Alberta, Peace River and Eastern Ry. 21
Alberta Railway Act, section declared in-
valid 547
Algoma Central and Hudson Bay Ry.—
Appointments 502
Development 418, 500, 501, 544
Finance, Meetings, etc. 497
Report 478
Algoma Central Terminal Co. 372, 420
Algoma Eastern Ry.—Appointments 30, 177
Development 69
Report 478
Algonquin Ry. 323
All Red Line Ry. 21, 165
(See also Labrador, Quebec and Southern Ry.)
American Association of General Passenger
and Ticket Agents 473
American Express Co. 48
American General Baggage Agents Associa-
tion 326
American Railway Engineering Association. 159
American Railway Master Mechanics Asso-
ciation—
Committee reports, disposal of 314
Convention notes 315
Electric motors in railway shops 307, 314
Exhibits 315
Fuel economy 303
Locomotive headlights 306
Locomotive stokers 296

Locomotives, methods of conducting tests 304
Officials 314
Smoke prevention 311
Superheater locomotives 313
Tinware standardization 312
1915 meetings 539
Appointments, Transportation 30, 79,
130, 177, 227, 275, 325, 376, 426, 473, 502, 542
Association of Railway Telegraph Superin-
tendents 346
Athabasca and Grande Prairie Ry. 500
Athabasca Valley Ry. 468
Atlantic and Lake Superior Ry. 226
Atlantic, Quebec and Western Ry. 19,
131, 167, 253
Atlin Ry. 165, 323

B

Baxter, W. M., Statistical control of rail-
way operation 493
Birthdays of Transportation Men 9, 72,
111, 161, 211, 261, 316, 355, 409, 451, 489, 548
Board of Railway Commissioners—
Accidents on joint lines 173
Appointments 79, 130, 502
Conductors for light locomotives 506
Drawing room cars, use of 174, 417
Dry grass, etc., on right of way 207
Flies, originating near railways 171, 273, 319
Locking of main track switches 170
Marker light sockets on cabooses 171, 379
Locomotive defects order 413
Orders by, summaries of 15, 65, 116,
178, 259, 330, 362, 410, 460, 509, 531

Railway cartage charges on eastern lines. 29
Rates—Interswitching 268
Lake freight 289
Ocean freight 42
Removal of regular station agents 176
Report 210
Safety appliances on cars 497
Shipments to flag stations 81
Standard railway fences 492
Traffic Orders 21, 78, 123, 167, 268, 373,
417, 469, 501, 545
Western rate case judgment 222
Book Reviews 61, 105, 212, 316, 357,
400, 455, 536
Boston and Maine Rd. 376
Bridle Belt Ry. and Navigation Co. 506
British Columbia Express Co. 396, 442, 485
British railways and the war 472

January, 1911.

The Construction of Steel Upper Frame Box Cars.

By R. W. Burnett, General Master Car Builder, Canadian Pacific Railway.

[ABSTRACT OF PAPER.—This paper outlines the development of the box car from the all wood car to the steel under and upper frame constructions now so exclusively in use, and discusses some of the factors that have been effective in establishing steel frame construction. The advantages of the steel upper frame construction are discussed in particular, and the practice of the C.P.R. in construction and repairing is referred to in detail. The advantages that this type has over the wooden superstructure car, which are of value to the operating traffic and mechanical departments of

wooden superstructure cars. Immunity from serious damage to superstructure in wrecks. Protection to roof due to the stiffness of the superstructure. Minimum clearance at eaves.]

This paper, which is confined solely to superstructure details of the steel frame box car, is intended to apply in general to steel frame practice as developed in connection therewith. While the early development of steel upper framing is passed over rather briefly, many of the important considerations that have influenced its adoption are discussed in detail, particularly as

Jan., 1910, that I have thought it unnecessary to go over this same ground, but will review only briefly the development of the box car from the all wood car through the intermediate stages of steel underframe cars.

The original wooden car, with the single spring draft rigging having the check castings bolted to the sills, gave little if any more trouble than modern equipment, due principally to the shorter trains, lesser density of traffic, and to the use of link and pin couplers which compelled gentler handling of trains than is prevalent today. The steel underframe car was built mainly to

First Inside Sheathed Steel Frame Box Car for Canadian Pacific Railway

the railways are enumerated as follows: Low tare weight. Clean inside finish. Ease, with which it can be cleaned and kept clean. Answers the purpose, when built with rolled shapes, of a standard car as regards the low cost of maintenance and small amount of material necessary to keep in stock for repairs, and the fact that repairs can be made by the company on whose line the car is without any special tools or dies. An economical car to build, both as regards size of plant and cost of equipment required. Does not deteriorate more rapidly in service than when idle. Small percentage out of service for repairs. Protection against losses from leakage and damage from weather. Much longer life than

viewed by the Canadian Pacific Ry. The information and data presented are based on the writer's experience in this railway system in connection with the design, construction and maintenance of 30,000 cars of this type, which represent an investment of \$30,000,000.

Credit is due to C. A. Seley, Mechanical Engineer, Rock Island Lines, for designing the first outside sheathed steel superstructure box cars that were constructed in large numbers. The introduction of steel into the superstructure of the box car, and the development of the outside sheathed steel superstructure in particular, were discussed so thoroughly by Mr. Seley in a comprehensive paper before the Franklin Institute in

secure a stronger centre construction for the attachment of draft rigging and to get away from the trouble caused by wooden sills breaking and splitting, broken draft bolts, etc.

While having many advantages over the old wooden car, the steel underframe car developed some troubles peculiar to itself, the most important being due to the fact that the body being carried on a rigid frame and not held together by the strains resulting from its weight, as in the old trussel cars, has a tendency to develop slack in the superstructure. This in turn affects the roof and sheathing. One principal trouble with outside sheathed cars is that, after they have been in service a compara-

tively short time, the sheathing frequently loosens at the end sill, and at the side sills near the bolsters, with resultant leakage of grain.

There were some steel frame box cars built previous to 1909, but the writer has been able to secure data on only the outside sheathed types. Of these, 2,700 were in service on the Norfolk and Western, of

ing load of 91,000 lbs. and retain the same strength. Thus the actual capacity of the car is increased almost 4% with a better ratio of paying to dead load.

With the wooden superstructure it had been thought necessary to assist the superstructure by heavy roof construction, some going so far as to use different methods of diagonal bracing, but with the

ened and the original lining replaced, the whole cost being the comparatively small labor charge. Jacking frames are being installed at all of our principal repair points for all classes of steel cars, and while not original with the C.P.R., have been amplified better to take care of steel frame box cars. With these frames, many jobs that would require the car to be cut apart, taking several days, can be done in a few hours without cutting rivets. With modern steel frame cars, these jacking frames are as much a necessity as the blacksmith shop or any other part of the shop.

With the outside sheathed car it is difficult to clean a car properly when it is unloaded, on account of grain lodging between the framework, and also on account of the opening where the posts and braces meet at the bottom becoming obstructed, resulting in grain being retained between the sheathing and lining with resultant complaints from shippers. All of this is overcome by the clean joining of the lining and the floor in the steel frame cars, and it is believed a change of this kind would have come years sooner if designers had kept in close touch with service conditions. One advantage of the steel frame car is that outside of possible repairs due to wreck damage and to wear and tear of couplers, wheels, brake shoes and journal bearings, the car does not deteriorate more rapidly in service than when stored.

The grading of lumber for use in these cars is an item that has received much consideration. Yellow pine or fir has so far been the principal lumber used, although we have experimented to some extent with spruce. Spruce has the advantage of being lighter, but it seems to be more difficult to dry it sufficiently for this purpose. Great pains have been taken to avoid knots that are too large or numerous, and while it is generally desirable to have lumber as free from knots as possible, I have never, in the inspection of many hundreds of cars, seen where a knot had fallen out. It is, however, desirable to have lumber as free from sap and shakes as possible and thoroughly dry.

When the first of these cars were built outside of the C.P.R. shops we had considerable difficulty in getting the lumber properly dried, due to lack of both experience and facilities on the part of the car companies. We have about 3,000 cars on which the lumber has shrunk and given them a bad appearance, but this result was

Steel Frame of Canadian Pacific Railway Box Car Ready for Lining.

which the first 100 were built in 1902; the owners advise they were satisfactory, and the same type has been purchased on subsequent orders. The Rock Island and Frisco lines had in service at that date approximately 5,000 cars similar to the Norfolk and Western, and these also appear to have given satisfaction as the owners have re-ordered the same type several times. All of these, however, were outside sheathed, and as regards leakage at the sills, had comparatively little advantage over the wooden cars. Recently both of these lines have purchased some inside sheathed cars.

In 1908 the C.P.R. designed a steel frame inside sheathed box car. This car avoided the disadvantage of the outside sheathed car which had not been accomplished by the steel frame cars constructed up to that time, and at once obtained a further reduction in weight and provided for cheapness of maintenance by the use of steel superstructure, without the additional lumber required by the outside sheathed car. With practically no preliminary experimenting, 500 of these cars were built and over 30,000 have been built since similar to the first cars, with the exception of several refinements of details, such as corner and door posts, end doors and side plates, and joining of flooring and lining. These changes have not affected the general design of the car, but are the improvements that have been introduced from time to time to reduce weight and simplify the construction.

The steel frame outside sheathed car has several advantages over the types previously used, notably in that the tare ton weight is low in proportion to the capacity. There is such a variation in the figures used for the cost of hauling per ton mile, that no attempt is made to say what the saving would amount to, but certainly the advantage of having a car equal, if not superior to other cars in all respects, weighing from 1,000 to 5,000 lb. less, will appeal to all traffic and operating men. Not only is there that much less dead weight to haul when the car is empty or partly loaded, but additional lading can frequently be carried. The actual limit on the paying load that can be carried in a properly designed car is the total weight on the axles. Thus, a car having 5 in. by 9 in. axles, with such a tare weight that, when deducted from the capacity of the axles, allows the car to be safely loaded to 88,000 lbs. could, if dead weight be reduced by 3,000 lbs., safely carry a pay-

ing load of 91,000 lbs. and retain the same strength. Thus the actual capacity of the car is increased almost 4% with a better ratio of paying to dead load.

With the wooden superstructure it had been thought necessary to assist the superstructure by heavy roof construction, some going so far as to use different methods of diagonal bracing, but with the steel car it has been found that there is no appreciable local movement of the framing in the heaviest service, which makes a simple proposition of the roof, as it has only to take care of itself. This presents a simpler problem to roof designers, making it possible to design a roof much lighter, without necessity for use of purlins or ridge poles to strengthen the car. It is obvious that unnecessary weight in the roof raises the centre of gravity, and increases the tare weight and cost and has other disadvantages.

In explanation of the local movement of this style of framing, it is well to mention tests we have made in jacking up this car, which demonstrated that the car would take a gentle twist from end to end, allowing the bolsters to be slightly out of the same plane horizontally. This twisting was accomplished without any perceptible local distortion of the sides or ends. The capacity for twisting is a condition to be desired as it allows a car to adjust itself to uneven track conditions.

In addition to being 5½ in. narrower than the outside of the sheathing of a wooden car, the superstructure of the C.P.R. car is protected by the framing, so that a side

Form Used by Canadian Pacific Ry. for Reports on Moisture Determination on Lumber.

swipe that would do serious damage to an outside sheathed car frequently does not touch the lining and is resisted by the framing without damage to the posts or braces. Frequently it is found that a side swipe that would almost demolish the sides of a wooden car only bends the steel framing, and in making repairs, the lining is merely removed, posts and braces strength-

expected, as when the cars were built the lumber was quite green. The sheathing on these cars could be tightened for less than \$4 a car, but very few have been tightened, owing to receipt of practically no reports of loss or damage to lading due to the shrinkage; also as they do not frequently reach our main repair tracks, being shipped only for such repairs as wheels.

or wreck damage, we have not considered it advisable to shop the cars for a defect which is almost entirely a matter of appearance. The lining shrinks as much in two months of summer weather as it ever will.

The lining should not be matched before drying, as it warps and curls, rendering it difficult to make a tight joint. The rough size of lumber should be at least $\frac{1}{4}$ in. greater than finished dimensions. In establishing limits for drying lumber no information or data could be secured whatever, and after experimenting we came to the conclusion that a piece of this lining of full cross section, subjected to a temperature averaging 170 deg. Fahr. for 96 hours, should not lose more than 6% in weight, and that lumber represented by samples losing more than 10% must not be used until further dried.

The variable condition of the lumber when taken from the yard makes it necessary to use careful judgment as to the length of time it should be kept in the kiln. At the C.P.R. Angus shops this responsibility falls on the wood mill foreman, whose constant attention to this feature makes him the best fitted for the purpose. The average moisture loss reported by the test department for lumber used on cars now building at the Angus shops is 5.25%, which shows that we are getting very satisfactory results from the kilns. A number of tests were made last year on lumber taken from the yard. These tests showed a moisture loss of between 25 and 30%, which shows the importance of drying lumber properly. The accompanying form is used for reporting results of tests both at Angus and outside shops.

Due largely to our insistence, nearly all of the car plants in the country are now equipped with dry kilns, and any possible additional cost of drying lumber in excess of what has been considered good practice in the past would be less than \$1 a car. Such drying would make the car side practically the same as one board, so that it is absurd that the possible shrinkage of lumber should be considered as any reason for this type of car not being built. It has been claimed that lumber can be so dried that it will swell and bulge, but we have never found this to occur. We have had cases where lumber slightly moist has dried more rapidly on the inside, due to that side not being painted, and made the outside of the boards slightly convex, with tight joints that could be easily mistaken for swelling, whereas the opposite is the case. We have kept a car with very green lumber in the passenger shop, with a high temperature, for over a month, until the lumber was absolutely bone dry, and then put it outside, with doors open through four weeks of constant raining spring weather, with the result that there was no closing of the cracks that could be detected, which further proves that there is nothing to be feared from lumber being too dry.

The defects in the sheathing that must be most closely watched are shakes or splits that extend obliquely downward into the car which must be knifed in with paste before the car is painted. The edges of the lining should be painted, and we have found this can be done more easily and thoroughly by dipping the boards and putting them through two rubber scrapers, which removes the surplus paint, leaving the edge thoroughly coated. This gives a thin coat of paint on the inside of the car, which is an advantage in causing the lumber to dry more uniformly and diminishes the tendency to warp. Narrow boards have the advantage of having less tendency to warp, and also if the lumber should not be thoroughly dry, there is less total shrinkage for each board, making the space

between the edges narrower. The steel work and roofing are painted the same as other cars. This considerable space has been given to the grading and drying and painting of lumber, as we have found that these factors have required much more attention than everything else combined in connection with the car.

The development of the inside sheathed car has been so rapid and the experience with it so uniformly satisfactory, that I feel safe in saying that its introduction in such large numbers, on so many roads, in so short a time, indicates more nearly a tendency towards the adoption of a standard car than has any distinct type of car, outside of patented cars for special service. It is certain that there will be no backward movement to a wooden superstructure, and that this car, with possible

common to all car, except lining, of which our stock amounts to practically nothing. We save out sufficient of the parts from cars destroyed to make up our stock of repair parts, but have found it necessary to use very little of this. There are, of course, many valid reasons why cars should be made to standard inside dimensions and outside clearances.

To look at the matter in another way, the wheels, axles, journal bearings, journal boxes, couplers, brakes, safety appliances, etc., which constitute the removable and perishable parts, are all standard, and when it is remembered that nearly all of the remaining parts of the cars are standard rolled shapes, which are easily obtained either from the mill or from stock in all principal cities, it is apparent that we now have in effect a standard car, or

Details of Roof Clearances on Steel and Wooden Box Cars.

modifications, will remain a standard car unless some superior type is developed. It may be stated as the writer's opinion that no committee will ever develop a car that will be adopted as standard, but that the nearest we will ever get to a standard is what may be developed by one or two persons given a free hand, and the merit of which is so pronounced that it will force itself upon the country.

With the use of structural steel there is less necessity of carrying special parts in stock, on account of repairs being largely a question of labor, and it seems that with this type of car the necessity from a repair standpoint for a standard car is decreasing. This is further borne out by the fact that for the 30,000 cars of this type we have ordered no material for repairs and carry none in stock, outside of material

at least a car of standard parts. A car of different dimensions would not increase the cost of maintenance as long as standard shapes are used; nor would it if every lot of cars is designed differently, as long as proper strength is maintained, and any change in design would usually be to increase the strength. In other words, to keep a car as close as possible to standard and reduce cost of maintenance, rolled shapes should be used in preference to pressed shapes where possible.

It is my belief that the people who are urging the adoption of a standard car, for maintenance reasons, have in mind the remaining wooden cars, for the maintenance of which large quantities of timbers and castings have to be kept in stock. It is of vital importance that the parts be standardized if that style of construction

is to be continued. It should not be overlooked that in a car constructed with roller shapes, these parts seldom need renewal, even when the car is wrecked, as they can easily be straightened or formed to the original shape at any car repair point, while wood would have to be replaced, and pressed snapes would call for special dies to reform them. With a wooden box car the amount of material necessary to carry in stock and use for repairs increases rapidly with the age of the car, with a steel frame box car the amount of material necessary to carry in stock and use for repairs outside of parts common to all cars does not increase with the life of the car.

The wind resistance on the steel frame box cars with inside sheathing is slightly greater than on a smooth outside sheathed car, but on the other hand, it is less than on any ordinary type of stock car. The effect of wind resistance between box and stock cars, has never been great enough to require any distinction between them as to the number of cars that could be hauled in a train of either, and is really a refinement that not even a dynamometer car can detect. A small change in the angle or velocity of the wind, or difference of the number of wheels running to one flange, or trucks somewhat out of square, affects the haulage of the train too much to enable any satisfactory figure for the difference in the wind resistance of the various types of car to be obtained. There is a certain stretch of track on the western plains of about 40 miles, without a curve and practically level, where high winds are frequent, on which the haulage capacity of locomotives is dependent principally upon the wind, and yet even there it was found practically impossible to distinguish between the wind resistance of stock and box cars. From this it is evident that the wind resistance of steel frame inside sheathed box cars, as compared with outside sheathed cars, may properly be ignored.

In the summer of 1911 we lined one of these steel frame cars with corrugated steel and found it to be as simple a matter as lining with wood. We lapped and riveted the sheets, which were no. 13 gauge, between the door and end, and had the corrugations on the side and end coincide, pressing into special corrugated angles in the corners to break the joints. At the floor, we straightened out about 4 in. of the corrugation and formed of it an angle that rests on the side sill, and on this the ends of the floor boards were superimposed, easily making as tight a joint as I have ever seen on any car. After 18 months of general service this car was brought in, and on examination found to be in as good shape as when constructed. It was interesting to note that, when inspected, the paint sealing the joints, where the side sheets lapped, was in no place seal broken, indicating that there is no material wearing or deflection of the sides. The paint was in perfect condition, there still being some gloss, indicating that in the use of steel there is no disadvantage as far as the painting is concerned. Different methods of lining with steel could be followed, and I am convinced that if experience proves that there is no damage to be feared from heat, cold or sweating, that steel lining will be largely used. But, I am also convinced that the use of steel lining with any insulation will never be extensively used, as it adds to the cost and weight without affording any protection to the lading, which is not secured by the old lining. An advantage of this construction is shown in the application of hoppers under the door openings, which were made without alteration to the door cross members.

As regards the end of the car we use two 4 in. Z-bar end posts of 8.2 lb. per ft., with 1½ in. lining, which gives good service, but we intend to use on future cars two 5 in. end posts of 11.6 lbs. per ft. with 2½ in. lining for a height of 4 ft. and 1½ in. lining above that height. This, we feel, will protect any lading that needs protection. If a car gets such rough handling that wheels or rails, or similar lading, would break through, it is better to have the boards broken than to distort the posts, as the lining can be replaced at any repair track with a minimum expense, while distorted posts would require sending the car to a steel car repair point. The single thickness end lining makes convenient the application of single thickness, grain tight end doors.

Out of 30,000 of these cars, 29 have been destroyed. Based on the length of time in service, this would average a loss of approximately one car per 1,000 per year. Of the cars destroyed, 15 were burned, 14 were destroyed in wreck, 10 being destroyed on foreign lines. As the loss of cars by fire is in no way affected by the details of construction, I will eliminate these from the calculations. This then, based on the length of time in service would give about one half per car per 1,000 per year destroyed in wreck. As there is no appreciable deterioration of these cars in service, it is safe to assume that in the same service substantially the same rate of loss would continue, while with wooden cars the rate of loss would increase each year.

A conservative estimate shows that there are today approximately 65,000 steel superstructure cars, including outside sheathed, in service. Of this number 30,000 are C.P.R., and nearly all the remainder belong to the Grand Trunk, Intercolonial, Toronto, Hamilton & Buffalo, Minneapolis, St. Paul and Sault Ste. Marie, Pennsylvania, Rock Island, Erie, Wabash, and Frisco Lines. The Pennsylvania has a 40½ ft. 50 ton car, designed to carry the load on the centre sill; the Frisco Lines has a 40 ft. 40 ton car, designed to carry part of the load on centre sill.

The foregoing paper was read by Mr. Burnett before the American Society of Mechanical Engineers in New York, Dec. 3.

Steel Underframe Box Cars.

At the same meeting G. W. Rink, Mechanical Engineer, Central Rd. of New Jersey, read a paper on steel underframe box cars, of which the following is a brief extract: On account of the large variety of designs of steel underframe box cars, it is the desire to show by tables the practice of the various railways, with a view to selecting such designs as will render the best service, considering the more exact conditions as required by interchange of cars and the use of locomotives of increased tractive power. Box cars should now be built along standard lines, with particular reference to those parts that affect repairs and interchange. Tables showing stresses in underframes for various cars are compiled, certain assumptions having been made in order to treat the subject in general. It is the opinion of the author that a committee representing the various railways throughout the country should be organized, with a view to developing a standard box car which will eliminate cars of inferior design and light construction, thereby facilitating repairs and decreasing operating expenses.

H. G. Smith, City Passenger and Ticket Agent, Grand Trunk Pacific Railway, Vancouver, B.C., in remitting his renewal subscription for Canadian Railway and Marine World writes: "Would be greatly disappointed to miss even one copy."

The Central Railway of Canada and Its Contractors, Etc.

The Quebec Court of Appeal delivered judgment, Nov. 26, in the action of Wills against the Central Ry. of Canada. This was an appeal against the decision of Mr. Justice Archibald in the original action. The Central Ry. Co. of Canada has a charter from the Dominion Parliament to build a railway from Montreal to Midland, Ont., with charters from the Quebec and Ontario Legislatures to build various connecting lines. The company entered into a contract with C. J. Wills and Co., London, Eng., to build the Montreal-Midland line, agreeing on its part to provide funds for carrying on construction. The contractors started work in 1911, but early in 1912 difficulties arose between the company and the contractors. The latter alleged that the company had failed to provide money as agreed, and the former that the contractors were not proceeding with due diligence. As a result the contractors sought to recover damages, and the company took steps to let another contract for construction. The contractors thereupon applied for an injunction restraining the company from proceeding with the work itself or from letting a contract to any other person for building the line. At the original trial judgment was given in favor of the contractors for \$2,373.30 on the first claim, with a reservation to claim other damages for breach of the general contract, and an injunction restraining the company from having the line built by any one other than Wills and Co.

The railway company appealed against this decision, and the Court of Appeal found unanimously in favor of the contractors on the first point—the condemnation to pay \$2,373.30. On the second point, the reservation to claim other damages, the Court of Appeal found that the trial judge's finding should be amended in such a way as to eliminate the enacting clause embodying the reservation in question. On the third point—the maintenance in full force and effect of the contract—the court found, by four to one, that while the company had failed to provide the necessary funds in conformity with the contract, and consequently was alone to blame for any delay experienced in the carrying on of construction, the company had a right to terminate the contract at any time on paying damages. The opinion of the trial judge was reversed on the point as to the present force of the contract. On the fourth point—the injunction to prevent the company building the line itself, or letting a contract to anyone else—the court, in a lengthened review as to law and practice affecting injunctions, set out a number of reasons why the injunction should be set aside. The decision of the trial judge is therefore upheld so far as to pay the contractors \$2,373.30, but is reversed as to all other of its enacting clauses.

We are officially advised that all construction on this projected line between Montreal and Ottawa has been stopped. F. S. Williamson, Chief Engineer, has resigned, and will act for the company in future as Consulting Engineer.

A meeting of shareholders, under the trust deed of July 17, 1911, made between the company and the City Safe Deposit and Agency Co., London, Eng., was held, Dec. 16, for the purpose of passing resolutions cancelling the trust deed and the redemption of the outstanding bonds.

The Board of Railway Commissioners has established express delivery and collections for Leamington, North Bay, and Sudbury, Ont.

Crane for Mounting Axles in Lathe at West Toronto Shops, Canadian Pacific Railway.

The accompanying illustration shows a handy air crane used in the C.P.R. West Toronto passenger car shops—H. R. Naylor, General Foreman—for lifting axles into the axle lathe for turning. Back of the lathe, against the shop wall, there is at-

amount of oil loss. The two baskets are used alternately, one soaking and draining, while the other is in use.

Sheet Punch in Grand Trunk Railway Toronto Shops.

In the G.T.R. Toronto shops—E. Logan, General Foreman—the old Northern Ry. locomotive house is now used for running

rod, operated from a crank on the end of a shaft passing through the sheet metal hood behind the punch. Inside this latter is a large gear, mating with a small pinion on the upper shaft, which is driven from above by belting. This shaft carries an old time small fly wheel, made with a cast iron rim and wrought iron spokes.

Drop Pit Rail Clamp at Canadian Northern Ontario Railway Trenton Locomotive House.

The rails bridging the drop pit in the C.N.O.R. locomotive house at Trenton are secured to the approach rails by a novel clamp, as shown in the accompanying illustration. The bridging rail is of a 60 lb. section, 8½ ft. long, over the 7 ft. drop pit, and is trussed by a 5/8 by 8 in. strap on 7 in. channel struts, 3 ft. 2 ins. apart. The ends of the bridging rail, and also of the approach rails, each have a channel, ½ in. deep by 2 ins. wide, cut in the rail web, leaving a 1 by 2 ins. opening when the rails are in position. The clamp comprises a length of ½ by 2 in. bar stock, bent double, and the ends then bent outwards to form a T, the top of which is 9¼ ins., and the upright, 1½ ins., this latter section being the double thickness of the bar stock. This section just fits in the opening cut in the rail ends. A taper key, ½ in. thick, passes through an opening in the double leg of the T, so that the latter is securely clamped in place when the key is driven after the T is in place between the rails. This locks the rails as efficiently together as when the usual slip fish plate catch is employed.

The top edge of the drop pit wall, on which the rails rest, is surmounted by a metal plate. When the locking member is removed from the rail ends, the rail may be slipped to one side along this bearing plate, far enough to allow of the driving wheels to be lowered to the awaiting pit trucks on the tracks below. This

Crane for Mounting Axles in Axle Lathe.

tached a jib crane, which has a clear swing over the lathe on the pipe support. On the horizontal arm of the jib there is a two wheel traveller, to the under side of which is attached horizontally an air cylinder. On the under side of the cylinder there are mounted, in bearings, two chain wheels, over which pass hoisting chains, the upper ends attached to a piston rod crosshead. The outward movement of the piston rod, controlled from an air valve adjoining the chain wheels, raises the axle hook on the lower end of the chain, lifting the axle. The axle hook is of the type described some months ago in Canadian Railway and Marine World, as originating in the C.P.R. Angus shops.

Waste Soaking at Grand Trunk Railway Mimico Locomotive House.

Instead of soaking waste for journals in a pail, or by any of the imperfect methods in common use, the G.T.R. locomotive house at Mimico, near Toronto, is equipped with a simple but efficient device for so doing. This consists of a rectangular steel tank, 26 by 32 ins., and 24 ins. deep, containing about 2 barrels of oil. In this tank, two baskets, about 12 ins. deep, fit loosely, each supported by a chain from a 1¼ in. rod mounted in rough bearings in the side of the tank. The front end of the supporting rod is squared to receive a crank, by means of which the baskets may be lowered into the oil.

The waste to be treated is placed in a basket, after first being torn apart, and the basket load lowered into the oil, where it is allowed to soak at least 5 hours. After this immersion, the basket is raised by the crank and allowed to drain. By this means the waste is thoroughly soaked, and the surplus oil drained off, giving a minimum

Sheet Punch for Light Work.

repairs for the motive power in and out of Toronto. Much of the machinery is more or less antiquated on account of the long time the shop has been in continuous service. Many small machines are to be seen

Locomotive House Drop Pit with Novel Rail Clamp.

there that have probably no existing counterparts.

The small sheet punch shown in the accompanying illustration is an instance of what has been done to supply small machines to supplement existing equipment. A small punch was required for perforating thin steel sheeting, resulting in the development of this machine. The punch is guided in a forged frame, and to the upper end of the punch there is attached a connecting

eliminates the laborious work of removing the rail entirely, as is the common practice.

Economy in the use of fuel may be increased by seeing that locomotives do not have unnecessary delays on the road and are not kept under steam an undue time in the locomotive house. These are just as important considerations as the training of enginemen in the proper handling of the locomotive and in firing.

Divisional Yards on the Montreal-Port Arthur Line. Canadian Northern Ontario Railway.

The Canadian Northern Ontario Railway's Montreal-Port Arthur section of the main C.N.R. transcontinental line, a description of the survey work, etc., on which appeared in *Canadian Railway and Marine World* for Sept., 1913, has progressed to such a stage that the engineering department has had under preparation for some time plans for the several divisional yards to be completed about the time the line will be opened for through traffic, which, it is expected,

ing the latest practice where such conditions appeared advisable, and wherever it was considered the better policy to follow a cheaper construction, the plans have been so developed as to make possible the introduction of the better construction at some future date with the least change in the original arrangement. In pursuance of this policy, and realizing that the traffic possibilities of this section of the transcontinental line are great, and will increase

traffic to the northern mining districts, and it is contemplated that a heavy traffic will develop from the lower Ontario district through this junction point for the west. Of the three other points, Fitzbach is the most important, being a divisional point, and the other two, Foley and Hector, only turning points at the ends of the runs from the divisional points east and west of them.

Of the several divisional and turning points Rideau will not only have the greatest capacity, but will extend over considerably more ground, each of the two lines that branch out from that point having separate yard accommodation, with the

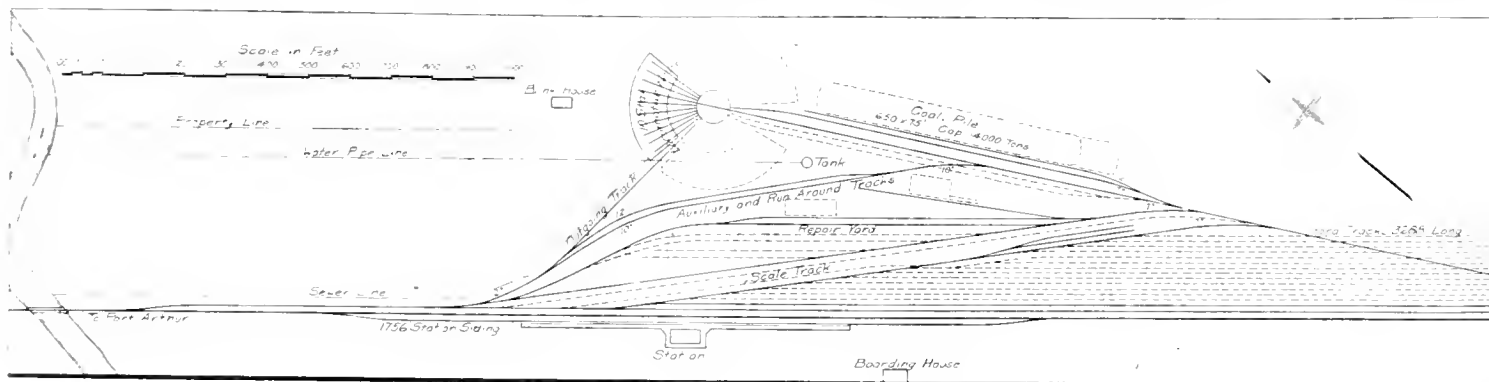

Canadian Northern Ontario Ry. Yard Layout at Capreol (West End).

will be during this year.

Somewhat longer runs have been provided for than is the practice on the other two principal Canadian lines, the average distance between turning and divisional points being slightly more than 150 miles.

rapidly, all the turning and divisional points have been laid out in such a manner as to make possible the extension of the yards and facilities to something over four times the initial capacity, utilizing the initial construction as part of the extended

mechanical yard arrangement in the intervening angle, as shown in one of the accompanying illustrations. Each of these separate yards will be very similar to the yards at the other points, a standard yard plan having been adopted, with body tracks in

Canadian Northern Ontario Ry. Yard Layout at Foley (West End).

This divides the run from Montreal to Port Arthur into very uniform sections, with the exception of the first one from Montreal to Ottawa, which will be only a 116 mile run. The turning and divisional points on the line, with their respective distances from Montreal, will be as follows: Montreal, 0 miles; Rideau (outside Ottawa), 111.6 miles; Capreol, 414.6 miles; Foley (turning point), 563.2 miles; Fitzbach, 711.9 miles; Hector (turning point), 861.7 miles; Port Arthur, 1,010.1 miles. From Rideau to

yard. In other words, the initial construction is only a portion of the final contemplated accommodation, which may be obtained by making additions to the original arrangement from time to time, without in any way disturbing the general scheme.

Of the five points under consideration—Rideau, Capreol, Foley, Fitzbach and Hector—two, viz., Rideau and Capreol, are of the greater importance, as both of them are junction points. At Rideau, in addition to the main line, there is also the line from

all cases 3,288 ft. long. The standard body track length at first accepted in the early studies of yards on this line was 2,800 ft., but this was deemed to be rather too short, as in the latter a maximum train length would be 70 cars, whereas the former gives a possible train length of 80 cars. It is quite conceivable that this will be the standard train length in the near future over this line, as grades and curves have been eliminated as far as practicable, and where such was not possible, provision was

Canadian Northern Ontario Ry. Yard Layout at Fitzbach (West End).

Capreol 393 miles, and it is the intention to have a divisional point midway, the location of which has not been determined.

In the construction of this link of the new transcontinental line a far-sighted policy has been adopted, in so far as is practicable, the designs throughout follow-

Ottawa to Toronto, now nearly completed, and already operating a freight service, which will make demands on the accommodation, requiring a larger yard and facilities than those at intermediate points. Similarly with Capreol, the junction point of the main line and the Toronto-Sudbury branch, which has a comparatively heavy

made that the line might be reduced to the initially designed high standard at some future time. The maximum gradient will be 0.4%, the limiting gradient for maximum haulage capacity. The far-sighted yard policy is thus apparent.

A standard locomotive house construction has been adopted by the engineering and

mechanical departments, the same type being built at all the points on the line. The ultimate size of these locomotive houses

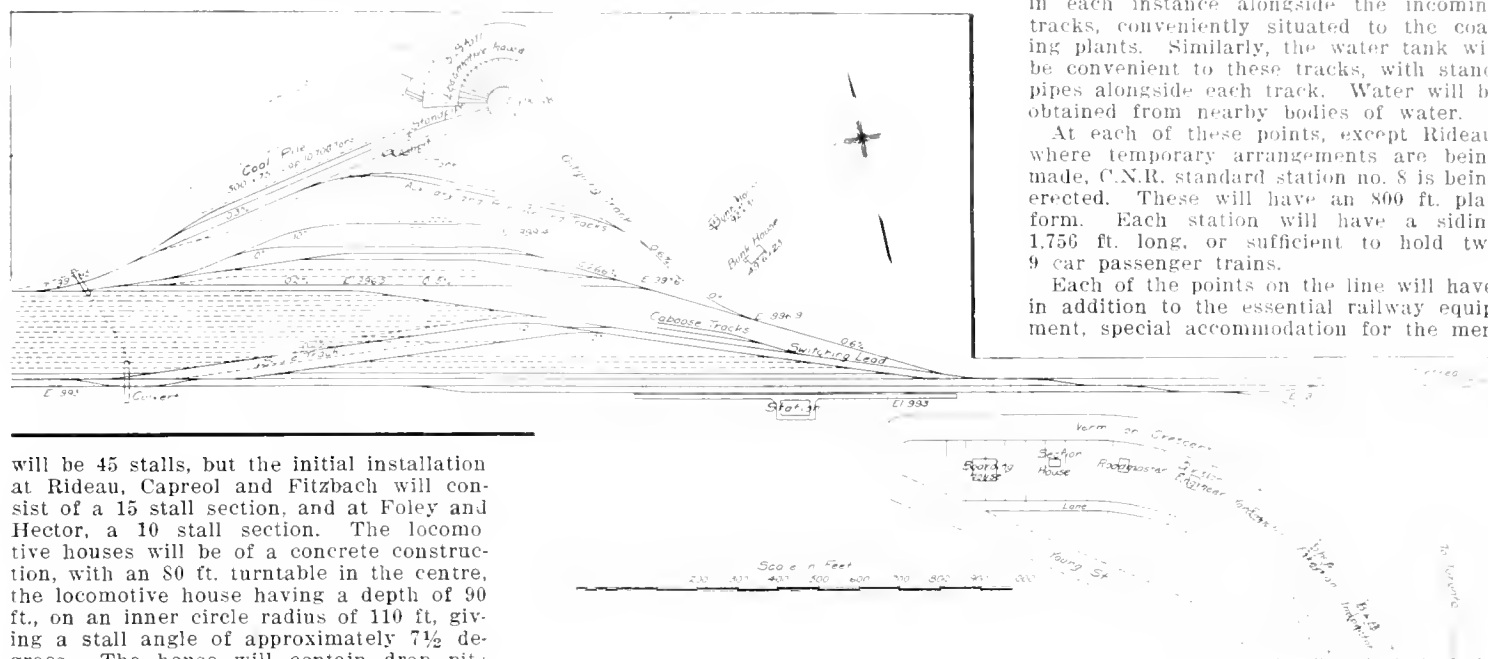

the exception of Rideau with a single outgoing track for each line, and that this track will be tangent for some little dis-

outgoing tracks.

Coal storage piles, varying in capacity from 9,500 to 14,000 tons, will be located in each instance alongside the incoming tracks, conveniently situated to the coaling plants. Similarly, the water tank will be convenient to these tracks, with standpipes alongside each track. Water will be obtained from nearby bodies of water.

At each of these points, except Rideau, where temporary arrangements are being made, C.N.R. standard station no. 8 is being erected. These will have an 800 ft. platform. Each station will have a siding 1,756 ft. long, or sufficient to hold two 9 car passenger trains.

Each of the points on the line will have, in addition to the essential railway equipment, special accommodation for the men,

Canadian Northern Ontario Ry. Yard Layout at Capreol (East End).

will be 45 stalls, but the initial installation at Rideau, Capreol and Fitzbach will consist of a 15 stall section, and at Foley and Hector, a 10 stall section. The locomotive houses will be of a concrete construction, with an 80 ft. turntable in the centre, the locomotive house having a depth of 90 ft., on an inner circle radius of 110 ft., giving a stall angle of approximately $7\frac{1}{2}$ degrees. The house will contain drop pits for both driving wheels and the pilot and trailing truck wheels, and will in addition have a small machine shop adjoining for the handling of running repairs, the shops at Rideau and Capreol being larger and more important than at Fitzbach, which in

tance beyond the locomotive house. In this connection it will be noted that in every instance there is at least one track, either an incoming or outgoing track, that leads

including bunk houses of standard design, dining hall, section house, and at such a point as Capreol, where the divisional staff will be located, a series of cottages. A few

Canadian Northern Ontario Ry. Yard Layout at Foley (East End).

turn is to be more complete than Foley and Hector.

directly into a stall. This is an important consideration in the handling of cripples.

company cottages will also be erected at the other points.

Canadian Northern Ontario Ry. Yard Layout at Fitzbach (East End).

The incoming tracks at all these points are to be laid out for half the ultimate capacity. The arrangement planned, which will be eventually completed, calls for an incoming track arrangement symmetrical about a central line. Only one half of this scheme will be laid down. In the incoming tracks will be the coaling, sanding and ash handling equipment. A conveyor type of coal plant will be used, the specific design of which is still under consideration, as are most of the details. The ashpits will be air operated.

In all the yards it will be observed that there will be a single outgoing track, with

which may be pushed into a stall directly by a helper, eliminating the necessity for block and tackle assistance from the turntable.

In each layout, with the exception of Rideau, there will be a run around and an auxiliary track connecting the incoming and outgoing tracks. In the excepted instance, these double tracks will connect the two

There will be in each case a repair yard of two tracks, capable of extension to six when required, two caboose tracks, and the main yard tracks, a varying number of which are being put in in this first layout. At Rideau each line will have an initial yard trackage of five tracks, and all the other yards two tracks. At Rideau the ultimate capacity will be 20 tracks on both the main line and the Ottawa-Toronto line; at Capreol, 18 tracks; and at the other three points, 13 tracks. It will be noted that Capreol and Fitzbach, both divisional points, bear a very close resemblance to each other, the former being slightly the larger. In the case of Foley and Hector,

the turning points, the similarity is more apparent, the layouts being almost identical.

The engineers were most fortunate in nearly every instance in choosing sites that

are practically level, requiring but a small amount of excavation and fill. The principal exception was Capreol, where some heavy cutting was made necessary. Foley was also comparatively heavy, and Fitzbach had some filling. Both Hector and Rideau, however, were practically level.

The several yards were planned in the office of H. E. B. Smith, Engineer of Yards and Terminals, Toronto, from whom the data on which this article is based, was secured, through the courtesy of A. F. Stewart, Chief Engineer. We are also indebted to J. Montgomery, of the Imperial Construction Co., for information concerning the standard buildings which are being erected by that company at these points.

Automatic Electric Block Signalling on the Canadian Pacific Railway.

In addition to the block signalling work referred to in previous issues, automatic block signals are being installed between Montreal Jct. and Iberville Jct., Que., 27 miles; between West Toronto and Islington, Ont., 5 miles; between Markstay and Stinson, Ont., 14 miles; for 3 miles at Mattawa, Ont., and between Renfrew and Espanville, Ont., 6 miles. For the 13 miles between Islington and Streetsville Jct., Ont., they have been rearranged for the new second track.

The block signal system in operation between Fort William, Ont., and Winnipeg is similar to that in use on the Eastern Lines except that the signals protect station limits only. The signals, which are of semaphore type, are located about 3,000 ft. outside of the outlying switch, and, in accordance with usual C.P.R. practice, the

A. L. Smith, Superintendent District 1, Lake Superior Division, Sudbury, Ont., has issued the following special rules:—

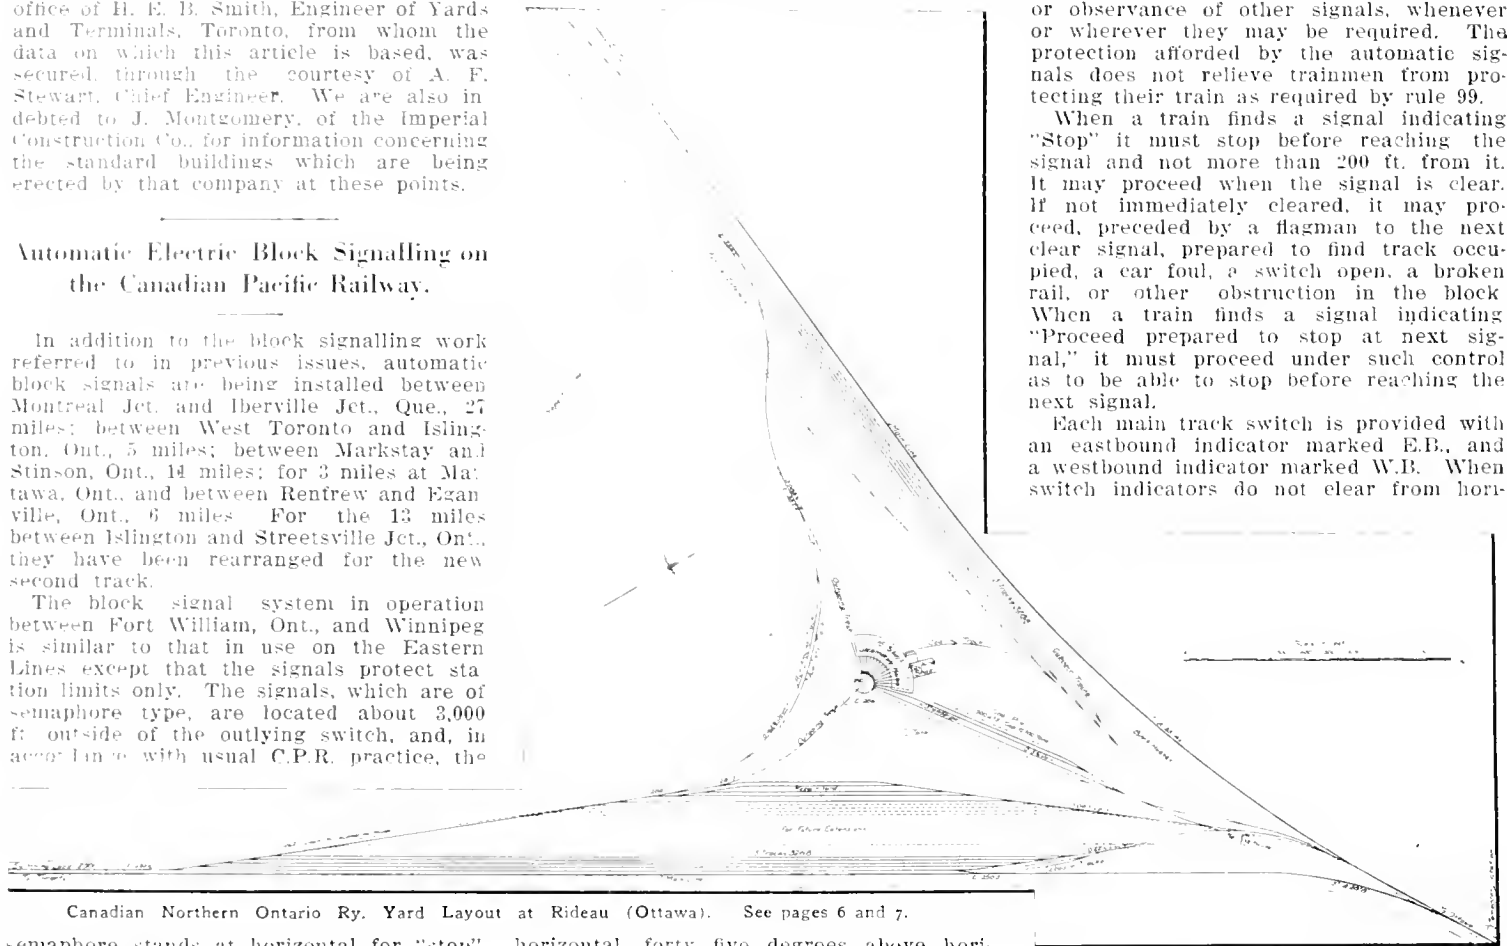

The movement of trains between Markstay and Stinson, and at Mattawa, will be controlled by normal danger automatic block signals of the three position, upper quadrant type, the three positions being:

a signal has a pointed end. A lunar white marker light is placed at 6 ft. below, and on the opposite side of pole from signal light.

The track is divided into blocks, and the block signals control the use of the block but do not effect movement of train under the train rules, nor dispense with the use or observance of other signals, whenever or wherever they may be required. The protection afforded by the automatic signals does not relieve trainmen from protecting their train as required by rule 99.

When a train finds a signal indicating "Stop" it must stop before reaching the signal and not more than 200 ft. from it. It may proceed when the signal is clear. If not immediately cleared, it may proceed, preceded by a flagman to the next clear signal, prepared to find track occupied, a car foul, a switch open, a broken rail, or other obstruction in the block. When a train finds a signal indicating "Proceed prepared to stop at next signal," it must proceed under such control as to be able to stop before reaching the next signal.

Each main track switch is provided with an eastbound indicator marked E.B., and a westbound indicator marked W.B. When switch indicators do not clear from hori-

Canadian Northern Ontario Ry. Yard Layout at Rideau (Ottawa). See pages 6 and 7.

semaphore stands at horizontal for "stop" and 90 degrees above horizontal for "clear." They are electrically operated, and act in such a way that a car or engine occupying the main track at any point from the signal through the station yard will hold the signal at "stop," and also if a switch in the main line should be open or a car happen

horizontal, forty five degrees above horizontal, and ninety degrees above horizontal. The indications given are:—Arm horizontal—Stop. When in this position a red light is displayed at night. Arm forty five degrees above horizontal—Proceed, prepared to stop at next signal. When in this position a yellow light is displayed at night.

zontal to vertical by operating the push button underneath the indicator, it will indicate that a train is approaching and switch must not be opened until sufficient time has elapsed to allow the approaching train to pass. If, after this period of time, indicator will not clear, and there is no sign of an approaching train, switch may be opened, and train may proceed under required flag protection.

A train or car standing in a passing track, or in a side track, must be clear of the insulated rail joints or back of the safety blocks, otherwise the automatic signals protecting that portion of track will

Canadian Northern Ontario Ry. Yard Layout at Hector (West End). See pages 6 and 7.

to stand on siding long enough to the switch to foul the main line, or there should happen to be a broken rail in the portion of track protected by the signal, the signal will stand automatically at "stop," furthermore, the mechanism is so designed that in the event of a possible failure of the electric current or in the mechanism itself the signal will stand at "stop."

Arm ninety degrees above horizontal—Proceed. When in this position a green light is displayed at night.

The signals governing eastbound trains have even numbers, and those governing westbound trains have odd numbers, and are on poles, located at the entrance to each block on the right hand side as seen from an approaching train. The arm of

not clear for an approaching train.

Conductors must report by wire to the Superintendent from the first telegraph station all delays caused by signals, giving the number of signal, and cause if known. Engineers must use forms S. M. 1 to report delays at signals, except delays on account of train ahead. Track foreman and other employees will also report promptly by wire

any defect noticed in the signals, wires, or other appurtenances of this system.

Trainmen must not make any change in the track which will interfere with the signal system without notifying the signal maintainer, and, except in case of emergency, receiving his consent.

Signals 546 and 631, being the end signals of the installation between Markstay and Stinson, and signals 725 and 729, being the end signals of the installation at Mattawa, will operate only in two positions, namely, horizontal, and 45 degrees above horizontal.

If necessary to clean the ashpan on the main track, inside of block signals limits, the ashes and cinders must immediately be removed by the fireman, if no one else is available for the purpose, in order to prevent damage by fire to the trunking which covers the signal wires.

The Canadian Pacific Railway's Windsor Street Station, Montreal.

The extensive additions to the Windsor St. station, Montreal, are rapidly approaching completion. A full description, with plan, of the trackage and approaches appeared in Canadian Railway and Marine World for November, and a very complete article on the power interlocking and signalling appears elsewhere in this issue.

In the summer of 1910 the foundations were laid of an addition to the old building, to extend the frontage along Windsor street to a total of over 490 ft. with a frontage on St. Antoine street of over 170 ft. There were two problems to be faced, one architectural, the other engineering. The architect's difficulty was to devise a facade which would look harmonious and impressive from every point of view, in spite of the fact that there was a difference in elevation on Windsor St. of 40 ft. between St. Antoine and Osborne streets. The engineering problem was to find a satisfactory foundation on rather treacherous soil for the massive tower, which the architect proposed. The sinking of the foundations delayed the work considerably at the initial stages, but eventually a satisfactory base was found, and the building began to rise with a structural steel frame, all the columns of which rest upon heavy concrete foundations carried to rock by means of cylindrical caissons. The variation in levels had one satisfactory result, namely, that room was found for vast vaults beneath the main floor of the building and beneath the tracks, in which there is storage capacity sufficient to accommodate records for many years to come. These vaults cover a ground area of 66,000 sq. ft., still leaving room for an immigration hall covering 10,000 sq. ft., Chinese waiting room, covering 6,900 sq. ft., and third class passenger waiting room, covering 3,000 sq. ft.

with a combined capacity of 30,000 gallons, and is said to be the most massive tower in Canada. The general waiting room, in the main building, has a ground area of 7,800 ft. The new addition alone contains 2,800 tons of steel, apart from the steel used in the train sheds. The building when completed will have 13 elevators, 8 for passengers (2 of which have a lifting capacity each of 7,000 lbs.), 4 for freight and baggage, and 1 for the kitchen and restaurant.

In the construction of the exterior of the building limestone from quarries in the Province of Quebec was used, and the labor employed was almost entirely native. The steel was manufactured at Lachine by the Dominion Bridge Co. As many as 600 men were employed at one time on construction, the riveters and erectors being chiefly recruited from the Indian reservation at Caughnawaga. The stonemasons were French Canadians. The interior fittings were very fine, marble being used exclusively in the principal halls and corridors. Italy, France, Indiana and Tennessee have each contributed from their quarries, some of the stone coming from Euville, and some of the marble from the Botticino quarries.

The trainsheds have been planned to cover all the tracks, which have been increased to 11 in number. On 6 tracks the sheds are 1,000 ft. long, on 2 tracks 800 ft., on 2 more 550 ft., and on track 1, intended particularly for suburban traffic, 420 ft. Over 2,000 tons of steel have been used in these sheds, exclusive of the concourse. The area covered is 205,000 sq. ft., or about 5 acres. The train sheds are of the Bush pattern, and special care has been taken to provide roof drainage and to ensure dry and clean platforms at all times. The skylights are designed so as to be always clear, and snow can be shovelled through slots in the roof on to cars below. A copper hood over every skylight is specially designed to allow of ventilation and yet to prevent snow or rain from drifting in. There is a system of fire protection in case of cars taking fire in the station, pipes being laid with plentiful supply of water under high pressure.

Birthdays of Transportation Men in January.

Many happy returns of the day to:—

W. U. Appleton, General Master Mechanic, Intercolonial Ry., Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, District 4, Manitoba Division, C.P.R., Souris, born at Kingston, Ont., Jan. 27, 1865.

F. X. Belanger, General Freight and Passenger Agent, Temiscouata Ry., Rivière du Loup, Que., born at Chlorydormes, Que., Jan. 20, 1876.

R. H. Bell, General Agent, Canadian

trict 1, Atlantic Division, C.P.R., Brownville, Me., born at Galt, Ont., Jan. 22, 1877.

J. E. Dalrymple, Vice President, G.T.R., G.T.P.R., and Central Vermont Ry., Montreal, born there, Jan. 1, 1869.

A. Davidson, General Agent, G.T.R., Prince Rupert, B.C., born at St. Henri, Montreal, Jan. 29, 1885.

J. E. Everell, Superintendent, Montmorency Division, Quebec Ry., Light and Power Co., Quebec, born at Cap Rouge, Que., Jan. 1, 1863.

Sir Sandford Fleming, K.C.M.G., director, C.P.R., born at Kirkcaldy, Scotland, Jan. 7, 1827.

W. H. Gougeon, Locomotive Foreman, C.P.R., Webbwood, Ont., born at Point Alexander, Ont., Jan. 16, 1872.

Gordon Grant, Chief Engineer, National Transcontinental Ry., Ottawa, born at Dufftown, Scotland, Jan. 2, 1861.

H. J. Herrold, General Freight and Passenger Agent, Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry., Saul Ste. Marie, Ont., born at Athens, Ohio, Jan. 21, 1880.

G. F. Hichborn, formerly Agent, Great Eastern Fast Freight Line, New York, born at Boston, Mass., Jan. 13, 1875.

Carl Howe, Manager, New York Central Fast Freight Lines, Chicago, Ill., born at Berrien Springs, Mich., Jan. 11, 1870.

W. C. Hunter, ex-Manager, New Brunswick Coal and Ry. Co., Moncton, N.B., born at St. John, N.B., Jan. 4, 1865.

H. G. Kelley, Vice President, G.T.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

James Kent, Manager, C.P.R. Telegraphs, Montreal, born Jan. 15, 1854.

A. J. McGee, Secretary-Treasurer, Timiskaming and Northern Ontario Ry., Toronto, born at Lachine, Que., Jan. 24, 1876.

G. C. Martin, General Freight and Passenger Agent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., born at Creemore, Ont., Jan. 2, 1866.

G. Pepall, Assistant Division Freight Agent, G.T.R., and Agent, National Despatch-Great Eastern Line, Toronto, born at High Wycombe, Bucks, Eng., Jan. 15, 1849.

W. Phillips, European Traffic Manager, Canadian Northern Ry. and Canadian Northern Steamships, Ltd., London, Eng., born in Toronto, Jan. 31, 1870.

W. Pratt, Superintendent, Sleeping and Dining Cars and Hotels, Canadian Northern Ry., Winnipeg, born at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 23, 1863.

L. J. Rouleau, Travelling Freight Agent, G.T.R., and Agent, National Despatch-Great Eastern Line, Montreal, born there, Jan. 6, 1879.

B. G. F. Rutley, ticket agent, C.N.R. and

Canadian Northern Ontario Ry. Yard Layout at Hector (East End).

See pages 6 and 7.

The cubic capacity of the new portion of the building, exclusive of vaults under tracks, but including the splendid concourse, is 4,703,000 cu. ft., while the viaducts total another 1,000,000 cu. ft., and the power houses an additional 220,500 ft. The tower is 15 stories high, or 16 including the basement, and its top is 225 ft. above the level of St. Antoine St. It contains water tanks,

A. Wilcox, General Superintendent, Central Division, C.N.R., Winnipeg, born at Kincardine, Ont., Jan. 2, 1865.

T. A. Wilson, Assistant Superintendent, District 3, Lake Superior Division, C.P.R., Schreiber, Ont., born at Stratford, Ont., Jan. 27, 1872.

The Manufacture of Coil Springs.

There are a number of parts that enter into the construction of all kinds of rolling

Oil furnaces for heating the stock are located to the rear of the point from which

Fig. 1.—Coil Winding Machine.

stock which can be made in conventional and slow methods in the railway shops, but which when made in the specialty shops of large supply companies, are made more expeditiously and, for the most part, better, from the fact that the demand is sufficiently great to warrant the installation of special machinery for this purpose. Such an instance is the production of coiled springs, which are in use in large quantities in every railway shop. Their production under the usual blacksmith shop methods would be an uneconomical practice; in specialty shops, this is not the case.

The development of a coiled spring is a most interesting process, and from its very general service, and the fact that but few people know the steps through which the stock passes in the development, the following description has been prepared. The practice followed in the Canadian Steel Foundries spring shop at Montreal has been selected as an example of modern practice in this work.

To obtain a flat bearing on the ends of the coil spring, the ends of the bar stock from which the coil is developed is drawn out to a flat tapered end, something like a chisel. The spring steel that is made up into these coils is received from the rolling mills, cut to length, and the ends of the stock piece drawn down as explained. The initial step in the coil spring is the coiling of the spring. Piles of spring stock lengths are to be seen in the background in the accompanying illustration.

Figs 1 and 2 show the mechanism of the machine, which completes the whole operation of winding the coil in one short order

mechanism to the left in fig. 2. The spindle at this point is large, and on its front is attached the stock chucking device a. This consists of a short knife edge mounted on the inner face of an arm that parallels the spindle inside the front bearing, and which is fulcrumed on the spindle inside the bearing, the whole revolving with the spindle. To the rear end of this fulcrumed arm is ring on a sleeve that can be moved within short limits on the spindle behind the front bearing. The movement of the sleeve by an operator's handle pushes the short link into a vertical position under the rear of the fulcrumed lever, the knife edged front end of this latter being depressed on the end of the bar stock, the end of which is pushed in under the knife edge, with the flat against the shoulder of the spindle at the point a. The central arbor on which the bar stock is clamped by the knife edge is the internal diameter of the spring. The knife edge is so adjusted as to bear down tightly on the stock when the locking sleeve to the rear is moved into the locking position.

On the face of the spindle shoulder at a, there is a slight projection against which the stock bar is forced before clamping. The bar is guided into place over the support bar b, and through the pitch guide, c, the purpose of the latter being to guide the bar while the spindle is winding up the stock so as to give the desired pitch. The pitch guide bar, c, is carried on a carriage which corresponds to the carriage of a lathe. This carriage is the casting d, which is bolted to a guide, e, which slides in bearings, one of which is shown at f.

On the face of the stationary part of the machine is a tapered bar, g, on which a short arm, h, fulcrumed on the carriage, rests when the carriage is in its furthest back position. Through an adjustable link connected to the upper end of the arm h, the latter is connected with the upper end of the guide arm c, so that when the arm h rides down the taper of g the arm c falls in towards the coil arbor, resting against the outer surface of the coil, against which

Fig. 2.—Close View of Coil Machine.

the views were taken. Here the lengths are heated in batches as for the bolt machine, etc.

The construction of the machine is fundamentally that of the lathe. A spindle is carried in two bearings which are integral with the base of the machine. The front bearing of these two is located behind the

it is held by the small coiled spring on the link on the top of the carriage. The bar stock is thus accurately guided on the arbor.

The forward movement of the carriage is obtained through a pitch screw sleeve secured to the machine spindle between the two bearings, as at i. These pitch screw sleeves are made in all the desired sizes,

and are constructed in halves which can be bolted on around the spindle. The sleeves consist of hollow cast iron shells, in halves, as mentioned, bored at the ends to fit the spindle, with the outer surface turned, and grooved with a narrow channel cut to the required pitch, each end of the pitch groove breaking away from the spiral to give the flat end to the spring. On the continuation of the bar *e* to the left, there is a vertically hinged arm, on the lower face of which there is a pin that can be dropped into the grooves of the pitch sleeve. This arm, *j*, fig. 1, is shown dropped into the pitch sleeve by the operator to the rear. This arm being attached to the bar *e*, carries the carriage to the right with the pitch of the screw, feeding the coil along over the arbor. On reaching the full length of the spring, the pin in the pitch sleeve groove rises out of the groove, when the carriage is ready to return to its initial position.

Over top of the winding arbor, there is a bar, *k*, pinned at each end, and which carries a downwardly projecting arm, *l*, with a stencil wheel pinned on its lower end. This stencil is engraved with the initials of the company and the number of the month of the year. The arm *l* is so set on the bar *k* for each size of spring that the last coil of the spring bears up under the roller, the name and date being automatically rolled on the spring during the winding operation. On the completion of the spring winding, the stencil roller is swung out of the way by the depression of a lever at the floor level, connected to the lower end of the rod *o*.

The arbor on which the coil is wound is of the expanding mandrel type, with the shell of the arbor in three sections, and an internal taper pin that forces outward these three sections to the required diameter. The inner taper pin of the arbor is operated through the lever in the hands of the operator on the right in fig. 1, this lever being fulcrumed on the arbor carrying frame, with the inner end connected to the taper pin, which, on being forced to the left, expands the arbor.

The frame that carries the expanding winding arbor is a carriage sliding on ways in the lower part of the frame of the machine, the action being such that the carriage can move away to the right from the position shown in both illustrations, so that the winding arbor is free from the supporting point where it connects with the chuck. The connection is only a loose sliding joint. This carriage, on moving to the right, causes the spring to strike the arm *r*. Before moving backwards, the taper pin in the centre of the mandrel is loosened, freeing the spring on the mandrel, so that as the spring strikes the stationary bracket *r*, it is slipped off the mandrel.

The drive of the machine is through a clutch block, engaging the gearing on the left in fig. 1 with the machine spindle. This clutch is operated by the attendant to the rear. On the lower left hand side will be noted a short shaft. This connects at the rear end with a cross shaft through bevel gears, this latter shaft bearing at its centre a pinion meshing with a gear rack on the under side of the arbor carrying carriage. Through this means, the carriage can be moved to the right so as to draw the arbor from out of the coiled spring.

Over the top of the machine will be noted a short length of pipe, the lower surface of which is perforated with a series of small holes, through which water is poured on the winding arbor, keeping the parts cool. The spring, on being dropped off the arbor, runs down a chute under the arbor to the floor to the rear.

The still red hot spring is next immersed in an oil bath and tempered in the conventional manner. After this process in the

oil bath, the spring is taken to a testing machine, in which it is forced up tight once, to give the required initial set. This testing press consists of a 4 bar vertical frame. On the upper end of the rod frame is a heavy head, on the under side of which is a set of 6 springs carrying on their lower end a face plate, the idea of the spring backing being that the machine will not be strained on tightening down the coil. Guided on the lower parts of the four rods is a plunger, operated from below through a chain of gears to a connecting rod, giving the plunger table a slow vertical motion. The spring is placed on the table, the upward

movement carrying it up to the spring cushioned head, against which it is tightened up. This gives the spring the required set, providing the tempering has been correct. To test for this set, there are gauge arms attached to one of the four legs. The spring is slipped into these legs, and if the tempering is correct, the spring will just clear through. This is the final step in the spring production. On ordinary heavy springs, it is possible to produce as many as 75 an hour in this machine without undue exertion, so that the development of the machine is a considerable improvement on older methods of forming by hand.

☐ Additions to Grand Trunk Railway Freight Car Equipment.

The G.T.R. has added to its rolling stock recently a large number of freight cars of improved designs, comprising several thousand all steel hopper cars, 2,000 steel frame box cars and 250 steel underframe automobile cars.

The hopper cars are specially adapted to the transportation of coal and coke, being self clearing and having doors which are easily and quickly opened or closed by means of a device which is positive in action as well as safe against accidental discharge of lading. They were designed to carry 100,000 lbs. of coal with an addition of the usual 10% overload. Pressed shapes, plates and structural material have been used to the best advantage to obtain as light a car as possible, consistent with good practice, for the service required. The centre sills, which extend from end sill to end sill, are made of 10 in. 20 lb. channels, reinforced at top with cover plates, and at bottom with 3½ by 3½ in. angles. The side sills extend from bolster to end, and are made of pressed steel 10 in. deep; 10 in. 15 lb. channels are used for end sills and are attached to side sills by means of gussets and malleable iron push pockets.

The body bolster consists of a ¼ in. web plate, reinforced at top with a bent plate, and at bottom with 3½ by 3 in. angles, and an 18 by ¾ in. tie plate, the centre plate and brace being made of malleable iron. The corners of the car are further stiffened by means of diagonal braces made of 5 by 3 in. angles, extending from body bolster at centre to end sills at corner of car. The side, end and floor sheets are made of ¼ in. plates, reinforced with flanges and angles, the sides being stiffened vertically by 7 pressed steel stakes per side, two inside gussets at cross ridge and two channel braces extending across car near the top from side sheet to side sheet. There are four doors, hung in pairs, each two doors being connected by two 5 in. channels, placed back to back, to which the operating arm of the door gear is connected. The operating device consists of levers and cams and is positive in action, and when in the closed position the doors cannot be accidentally opened and lading discharged along the tracks. The trucks are of the arch bar type with rolled channel top arch bar, 5½ ft. wheel base, 5½ by 10 in. journals; pressed steel truck bolster and brake beams; malleable iron journal boxes and grey iron wheels being used. All safety appliances are in accordance with the requirements of the Board of Railway Commissioners and the Interstate Commerce Commission, to permit use of cars in service between Canada and the U.S. The general dimensions are as follows:—

Length inside of body	30 ft. 0 ins.
Width inside of body	9 ft. 6 ins.
Width over side stakes	10 ft. 1½ ins.
Length over end sills	31 ft. 6 ins.
Height from rail to top of body	10 ft. 0 ins.
Height from rail to top of brake mast	10 ft. 9 ins.
Length of drop doors in clear	2 ft. 4½ ins.
Width of drop doors in clear	3 ft. 4½ ins.

Weight of car body	26,600 lbs.
Weight of two trucks	16,400 lbs.
Light weight of car	37,000 lbs.
Percentage of paying load to total weight of car and lading	75%

BOX CARS.—The 2,000 steel frame box cars, 60,000 lbs. capacity, which were recently completed, have steel under and upper frames and carlines, with wooden floor, roof and sheathing. The centre sills are 15 in. 33 lb. channels, and the side sills 8 in. 11½ lb. channels, all extending from end sill to end sill. The end sills are 10 in. 15 lb. channels, connected to side sills by gusset plates and pressed steel push pockets. The body bolsters are built integral with underframes and are made of four pressed steel diaphragms and one cast centre brace each, reinforced at top and bottom with 15 by ¾ in. cover plates. The underframe is further strengthened, transversely, by two cross bearers made of pressed steel diaphragms, with top and bottom cover plates, 13 in. deep at centre sills and 7 in. deep at side sills, also by three shallow diaphragms made of 5 in. to 6½ in. channels. The side posts and braces are made of 3 in. 6.7 lb. Z bars and the end posts of 4 in. 8.2 lb. Zs, securely riveted to the side and end sills and plates. The floor boards are made of yellow pine 1¾ in. thick, resting directly on side sills and bolted to intermediate Z bar stringers, being supported at centre by yellow pine stringers resting on top of centre sills. The side sheathing, or lining, is made of yellow pine 1½ in. thick, bolted to Z bar posts and braces with ½ in. bolts; the end lining being made of 1¾ in. yellow pine, bolted to end and corner posts. There are two centre side doors, one on each side of car, made of yellow pine. The cars are equipped with Westinghouse air brakes, cast steel couplers, vertical twin spring draft gear with key attachment to couplers, roller side bearings, inside metal roof and all safety appliances in accordance with the requirements. The trucks are of the arch bar type with 4¼ by 8 in. journals and 5 ft. 2 in. base, equipped with pressed steel bolsters, cast steel centre plates, M.C.B. brake beams, steel back shoes, malleable iron boxes and 625 lb. grey iron wheels. The general dimensions are as follows:—

Length inside of car	36 ft. 0 ins.
Width inside of car	8 ft. 6½ ins.
Height from floor to carlines	8 ft. 0½ ins.
Width of door opening	6 ft. 0 ins.
Height of door opening	7 ft. 7½ ins.
Length over end sills	37 ft. 4½ ins.
Width over side sills	8 ft. 9½ ins.
Width over eaves	9 ft. 7 ins.
Height from rail to top of floor	11 ft. 2½ ins.
Height from rail to roof at eaves	12 ft. 7½ ins.
Height from rail to top of running boards	13 ft. 7 ins.
Height from rail to top of brake mast	13 ft. 11½ ins.
Weight of car body	26,600 lbs.
Weight of two trucks	12,400 lbs.
Total light weight of car	35,000 lbs.

AUTOMOBILE CARS.—The 60,000 lbs. capacity automobile cars are of the following dimensions:—

Length over striking plate	41 ft. 8 ins.
Length over running boards	42 ft. 0 ins.

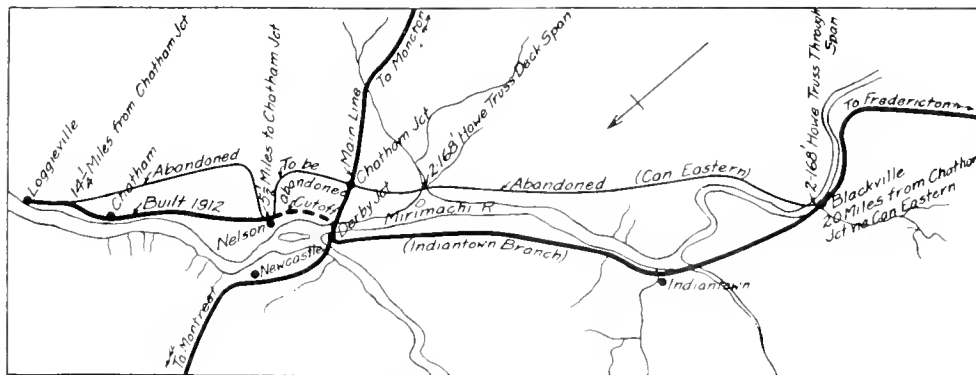

A card has been distributed to all employees of the system, in connection with the movement, conveying the terms of a pledge, as follows:—"I will railroad according to the book of rules. I will do all in my power to guard against unsafe acts on my part. If I see a fellow employee doing his work in an unsafe manner, I will speak to him as a friend, and use my moral influence to have him perform his duties in the safest pos-

sible manner. I will remember and practice at all times, safety first." To this pledge is appended a statement to the effect that 83% of all persons injured on railways are the men who work on them, and 60% of all preventable injuries are due to unsafe practices which can be avoided.

Intercolonial Railway Diversion at Derby Junction.

The accompanying map shows the situation of the Intercolonial Ry., and the old Canadian Eastern Ry., from Loggieville, to Chatham, now a part of the I. R. C., and the mouth of the Miramichi River, and the facilities which will be provided, when the work now in progress, or contemplated is completed.

When the Dominion Government took over the Canada Eastern Ry., extending from Loggieville to Fredericton, with a branch from Derby Jct. to Blackville, it operated a line on both sides of the South West Miramichi River from Blackville to the main I. R. C. line. On account of the large expenditure required to maintain the portion of the Canada Eastern Ry. between Nelson and Blackville, via. Chatham Jct., which included the building of two bridges, and as the local traffic on this portion of the line was very light, it was decided to abandon

Map Showing Diversion of Intercolonial Ry. at Derby Jct., N.B.

it and to build a diversion from Nelson to Derby Jct., and to use the Indian town branch from Derby Jct. to Blackville as the main line of the Canada Eastern Branch. A diversion from Chatham to Nelson was completed in 1912, and the projected line from Nelson to Derby Jct. will finish it. The mileage to be abandoned on the completion of the work will be as follows: Chatham to Nelson, 14.25 miles; Nelson to Chatham Jct., 5.50 miles; Chatham Jct. to Blackville, 20 miles, total 39.75 miles. The new route between the points will be 33.03 miles as follows: Chatham to Nelson (built), 8.28 miles; Nelson to Derby Jct., contract for construction awarded, 2.75 miles; Derby Jct. to Blackville, Indian town branch I. R. C., 22 miles.

The proposed diversion at Derby Jct., will leave the main line at the south end of the crossing of the South West Miramichi River, and will run to Nelson, on the old Canada Eastern Ry., 2.75 miles. The maximum gradient will be 1%.

We are officially advised that the contract has been awarded to K. A. Morrison, Union Bank Bldg., Ottawa.

In 1912, there were 236,444 miles of railway in the United States, and the fuel cost for operating trains over them was \$230,555,544, or 11.85% of the total operating expenses, and 8.22% of the gross earnings. This means a cost of \$4,000 a locomotive a year for fuel alone.

The Conservation of Natural Resources Through the Electrification of Railways.

A paper on this subject was read before the Canadian Railway Club in Montreal by G. Percy Cole, Electrical Engineer, Canadian General Electric Co., which has been abstracted as follows:

Few railway electrifications have been made entirely from an economic standpoint, municipal laws for the abatement of smoke having been largely the cause. The earlier installations centred on the feasibility of heavy electric traction, whereas the present tendency appears to be towards considering the question from an economic viewpoint.

Authority is quoted for the statement that on the average, there is receiving back from the coal consumed, much less than 10% of the latent heat in the coal. It has been shown that in order that electricity may be supplied for all purposes, this conversion efficiency must be raised to at least 25%.

Railways cannot possibly generate electricity for less than twice the cost of a company with miscellaneous power loads. The addition of the railway load would be welcomed by the latter, not only on account of the increase in load decreasing the unit cost, but the railway load would slightly im-

prove the total load factor, making it possible for the companies to offer the railways an attractive price.

Early railway electrifications involved heavy capital expenditure, as high as \$90 per k.w., to insure continuity of service, the plants in one instance being duplicated. Since the primary installations in 1907, conditions have changed, and it is only a question of a few years before the country will be covered with transmission networks, from which the railways may secure power, and on account of the non-coincidence of the railway peak with the industrial peak, it will be a desirable addition.

Comparing power generated in a station for distribution to electric locomotives, to that generated directly in steam locomotives, the fuel cost of the former is only about one third that of the latter. Railways use about one fifth of the coal mined, so that if a saving of two thirds of this were effected by the elimination of the steam locomotive, the saving in Canada and the U. S. would be approximately 75,000,000 tons, or \$147,000,000, yearly. In addition to this conservation of coal, the railway capacity would be increased, water stations would be eliminated, there would be no reduced locomotive steaming capacity in cold weather, and there would be elimination of smoke, as well as other minor advantages.

Four electrification systems are offered: low pressure d.c., at from 500 to 600 volts; high pressure d.c., at from 1,200 to 3,000

Additions to Grand Trunk Railway Mimico Locomotive House.

Since the addition of the recently purchased mikado locomotives to the G.T.R. motive power, the stalls in the existing locomotive houses on the divisions over which the new power is being used have been found to be too short. One of the principal runs over which they have been employed is that between Black Rock, N.Y., and Toronto, between which points solid coal trains are operated under conditions that are most suitable for such heavy power.

To accommodate these large units the locomotive house at Mimico, just west of Toronto, where all the motive power at that terminal is handled, has required enlargement. Ten stalls, nos. 1 to 10, are being extended 9 ft., by knocking out openings in the concrete wall in front of each pit just large enough to clear the cylinders, and building a new metallic lath and plaster wall to form the passage in front of the locomotives, beyond the old

The present 70 ft. turntable can handle the new locomotives when the tender is loaded with coal and water, but as this is not always convenient this turntable is to be replaced shortly by an 85 ft. one. It is the intention to build a concrete wall at the 85 ft. diameter, and then knock out the existing wall, replacing the existing table, thereby interrupting operations at a minimum.

Are lights, suspended from the inner wall of the locomotive house for illuminating the turntable, have been replaced by bull's eye lights, attached to the inner wall of the locomotive house near the roof, and focussing down on the turntable; 115 candle power tungsten lights are used, and a superior illumination is obtained.

Strengthening the Forth Bridge.—Bridges of long span, on account of their great dead load, as compared to the live weight of passing trains, have been able to meet the requirements of increased loading without the strengthening that has been necessitated in bridges of smaller dimensions. The great Forth bridge, in Scotland, with its 1,710 ft. spans, has been able to meet the increased requirements in all the main members without increasing the stresses unduly, but it has been found that an increase of 25% in the axle loading has left the floor system rather too light. The main floor girders are of ample strength, and only the superimposed trough construction requires strengthening, which it is proposed to do shortly, following observations on experimental sections in the bridge approaches. The new construction will extend over 7854 ft. and will require 2,500 tons of structural material. An effort will also be made to improve the drainage facilities, as the corrosive effect of sand, cinders and water on the existing floor has necessitated frequent paintings.

G. F. BURGESS, Road Foreman of Locomotives, C.P.R., Macleod, Alta., writes: "Enclosed is express order for subscription to Canadian Railway and Marine World. I had your valuable paper left on my desk every month when I was acting District Master Mechanic at Moose Jaw, and since coming up here I have missed it greatly, as it always contains the current railway news."

Great Northern Railway's Report.

The annual report of the directors for the year ended June 30 shows an increase in the authorized share capital from \$210,000,000 to \$231,000,000, and a decrease from \$147,757,909.09 to \$143,855,909.09 in bonds outstanding. There was paid in \$12,958,546 on account of new capital stock, and the directors had in hand 92½ shares of stock for acquiring 74 shares of the St. Paul, Minneapolis and Manitoba Ry. still outstanding. The directors also held \$28,069,000 of bonds in the treasury, and there were held by mortgage trustees \$14,106,000. During the year, \$102,000 of the St. Paul, Minneapolis and Manitoba Ry. bonds were retired through the operation of the sinking fund. Of the bonds held in the treasury, \$6,000,000 were issued against construction and acquisition of property, and \$5,246,000 against the acquisition of the stock of certain companies.

The construction of new lines included \$166,930.03 for the line from Niobe, N.D., to a junction at the international boundary with a branch of the Grand Trunk Pacific Ry., from Regina, Sask., and \$2,158,373.25 on account of construction of the Oroville-Pateros-Wenatchee line, connecting with the Vancouver, Victoria and Eastern Ry. at Oroville, Wash., south of the international boundary.

The company made advances to the controlled Canadian companies to pay for property, construction, additions and betterments, as follows:—

Midland Ry. of Manitoba	\$571,089.06
Manitoba Great Northern Ry.	18,882.06
Great West Southern Ry.	21,808.18
Vancouver, Victoria and Eastern Ry.	352,092.15
Nelson and Fort Sheppard Ry.	4,592.53
New Westminster Southern Ry.	34.37

Total \$968,876.45

The Midland Ry. of Manitoba issued \$4,300,000 of stock in payment of advances for construction made by the G. N. Ry. and Northern Pacific Ry., each company receiving one half of the total issue.

The gross operating revenues for the year were \$78,692,767.22, and the income from operation was \$28,676,258.77, an increase of \$3,513,366.47 over the year ended June 30, 1912. The operation of the company's lines in Canada are included in the totals, the figures not being reported separately.

Details as to construction work are referred to under the heading of Great Northern Ry. Lines in Canada elsewhere in this issue.

The general balance sheet shows that the company had the following investments in other railways, whose lines formed a part of the system:—

Midland Ry. of Manitoba	\$2,172,940.49
Manitoba Great Northern Ry.	2,061,491.59
Brandon, Saskatchewan and Hudson Bay Ry.	2,150,000.00
Great West Southern Ry.	1,201,968.07
Bedfordton and Nelson Ry.	280,000.00
Nelson and Fort Sheppard Ry.	2,093,612.04
Red Mountain Ry.	310,619.07
Vancouver, Victoria and Eastern Ry. and Navigation Co.	19,482,092.15
New Westminster Southern Ry.	279,021.47

Car Illumination.—From the results of a series of tests of gas and electric lighting in the Lake Shore and Michigan Southern Rd. shops at Collinwood, Ohio, a committee has drawn the following inferences: 1. Equally satisfactory illuminating results are obtained with either the centre deck or half deck arrangement, but the latter has a much greater maintenance charge. 2. For good illumination distribution, the light should not be more than two seats apart, excepting indirect or semi-direct, which may be located three seats apart. 3. With direct lighting, head lining color has no effect, but a light color is recommended on account of cheerfulness. 4. A lamp of greater light capacity is desirable, but pending the production of such a lamp, only the most efficient present types should be used.

Recommendations in Connection With Fruit Transportation.

At the annual meeting of the Ontario Fruit Growers' Association in Toronto recently, the following recommendations, made by the Association's Transportation Agent, G. E. McIntosh, of Forest, were adopted:—

That an effort be made to have all navigation companies handling freight and operating upon Canadian waterways placed under the jurisdiction of the Board of Railway Commissioners.

That power be given the Board to adjudicate claims against railway or express companies not settled in 60 days.

That the Board be given jurisdiction in the matter of fixing a penalty for rough handling and pilfering of freight and express shipments.

That fruit inspectors be also cargo inspectors.

The express minimum be reduced from 20,000 lbs. to 15,000 lbs.

That if necessary the Board of Railway Commissioners be asked to compel the railway companies to allow free transportation both ways for man sent in charge of heated cars.

That the railway companies be asked to provide a special fruit train service from central points in Ontario to Winnipeg during the shipping seasons.

Progress of Construction of the Quebec Bridge.

Work on the bridge across the St. Lawrence River near Quebec was carried on throughout the past summer and autumn. Practically all of the masonry work on the piers is completed, and progress has been made in the erection of the approaches, and of the steel falsework for the anchor spans. The steelwork is being fabricated in an entirely new shop at Lachine, Que., built especially for the Quebec bridge by the St. Lawrence Bridge Co., a newly organized company holding the Quebec bridge contract. It has a capacity of about 2,000 tons a month.

All draughting, designing, etc., for the bridge is being done at Lachine by the St. Lawrence Bridge Co. under the direct supervision of the Board of Engineers, but when the shop designing is completed the whole office will be moved to or near the bridge site.

When construction is started again in 1914, it is expected that erection will be prosecuted from both sides of the river and that the approaches will be completed by the end of next season. No estimate is made as to the time of completion of the anchor arms or of the entire bridge.

The Use of Natural Gas on the Intercolonial Railway.

Since March, 1913, the Intercolonial Ry. has been using natural gas for lighting its passenger car equipment over the principal portions of its main line, including all the first class, second class, sleeping, dining and chair cars in that service, or about 200 in all. Charging stations are located at Halifax, Moncton and Levis, Pintsch gas being also still used from the Pintsch Compressing Co.'s Montreal plant.

The gas is used in the regular Pintsch gas equipment in the cars, at the same pressure, none of the parts being changed, except that it has been found that flat flame burners are not as satisfactory with natural gas as Pintsch gas, and, in consequence,

the flat burners are being replaced with mantle burners as the cars go through the shops.

As previously mentioned in these columns natural gas, which is obtained in quantities near Moncton, has replaced producer gas for the gas engines in the Moncton shops. It is also being used in the same plant for the blacksmith, boiler and pipe, shop forges, and in the regular cast iron sectional boilers for heating the general offices and station, and in the water tube boilers for shop heating. During the summer some 30,000 cu. ft. a month are used, and during the winter about 50,000 a month.

The Additions to Angus Shops, Canadian Pacific Railway.

Ten steel freight cars a day, and from 8 to 10 steel passenger cars a month, is the capacity of the latest addition to the Angus shops, C.P.R., Montreal. The new buildings for the construction of steel cars are now operating in full blast. The buildings consist of two structures 100 by 200 ft. and 100 by 182 ft. respectively, for the manufacturing of both classes of cars, a building 72 by 405 ft. for the exclusive manufacture of freight cars, and four buildings 226 by 208 ft. for passenger car work.

The blacksmith shop, wood mill, and wooden freight car shop previously used in the manufacturing of wooden cars, and which had a capacity of 32 cars a day, will be utilized in the work of steel car construction. The only change to be made will be the affording of more space in the blacksmith shop for the presses and machinery required. A new bolt nut and rivet shop, 60 by 420 ft., has been built, to which all this class of machinery can be moved.

Extension of Grain Elevator Facilities at St. John, N.B.

The new C.P.R. elevator at St. John, N.B., with a capacity of 1,032,000 bush., was completed and ready to receive grain during December. The cost of the building is quoted as \$600,000. The contractors were John S. Metcalf Co., Montreal.

The Dominion Department of Public Works has awarded a contract for the erection of approximately half a mile of grain shipping conveyor galleries at berths 5 and 6, Sand Point, West St. John, N.B., at an approximate cost of \$135,000, to John S. Metcalf Co., Montreal. The conveyor will extend from the end of the old C.P.R. elevator to the inner end of Sand Point basin, round the end of the basin and on top of the Government sheds 5 and 6. Belt conveyors 36 ins. wide, each with a loading capacity of 15,000 bush. an hour, will be installed so that vessels at both sheds may be loaded simultaneously. These conveyors will also receive grain from the new C.P.R. elevator, under construction also by John S. Metcalf Co., and which it is expected to have completed early in the winter. The galleries will be of wood, and will be 56 ft. above wharf level. Thirty-three vessel loading spouts will be provided, and all machinery will be driven by electricity.

Canadian Cartage and Storage Co., Ltd., has been incorporated under the Dominion Companies Act, with \$500,000 capital and office at Montreal, to carry on business as cartage contractors and forwarders, and to own and operate vehicles of all kinds, aerodromes, steam and other vessels, etc. F. W. Rous, Westmount, Que., is chiefly interested.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

20728. Oct. 29.—Authorizing C.P.R. to build bridge 0.32 at Lorne St., Kamloops, B.C.

20729, 20730. Oct. 29.—Authorizing C.P.R. to build at grade its ballast pit spur across highways from mileage 0 to 3.05 of said ballast pit spur, at mileage 3 from Bassano, and between Sec. 19-6-11 and Sec. 24-6-12, w. 4 m., on its Weyburn-Stirling Branch.

20731. Oct. 28.—Approving location of C.P.R. station at Mara, B.C.

20732. Oct. 28.—Authorizing Canadian Bridge Co. to build foot bridge and grade crossing over Pere Marquette Rd. at Walkerville, Ont.

20733. Oct. 27.—Authorizing C.P.R. to build, at grade, extension to passing track across Boundary St., Didsbury, Alta.

20734. Nov. 3.—Authorizing C.P.R. to divert road in Sec. 4-23-27, w. 3 m., Sask., and to build its Swift Current Northwestern Branch at grade across same at mileage 96.3.

20735. Oct. 27.—Authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co. (G.N.R.) and C.P.R. to operate trains over crossing at Burrard Inlet, Vancouver, B.C., without previous stop.

20736. Oct. 29.—Authorizing Montreal Light, Heat and Power Co. to lay concrete water tunnel under C.P.R. in Ville Lasalle, Que.

20737. Oct. 30.—Authorizing G.T. Pacific Branch Lines Co. to build spur for Union Coal Co. in Sec. 36-31-24, w. 4 m., Alta.

20738. Oct. 29.—Authorizing G.T. Pacific Ry. to build spur from its main line on 21st St. into Block 12, Inglewood Subdivision, Edmonton, Alta.; crossing of Brazeau Ave. to be built as per regulations.

20739. Nov. 4.—Ordering that rating of 4th class provided in Canadian Freight Classification for blaugas and carbonic acid gas be provided, also for oxygen and acetylene gases in carloads, and dismissing application for a reduced less than carload rating of oxygen gas.

20740. Oct. 28.—Authorizing C.P.R. to build, by means of a bridge, four tracks on its main line across Westminster Road, Lethbridge, Alta.

20741. Nov. 5.—Authorizing Canadian Northern Ry. to build its Bienfait-Estevan Branch over a coal mine in south 1/2 Sec. 19-2-6, w. 3 m., Sask.

20742. Nov. 6.—Ordering Pere Marquette Rd. to maintain watchman at crossing of highway 134 miles west of Kingsville, Ont., pending installation of bell.

20743. Nov. 5.—Relieving C.P.R. from providing further protection at crossing of first public highway west of west switch at Little St. Martin, Que.

20744. Oct. 9.—Relieving G.T.R. from providing further protection at crossing of public road one mile east of Wyoming, Ont.

20745, 20746. Nov. 5, 6.—Approving location of C.P.R. stations at Tribune and Bromhead, Estevan-Forward Branch, and at Westerham, Swift Current Northwestern Branch, Sask.

20747. Nov. 5.—Extending, to Dec. 31, time within which C.P.R. shall install electric bell as required by order 20017, Aug. 17, at crossing of Main St., Shelburne, Ont.

20748. Nov. 6.—Authorizing C.P.R. and Quebec, Montreal and Southern Ry. to operate trains over crossing at mileage 18.81 from Farnham, Que., without their first stopping.

20749. Nov. 6.—Extending, to Nov. 30, time within which C.P.R. shall install gates at crossing of Centre St., Chatham, Ont., as required by order 19051, Apr. 14.

20750. Nov. 6.—Authorizing C.P.R. to open for traffic portion of its Weyburn-Stirling Branch from mileage 0 to 49.2 east of Stirling, Alta.; speed of trains limited to 25 miles an hour.

20751. Nov. 6.—Authorizing C.P.R. to use bridge crossing St. Lawrence River at mileage 41.9, Farnham Subdivision, Que.

20752. Nov. 6.—Authorizing Canadian Northern Ry. to build across 11 highways on its Alsask South-easterly Branch, Sask.

20753. Nov. 6.—Authorizing C.P.R. to build extension and passing siding track at mileage 53.43, Toronto Subdivision, Ont., for Godson Contracting Co.

20754. Nov. 7.—Authorizing C.P.R. to build bridge 9.17, Nipigon Subdivision, over Maggot River, Ont., and rescinding order 20044, Aug. 18, so far as it authorizes similar construction.

20755. Nov. 6.—Authorizing C.P.R. to build spur for Kettle River Co., Minneapolis, Minn., at North Transcona, Man.

20756. Nov. 6.—Authorizing G.T.R. to build siding for Canada Stove and Furniture Co., St. Laurent Parish, Que.

20757. Nov. 6.—Authorizing Galbraith & Sons to build tram-logging road under Vancouver, Victoria and Eastern Ry. and Navigation Co.'s trestle bridge 73, near Lincoln, B.C.

20758. Nov. 7.—Approving location of Glengarry and Stormont Ry. from mileage 0 to 24.05.

20759. Nov. 6.—Relieving C.P.R. from providing further protection at crossing of Godfrey Ave., Winnipeg.

20760. Oct. 30.—Dismissing application of S. J. Blair, Calgary, Alta., of order staying proceedings under order 19075, Apr. 16, re C.P.R. branch for Northern Electric and Mfg. Co., Calgary; but determining that order be not construed as precluding applicant from claiming that spur cannot be built over his land without first taking expropriation proceedings under Railway Act.

20761. Oct. 30.—Ordering C.P.R. to provide level crossing where Calgary and Edmonton Ry. intersects 32nd Ave., Calgary, Alta., same to be built in accordance with standard regulations and at city's expense.

20762, 20763. Nov. 5.—Ordering Canadian Northern Ry. to provide proper culvert under its tracks at Waller Ave., and to provide crossing at Southwood Ave., Fort Garry, Man., both at the municipality's expense.

20764. Nov. 4.—Amending order 20018, Aug. 14, re C.P.R. crossing of Anderson St., Grenfell, Sask., by providing that cost of watchman be paid; 60% by C.P.R. and balance by the municipality.

20765. Oct. 31.—Ordering Canadian Northern Ry. to file, within ten days, plan in triplicate of freight shed 30 by 40 ft. to be built at St. Albert, Alta., within 30 days after approval.

20766, 20767. Nov. 5.—Ordering Canadian Northern Ry. to provide crossings at Chevrier Boulevard and at Waller Ave., Fort Garry, Man., at municipality's expense.

20768, 20769. Nov. 1.—Dismissing application of City of Saskatoon, Sask., for authority to build Avenue I across C.P.R. at rail level, and authorizing it to build Avenue I across C.P.R.

20770, 20771. Oct. 31.—Finding that should Peace Ave. and Athabasca Ave., Edmonton, Alta., be opened up, such opening would be subject to seniority of Calgary and Edmonton Ry. title and construction as against the city.

20772. Nov. 7.—Rescinding order 20624, Oct. 22, relieving C.P.R. from providing protection at Cote du Sud, Montreal.

20773. Nov. 8.—Extending, to Jan. 15, 1914, time within which C.P.R. shall install bell at crossing of Port Burwell Road, mileage 32.7, Port Burwell Branch, Ont.

20774. Nov. 7.—Authorizing C.P.R. to build spur for loading ties at mileage 44.32 from Chapleau, Ont.

20775. Nov. 6.—Authorizing C.P.R. to build spur for Frontenac Floor and Wall Tile Co., Kingston, Ont.

20776. Nov. 8.—Authorizing C.P.R. to build its Lacombe Easterly Branch across 39 highways, mileage 180.61 to 221.11, Alta.

20777. Nov. 8.—Approving location of C.P.R. station at Port McNicoll, Ont.

20778. Nov. 10.—Rescinding order 20638, Oct. 22, re C.N. Ontario Ry. farm crossing for L. O. Christmann, Beachburg, Ont.

20779. Nov. 10.—Authorizing C.P.R. to open for traffic portion of its Lacombe Easterly Branch from Consort to Monitor, Alta., mileage 130 to 130.

20780. Nov. 8.—Ordering C.P.R. to install, by June 1, 1914, improved type of automatic illuminated electric bell at crossing of public road east of Mountain Grove station, Ont., 20% of cost to be paid out of the railway grade crossing fund.

20781. Nov. 10.—Authorizing C.P.R. to open for traffic its Lacombe Easterly Branch from Coronation to Consort, Alta., 32 miles, speed of eastbound trains approaching crossings at mileage 137.6 and 136.3 to be reduced to 10 miles an hour, and bells rung continuously between whistling posts and crossings, and rescinding order 17852, Oct. 25.

20782. Nov. 8.—Approving plan showing Logan Drain where it crosses G.T.R. in Blyth, Ont.

20783. Nov. 7.—Authorizing G.T.R. to build bridge 62, Goderich Tp., Ont.

20784. Nov. 10.—Approving location of C.N. Ontario Ry. Parry Sound-North Bay line through Gurd, Nipissing, Himsforth and Ferris Tps., from mileage 200.52 to 233.00 from Toronto.

20785. Nov. 11.—Approving C.P.R. revised location from mileage 5.08 to 7.16, and from mileage 9.68 to 11.51, Schreiber Subdivision, Ont.

20786. Nov. 11.—Authorizing G.T.R. to build siding for Malcolm Furniture Co., Listowel, Ont., and change location of existing track south of the proposed siding.

20787, 20788. Nov. 10.—Approving location of C.N. Ontario Ry. Parry Sound-North Bay Line through Burpee, Burton, Mackenzie, Ferris, Mills, Patterson, and Pringle Tps., mileage 170 to 209.52, from Toronto.

20789. Nov. 11.—Authorizing Esquimalt and Nanaimo Ry. to build spur across roadway to station at Cowichan Lake, B.C.

20790. Nov. 10.—Ordering C.P.R. to rebuild culvert on its Chalk River Subdivision bridge 54.2, near Arnprior, Ont.; to be completed by Jan. 1, 1914.

20791. Nov. 11.—Relieving C.P.R. from providing further protection at crossing of public road at Cluny, Alta., mileage 116.2, Calgary Subdivision.

20792. Nov. 11.—Recommending to Government in Council for approval, Toronto, Hamilton and Buffalo Ry. rules and regulations, covering private instructions to train conductors.

20793. Nov. 12.—Authorizing City of Edmonton, Alta., to build its electric railway across G.T. Pacific Ry. at intersection of Twenty-seventh St. between Armstrong and Cochrane Aves., cost of providing half-interlocking plant to be paid equally by city and G.T.P.R.

within six weeks. Pen. 10¢ a day for each day in default of H. E. Knight, G. and Forks, B.C., and for each day in default of \$25 a day for each day in default.

20795. Nov. 12.—Authorizing G.T.R. to build bridge carrying Durham Road over its line, at milepost 125.25, near Hanover, Ont.

20796. Nov. 11.—Approving plan and specifications for Leifreik, award drain under G.T.R. in Lot 2, Lake Shore Concession, Rochester Tp., Ont.

20797. Nov. 12.—Ordering C.P.R. to install improved type of automatic electric bell at crossing of first public highway east of Beramunda, Ont., at mileage 3.9, Chalk River Subdivision, 20% of cost to be paid out of the railway grade crossing fund.

20798. Nov. 12.—Amending order 19439, May 16, re Great Northern Ry. subway at Snoway Ave., White Rock, B.C.

20799. Nov. 13.—Approving location of Alberta Central Ry. Sounding Creek-Moose Jaw line from mileage 220 to 277.75, east of Red Deer, Alta., and authorizing construction across 56 highways.

20800. Nov. 13.—Authorizing C.P.R. to build spur for Dominion Wire Rope Co., Lachine, Que.

20801. Nov. 13.—Authorizing C.P.R. to build spur for Montreal Light, Heat and Power Co., Lachine Parish, Que.

20802. Nov. 13.—Authorizing C.P.R. to operate spur for Massey-Harris Co. at Medicine Hat, Alta.

20803. Nov. 11.—Authorizing Canadian Northern Ry. to build across and divert public road between Sec. 24 and 25, Tp. 26, R. 23, w. 3 m., on its Alsask Southeasterly line, Sask., and ordering it to install improved type of automatic electric bell there.

20804. Nov. 13.—Authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co. (G.N.R.) to build over crossing, to build across and divert Nicola-Princeton highway, Lot 1775, Group 1, Yale District, B.C.

20805. Nov. 1.—Dismissing application of E. A. Purcell, Saskatoon, Sask., alleging that G.T. Pacific Ry. discriminates against his bus line.

20806. Nov. 13.—Dismissing application of Fort Garry, Winnipeg, Man., for order directing Canadian Northern Ry. to build crossing at Fairfield Ave.

20807. Nov. 13.—Authorizing Alberta Government to build diversion of road allowance across C.P.R. in s.w. 1/4 Sec. 32-18-14, w. 4 m., Alta.

20808. Nov. 13.—Authorizing Canadian Northern Ry. to divert Rue La Verandrye, St. Boniface, Man.

20809. Nov. 13.—Authorizing C.N. Ontario Ry. to build across and divert public road on Lot 38, Con. 18, Ferris Tp., stations 981 to 991, and rescinding order 20660, Aug. 13.

20810. Nov. 13.—Authorizing C.P.R. to build, at grade, its siding extension across public road at Worthington, Ont.; and to build sidings for Mond Nickel Co., Coniston, Ont., from its right of way, at Worthington, across public road and lands adjoining, in Lot 2, Con. 2, Drury Tp.

20811. Nov. 13.—Authorizing C.P.R. to build extension to siding for Dominion Radiator Co., Toronto.

20812. Nov. 13.—Ordering North Cowichan municipality, B.C., to move highway crossing at milepost 41.612 ft.; and rescinding order 6642, Feb. 27, 1909.

20813. Nov. 13.—Amending order 19366, June 7, re crossing of Canadian Northern Ry. by Regina Municipal Ry., on Fourth Ave.

20814. Nov. 13.—Approving plan and specifications of Ellice Maitland relief drain under C.P.R. on Lots 29 and 30, Con. 18, Elma Tp., Ont.

20815. Nov. 12.—Authorizing Canadian Northern Ry. to operate trains over Thirteenth St., Brandon, Man., without first stopping; cars of Brandon Municipal Ry. to be stopped before crossing, and conductors of latter cars to operate interlocker levers.

20816. Nov. 12.—Ordering C.P.R. and Great North Western Telegraph Co. to remove wires from poles on Queen St. North, between King and Weber Sts., Berlin, Ont.; city to make provision by which companies have right to string wires on Frederick and King Sts.

20817. Nov. 11.—Ordering Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build under crossing of A. R. Fairwell, Oshawa, Ont., to be completed within 3 months.

20818. Nov. 14.—Authorizing C.P.R. to build spur for P. Hamilton Co. across Shebrooke St. and along Water St., Peterboro, Ont.

20819, 20820. Nov. 14.—Authorizing G.T.R. to build sidings for Grand Gypsum Ltd., North Cayuga Tp., at Nelles Corners, Ont.; and Dominion T. and Ammonia Co., Hamilton, Ont.

20821. Nov. 13.—Authorizing Canadian Northern Ry. to build across Winnipeg Electric Ry. on Jubilee Ave.

20822. Nov. 13.—Authorizing C.P.R. to use bridge 45.9, Orford Subdivision, Que.

20823. Nov. 17.—Authorizing G.T. Pacific Ry. to build bridge across Nechaco River, mileage 7.4, Prince Rupert Easterly, B.C.

20824. Nov. 13.—Authorizing G.T.R. to operate bridges 217, over Jacques River, mileage 13.071, 232, over English River, mileage 36.83, and 236, over Chateauguay River, mileage 41.82, Que.

20825. Nov. 17.—Approving location of Montreal and Southern Counties Ry. from Central Vermont Ry. at St. Césaire to boundary between St. Césaire and St. Paul de Abbotville parishes, Que.

20826. Nov. 14.—Amending order 20513, Oct. 6, re installation of electric sign and bell, by Michigan Central Rd., at Townsend, Ont.

20827. Nov. 14.—Authorizing C.P.R. to build bridge 92.7 (Don Viaduct), near Highlands, Ont.

20828. Nov. 14.—Authorizing C.P.R. to build double track, certain land in York Tp., Ont.

20829. Nov. 17.—Amending order 19875, May 12,

20831. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20832. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20833. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20834. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20835. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20836. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20837. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20838. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20839. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20840. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20841. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20842. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20843. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20844. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20845. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20846. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20847. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20848. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20849. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20850. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20851. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20852. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20853. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20854. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20855. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20856. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20857. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20858. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20859. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20860. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20861. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20862. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20863. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20864. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20865. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20866. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20867. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20868. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20869. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20870. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20871. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20872. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20873. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20874. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20875. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20876. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20877. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20878. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20879. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20880. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20831. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20832. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20833. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20834. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20835. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20836. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20837. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20838. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20839. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20840. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20841. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20842. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20843. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20844. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20845. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20846. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20847. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20848. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20849. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20850. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20851. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20852. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20853. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20854. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20855. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20856. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20857. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20858. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20859. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20860. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20861. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20862. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20863. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20864. Nov. 18.—Authorizing C.P.R. to build bridge across Kiamistikwa River, at mile 10.5, Prince Rupert, B.C.

20880. Nov. 25.—Authorizing Canadian Northern Ry. to build across public road between Secs. 14 and 15, Tp. 20, R. 20, W. 3 m., Sask.

20880. Nov. 25.—Authorizing G.T.R. to build spur from siding serving Queenston Quarry Co., for S. W. Marchmont, on Lot 48, Niagara Tp., Ont.

20891. Nov. 20.—Ordering Canadian Northern Ry. within 30 days, to submit for approval of Board's Engineer detail plans showing half interlocking plants to be installed at various crossings in Edmonton, Alta., as required under orders 3598, 6751 and 7201; work to be completed within 3 months after approval; cost of diamonds to be paid by City of Edmonton, and cost and maintenance to be paid half by city and half equally between C.N.R. and G. T. Pacific Ry.; leave reserved to G.T.P.R. to appeal to Supreme Court upon competency of Board to apportion cost as provided; and rescinding order 14994, Sept. 11, 1911, in this connection, upon completion of interlocking plants.

20892. Nov. 25.—Authorizing Toronto, Hamilton and Buffalo Ry. to build spur for Egg-O Baking Powder Co., Hamilton, Ont.

20893. Nov. 25.—Ordering C.P.R. to erect fences along portions of right of way near Savona, B.C., work to be completed within 3 months from date; and rescinding order 17358, Aug. 27, 1912, in so far as it relieves C.P.R. from erecting fences between Savona and Pennys, B.C.

20894. Nov. 24.—Authorizing Hillsburgh Rural Municipality 280, Sask., to build highway across Canadian Northern Ry. 250 ft. west of west switch, D'Arcy, Sask.

20895. Nov. 25.—Approving location and detail plans of Windsor, Essex and Lake Shore Rapid Ry. station on Talbot Road, Malden, Ont.

20896. Nov. 27.—Authorizing C.P.R. to open for traffic portion of double track from mileage 121 to 131.3, at Broadway, Sask.

20897. Nov. 25.—Authorizing C.P.R. to build, at grade, its Snowflake Western Branch across a high ways, mileage 0 to 0.10, Man.

20898. Nov. 25.—Authorizing C.P.R. to build, at grade, switching lead at mileage 123.0 from Montreal, Smith's Falls Subdivision, Ont., across public road between Cons. 3 and 4, Montague Tp.

20899. Nov. 27.—Approving revised location of C. N. Montreal Tunnel and Terminal Co.'s tunnel line from St. Antoine St. to junction with main line, at Montreal.

20900. Nov. 26.—Approving Canadian Northern Ry. plan of freight shed to be built at St. Albert, Alta., as required by order 20765, Oct. 31.

20901. Nov. 25.—Authorizing G.T.R. to build siding for Harris Abattoir Co., Hamilton, Ont.

20902. Nov. 25.—Ordering Great Northern Ry. to build open ditch on north side of its line at Horth Road, Tynehead Station, B.C.

20903. 20904. Nov. 25.—Authorizing C.P.R. to build spur for W. Rutherford, Stephen, B.C., and siding for National Builders' Supply and Enamel Concrete Brick Co., Montreal, Que.

20905. Nov. 25.—Authorizing Saskatchewan Government to build highway over G. T. Pacific Ry. near northeast corner of Sec. 17, 18-26, W. 2 m.

20906. Nov. 27.—Authorizing B.C. Public Works Department to build overhead highway crossing over G. T. Pacific Ry. about 127 miles from Prince Rupert, near Fiddler Creek.

20907. Nov. 25.—Authorizing G.T.R. to build extension to siding for M. Chew, on Lot 21, Con. 3, Tay Tp., Ont.

20908. Nov. 27.—Authorizing Canadian Northern Ry. to remove spur to Exhibition Grounds, Brandon, Man., built under order 18348, Dec. 20, 1912.

20909. Nov. 28.—Extending, to Dec. 31, time within which British Columbia Electric Ry. shall complete work at crossing of Esquimalt and Nanaimo Ry. near Russell, B.C., as required by order 18713, Feb. 18.

20910. Nov. 27.—Authorizing C.P.R. to build spur for Pembroke Shook Mills, Ltd., Pembroke, Ont.

20911. Nov. 29.—Authorizing G. T. Pacific Branch Lines Co. to carry traffic over portion of Mountain Park Coal Branch, Alta., between mileage 0 and 30.24; speed not to exceed 12 miles an hour.

20912. Nov. 25.—Re special eastbound tariff rates from Vancouver, B.C., published by C.P.R. from time to time, to apply to carload shipments of lumber, shingles, and articles taking lumber and shingle rates. This order is given in full on another page.

20913. Nov. 28.—Amending order 20411, Sept. 23, re installation of automatic electric bells by Campbellford, Lake Ontario, and Western Ry. (C.P.R.) and G.T.R. at crossing between Lots 16 and 17, Con. A, Haldimand Tp., Ont.

20914. Nov. 28.—Authorizing C.P.R. to build its Calgary and Edmonton Ry. Lacombe-Easterly Branch, across highways at mileage 181.93 and 186.01.

20915. Nov. 29.—Authorizing C.P.R. to build grade crossing at mileage 61.12, East Kootenay District, B.C.

20916. Nov. 29.—Authorizing C.P.R. to build road diversion in Sec. 27.8.8, and to build its Weyburn Siding Branch across highway between Secs. 27 and 28.8.8, W. 3 m., Sask.

20917. Nov. 29.—Amending order 18457, Dec. 30, 1912, C.P.R. crossing of May and Ridgeway Sts., Fort William, Ont.

20918. Nov. 29.—Approving C. N. Ontario Ry. revised location through unsurveyed territory at Cleve Lake, Barton Tp., Nipissing District, mileage 131.39 to 134.75.

20919. Nov. 29.—Authorizing C. N. Ontario Ry. to open for traffic its branch from Oshawa station to material yard, south of William St., 2.4 miles.

20920. Nov. 29.—Authorizing C. N. Ontario Ry. to open for traffic its branch from Oshawa station to material yard, south of William St., 2.4 miles.

20921. Nov. 29.—Authorizing C. N. Ontario Ry. to open for traffic its branch from Oshawa station to material yard, south of William St., 2.4 miles.

20922. Nov. 29.—Authorizing C. N. Ontario Ry. to open for traffic its branch from Oshawa station to material yard, south of William St., 2.4 miles.

20923. Nov. 29.—Authorizing C. N. Ontario Ry. to open for traffic its branch from Oshawa station to material yard, south of William St., 2.4 miles.

20924. Nov. 29.—Authorizing C. N. Ontario Ry. to open for traffic its branch from Oshawa station to material yard, south of William St., 2.4 miles.

Port Huron Fire and the Grand Trunk Railway's Western Shops.

The G.T.R. took immediate steps, following the disastrous fire of Nov. 26, which devastated practically the whole of its Port Huron, Mich., car shops, to handle the repair work that formerly was done there. The accompanying illustrations give a bird's-eye view of the plant before, and immediately after, the fire. The only building of the entire plant not destroyed was, strangely, the lumber shed on the extreme left, alongside the wharf on the river. The building on the extreme right in the view of the plant before destruction, was the office, to the rear of which was the machine shop, and a long passenger car shop, extending nearly the full length of the grounds. To the left of the office building, was the blacksmith shop, adjoining which was the mill, with the freight car shop to the rear of both buildings, the mill forming a wing thereof. As the illustration of the plant following the fire shows, nothing remains but the brick walls of the office, and the machine and passenger car shops. The insurance adjustment is going on and until this is completed it will not be decided just what will be done in the way of replacing the plant.

To meet immediate requirements the G.T.R. has purchased the Whipple Car Co.'s plant at Elsdon, Ill., in the heart of the G.T.R. Chicago freight yard. The Whipple Co. was going out of business, so the plant

We were officially advised, Dec. 15, that the loss on buildings and contents burned at Port Huron amounts to about \$350,000. It had not then been decided whether the shops would be rebuilt or not.

Mount Royal Tunnel, Canadian Northern Railway.

The last barrier in the C.N.R. tunnel under Mount Royal, Montreal, was blasted out Dec. 19, at 7 a.m., when the gangs working from both ends met. In the afternoon, a party of engineers and other officials were taken through the tunnel by S. P. Brown, Chief Engineer, and H. T. Fisher, Tunnel Engineer of the Canadian Northern Montreal Tunnel and Terminal Co., in a train of work cars from the west portal at the back of the mountain to the Dorchester St. shaft, on the site of the proposed Montreal station.

This tunnel, which was described in detail in Canadian Railway and Marine World for August, 1913, is 3 1-3 miles long, with east portal, station 137.0, between Lagauchetière and Latour Sts., in Montreal, and the west portal, station 318.0, at the back of the mountain at the C.P.R. crossing. Briefly, the tunnel extends practically the full length through Trenton limestone and Essexite, with igneous dykes. The interior section

through first, the smaller heading has been timbered and the upper section of the bore removed to full dimensions. A large portion of the west end has been completed in this manner, leaving only the benches, which, through a short section, have also been removed. On the completion of the upper heading, the benches will be removed by steam shovel.

The tunnel at the Dorchester St. shaft, the terminal site, is level, at elevation 144.4 ascending from that point on a 0.6% grade to the west portal. The greatest depth of rock over the tunnel is near the point where the last headings met, where there is 600 ft. of rock above.

The small working heading was pushed through in the short period of 15 months. The best progress made was 810 ft. in 31 working days. The monthly progress in each heading averaged 420 ft., giving a gross monthly progress of 11,000 ft.

Following is comparative data of progress with other well known railway tunnels:—

Tunnel	Size of Heading	Distance	Time	Material
Arlberg		641	1 mo.	Gneiss
Simplon	6.5x9.5	685	1 mo.	Hornblende and mica
Loetschberg	6.5x10	1013	1 mo.	Triassic limestone.
Mount Royal	8x12	810	31 days	Hard limestone and dykes of igneous rock

The distance driven in 31 consecutive working days at the Loetschberg tunnel was greater than that in the Mount Royal tunnel, but it is said that the Triassic limestone in the former was ideal for making distance.

Grand Trunk Railway Car Shops at Port Huron Before and After the Fire.

proved a particularly fortunate means for the G.T.R. yards. This Elsdon plant covers about 20 acres, and comprises a modern group of buildings, none of which are over five years old. The office building, stores building, power house and mill building are of brick and steel construction. There are three main buildings for the forge shop and erecting shops, two of which are 80 by 500 ft., and the third, 80 by 400 ft., each containing three longitudinal tracks. These three buildings are of steel construction sheathed in galvanized iron. All the machinery throughout the plant is electrically driven, from power generated in the plant. Electric lighting is handled from the same power house. The G.T.R. took possession of the plant Dec. 20, and as soon as an inventory of the stock on hand is made, which is expected will be Jan. 1, it will be placed in service.

It is the G.T.R.'s intention to transfer much of the staff as desire to go, from Port Huron to Elsdon it being the President's express wish that all the old employes be cared for. From 400 to 500 can be used in the new plant, but it will not be quite large enough to handle all the repairs on the western line. Since the fire the pressing repairs on these lines have been handled in the company's Canadian shops. All the parlor and dining cars have been taken to Montreal for overhauling, adding to the congestion in that shop.

will be 22 by 30 ft. neat excavation, except near either portal, where it will be arched with concrete blocks. The estimated quantities to be excavated for the tunnel are 390,000 cu. yds. of rock and 13,000 cu. yds. of earth, and there will enter into its construction 61,000 cu. yds. of concrete and 1,000 tons of steel and iron. In addition, the work has necessitated 1,400 lineal ft. of shafting and tunnelling, not in the main tunnel line.

In the pushing forward of the work, four headings were used, with part of the time a fifth. Apart from preliminary work of preparing approaches, the actual tunnel work commenced from the west portal in Sept., 1912, and at the same time work was begun on the sinking of shafts at Dorchester St., station 145.0, and Maplewood Ave., station 265.0, the former 55 ft. deep, and the latter, 240 ft. From the Dorchester St. shaft, the tunnel heading, which in each case was from 8 to 10 by 12 ft., was pushed towards the west portal, with a short section to the east, towards the city portal. From the Maplewood Ave. shaft, the heading was driven in both directions, meeting that from the west portal at station 285.0 in April, 1913. The two headings from Maplewood Ave. and Dorchester St. were the ones that met Dec. 10, at station 208.0, completing the heading the full length of the tunnel.

Following up the smaller heading, principally from the west end, which was

Suit Against the Grand Trunk Ry. re Toronto Union Station.—An action has been instituted in Boston, Mass., by the Westinghouse, Church, Kerr and Co., New York, against the G.T.R. for the purpose of securing damages for an alleged breach of contract. Contract was entered into by the late C. M. Hays, President, G.T.R., for the preparation of plans and the erection of the new union station and terminals at Toronto. The contract was subsequently cancelled by the G.T.R., and for this cancellation \$1,000,000 is claimed as damages. It is stated on behalf of the G.T.R. that the Board of Railway Commissioners issued certain orders after the signing of the contract which made it impossible that the original plans could be carried out, and that the cancellation of the contract was justified.

The G.T. Pacific Ry. hotel Fort Garry, at Winnipeg, was opened for guests, Dec. 9. It is 14 stories high, and is of Canadian granite and buff limestone. It is located on Broadway Ave., in close proximity to the Fort Garry Union Station, and almost on the site of the historic Fort Garry, some ruins of which yet remain.

The Eastern Terminal Elevator Co., Ltd., incorporated under the Manitoba Companies Act, has been authorized to do business in Ontario, with capital to be utilized in that Province, limited to \$250,000. F. H. Young, Fort William, is its attorney.

Issue of Note Certificates by Canadian Pacific Railway.

The following official statement was given out by the C.P.R. management in Montreal, Dec. 5:—

"At the regular meeting of the directors today, a trust fund was created to be known as The Special Investment Fund, made up of deferred payments on land sales, and securities in which the cash proceeds of land sales are invested, to the aggregate of \$55,000,000. The Royal Trust Co. of Montreal is named as trustee of the fund.

"It was decided to offer the holders of the ordinary capital stock of record Dec. 23rd, 1913, in proportion to their respective holdings, \$52,000,000, note certificates carrying interest at the rate of 6% per annum, payable semi annually, at the price of 80% of their par or face value.

"The C.P.R. Co. engages and promises that the interest on the note certificates will be promptly paid, and that all of the note certificates will be redeemed at their face value on or before Mar. 2, 1924, but they may be redeemed in part by drawings at any time when the trustee has funds in hand for the purpose.

"The amounts accruing from time to time from deferred payments on land heretofore sold and the interest thereon, and from securities in which the proceeds of land sales have been invested, will be utilized by the trustee, in so far as may be necessary, or will be supplemented by the company if required, to effect the payment of interest on the note certificates, and the repayment of the principal on or before maturity."

It was also announced that shareholders would be entitled to subscribe for one note certificate for eight full shares of stock held. Payments are to be made as follows:—\$32 on each \$100 note on Feb. 2, and \$48 on March 2.

The day following the above announcement, Sir Thos. G. Shaughnessy made the following statement:—"The trust fund which has just been created by the company is to be devoted to the payment of interest on the note certificates and to their redemption at par at or before maturity, and is composed of the deferred payments on the securities in which the proceeds of the land sales, heretofore made, are invested. It does not include any of the company's unsold lands or other extraneous assets. These remain intact for the future benefit of the shareholders, and the directors are quite satisfied that the special income from these sources will be sufficient for all the company's purposes."

On Dec. 12, Sir Thos. G. Shaughnessy issued another statement as follows:—"The company is not short of funds by any means, its bank account being of very comfortable proportions, but it has for many years been its policy to be strong in its cash resources, and, considering the magnitude of the enterprise, this is manifestly prudent. Works of improvement, now in progress, to provide for its traffic, will require a considerable sum to finish. The additional railway mileage constructed, and nearing completion, represents an expenditure of upwards of \$10,000,000. To meet this expenditure the directors have authority to issue and sell 4% consolidated debenture stock, but it is not the time to go into the market with a large issue of that security to the prejudice of the commanding position that it has always had in the London market, and which again have when normal conditions are restored. Any issue of debenture stock, excepting such small amounts as may be required to meet the demands of the market, must be postponed until some more opportune time. Neither

would an increase of the company's capital stock be desirable just now. In view of these circumstances, the directors decided to ask the shareholders to loan the company the money likely to be required for its purposes during the next year or two on terms that would be advantageous to them, and the issue of \$52,000,000 of note certificates was determined upon accordingly.

"When the proceeds of land sales, to an amount exceeding \$62,000,000, had been invested in the property, the land assets were permitted to accumulate, and these now constitute the special investment fund of \$55,000,000 that has been set aside and earmarked as applicable only to the principal and interest of the note certificates. Of course it goes without saying that were the company to go into the market to borrow money on its own credit in the ordinary way, better terms could be arranged, but this was a special transaction between the company and its shareholders, and it was intended that the shareholders should have the distinct advantage to which they are entitled. These note certificates will constitute no permanent charge against the company's revenue; indeed, they make no demand whatever on the income from the company's traffic. It is a debt that will obliterate itself in the course of a few years. The unsold lands and other extraneous assets will remain undisturbed for the future benefit of the shareholders, and it is evident that the income from them will be sufficient for the purposes to which it has, for some years, been largely devoted."

Intercolonial Railway Construction. Betterments, Etc.

Halifax Ocean Terminals.—A contract for the first section of these terminals has been let, according to an Ottawa dispatch to Foley, Welch, Stewart and Panquier, at an estimated cost of \$5,208,748. A description of the work to be done under the proposed contract was given on pg. 462 of our Oct. issue. In connection with these new terminals, we have been officially advised that the existing tracks to North St. station, the deep water terminus and pier No. 2 will be retained, but nothing has been definitely decided as to the existing stations at North St. and at Richmond. The new union passenger station to be provided at the ocean terminals will be designed to accommodate all railways entering the city.

The New Station at Truro, N.S., has been completed. It is one of the largest and most modern stations on the line. It is 337½ ft. long, of which 110 ft. is two stories high, with a central tower 19 ft. square; and is 50 ft. deep. The building is of brick and concrete, and is finished with natural woods in the interior. The main entrance is under the tower, and leads to the general concourse, 61 by 50 ft., in which is located the ticket office. On the right is the ladies' waiting room and retiring room; the second class waiting room, with lavatories; and on the left is the smoking room, the station master's office, telegraph office and trainmen's room. A passage on the left leads to the general lavatories and the lunch and dining rooms, the latter being 80 by 50 ft. and in the single story part of the building. In the opposite wing, in the single story section, are baggage room, conductors' box room, express room and office and mail room. The second floor contains offices for the superintendent and the despatching staff, with six bedrooms.

Diversion of Line in Cape Breton.—Tenders are under consideration for the building of a diversion from North Sydney to Leitches Cove, on the Cape Breton section.

St. Romuald-Chaudiere Curve Second Track.—The contract for the second track work from St. Romuald to Chaudiere Curve, Que., 3.75 miles, to which reference was made in our October issue, has been let, we are officially advised, to Soper and McDougall, Ottawa. The work is not heavy, and there is no bridgework and does not involve any diversion from the existing line. The present track is to be raised at one or two points to improve the alignment. The contract does not include work at the crossing of the National Transcontinental Ry.

Bridge Reconstruction.—A contract is reported to have been let to the Dominion Bridge Co. for the building of four bridges, viz.:—over the Beemour River, over the National Transcontinental Ry., at Riviere du Loup, and Riviere du Sud; Canadian-Allis-Chalmers Co., for bridges at West River, Barneys River, and French River, N.S.; and to McKinnon, Holmes & Co., for bridges at Beach River, Riviere Le Brass, Sayabee, Ivory, Road and Oxford.

We are officially advised that the contracts cover as follows:—

Dominion Bridge Co., Becancourt River bridge, four 105 ft. deck plate girder spans; bridge at Riviere du Loup, six 105 ft. and two 50 ft. deck plate girder spans; bridge at crossing of National Transcontinental Railway two 52 ft. and four 45 ft. deck plate girder spans; Riviere du Sud bridge, two 65½ ft. through plate girder spans.

Canadian Allis-Chalmers, Toronto, West River, Antigonish, one 88 ft. through plate girder span, and 28 Bethlehem I beam spans, each 22 ft. 3 ins.; bridge at Barney's River east, one 71½ ft. through plate girder; French River bridge, one 89½ ft. through plate girder.

The contracts placed with McKinnon, Holmes & Co., Sherbrooke, Que., are for the following:—Riviere Le Bras bridge, 26 ft. centre to centre, near St. Louise, Que.; Black River bridge, 26 ft. centre to centre, near Sayabee, Que.; the Sayabee bridge, a 32 ft. 8 in. span centre to centre, 2.8 miles west of Sayabee; Ivory road crossing bridge, three spans 24 ft. each, for a roadway 20 ft. wide, supported on longitudinal I beams and two trestle bents, near Nelson, N.B.; Oxford Subway bridge, 20 ft. clear half deck plate girder span, at Oxford, N.S.

Automatic Electric Block Signalling.—As previously stated in Canadian Railway and Marine World, it has been decided to install automatic electric block signalling between the following points:—Halifax and Windsor Jct., N.S., 12.9 miles; Pamtelee Jct. and Moncton, N.B., 7.3 miles; Hampton and St. John, N.B., 22 miles. A contract has been given to the Union Switch and Signal Co., the approximate cost being stated as \$85,000. The installation is to be completed by June 30, 1914.

Painsec Jct.—Oxford Jct. Second track.—We are officially advised that engineers are in the field making surveys for revising grades, and building a second track between Painsec Jct., N.B., and Oxford Jct., N.S., 70 miles. The survey is aiming at securing a gradient of 0.6 per cent. J. H. Congdon is in charge of the party, and it is expected that the survey will be completed early in the spring.

Telephone Train Dispatching.—We are officially advised that a contract has been let to the Hall Switch and Signal Co., for the erection of a telephone train despatching line between Moncton and St. John, N.B., at an estimated cost of \$10,371.90.

Grade Crossings in Moncton.—A proposition has been laid before the Moncton, N.B.,

City Council with a view of eliminating the level crossings in the city. F. P. Gutelius, General Manager, Government Railways, explained the project at a meeting of the Moncton Board of Trade, Nov. 4, and it came before the city council, Nov. 7. The cost of \$100,000 is immediately available. The work would include the building of a subway on Main St. and bridges at five other points. The city council, Nov. 12, gave a general approval of the plans, asked for a couple of additional subways, and some other modifications, and appointed a committee to confer with Mr. Gutelius. At a meeting of the City Council Nov. 28, a resolution was passed stating that the written proposals submitted were not in accordance with the plans outlined by Mr. Gutelius, and that they be not concurred in. (Oct., pg. 475.)

The Rogers Pass Tunnel, Canadian Pacific Railway.

Preliminary work for the construction of the tunnel through Mt. Macdonald in the Selkirk Range for the C.P.R., considerable information about which has already been published in Canadian Railway and Marine World, is now well advanced. About 350 men are engaged, and this force will be increased later on to about 500, who will be employed for about four years.

Three camps have been established. Camp 1, at Glacier, B.C., which was described and illustrated in our November issue, will be the main headquarters of the contractors for the work. The second camp is located on the west side, and another is at Bear Creek, 6 miles east of camp 1. At the latter place three steam shovels are in operation, and will continue to be used there throughout the construction of the tunnel. Another shovel will be operated at east side of the hill. The contractors' quarters will include two large buildings, a boiler house and a locomotive house capable of housing four locomotives. The working force will be housed in a 2 storey building 360 ft. by 50 ft. The rooms will be each 12 by 12 ft.

The tunnel will be a trifle over 5 miles long and will have a 1,700 ft. approach on the west side, and a 2,600 ft. approach on the east side. It will lower the grade of the road 545 ft., will shorten the distance by nearly 4 miles; and will practically do away with dangers from snow slides. The portal of the tunnel will be 150 ft. wide by 40 ft., and it will be necessary to excavate 50 ft. before reaching tunnel grade. Before work can be started on the main tunnel, the course of the Illecillewaet River for nearly a mile, will have to be changed. In doing this the river will be diverted some 900 ft. to the left of its present course. Over 20,000 cu. yards of concrete will be required for tunnel approaches and the tunnel proper.

Foley Bros., Welch & Stewart, are the contractors. A. C. Dennis, M. Can. Soc. C. E., with headquarters at Glacier, B.C., is in charge of the work for them.

A Passenger on the Quebec and Lake St. John Ry., recently sued the company for \$1,000 damages for being put off a train between Limoilou and Lorette on account of his refusal to give up his ticket through not being accommodated with a seat. The judge stated that the fact that plaintiff remained on the train and standing, after being asked for his ticket, was an acknowledgment that he was prepared to proceed on the train, and therefore his ticket was collectible. He, however, awarded him \$10 and damages with costs, on account of the conductor putting him off the train between two stations, which was not justifiable.

Anniversary Honors to Dean Galbraith.

As a mark of esteem towards its Dean, John Galbraith, M.A., LL.D., M. Can. Soc. C.E., on the occasion on which, by a strange coincidence, occurred three important anniversaries of his connection with the University of Toronto, the University of Toronto Engineering Society made him the guest of honor at its annual dinner on Dec. 5. This occasion marked the 50th anniversary of the Dean's entrance to the University as a freshman; the 35th of his connection with the institution of which he is head, first as Principal of the Ontario School of Practical Science, and after the incorporation of the latter into the University with a change in name to the Faculty of Applied Science, as its Dean; and it was also the 25th annual dinner of the Engineering Society, of which he was the first president. The dinner was attended by more than 500 of the alumni, practically from all quarters of the continent.

Dr. Galbraith was born in Montreal, Sept.

Dean Galbraith.

5, 1846, receiving his primary education at the Port Hope Grammar School. Entering the University of Toronto in 1863 he received his B. A. with double scholarship in mathematics and general proficiency, and the gold medal in mathematics, as well as being Prince's prizeman in 1868. He received his M.A. in 1875, and the honorary degree of LL.D. in 1902. In addition, the honorary degree of LL.D. was conferred upon him by Queen's University in 1902. Following graduation, he studied engineering and surveying under G. A. Stewart, Chief Engineer, Midland Ry. (Ontario) subsequently attaining the rank of P.E.S. and D.L.S. He was employed in the building of the Intercolonial Ry., the Midland Ry., and the Canadian Pacific Ry.

On the formation of the Ontario School of Practical Science in 1878, he was appointed to the chair of engineering, as well as being Principal, and when that institution became the Faculty of Applied Science of the University of Toronto, he was given the title of Dean. To him, the old "School," as it is familiarly known by its graduates, owes

much of its success, as it was his tireless energy in promoting the welfare of the institution from the early days when a small building and a staff of three comprised its entire charge, to the present day, when there are three large buildings under him with a large staff of instructors and nearly 800 students in the four years.

In the engineering profession at large, he is well known. He was one of the founders of the Canadian Society of Civil Engineers, of which he was for many years a councillor, finally being elected President in 1908. He is also an associate of the Institute of Civil Engineers, England. He was a member of the Royal Committee to investigate the Quebec Bridge failure in 1907.

Railway Finance, Meetings, Etc.

Atlantic, Quebec and Western Ry.—A London, Eng., cablegram states it is understood among the creditors of the Charing Cross Bank, which financed the building of this railway, that the Quebec Government is considering the purchase of the company's bonds which are held by the liquidators of the bank; and that Canadian capitalists have an option on the company's land grants.

Canada Gulf and Terminal Ry. The annual meeting of shareholders was held at Montreal, Nov. 28. Following are the officers and directors for the current year,—President, M. J. O'Brien; Vice President, H. J. Lyons; Secretary-Treasurer, F. W. Roux; other directors, J. A. O'Brien, C. A. Gavreau, A. M. Tessier, G. A. Cote, J. A. Ross and Hon. R. Turner.

Canadian Pacific Ry.—Application is being made to the Dominion Parliament for an act to enable the C.P.R. to guarantee bonds, debentures or other securities of companies in which it may take shares, having for their object the holding of lands, wharves, docks, warehouses, offices, etc., to be used for the purposes of the company or its steamship connections.

Central Ry. of Canada.—A London, Eng., cablegram of Dec. 16 says:—"The Central Ry. Co. of Canada today resolved to retire existing bonds, replacing them by a new issue covering the whole main line between Montreal and Midland. C. N. Armstrong, Vice President, told the bondholders that the railway company was negotiating with an important shipping company which proposes to put a line of steamers on the Great Lakes and from Montreal to British ports. Negotiations are also proceeding with an important new railway from Montreal to the north. Canadian bondholders, Mr. Armstrong added, had never attempted to sell their holding, but they had every confidence in the company's future."

At a meeting of shareholders in London, Eng., Dec. 16, it was resolved to retire all existing bonds in order to make a new issue of bonds covering the whole projected line from Montreal to Georgian Bay. C. N. Armstrong, Vice President, is reported to have stated that bondholders had never attempted to sell their holdings. Negotiations were in progress with another railway for the enlargement of the undertaking, and also with a shipping company which proposed to put a line of steamers on the Great Lakes, and from Montreal to Great Britain to be operated in connection with the line.

Grand Trunk Pacific Ry.—A press dispatch from London, Eng., states that an announcement was made there recently that an issue of \$10,000,000 of seven year 7% notes would be placed on the market at 97, within a few days thereafter.

Grand Trunk Ry.—The Dominion Parlia-

ment is being asked to confirm an agreement between the G.T.R. and the Canada Atlantic Ry. for the amalgamation of the two companies, under the title of the G.T.R. Co., and to authorize the issue by the G.T.R. of such additional amounts of stock as may be necessary for the carrying out of the agreement.

Application is also being made for an act providing for the holding of one annual general meeting a year, and the submission thereto of the accounts for the entire year, instead of half yearly meetings as at present; authorizing the directors to pay interim dividends if thought advisable, and authorizing the creation of an additional amount of 4% consolidated debenture stock, the annual interest charge on which shall not exceed £100,000.

Kettle Valley Ry.—Canadian Pacific Ry.—A duplicate of an agreement between these companies was deposited with the Secretary of State at Ottawa, Nov. 22.

Stanstead, Shefford and Chambly Ry.—Following are the officers and directors for the current year:—Chairman, E. J. Chamberlin; President, S. W. Foster; Vice President, E. C. Smith; Secretary and Treasurer, G. E. Robinson; Assistant Secretary and Treasurer, W. H. Chaffee; other directors, W. Wainwright, G. C. Jones, G. Stevens and J. P. Noyes.

Temiscouata Ry.—Net earnings for October, \$2,161. Aggregate for four months ended Oct. 31, \$15,095.

Timiskaming and Northern Ontario Ry.—The Ontario Government has received \$250,000 from the Treasurer of the T. and N.O. Ry. representing the net earnings for the financial year, less an amount reserved for working capital. For 1912 the Government received \$510,000 and in 1911 \$515,000 from this source. The decrease in the net earnings is due to decreased freight traffic, owing to smaller ore and coal shipments, reduction in mining royalties, and increased working expenses.

The Ontario Government has received payment of \$2,134,000, the subsidy voted by the Dominion Parliament.

White Pass and Yukon Route.—Gross earnings from Jan. 1 to Nov. 14, \$1,075,202, against \$1,098,822 for same period 1912.

Railway Cartage Charges on Eastern Lines.—In connection with the arrangement by which the railway companies recently gave notice that giving cartage service as hitherto, would expire on Oct. 1, 1913, the Board of Railway Commissioners gave a hearing to a number of the eastern boards of trade, during December, at which the railway companies definitely announced that they would not continue the cartage service under the terms and conditions prevailing. It was announced Dec. 18, that the railway companies, in view of the urgent demand of the merchants in different sections of the country, and their voluntary offer through the boards of trade to pay the exact cost of cartage, would continue the present cartage arrangements until further notice.

G. T. Pacific Ry. Regina-Minneapolis Route.—Negotiations are reported to be in progress between the G.T. Pacific Ry., the Great Northern Ry. and the Chicago, Burlington and Quincy Ry. for the establishment of a through service between Regina, Sask., and Chicago, via Minneapolis. The run would be over the G.T. Pacific Ry. from Regina to the International boundary, over the Great Northern Ry. to Minneapolis, thence over the C.B. and Q. Ry. to Chicago. In the event of the arrangement being made, a new service will, it is said, be started in the spring.

Steam Railway Track Laid in 1913.

In pursuance of its annual practice Canadian Railway and Marine World issued circulars on Dec. 1, to all railway companies in Canada, asking information as to new track laid during 1913. The following table gives a preliminary statement of the new track laid. In a number of cases the figures given have been estimated either by the railway companies, or in our own offices, pending the receipt of the final figures for the year. Estimated figures are distinguished by an asterisk. The total new single track laid, 3,358.50 miles, is largely in excess of previous years, the figures for 1912 being 2,179.09 miles, and for 1911, 1,851.98 miles.

Waterford Lake to Colliery 17	1.00	
	3.00	
Timiskaming and Northern Ontario Ry. —		
Montreal River to Elk Lake, Ont.	6.00	
Iroquois Jet. to Iroquois Falls	6.40	
	12.40	
Vancouver, Victoria and Eastern Ry. —		
Kulgard to Sumas Landing	5.05	
Total	3,344.50	

In addition to the above new lines the C.P.R. laid second track as follows:

	Miles.	Miles.
*Quebec—Farnham section	3.00	
Ontario—Islington to Guelph Jet.	29.00	
Manitoba—Bergen north east	20.00	
Manitoba—Kemnay-Virden	35.00	
Saskatchewan—Whitewood-Grenfell	8.00	
Saskatchewan—Indian Head-Regina	21.60	
Saskatchewan—Regina-Pasqua	12.00	
Saskatchewan—Caron-Java	66.70	
British Columbia—Ruby Creek to Hammond	59.00	
	254.30	

The Toronto Hamilton and Buffalo laid second track on 5.90 miles from Welland to Fenwick, Ont., and the Vancouver, Victoria and Eastern Ry. 7.12 miles from Ardley to Still Creek, B.C., making a total of 267 miles of second track laid during 1913.

On the Minneapolis, St. Paul and Sault Ste. Marie Ry., a C.P.R. subsidiary line in the United States, 97.35 miles of track was laid as follows:—

	Miles.
Ambrose, N.D., to Whitetail, Mont.	85.78
Ironhub, Iron Mountain, Minn.	8.21
Range Jet. to Riverton, Minn.	3.36
Total	97.35

The Detroit and Huron Ry., a subsidiary of the G.T.R. in the United States, laid 14.50 miles of track, from near Cass City, to Bad Axe, Mich., 14.25 miles, and from West Bay City to Bay City Terminal, Mich., 1.25 miles.

Passenger Meetings at Buffalo.—The annual meetings of the Niagara Frontier Summer Rate Committee and the Great Lakes and St. Lawrence River Rate Committee will be held at the Lafayette Hotel Buffalo, N. Y., in January. The rate representatives of the Niagara Frontier committee will meet on January 20 and 21 at 9 a.m. for compilation of fares, etc., and the full committee will meet on January 22 at 10.30 a.m. The Great Lakes and St. Lawrence River Rate ing. The International Water Lines Passenger Association will meet on Jan. 21, at 4 p.m.

Calgary Storage Elevator.—The Minister of Trade and Commerce announced at Ottawa, Dec. 12, that tenders would shortly be called for the construction of a Government owned interior storage elevator at Calgary, Alta. It is said to be intended that construction shall commence as early as possible in the spring, that the capacity will be about 2,500,000 bush., and that the type to be followed is that which was adopted for similar elevators at Moose Jaw and Saskatoon.

The Dominion Government telegraph line between Vancouver and Newport, B.C., the terminus of the Pacific Great Eastern Ry., has been completed and opened for commercial business.

Railway Development.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—Press reports from Edmonton, Alta., dated Dec. 4, state that two engineering parties are in the field completing location surveys for the line. Construction will be started, it is stated, at a point on the line of the Edmonton, Dunvegan and British Columbia Ry., 12 miles north of Edmonton. J. D. McArthur, Winnipeg, will build the line. (Dec., 1913, pg. 573.)

Alberta Metropolitan Ry.—We are officially advised that right of way plans have been approved for about 16 miles of this projected railway, and that it is expected to build this year about five miles from the Calgary city limits, through Calgary Jct., to connect with the C.P.R. Ogden shops. A contract for four miles of grading has been let to the Dominion Co-operative N. T. and Realty Co., Calgary, and this is nearly completed. The company has an authorized capital of \$500,000, the directors being:—W. H. Clapperton, Toronto; W. J. C. Madden, W. T. D. Lathwell, R. P. Madden, Calgary. (Dec., 1913, pg. 592.)

Alberta, Peace River and Eastern Ry.—A general meeting of shareholders was called to be held at Edmonton, Alta., Dec. 29, to consider matters relating to the construction of the line. Lord Farrar, London, Eng., is President. (Dec., 1912, pg. 604.)

H. Muskett King, Vice President, and H. H. Williams, Chief Engineer, who have been in England for some time are expected in Edmonton about Dec. 31. A recent cablegram stated that the meeting of shareholders called to be held in Edmonton, Dec. 29, would be adjourned to London, Eng., where the stockholders reside. The cablegram also said that financial arrangements have been completed for starting construction early in the year.

All Red Line Ry.—In connection with this projected railway in Canada, the associated British interests are promoting the building of a line to connect existing railways in Ireland with Black Sod Bay, from which point it is proposed to run steamships to the Newfoundland coast, or to the starting point of the Canadian line. A contract is reported to have been signed in London, Eng., for the building of wharves and other harbor works at Black Sod Bay. H. C. Long, Boston, Mass., is said to be engineer in charge of the work. (Dec., 1913, pg. 579.)

It is reported in a press dispatch from Prescott, that the principal promoter of this railway project in Canada is F. A. Knapp; that the company will be capitalized at \$100,000,000, and that large New York and London, Eng., financial interests will be associated with the project. Mr. Knapp is a barrister formerly living in Toronto, and was the inventor of the Knapp roller boat, built in Toronto, about 15 years ago, which did not prove a success.

Bassano to Richmond, Alta.—We are officially advised that the press reports to the effect that a light railway was to be built under the recent Light Railways Act of the Alberta Legislature, from Bassano through the Irrigation Block to Richmond, by a subsidiary of the C.P.R., are entirely without foundation. (See Alberta proposals for Light Railways, Dec., 1913, pg. 573.)

Burrard Inlet Tunnel and Bridge Co.—At a meeting of directors in Vancouver, B. C., Dec. 3, it was reported that the Provincial Government had under consideration the question of taking over the charter and

building the bridge as a provincial work. Representatives of certain of the municipalities urged that the directors should invite tenders at once on the plans prepared by the company's consulting engineer. The plan suggested by certain interests to the Provincial Government is of a different type to that proposed by the company, and is estimated to cost \$1,000,000. (Dec., 1913, pg. 573.)

Application is being made to the Dominion Parliament for an extension of time for the building of its authorized lines of railway, bridge and tunnel at Vancouver, B. C.

Central Provinces Ry.—The Saskatchewan Legislature has incorporated a company with this title to build the following lines:—From Regina southeasterly to the eastern boundary of the province between townships four, five and six; from Regina northwesterly to townships 27, 28 or 29, ranges 4, 5 or 6, thence northerly to Saskatoon; from Regina northerly to Prince Albert, and from Saskatoon northeasterly to the eastern boundary of the province between townships 52, 53 or 54. The provisional directors are:—J. D. McArthur, W. P. McDougall, D. W. Campbell, R. A. Hazelwood, J. K. McLellan.

Dominion Atlantic Ry.—We are officially advised that a contract has been let to Kirk and Cook, North Sydney, N.S., for building a line from Centreville Jct., on the Cornwallis Valley branch, to Weston, N.S., 14.79 miles. It is proposed to build a line from Sissiboo Falls to Weymouth, 8.5 miles, but the plans for this have not yet been approved. G. G. Hare, Kentville, N. S., is Engineer. (Oct., 1913, pg. 475.)

Edmonton, Dunvegan and British Columbia Ry.—Edmonton press reports state that it is expected to have a regular train service in operation from Edmonton to Narrow Landing, on the Athabasca River, early in January. (Dec., 1913, pg. 573.)

Gananoque and Arnprior Ry.—Application is being made to the Ontario Legislature for authority to build a branch from the projected main line between Gananoque and Arnprior, Ont., in the township of Rear of Leeds and Lansdowne to Ottawa. J. C. Judd, Ottawa, is the solicitor. The company was incorporated in 1913 to build a railway to be operated by steam or any other motive power from Gananoque to Arnprior, Ont. The provisional directors are:—G. E. Fauquier, J. C. Judd, W. T. Sampson, W. J. Gibson, F. B. Taber, D. W. Green, J. Kenny.

Ha Ha Bay Ry.—The Quebec Legislature has extended the time for the building of previously authorized lines, and for building a branch line from a point on the existing line to the St. Maurice River, following the height of land. (Dec., 1913, pg. 575.)

Joliette and Lake Manuan Colonization Ry.—Application is being made to the Dominion Parliament for an extension of time for the building of the projected lines from Joliette to the G.T. Pacific Ry., and from Joliette to Montreal, Que. Beament and Armstrong, Ottawa, are the solicitors. (Aug., 1912, pg. 412.)

Kettle Valley Lines.—J. J. Warren, President, who was in Victoria, B. C., in conference with the Provincial Government, in connection with the construction of the line, Dec. 3, is reported as stating in an interview as follows:—Beginning at Midway, the present western terminus on the line, 75 miles of steel have been laid westerly to the summit between the Kettle River and

Okanagan Valleys. A small trestle is being erected there, and on its completion track will be laid to Canon Creek, mileage 83. A number of trestles have to be built in the Canon Creek district, which will delay track laying in that vicinity until the spring. The grading is finished, with the exception of some cuts and one tunnel, through to Penticton. This work it is expected to have completed and ready for track laying by Mar. 1. It was expected to have about 15 miles of steel laid easterly from Penticton by Dec. 31, leaving 35 miles to be laid to connect with the track end at mileage 75. Track has been laid 30 miles westerly from Penticton, and was expected to have been laid to Osprey Lake, 10 miles farther on, by Dec. 31. Very little work has been done between Osprey Lake and Otter Summit, mileage 105 west of Penticton, the location not having been finally approved. As soon as the route has been settled, a contract will be let, and the work completed, it is expected, by the fall. The line is in operation from Otter Summit to Merritt, 30 miles. At Coldwater Jct., 25 miles south of Merritt, the line branches off in the direction of the Coquihalla Summit. On this section 13 miles of grading have been completed, and 11 miles of steel have been laid. Between the Coquihalla Summit and the Fraser River, McArthur Bros. have over 1,000 men at work. The work of building the bridge across the Fraser River at Hope, to connect with the C. P. R., is well in hand, and it is expected to have it completed by the end of the year. At Merritt, where connection is made with the Nicola, Kamloops and Similkameen Ry., a C. P. R. branch, spur lines will be built during this year or next to give connection with the coal mines. The divisional shops and other buildings have been completed. (Dec., 1913, pg. 574.)

Lake Erie and Northern Ry.—Construction on this line between Brantford and Galt, and Brantford and Port Dover, Ont., was suspended Nov. 28. W. P. Kellett, Chief Engineer, subsequently went to Montreal, and on his return stated that arrangements were being made to resume work shortly. The only place where work did not cease was in Brantford at Lorne Bridge. Near this point there is some difference with the city as to the protection of the terrace. G. A. Mountain, Chief Engineer of the Board of Railway Commissioners, was in the city, Dec. 10, in consultation with the City Engineer and Mr. Kellett on the matter, and a satisfactory understanding was reached. (Dec., 1913, pg. 574.)

Lake Huron and Northern Ontario Ry.—The old Bruce Mines and Algoma Ry. built a line from Bruce Mines, Ont., for about 13 miles northerly to some copper mines, and grading was completed for some six miles beyond that point, before it fell into financial difficulties. The property of the old company was sold, and the purchasers obtained incorporation under the above title from the Ontario Legislature, with power to extend the line to the National Transcontinental Ry. Press reports state that work has been started cleaning up the six miles of grading done beyond track end. It is expected that plans for the extension of line northerly to the N. T. Ry. will shortly be submitted for approval by the Board of Railway Commissioners. (July, 1913, pg. 331.)

Moncton and Northumberland Strait Ry.—We are officially advised that preliminary surveys have been completed for the projected line from Buctouche to Loggieville, N. B., and the location survey from Buctouche to St. Louis, 27 miles. It is expected to have the location survey, together with the profiles of all the bridge sites, borings of the

rivers, lay outs, etc., required by the Board of Railway Commissioners, completed by Feb. E. G. Evans, Hampton, N. B., is Chief Engineer. (Dec., 1913, pg. 574.)

Montreal and Lake Victoria Ry.—The Dominion Parliament is being asked to extend the time for the building of the line authorized by chap. 122 of the Statutes of 1912. E. Rodier, Montreal, is Secretary. (June, 1913, pg. 301.)

Montreal and South Western Ry. and Power Co.—The Quebec Legislature is being asked to extend the time within which the company may start construction of the works authorized by chap. 82 of the statutes of 1911. The company has power, among other things, to build a railway to be operated by steam, electricity or any other motive power in the counties of Laprairie, Beauharnois, Huntingdon and Caughnawaga, and particularly from Adirondack Jct., on the C.P.R., to the international boundary at St. Francis; from Adirondack Jct., on the New York Central Ry., to Dundee, in Huntingdon county. H. A. Beique, Montreal, is solicitor. (June, 1911, pg. 557.)

Pacific and Hudson Bay Ry.—We are officially advised that survey work has been completed for the present, that arrangements are being made to start construction on the first 30 miles of the line early in the spring, that route maps have been filed, and that arrangements have been made for securing the right of way for the greater part of the contemplated construction. The portion of the right of way for which negotiations are in progress is that through the Bella Coola Indian Reserve. (May, 1913, pg. 220.)

Pacific Great Eastern Ry.—It is expected that a train service will be put in operation between North Vancouver and West Vancouver, B. C., Jan. 1; and by June 1, as far as Horseshoe Bay, near Newport. The lines being operated from Newport for about 12 miles, and it is expected to be able to run trains as far as Lillooet by the fall, and to have the entire line to Fort George completed by the end of 1915. It is not intended to have the piece of line along Howe Sound into Newport completed until 1915, as there is a water route between Vancouver and Newport, which can take care of the existing traffic.

The company is negotiating with the Provincial Government with a view to securing a considerable area of the tide flats at Newport, reclaiming them for railway purposes. (Dec., 1913, pg. 574.)

Prince Edward Island Ry. The line to be built to Carleton Point in connection with the ferry terminals under construction there, will start from the existing line about 1.5 miles from Cape Traverse. It will be about three miles long. Construction will, we are officially advised, probably be gone on with at once. (Dec., 1913, pg. 574.)

Quinze and Blanche River Ry. We are officially advised that this railway was built only for a very short distance from the Quinze River, a tributary of the Ottawa River, to Quinze Lake, Que. It was built as a lumbering line, but is not now being operated. (July, 1913, pg. 481.)

The Dominion Parliament is being asked to extend the time for the building of the railway authorized by chap. 123 statutes of 1906-07, as amended by chap. 27, statutes of 1908-09, and to confirm the action already built, or partially built, between the Devil's Eddy at the Tard Canal of the Des Quinze River and the head of navigation on Lake Timiskaming. Geo. Powell and Lyle, Ottawa, are solicitors for applicants.

Regina and Saskatoon Ry.—The Saskatchewan Legislature is being asked to incorporate a company to build a railway from

Regina to Saskatoon, Sask. Anderson, Bagshaw and Amyot, Regina, are the solicitors.

Roberval-Saguenay Ry.—The Quebec Legislature has granted an extension of two years within which that company may build its projected lines; and has authorized the building of a line of 250 miles, from the Ha Ha Bay Ry., to the St. Maurice River. (Dec., 1913, pg. 575.)

Saskatchewan Central Ry.—The Dominion Parliament is being asked to grant an extension of time for the construction of the lines authorized to be built by chap. 160 of the Statutes of 1910. Smith and Johnston, Ottawa, solicitors. (June, 1913, pg. 302.)

Shefford, Bagot and Missisquoi Ry.—Application is being made to the Quebec Legislature for the incorporation of a company with this title, to build a railway from the International Boundary, between Quebec and Vermont, in the parish of St. George, to a junction with the Intercolonial Ry. between Bagot and St. Eugene, in Bagot County, and to build a branch line from Adamsville to the parish of St. Armand, and another from Roxton pond to Richmond. J. E. Runnells, Worcester, Mass., is Chief Engineer.

The provisional directors are W. H. Robinson, Granby, Que.; A. R. McMaster, Montreal; J. G. Gibson, Dunham, Que.; A. W. Runnells, Springfield, Mass.; J. E. Runnells, Worcester, Mass.

Simcoe, Grey and Bruce Ry.—Negotiations are reported to be in progress between the company and the G. T. R., under which the latter proposes to take over the line between Owen Sound and Meaford, Ont., when built. The directors have asked the G. T. R. to give fuller details of its proposals, particularly in regard to what running rights would be given to other railways. Jas. McLaughlin, A. G. MacKay, B. Allen, C. Eaton, Owen Sound, are provisional directors. (See Owen Sound to Meaford, Dec., 1913, pg. 574, and S. G. & B. Ry., Dec., 1912, pg. 605.)

Seward to Yukon.—The Territories Committee of the U.S. Congress reported, Nov. 27, in favor of the Government building and operating a railway from Cordova or Seward, on the Alaskan Pacific Coast, to the Upper Yukon River, 722 miles.

Timiskaming and Northern Ontario Ry.—The plans and specifications for the reconstruction of the line from North Bay to New Liskeard, are reported to be fully prepared, and is expected that now the Dominion Government has paid over the subsidy amounting to \$2,134,080 voted last session, the Provincial Government will authorize the Commission to go ahead with the work.

Toronto, Hamilton and Buffalo Ry.—The Board of Railway Commissioners has decided that it has full authority to issue an order to compel the company to divert its present entrance into Hamilton, via Hunter St., and to adopt in conjunction with the G. T. R. and the Canadian Northern Ry., a common location in the north end of the city. The city desired the company to eliminate level crossings, and the company proposed to do this by elevating its tracks. The city said this would be much more costly than depressing them, which the company refused to consider. Then the city put forward a plan for common entrance into the city for the T. H. and B. Ry., and the C. N. R. The company claimed that the Board of Railway Commissioners had no power to order it to move from its existing location, although it might order the tracks to be either elevated or depressed. (Dec., 1913, pg. 575.)

Toronto, Barrie and Orillia Ry.—At a special meeting of the Barrie, Ont., Town Council recently a resolution was

passed approving a provisional agreement granting the Toronto, Barrie, and Orillia Ry. Co. a 25 years franchise for building an electric railway in the town, the company's assessment for general taxation to be fixed at \$15,000. The company proposes to build a line of about six miles from near Utopia or Midhurst stations on the C. P. R. Toronto-Sudbury line into and through Barrie. Construction will, it is said, be started in April, and completed by Sept., 1915. A by-law approving of the agreement will be voted on by the ratepayers at the municipal elections, Jan. 5.

Victoria, B.C.—The rails recently required by the Victoria, B.C., City Council, were for building a railway on the pipe line grade for the new water supply. The pipe line will have a length of 27.5 miles from the Humpback reservoir to Sooke Lake, along the mountain side. The railway is to be used for transporting concrete pipe and other materials. The gauge is 2 ft., and the gradient 1 ft. in 1,000. There are a great many curves, and several high trestle bridges have had to be built. Part of the line is in operation. C. H. Rust, City Engineer and Works Commissioner, has charge of construction.

Wabash Rd.—Negotiations have been opened with the London, Ont., City Council by the Wabash Rd., for running rights over the London and Port Stanley Ry., from St. Thomas to London, Ont.

The "Right Side" for Traffic in British Columbia.—This question was discussed at a meeting of the Progress Club at Vancouver, Dec. 10, particularly as it affects the British Columbia Electric Ry. At present, this railway operates its line according to the British rule of the road, under which vehicle traffic of all kinds keeps to the left. The club advocates the making universal of the rule of the road as used throughout the United States and some parts of Canada. F. R. Glover, representing the company, while sympathizing with the suggestion pointed out that the change would have to be made in one night. The entire line and rolling stock were constructed for left hand operation, and it would be a most expensive matter to make the change. A full four way crossing would cost \$22,000, and as the number of such and other crossings on the line is large, the cost of changing the track would be about \$290,000. It would take a year to change the cars, and the cost would be about \$300,000, to say nothing of the inconvenience that would be caused by the withdrawal of cars to be altered. To purchase new rolling stock for the mainland lines would cost \$2,471,000. The other expenses might run to \$650,000. It would, therefore, be easily seen that the suggested change would be a most expensive one to the company.

The Quebec Industrial Co.—Application is being made to the Quebec Legislature for the incorporation of a company with this title with a capital of \$2,000,000 and offices in Quebec. The powers asked include, according to a statement made to the Legislature, "everything in the industrial and commercial calendar except banking and insurance." Among the things which it is specifically mentioned the company desires to do is to build or acquire docks, wharves, warehouses, elevators, etc., to build railways, and to carry on an express business. The provisional directors are: E. Roy, R. Langlois, O. Morin, advocates, Quebec.

The Quebec and Saguenay Ry. Co. applied in the Quebec courts recently for the dismissal of an ex parte motion for judgment in favor of M. J. O'Brien and others, the contractors, for building the line, amounting to \$839,511.18. The application was refused.

Railway Rolling Stock Notes.

The G.T.R. is in the market for 110 passenger cars, 500 flat cars and 500 stock cars.

The Pacific Great Eastern Ry. is reported to have ordered two motor cars in San Francisco, Cal.

The Intercolonial Ry. has received 5 consolidation locomotives, nos. 266 to 270, from Montreal Locomotive Works.

The G.T. Pacific Ry. has received two colonist cars, nos. 3038 and 3039, from the Canadian Car and Foundry Co.

The G.T.R. has ordered 500 steel frame stock cars, and 10 steel frame baggage cars, from National Steel Car Co.

The Pacific Great Eastern Ry. has ordered 44 steel frame box cars, and 67 steel under-frame flat cars, from National Steel Car Co.

The Minneapolis St. Paul and Sault Ste. Marie Ry. has ordered 6 passenger cars, 2 parlor cars and 2 buffet observation cars, from Barney and Smith Car Co.

The Intercolonial Ry. has ordered 200 box cars and 20 vans, from Nova Scotia Car Works; and 6 consolidation and 5 switching locomotives, from Canadian Locomotive Co.

J. D. McArthur and Co., contractors for the Dominion Government railway to Hudson Bay, are reported to have ordered six mogul locomotives from Canadian Locomotive Co.

The C.P.R., between Oct. 31 and Nov. 30, ordered the following rolling stock from its Angus Shops:—12 steel baggage and express cars, 25 steel first class cars, 3 horse express cars, 60 ft. long, and 1 horse car, 72 ft. long.

The Union Carbide Co. of Canada has ordered one four wheel saddle tank locomotive, with cylinders 15 by 24 ins., 44 ins. driving wheels, and weight in working order, 44 tons, from Canadian Locomotive Co., for delivery in February.

The British Columbia Equipment Co. has ordered one four wheel saddle tank locomotive, with cylinders 10 by 14 ins., 28 ins. driving wheels, and weight in working order, 14 tons, from Canadian Locomotive Co., for delivery during January.

The Canadian Northern Ry., between Nov. 13 and Dec. 12, received the following additions to rolling stock:—4 cabooses, from its Winnipeg shops; 125 box cars and 3 snow ploughs, from Canadian Car and Foundry Co., and 20 box cars, from National Steel Car Co.

The Confederation Construction Co. has ordered one four wheeled saddle tank locomotive, with cylinders 13 by 18 ins., 36 ins. driving wheels, and weight in working order, 30 tons, from Canadian Locomotive Co., for delivery during January, for use on its Welland Ship Canal contract.

Morley Donaldson, Vice President and General Manager, G.T. Pacific Ry. is reported to have stated recently, that the company was taking up the question of oil fuel for locomotives, and that he expected within two years, locomotives consuming oil fuel would be in operation on the Mountain Division.

The G.T.R. has received 18 mikado locomotives, 63in. wheels, nos. 570 to 587, from Montreal Locomotive Works; 691 box cars from Canadian Car and Foundry Co.; 313 box cars from Eastern Car Co.; 479 box cars from Western Steel Car and Foundry Co., and 286 gondola cars from Pressed Steel Car Co.

The Canadian Locomotive Co. has recently delivered 18 ten wheel locomotives, class M3d, with cylinders 23 by 26 ins., 188,600 lbs. weight in working order, completing an

order of 25, to the C.P.R.; and 5 six wheel switching locomotives, class O-10b, with cylinders 19 by 26 ins., 124,600 lbs. weight in working order, to the Canadian Northern Ry.

The C.P.R., between Oct. 31 and Nov. 30, received the following additions to rolling stock:—231 steel frame box cars, 2 horse cars, 2 buffet parlor cars, 7 single track flangers, and 3 locomotives class U3, from its Angus Shops; 356 steel frame box cars from Canadian Car and Foundry Co.; 8 locomotives, class D10, from Canadian Locomotive Co., and 366 steel frame box cars, from Barney and Smith Car Co.

The C.P.R. Angus Shops, Montreal, during five weeks last autumn completed 233 new cars, comprising tourist sleepers, diners, freight cars and conductors' vans, and also turned out 7 new locomotives ready for service. If the Angus Shops had no repairs to make, if the entire staff of 7,000 men were available, a complete train could be turned out daily by this plant, which is the largest of its kind in Canada and one of the largest on this continent.

The Intercolonial Ry. has ordered 5 consolidation and 5 switching locomotives, from Canadian Locomotive Co. Following are the chief dimensions,—

	Consolidation.	Switching
Weight on drivers	208,000 lbs.	150,000 lbs.
Weight, total	236,000 lbs.	150,000 lbs.
Wheel base, rigid	16 ft. 6 ins.	12 ft.
Wheel base, engine, total	25 ft. 5 ins.	40 ft. 7 ins.
Wheel base, engine and tender	69 ft. 11 ins.	40 ft. 7 ins.
Heating surface, firebox	297 sq. ft.	157.5 sq. ft.
Heating surface, tubes	1885 sq. ft.	2300.0 sq. ft.
Heating surface, total	2092 sq. ft.	2475.5 sq. ft.
Driving wheels, diam.	63 ins.	51 ins.
Driving wheels, centres	Cast steel	Cast iron
Driving journals	10 by 14 ins.	8½ by 11 ins.
Cylinders, diam. and stroke	24 by 32 ins.	21 by 26 ins.
Boiler, type	Straight top radial stay.	Straight top radial stay.
Boiler pressure	180 lbs.	180 lbs.
Tubes, no. and diam.	227-2 ins.	272-2 ins.
	30-5½ ins.	25-5½ ins.
Tubes, length	15 ft. 2½ ins.	12 ft. 5 ins.
Brakes	Westinghouse American	Schmidt type A
Superheaters	Schmidt type A	Walschaert
Valve gear	Walschaert	Walschaert
Weight of tender loaded	140,000 lbs.	90,000 lbs.
Capacity, water	6,500 galls.	3,800 galls.
Capacity, coal	10 tons	6 tons
Tank, type	Water bottom	Sloping back
Truck, type	Outside equal	Arch bar
	12ing	12ing
Truck wheels, diam.	34 ins.	34 ins.
Wheels, material	W. I. centre steel tired	W. I. centre steel tired
Journals	5½ by 10 ins.	4½ by 8 ins.
Brake beams	Steel I section	Steel I section

Following are chief details of the six wheel switching locomotive which the Dominion Dredging Co. is having built by the Montreal Locomotive Works, as mentioned in our last issue:—

Cylinder, diam. and stroke	17 by 24 ins.
Tractive power	23,100 lbs.
Factor of adhesion	4.33
Wheel base, rigid	10 ft. 8 ins.
Wheel base, engine and tender	35 ft.
Weight in working order	100,000 lbs.
Weight, engine and tender	155,000 lbs.
Boiler, type	Straight top
Boiler, diam. first ring	54 ins.
Boiler, working pressure	180 lbs.
Firebox, length and width	90 by 31½ ins.
Crown staying	Radial
Tubes, no. and diam.	180-2 ins.
Tubes, length	10 ft. 4 ins.
Heating surface, tubes	966 sq. ft.
Heating surface, firebox	121 sq. ft.
Heating surface, total	1,087 sq. ft.
Grate area	214 sq. ft.
Wheels, diam.	46 ins.
Wheels, material	Cast iron
Wheels, tender, diam.	28 ins.
Driving journals, Main, 8 by 9 ins.; others 7 by 9 ins.	
Tender truck journals	3¼ by 7 ins.
Journal boxes	Cast iron
Brakes	Westinghouse American
Tank capacity	2,500 U.S. galls.
Coal capacity	3 tons

With reference to the 130 passenger cars for which the G.T.R. is in the market, we are officially advised that the number is divided as follows:—67 first class, 25 baggage, 8 mail, 5 combination first class and baggage, 4 dining, 5 parlor, 16 suburban. The

cars are to be of steel frame construction 74 ft. over end sills, except the baggage and mail cars which will be 61 ft. over end sills. They will have substantial steel under frames, with sides of steel girders and substantial side sill Z bars and heavy dropper bar under window sills and 3 by 3½ by ¾ ins. angles for side plates. Steel carlines are to be rivetted to the side plate angles thus making a rigid steel frame construction. The entire vestibules are to be of steel of built up construction, and the width will be increased from 2 ft. 5 ins. to 2 ft. 9¼ ins.; trap doors will be so arranged that they cannot be opened before the vestibule side door has been opened, and grab irons are to be placed on the bottoms of the trap doors as well as on the buffer beams. Each of the cars will be equipped with the Coleman bolster locking device, which was fully described in Canadian Railway and Marine World of Jan., 1913. The insides of the cars will be finished in Mexican mahogany.

Grand Trunk Railway Betterments, Construction, Etc.

Stratford Station and Yards.—The new station at Stratford, Ont., has been practically completed, and the staffs of the several departments have taken up their new quarters. The majority of the tracks in the yard have been rearranged, and have been raised 3 ft. above the old level in the vicinity of the new station, and to meet this the bridge across Wellington St. is being raised. It is not expected, however, to have the entire work in the yards completed until the spring.

Press reports state that plans are being prepared for the building of an additional 20 stalls to the locomotive house, and that work will be started early in the spring.

The Port Huron Shops.—Pending decision as to what is to be done in regard to rebuilding the shops at Port Huron, Mich., a number of men have been transferred to the shops at London, Ont., and others have been moved to Chicago, Ill., where temporary premises have been taken for carrying on some of the work formerly done at Port Huron. (Dec., 1913, pg. 582.)

The Toronto Board of Trade's Traffic Department. of which T. Marshall is Manager, issued recently its Information Series no. 1, which contains very full information about less than carload merchandise freight service and class rates from Toronto, and shows what an excellent service the railways have under schedule. It also contains information with respect to the proper packing, marking and addressing of freight, preparation and presentation of claims, etc., together with the effective class rates. This is the first publication of its kind in Canada, and it will undoubtedly be of considerable assistance in shipping rooms.

Cost of Transcontinental Lines.—J. P. Muller, who testified as an expert before the Board of Railway Commissioners during its recent enquiry into Western freight rates, gave the following figures of capital expenditure on the three transcontinental lines:—Canadian Pacific, total \$363,274,900; per mile, \$35,126.07. Canadian Northern, total \$170,411,188; per mile, \$45,669.50. Grand Trunk Pacific, total \$110,612,588; per mile, \$87,537.66.

It is said that the motor cars on the Toronto Civic Car Lines on the Gerrard St. section cost about \$9,500 each and those on the St. Clair Avenue and Danforth Avenue sections about \$8,500 each. They were imported from the United States.

National Trans-continental Railway Construction.

We are officially advised that track was laid during 1913, on 88.26 miles in the Province of Quebec, and on 2.22 miles in Manitoba. The line is now completed so far as track laying is concerned, and G. Grant, Chief Engineer, is said to have recently stated that the entire line will be ready for handing over to the G.T. Pacific Ry. for operation, by the end of this year. On the line east of Quebec to the boundary between Quebec and New Brunswick, there is stated to be only about 10 miles of ballasting to be completed. The work of finishing up the line west of Quebec is being pushed forward with all speed. In regard to the velocity grades, which were established east of Bell River, the Chief Engineer is reported as stating that they will be eliminated before long.

The steel bridge work is not yet finished, contracts for four bridges to replace temporary trestle work having just been let to the Canadian Bridge Co. (Dec., 1913, pg. 578.)

Grand Trunk Pacific Railway Construction.

A train service is being operated regularly on the main line to McBride, B.C., 413 miles west of Edmonton, Alta. The contractor's work trains are running to the second crossing of the Fraser River, 55 miles beyond McBride. It is expected that track laying will be completed into Fort George early in January, and that the track laying gang working easterly from Prince Rupert will have come within 100 miles of Fort George. The grading is all expected to be completed by June 30.

G. T. Pacific Branch Lines.

The Saskatchewan Legislature has authorized the city of Weyburn to enter into an agreement with the G.T.P. Saskatchewan Ry. for the building of a branch line into the city from the Regina-International boundary branch. The programme for construction during 1914 had not yet been arranged between the Government and the company.

It has been reported to the Saskatchewan Legislature that the surveys for the proposed branch through the territory lying north and west of Moose Mountain, provision for the guaranteeing of bonds for the construction of which has been made by the Legislature, are expected to be completed during the winter. No agreement had been made for the extension of the Moose Jaw Riverside line across the South Saskatchewan River.

The Saskatchewan Legislature has authorized the guaranteeing of the company's securities to the extent of \$2000 a mile in addition to the amount already guaranteed, for the construction of the lines named in chap. 4 of the statutes of 1908-09, as amended by chap. 35 1909, chap. 5, 1909, and chap. 13, 1912, and additional securities to be secured by supplementary mortgages or deeds. It has also authorized the guaranteeing of securities for \$1,300,000 in addition to those already guaranteed to provide a railway bridge across the South Saskatchewan River on the Young-Prince Albert branch and bridges on the Regina-Moose Jaw port easterly branch, and approves thereof. The resolutions also provide that the rate of interest guaranteed shall be reduced from 12 to 11½%.

A freight service has been put in operation on the line from Regina to Moose Jaw. Said line is expected that a passenger service will soon be operated. On the line northwesterly out of Moose Jaw, track is

reported to have been laid to Mawer, 10 miles west of Eyebrow.

Track laying has been completed to the banks of the South Saskatchewan River, on the Young-Prince Albert branch, and sidings laid out. Preparations are being made for the building of a bridge across the river. It is expected that the piers and abutments will be put in during the winter.

The Board of Railway Commissioners has authorized the opening for traffic of the Mountain Park Coal branch, mileage 0 to 30.24. (Dec., 1913, pg. 578.)

The Legislature is further being asked to guarantee the company's 4½% bonds for \$15,000 a mile in respect of the construction of the following additional lines:—From a point on the Biggar-Calgary branch to the west bank of the South Saskatchewan River opposite Riverside, 60 miles; from the main line in tp. 36, range 8, west of the third meridian, southwestwardly from Saskatoon, 50 miles; from Talmage on the Regina-Boundary branch northwesterly towards Moosomin, 70 miles; and for a 90 mile extension of the Watrous-Swift Current line authorized to be built by par. 2 of the schedule to chap. 14 of the statutes of 1912.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Rates on Elevator Sundries.

20861. Re complaint of Otis-Fensom Elevator Co. against the proposed rating of 6th class for elevator guides, iron or steel, in supplement 2 to Canadian Freight Classification 15, submitted by Canadian Freight Association for approval, it is ordered that the complaint be dismissed.

Rates on British Columbia Lumber.

20912. Nov. 25.—Re complaint of Fullerton Lumber & Shingle Co., of Vancouver, that notwithstanding orders 7277 and 9187, the joint rates on lumber, etc., from stations on the Vancouver, Victoria & Eastern Ry. and Navigation Co.'s line to points in British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario, did not come into force until Sept. 22, 1913, although the C.P.R. rates from Vancouver, on which the said joint rates are based, became effective July 10, 1913. It is ordered: 1. The special east-bound tariff rates from Vancouver, published by the C.P.R. from time to time, to apply to carload shipments of lumber, shingles, and articles taking the lumber and shingle rates, shall, with the addition of not more than 1c. per 100 lbs., apply as joint rates from stations between Vancouver and New Westminster on the Vancouver, Victoria & Eastern Ry. & Navigation Co.'s line (operated by the Great Northern Ry.) to carload shipments of the same articles, to the same points, which are routed via Vancouver or New Westminster and the C.P.R., or the C.P.R. and railways connecting therewith. 2. The Great Northern Ry. shall receive not less than 2½c. per 100 lbs. to Vancouver or New Westminster as its proportion of the said joint rates. 3. The C.P.R. shall furnish the said new rates from Vancouver, together with the regulations and conditions pertaining thereto, to the G.N.R., so that the new joint rates from the said stations of the Vancouver, Victoria & Eastern Ry. and Navigation Co. shall become lawfully effective simultaneously with the new rates from Vancouver to the same points. 4. Orders 7277 and 9187, dated June 16, 1909, and Jan. 7, 1910, are rescinded.

Rating of Peanut Butter.

50925. Nov. 25. Re application of Toronto Board of Trade, for an order requir-

ing the provision of a carload rating of 4th class on peanut butter in the Canadian Freight Classification. It is ordered that the Canadian Freight Classification be amended by the addition of a rating of 4th Class for peanut butter in carloads, and that the said amendment be included in the proposed Supplement 2 to Canadian Freight Classification 16 submitted by the Canadian Freight Association for the Board's approval.

Demurrage On Coal Shipments.

21011. Dec. 15. Re complaint of Vanguard Co-Operative Supply Co., Ltd., Vanguard, complaining that the C.P.R. wrongfully collected \$34 from it as demurrage on two cars of coal consigned to Canadian Coal and Commission Co., Bienfait, and shipped on Dec. 11 and 12, 1912. It is declared that the said charge for demurrage was illegal.

Steam Shovel Track Connection.—Every shovel man knows that much time is needlessly lost in moving up. This loss is sometimes due to the poor organization of the crew, but more often to derailment and other delays due to soft ground and poor track laying. Many methods have been devised for cutting down these accidents by the introduction of various devices for connecting the track ends. The most common method is the ordinary splice bar, which holds the rails together by means of a pair of pins or bolts slipped through holes bored in the rail ends and through each end of the bar. Another device is a pair of angles mounted on a plate and bolted to the tie. A better device, however, is a rail chair. It consists of a steel casting which fits loosely over the end of the rail, its length corresponding to the width of the tie, i.e., 8 in. The casting is bolted to the tie as shown, and is fitted with pins chained to the castings in order to prevent loss.

A Steel Lunch Counter Car was placed in service by the Pennsylvania Rd. recently between New York and Philadelphia on trains which also carry dining cars. The car is 80 ft. long and has, instead of tables, a long mahogany counter extending over half the length of the car, with sufficient capacity to serve 21 people seated on revolving mahogany chairs facing the counter. While the number seated is no greater than in a standard dining car, it is hoped to be able to serve them more rapidly.

Roger Miller & Co., (P. E. I.) Limited, has been incorporated under the Dominion Companies Act, with a capital of \$200,000 and offices at Montreal, to carry on business as a general construction and contracting company. The provisional directors named are merely nominal. A contract was let recently by the Department of Railways to Roger Miller and Sons, Toronto, for the erection of car ferry terminals at Carleton Point, P. E. I.

Railway Lands Patented.—Letters patent were issued during October, covering railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acre.
Canadian Northern Ry.	119.39
Canadian Pacific Ry. grants	922.60
Canadian Pacific Ry. roadbed and station grounds	10.98
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	10,881.50
Total	11,973.47

Calgary Stock Yard.—A project for the establishment of a stock yard at Calgary, Alta., has been initiated by the United Farmers of Alberta, of which organization W. J. Tregellis is President. The C.P.R., it is stated, asks to have 51% of the capital allotted to it, but the U. F. of A. desire to give the three railways now entering Calgary equal interests, the city of Calgary and the farmers having the other interests.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Express, Telegraph, and Railway
Canal Contractors' Interests.
Official Organ of the various Canadian
Transportation Associations.

Change of Canadian Railway and Marine World's Subscription Rates.

When this paper, under its original name of the Railway and Shipping World, was first issued in March, 1898, it consisted of 32 pages, which size was maintained during that year. During the succeeding 16 years it has been gradually increased in size, so that in 1913 it averaged 112 pages an issue, a total of 1,348 pages for the year.

When the Railway and Shipping World was first projected it was intended to be both a newspaper, with up to date news features relating to its field, and a technical paper dealing with engineering, mechanical and other transportation problems. This intention has been fully lived up to, and from a small beginning, with a limited amount of reading matter, it has been gradually built up to its present standard. As business has warranted, the editorial staff has been added to, until to-day's Canadian Railway and Marine World has the largest editorial staff of any technical publication in Canada devoting itself entirely to one publication, and in addition has a number of regular contributors, so that the various engineering, mechanical and other technical subjects are dealt with by experts of experience and acknowledged authority.

The establishment of a transportation paper in Canada in 1898 was looked upon as a risky venture, including some of the most prominent transportation officials, but the founder had every confidence in his ability to make it a success, which has been amply justified by results. The originally expressed intention to make accuracy the leading feature of matter published was very soon appreciated, and has resulted in securing a most thorough circulation among all grades of steam railway, electric railway and steamship officials throughout the Dominion, the result being that to-day there are on the subscription list over 90% of all the officials of those companies. For a number of years the paper has been a thoroughly established and satisfactory property, and as a result it is today much larger and more valuable in every way than in its earlier history. How thoroughly this has been appreciated is shown by the fact that during 1913 the average circulation was 4,341 copies of each issue. How completely this covers the entire Canadian field will be realized from the fact that the average circulation of the leading railway publication in the United States during 1913 was 8,600 copies per issue, as per its own published statement, and that in a field including the whole United States, and with some circulation in Mexico, Canada and other countries. This comparison shows how thorough Canadian Railway and Marine World's circulation is, and justifies the claim that no other transportation publication in any part of the world has so intensive a circulation, in fact that this paper has a very much larger circulation in proportion to the population of its field than any other transportation periodical published anywhere.

In the 16 years during which the paper has been published the cost of production has largely increased. Altogether outside of the facts that the size of the paper has steadily grown, and that editorial and other expenses have been largely added to in order to secure the improvements which have been carried out, the actual cost of printing per page has largely increased, in line with the general advance in prices which has been such a marked feature of the last few years. Since the establishment of this paper printer's wages have advanced over 75%, the prices of paper, ink, etc., have also largely increased. As a result the cost of printing Canadian Rail-

way and Marine World, including typesetting, paper, presswork and binding, is now considerably over double the annual subscription price heretofore charged, and this is exclusive of the cost of illustrations, editorial salaries, office and other business expenses, postage, etc.

In the earlier days of the paper's history, when its size was much less than to-day, and when the circulation was also much smaller, the loss on subscriptions was not a very serious item, but as the transportation interests have developed and the circulation has in consequence increased to its present proportions, the loss on circulation has to be considered. Enquiries which we have made from a large number of subscribers have elicited expressions of most thorough satisfaction with the paper, of surprise that it has been possible heretofore to supply it at so low a price, and entire readiness to pay a more adequate subscription. As a sample of letters received from time to time we may quote one from one of the principal general officers of the Canadian Pacific Railway, who wrote as follows:—"I look upon Canadian Railway and Marine World as THE paper which anyone interested in Canadian railway or marine matters has to take and read in order to be posted. I would not be without it for considerably more than the price of admission." Another well known railway man, in remitting his renewal subscription recently, wrote:—"I am ashamed to send so small a trifle for so valuable a publication."

After the most thorough consideration it has therefore been decided to make the subscription rate on and after Jan. 1, 1914, \$2 a year, including postage to any address in the world. This will still be below the actual cost of printing, outside of other expenses enumerated above. We are confident that in view of the quality of the publication which is being supplied, this change will be very generally acceptable to subscribers, and we can assure them that the extra revenue which will be derived will be expended in still further improving the paper in every way.

The new rate will apply to all new subscribers received on and after Jan. 1, 1914. Subscribers who have not yet paid the current year's subscription will be given the old rate for a year from their last payment date. For example, a subscriber who has paid up to say, June, 1913, will be charged the old rate to June, 1914, after which the new rate will apply.

Nosbonsing and Nipissing Ry.—We are officially advised that this line is no longer in operation, the rolling stock having been removed and the track taken up during last summer. It was a logging railway, 5.50 miles long, connecting Lakes Nosbonsing and Nipissing, crossing the G. T. R. line to North Bay, in Ferris Tp., and was owned by J. R. Booth, Ottawa.

G. M. Ross, Agent, C.P.R., Summerland, B.C., writes: "Enclosed find express order for one year's subscription to Canadian Railway and Marine World. My late father, I. G. Ross, always had it in his home, and I am sure it is the best means of keeping up to date about railway matters generally."

J. W. Porter, acting Chief Engineer, Hudson Bay Railway, Winnipeg, writes: "I have been a subscriber to Canadian Railway and Marine World for some time, and like many others get a great deal of pleasure, as well as information, from reading your interesting and accurate paper."

Canadian Pacific Railway Construction. Betterments. Etc.

Eastern Division.—The work of putting up the train sheds at Windsor St. station, Montreal, is practically completed. There is a good deal of work yet to be done at the old building in order to bring it in character and design in harmony with the new extension.

Campbellford, Lake Ontario and Western Ry.—Track laying has been completed from Glen Tay to Agincourt, Ont., 182.6 miles. The line starts from Glen Tay, 15.7 miles west of Smiths Falls, to which point the C.P.R. line from Montreal is double track, and running down to the lake shore at Belleville, runs south of the G.T.R. to Port Hope, and then strikes northwesterly to a junction with the C.P.R. Montreal-Toronto line at Agincourt, 12.8 miles east of Toronto. From this point on to Toronto a second track is being built. The distance from Montreal to Toronto by the old route is 338.5 miles, and by the new one 341.1 miles. A freight service is being put on at once, but it is not intended to operate a passenger service over the new line until the summer. The stations on the new line are:—Christie Lake, Crow Lake, Parham (junction with the Kingston and Pembroke Ry.), Wilkinson, Overton, Lonsdale, Shannonville, Belleville, Trenton, Brighton, Colborne, Grafton, Cobourg, Port Hope, Newtonville, New castle, Bowmanville, Oshawa, Whitby, Cherrywood.

Ontario Division.—In connection with the building of the viaduct in Toronto, the C.P.R. is considering the desirability of putting all its telegraph wires on lines entering Toronto, underground.

The second track between Islington and Guelph Jct., 29 miles, has been completed, and trains are being regularly operated over it. The rearrangement of the station yards at Streetsville is being gone on with, and is expected to be finished early in January. The only piece of the second track between Toronto and Guelph Jct. not completed is at the bridge across the Humber River. The plans for the reconstruction of this bridge as a double track one have been approved, and it is expected that construction will be gone on with during the year.

We are officially advised that no work is being done in or around Collingwood, Ont., by the C.P.R., preparatory to any new construction. Recent press reports stated that some work had been started at Collingwood, which was understood to be in preparation for the projected Collingwood Southern Ry. to Baxter, on the Toronto-Sudbury line.

Lake Superior Division.—The Board of Railway Commissioners has authorized the opening for traffic of a portion of the Deviated line at bridge 39.49, North Bay Sub-division.

Manitoba Division.—Construction of the yards at North Transcona, six miles east of Winnipeg, is being steadily progressed with. When completed, they will have 159 miles of trackage, sufficient to handle 12,000 cars. The plans at present being carried out are for track accommodation to handle 2,000 cars. The yards will have two locomotive houses, each 125 ft. outside diameter, with a 100 ft. turntable, and between the two will be a 100,000 gall. water tank. A double track line has been provided for these yards, extending from Berens northeasterly and rejoining the main line at or near White-water, on which 20 miles of second track was laid during 1913.

Track has been laid for 10 miles on a branch line starting from Snow Lake, and running east and north of the international boundary.

The Board of Railway Commissioners has authorized the opening for traffic of the Boissevain-Lander branch, 36.4 miles. Track was laid on this branch during 1913 for 35 miles.

A second track has been laid on the main line from Kemnay to Virden, 35 miles. The branch line from Virden, northeasterly, which heretofore extended 13 miles, has been extended to McAuley, on the Kirkella-Langdon line, 23 miles of track being laid in 1913. This line was opened for traffic early in December, the speed of trains being limited to 20 miles an hour.

Saskatchewan Division.—During 1913 the following stretches of second track were completed:—Whitewood to Grenfell, 8 miles; Indian Head to Regina, 21.6 miles; Regina to Pasqua, 12 miles, and Caron to Java, 66.7 miles.

The branch line construction carried on during 1913 included tracklaying as follows:—Extension of the branch line northwesterly from Estevan for 47 miles; this line connects with the Weyburn-Stirling line at Forward. Extension of the Weyburn-Stirling line for 162 miles, which carries the line to or just over the boundary line between Saskatchewan and Alberta. Completion of the branch from Kerrobert northeasterly, 22 miles; this line gives a connection between the Moose Jaw-Macklin line and the Portage la Prairie-Wetaskiwin line. Track has also been laid for 60.8 miles additional on what is known as the Swift Current-Bassano line. This carries the line approximately to the Saskatchewan-Alberta boundary.

Alberta Division.—The Board of Railway Commissioners has approved of location plans of the Swift Current Northwesterly branch, mileage 111.17 to 134.38, and for the line running easterly from Bassano to meet the Swift Current Northwesterly branch, mileage 118.39 to 180.20.

Track was laid on the following branches or extensions of branch lines during 1913:—Suffield, southwesterly, 32.3 miles; this line will give a connection with the Weyburn-Stirling line, a new and direct line from Gleichen to Shepard, 25 miles. Extension of the branch line from Lacombe, easterly for 8 miles. This branch connects with the Moose Jaw-Macklin line at Kerrobert.

The Alberta Central Ry., which is being built under C.P.R. auspices from Red Deer towards the Brazeau River coalfields, was expected to have laid 49 miles of track by Dec. 31, but definite reports as to work done had not been received when we were advised.

The addition to the C.P.R. hotel at Banff, Alta., is expected to be ready for occupancy early in the year. The new section is of reinforced concrete, and will increase the number of rooms to 100.

Kootenay Central Ry.—We are officially advised that track was laid during 1913 on a further 19.7 miles of this line. Track was laid for 14.50 northerly from Colville, and for 41 miles south from Golden, B.C., during 1912. The remaining mileage is under construction, and it is expected to have it completed by the end of 1914.

Pacific Division. During 1913, track was laid on 16 miles of the Whitewater-Kaslo line. This covers an extension of the Three Forks-Whitewater line, on which track was laid during 1912, the connection of the same with the old Kaslo and Slocan Ry., and the reconstruction and conversion of that line to standard gauge.

The second track between Hammond and Ruby Creek, 59 miles, was laid and is being operated over.

We are officially advised that the press dispatch from Denver, Col., Dec. 5, to the effect that the C.P.R. had let a contract for the driving of a 10 mile tunnel at Rogers Pass, B.C., to cost \$8,000,000, to James A. McIlwee & Son, of that city, is incorrect. The contract, as stated on pg. 485 of our issue for Oct., 1913, was let to Foley, Welch and Stewart, and we are advised that "the work is not subtle, neither would the cost named be anything near the estimate." The tunnel is to be five miles, and not ten miles long.

There is a proposal to give J. A. McIlwee & Son a contract for the pioneer tunnel to be used in connection with the construction of the tunnel proper, but this has not been decided at the time of our advice, Dec. 17.

Considerable work has been done on the new double track bridge over the Harrison River at Pitt Meadows, which is being built in connection with the development of the new yards at Coquitlam.

Press reports state that arrangements are being made for the building of large oil tanks at Port Moody, for use in connection with the pipe line, thence to connect with the tanks at Coquitlam, which is now being laid. (Dec., 1913, pg. 576.)

Renewing Switches with Wrecking Cranes is a method of handling track alterations that has been employed in several cases on the Philadelphia & Reading Ry. In some recent changes near Vine St., Philadelphia, it became necessary to put in some additional slip switch crossings and to shift others, and these were handled bodily. The new double slip crossings were put together on skids at the side of the track. Two wrecking cranes, with four part sling chains attached to the hoisting block, were then attached to the rails and ties of an old crossing, which was ripped out bodily. Then the slings were passed through two of the long end ties of a new crossing, and the crossing swung up and deposited in place, the ballast having been leveled and tamped in the meantime. The work is done very quickly and avoids the long period during which the track would be broken if the old crossover or crossing was taken apart and relaid in the ordinary manner.

Freight Car Troubles.—J. Coleman, Superintendent Car Department G.T.R., writes:—"It has been the practice on our road to scrap 30,000 and 40,000 capacity box cars when they require a general rebuild. We are not doing anything towards the introduction of strengthening light capacity cars for the reason that they are very unpopular with shippers, and our traffic department is placed at a disadvantage offering light capacity cars for loading on account of the reduced loading space as compared with the modern box car. We believe that this is a question on which the traffic departments should be consulted, and I am sure careful canvass of the officials of the traffic departments would show the consensus of opinion is that light capacity box cars should not be continued in interchange service."—Railway Master Mechanic.

United States Railways.—According to the Interstate Commerce Commission's statistics for the year ended June 30, 1912, there were 240,238 miles of track operated in the U. S. The average number of locomotives per 1,000 miles of line was 265, and the average number of cars was 9,860. The total number of persons on the payrolls was 1,699,218, and the total wages and salaries paid amounted to \$1,243,113,172. The par value of the amount of railway capital outstanding was over nineteen and a half billion dollars.

Steel Upper Frame and Steel Underframe Box Cars.

In the unavoidable absence of R. W. Burnett, General Master Car Builder, C.P.R., his paper on steel underframe box cars, which appears on pages 1 to 4 of this issue, was read before the American Society of Mechanical Engineers, New York, on Dec. 3, by H. H. Vaughan, Assistant to the Vice President, C.P.R. A paper on steel underframe box cars, by G. W. Rink, Mechanical Engineer, Central Rd. of New Jersey, an abstract of which is given on page 4, was read at the same meeting, the two papers being discussed together. Following is a portion of the discussion:—

H. H. VAUGHAN, Assistant to Vice President, C.P.R.—I feel that Mr. Burnett's paper has, unintentionally, to a large extent referred to what Mr. Rink has said about the standard car. Personally, I feel that Mr. Burnett's position, that with the structural steel car we have to all intents and purposes a car that is standard as far as any car can be standard, is a sound one. I do not believe that we are ever going to adopt one standard type of car or one standard design of car and build it indefinitely. There are sure to be improvements and alterations that the different roads think it desirable

enough you never lighten it, but that if you make a new design a little fine and then strengthen it at the weak points, you will finish up with a considerably lighter design than if you started out with some arbitrary figures and made everything plenty strong enough to start with.

In designing a car, what must be considered is the service in which it is generally going to run, not the service in which it may run. We estimated that 60 to 75% of the service to which the box cars are put, both in Canada and in the United States, is service in which the old type of underframe will stand up perfectly satisfactorily. I feel that that assumption is justified by the results we have had. If there was any decided weakness in this type of car we would certainly have found it out in five years. The fact that we have had 14 or 15 cars destroyed on foreign lines indicates that, while the construction may not be as strong as would be desirable for some service, it is strong enough for the average service in which the cars are used. I do not believe to-day that it is a good commercial proposition to put weight in a car for occasional service.

Standard Canadian Pacific Railway Steel Frame Car Fitted with Corrugated Steel Lining.
For description see page 4 of this issue.

to make, and if we had a standard car tomorrow the next order that was let would have a few changes from it. If we use standard material that can be obtained without difficulty, and keep to certain standards on the parts that both Mr. Rink and Mr. Burnett have mentioned, I think that we are going as far as we can go in the direction of a standard car. I quite agree that the draft castings, arch bars, bolsters and some of the other parts should be standardized to a greater extent than at present. It does seem absurd that the slight variations made in these parts should necessitate their being obtained from the car owners, when repairs are to be made on foreign lines, and that serious delays should ensue on account of these parts not being available.

We have been a good deal criticized on account of certain features in the design of the C.P.R. car, such features as I think Mr. Rink refers to when he says there was not very good engineering carried out in the design of the steel underframe. Some of the features of our underframe design were not altogether a question of engineering, but largely governed by a feeling I had that if you make a thing plenty strong

The omission of the end braces and the corner braces has been discussed. The centre sills and the side sills have ample strength to hold up the corners of the cars under general conditions, and the saving of 500 lbs. weight there, and 500 lbs. in the cover plate, and a few hundred pounds here and there, is what has made the car as light as it is.

Attention should be drawn to the effect of reduced weight on net earnings, and not on the cost per ton mile. The C.P.R. figures for 1913 show that we carried 22.34 tons per loaded car mile, and our light car mileage was 28.5% of the loaded car mileage. That gives an average load of 16.8 tons per car mile total. I have not the average car weight, but I do not think we are far off in taking it to be 18 tons; the average weight of the car loaded was then 34.8 tons. I do not believe that figure is out of the way for a large number of roads in this country handling general traffic. We have a large amount of grain, and while we do not have much coal our average load is fairly good.

Supposing the car weighed one ton more. Without any question as to whether we would always change our train rating, the

weight of the car loaded would be 35.8 tons instead of 34.8; in other words, there would be an increase in the ton mileage of 2.85%. Or suppose we were operating on a ratio of 70%, under this changed condition of weight we would be operating on a ratio of 72%. Our net tons would fall from 30% to 28%, which is a difference of 6%; in other words, while we have only changed 2% in our cost of transportation, we have changed about 6% in our net earnings, and net earnings are what we are after. It does not take very much of a change in transportation matters to make quite a change in net earnings. It takes less than it does to make a change in gross earnings. Even supposing that one half the time the weight of the car makes no difference, it depends on how tonnage is handled; on the C.P.R., on which a large percentage of the traffic is on grades over 0.5%, tonnage is what we are after. If we are within a certain number of tons of the right load we take it, and if it is less than that we put on another car. Taking only half, the handling of a ton makes a difference of 1% in the expenses and 1.5% in the net earnings. Taking the size of the car, and only taking one half of the actual difference in weight, we find that it amounts to about \$12 a ton per year. That is only assuming that one half the difference in weight makes any difference. We can do a good deal on a lot of cars with \$12 a ton per year.

The question of weight is something which must be looked after carefully in car design; we must not give all our attention to designing a car that is cheap to keep up and which will not need repairs, but try to design a car that is most economical for the railway company in handling its traffic. It may cost \$5 or \$10 a car more per year to keep up, but it will save two or three times that in the weight that is being hauled about uselessly.

In reference to vertical or horizontal sheathing, Mr. Burnett stated that there were a number of cars which were quite open. We have had a lot of cars which have shrunk to an extent to cause us a great deal of anxiety, but we have had singularly few cases of damage claims on account of it. The planks are all ship-lapped, and when looking at a car it would almost seem possible to see through the openings. But it is not difficult to tighten them, and the only reason we have not done so is because we have not had sufficient complaints to justify our taking the cars out of service and doing the work. The vertical sheathing would be, possibly, a preferable arrangement if it could be accompanied by an economical and convenient design of side framing. The truss form of side framing naturally lends itself to horizontal sheathing. We are using very extensively the same style of end for repairs of all-wood cars that we use on the steel frame car, simply putting in two Z bars, reinforcing the ordinary end post, and putting the 3, in. lining outside.

B. D. LOCKWOOD, Chief Engineer of the Pressed Steel Car Company, stated that he believed the railways should specify the minimum stresses allowable in box car frames in order that builders may have something definite to work to.

W. F. KIESEL, Jr., Assistant Mechanical Engineer, Pennsylvania Rd.—The authors of both papers seem to favor the Z bar posts and braces because they are made of rolled material, and, as stated by them, can be readily obtained. This does not seem a good argument, as it is well known that standard sections of rolled material cannot always be obtained on short notice; in fact, within the past year the steel mills have quite frequently reported that certain angles, etc., could not be furnished under

three or six months, as there was no stock on hand and they did not expect to put in the rolls for that length of time. Advocates of pressed steel for this purpose assert that pressed steel posts and braces are lighter per unit of strength, because they can be formed to the required shape; that they can be formed with sufficient surface at the ends for the number of rivets required to develop their full strength, while Z bars and other rolled forms require gusset plates for this purpose; that they are not likely to be damaged by pushpoles, and if damaged in wrecks, can be readily straightened and restored to approximate shape; and that when absolutely necessary to replace them they can readily be obtained from the car owner or builder, without waiting for any special rolling of material.

O. C. CROMWELL, Mechanical Engineer, Baltimore and Ohio Rd.—Side and end posts and braces, corner posts and door posts, should be brought down to a standard; they are now very nearly this. The height of the floor above the rail is an important point, and there should be no good reason why we should have a variation $6\frac{3}{4}$ in. in this height. This also affects the height of the truck, as if it is desired to work toward standard and interchangeable truck parts, the height of the truck is an important one to bear in mind.

I observe that no diagonal braces are used in the end framing of the C.P.R. steel frame car, such as are generally used in the end of a wooden frame car. These braces tend to keep the end framing of the car square. While their omission would probably not be apparent for the early life of the car, should we not expect to find, as the car ages, a loosening of the riveted joints uniting the posts with the plates and underframe? While the car is new, the end sheathing will serve to keep the framing straight, but will we not in time experience loosening of these end boards through shrinkage? We know that on gondola cars the side planks decay under the side stakes and under the corner bands. May we not, as the cars become older, experience a similar action of the lumber in this character of car? Would not this in turn lead to the loosening of the framing?

The Baltimore & Ohio built, in 1862, some iron box cars. These cars had wooden underframes, but the body and roof were made of iron plates. The cars proved unsatisfactory because in the summer they became so excessively heated that they spoiled the merchandise, and in sudden changes of weather produced sweating, with damage to the lading. They had finally to be withdrawn from service.

W. S. ATWOOD, Chief Engineer, Canadian Car & Foundry Co.—The first steel frame car which we built was considerably heavier than the present ones, weighing 41,000 lbs. This was partly due to the fact that the car was constructed from material which was in stock, no special material having been ordered. The present car weighs less than 36,000 lbs.

With the first cars of this type there was some difficulty experienced in securing the proper grade of lumber and also in properly drying it, as, owing to its thickness, it had to remain in the dry kilns longer than was necessary in the case of the thinner sheathing used on the outside sheathed car. On this account the car companies were not, in all cases, equipped with sufficient dry kiln capacity. The lumber dealers, however, have met the car builder, in attempting to prepare a satisfactory grade of lumber, and no difficulty is now encountered.

The adoption of a car with standard inside dimension would be a matter of considerable importance to the car builders, as material could be stocked and would be

available for building cars required for quick delivery for any of the railways which had adopted this type of car.

The foregoing report of the discussion is abstracted from the Railway Age Gazette.

Great Northern Railway Lines in Canada.

Projected Lines in Saskatchewan and Alberta.—The extension of the line from Niobe, N.D., to Northgate, on the International Boundary, 21 miles, has been completed, and a connection established with the Grand Trunk Pacific Ry. branch from Regina, Sask.

An extension of the branch now terminating at Plentywood, Mont., westerly for 45 miles to Scobey, is reported to have been completed. This extension runs parallel with the International Boundary.

Another line is under construction under the charter of the Grand Falls and Felton County Ry., from Power to Bynum, Mont., on which 45 miles of track has been laid. This line runs northerly, and its present terminus is almost directly south of Cardston, Alta.

L. Hill, President, accompanied by several G.N.R. officials, recently completed a trip through Southern Saskatchewan and Alberta, stopping at Swift Current, Medicine Hat, Calgary, Lethbridge and Cardston. G.N.R. interests hold several charters covering the building of lines in these two provinces, and also own the Crows Nest Southern Ry. A large amount has recently been expended on developing coal mines in the Pincher Creek district, and recent local press reports state that it is expected that a start will be made with railway construction in that district in the spring.

Kootenay Ry. and Navigation Co.—The G.N.R. President reported at the annual meeting of shareholders that because of the liquidation of the K.R. and N. Co. the Bedlington and Nelson line between Sirdar Jct. and Kuskanook, B.C., 3.26 miles became of no use and had been removed.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—The G.N.R. President reported at the recent annual meeting that work was in progress on the line of the V., V. and E. Ry. and N. Co., from Kilgord to Sumas Landing, B.C., 10 miles, and on an extension from Coalmount to Otter Summit 35 miles. The Board of Railway Commissioners has authorized the opening for traffic of a section of the line from mileage 245.84 to 155.619, which is a double track section.

In connection with this line the G.N. Ry. is engaged in building a line in the U. S. to connect at Oroville. The section under construction during the current year extends from Wenatchee to Pateros, Wash. Owing to landslides and other difficulties construction has been delayed, and it is not expected that the line will be ready for operation until June, 1914. The line is 133 miles, and track laying will probably be completed by Mar. 31, 1914.

Vancouver Terminals.—The excavations on the Grandview cut in Vancouver, B.C., are practically completed. The original width of the cutting was 38 ft., but in view of the False Creek reclamation and terminal project, it has been made 66 ft. The greatest depth is 65 ft. The cutting is spanned by seven bridges, and others will be added as street traffic necessitates. Four lines of track have been laid in the cut, and this line of approach into the city, which is 1.5 miles long, has a gradient of 1%. The line originally crossed the streets on the level.

The erection of the warehouses on the new dock on Burrard Inlet is being proceeded with. It is expected that the wharf

and its equipment will be finally completed by the end of the year.

It is reported that 70% of the work on the reclamation of the False Creek flats has been done. The area near Main St., which will be used as the site of the union station, has been entirely filled in, and the work is now in progress to the original shore line. L. Hill, President, and a number of G.N.R. officers were in Vancouver recently inspecting the progress of the work. The site upon which the station is to be built was selected, and it is said that tenders for the building will be called for at once. (Oct., pg. 479.)

Additional Lines in New Brunswick Controlled by Canadian Pacific Railway.

The C.P.R. commenced, Dec. 1, to operate the lines of the New Brunswick Coal and Ry. Co., the Fredericton and Grand Lake Coal and Ry. Co., and the Southampton Ry. in New Brunswick, which have been leased. They are being operated under the supervision of the General Superintendent of the Atlantic Division.

A. Sherwood, heretofore Manager, New Brunswick Coal and Ry. Co., which has hitherto been operated by a commission for the New Brunswick Government, has also been appointed Manager, F. & G.L.C. & R. Co., and Southampton Ry., and his office has been moved from Norton to Fredericton, N.B.

H. Larsen has been appointed Roadmaster of the combined lines, vice —. Baker, assigned to other duties.

Hamilton Incline Ry.—The Ontario Railway and Municipal Board issued an order, Nov. 25, directing the owners of this line to put it into a safe condition for operation. An engineer representing the Board subsequently visited Hamilton for the purpose of ascertaining the work necessary and the time required to do it.

Ottawa Car Manufacturing Co.—W. M. Arnold, heretofore Purchasing Agent, has been appointed Assistant General Manager. H. T. Burpee has been appointed Controller.

The C.P.R. is reported to have discharged its Japanese porters on sleeping and cars running west of Winnipeg, and to have replaced them with negroes. The change took effect Dec. 12.

L. R. Johnson, General Superintendent, Angus Shops District, C.P.R., read a paper before the Canadian Railway Club in Montreal, Dec. 9, on first aid to the injured as practised by the St. John Ambulance Association, under the auspices of the Order of St. John of Jerusalem, in England.

J. Grey, a C.P.R. locomotive driver living at West Toronto, was fined \$100 at Ingersoll, Ont., Dec. 11, for being intoxicated while in charge of a locomotive. The sentence was directed to be held in suspense and Grey was directed to report to the C.P.R. solicitors in Toronto when required.

The conciliation board in connection with the enquiry into the dispute between the G. T. Pacific Ry. and its machinists and boiler makers, consists of Mr. Justice Haggart, Chairman; W. Cross, representing the company, and C. J. Murray on behalf of the men, all of Winnipeg.

A Lehigh Valley Rd. Pacific type locomotive, weighing in working order 262,000 lbs., with 77 in. drivers, recently made a record in hauling an 8 car all steel train, weighing 603 tons, over a 24 mile stretch at an average speed of 38.1 m. p. h. against an average grade of 42.1 ft. per mile, with a maximum gradient of 67.9 ft. per mile.

Canadian Northern Railway Construction, Betterments, Etc.

James Bay and Eastern Ry.—The first section of this railway is under construction from Roberval, Que., the northerly terminus of the Quebec and Lake St. John Ry., 30 miles northerly. We are officially advised that grading upon this is well advanced. J. P. Mullarkey, Montreal, is the contractor, and A. F. Stewart, Chief Engineer of Construction, Mackenzie, Mann & Co., Ltd., is in charge of the work.

Canadian Northern Quebec Ry.—The extensions and branch lines located, but not yet finally passed for construction are:—Huberdeau Argenteuil county, Que., to St. Remi, 11 miles, and from Rawdon to St. Donat, 40 miles. These lines are projected for the purpose of opening up new territory lying between the old Great Northern Ry. and the old Montford Colonization Ry., both of which are now part of the C.N.Q.R. Another charter also amalgamated with the C.N.Q.R. is the Quebec, New Brunswick and Nova Scotia Ry., under which it is proposed to build a line from Quebec Bridge to Woodstock, N.B.

Canadian Northern Montreal Tunnel and Terminal Co.—The headings of the tunnel being driven under Mount Royal, to give the C.N.R. an entrance into Montreal, were joined on Dec. 10. The heading is 8 by 12 ft., and the work of enlargement to 22 by 30 ft. is being gone on with.

Plans have been filed in Montreal showing a revision of the location of the line to connect the tunnel with the St. Lawrence water front. These have been approved by the Board of Railway Commissioners.

The Central Ontario Ry. is asking the Dominion Parliament for an extension of time within which to complete the line from its present northerly terminus to a junction with the C.P.R. at some point between Sudbury Jct. and Callander station, Ont.

Canadian Northern Ontario Ry.—A mixed freight and passenger service has been put in operation on the Ottawa-Sydenham section of the Ottawa-Toronto line which has recently been completed. A regular freight and passenger service has been operated for some time between Toronto and Sydenham, and these services will be run through to Ottawa early in the spring.

The Board of Railway Commissioners has authorized the opening for traffic of the branch from Oshawa station to the material yard south of William St., 2.75 miles, and the building of a transfer track between the C.N.O.R. Oshawa spur and the Oshawa Ry.

Montreal-Ottawa-Port Arthur Line.—Track was laid during 1913, on 536 miles of this line, distributed as follows:—Between Montreal and Hawkesbury, Ont., 10 miles; between Ottawa and Capreol, Ont., 120 miles; between Ruel and Port Arthur, 496 miles. The line is being built, under special guarantees by the Dominion Government, under the charter of the Canadian Northern Ontario Ry. Ballasting and other work are reported well forward from Ruel west. Ballasting is also reported to be completed up to 200 miles easterly from Port Arthur, and one lift has been given to mileage 241, where the bridge work is not completed. Another bridge at mileage 253 is also incomplete. All the stations, section houses and other buildings up to mileage 200 have been erected.

Canadian Northern Ry.—The Saskatchewan Legislature has increased the amount of securities previously guaranteed by \$2,000 a mile, making the guarantee \$15,000 a mile. The lines in respect to which the guarantee apply are set out in sec. 9 of the act passed in 1908, as it is amended by chap.

4 of the statutes of 1909; and in chap. 8 of the statutes of 1912. Sec. 6 of the recent act authorizes the Government to guarantee the bonds for any surplus mileage on the lines mentioned in the several acts over the mileage specifically guaranteed at \$13,000 a mile, or in the event of there being a shortage of mileage the Government may authorize the application of the surplus of guaranteed bonds to be used in respect to the construction of other lines to be built.

A second act provides for the payment of interest on these securities at $4\frac{1}{2}\%$, and for the building of the following lines:—In further extension of the line mentioned in par. 1, second part of the schedule to chap. 3, statutes of 1908-09, westerly from mileage 210 for 60 miles; in further extension of the line mentioned in par. 3 of the same schedule from mileage 50 from North Battleford northwesterly for 39 miles; from mileage 100, on the Thunder Hill branch west of the eastern boundary of the Province, westerly for 40 miles; and any extension of any lines authorized to be built in Saskatchewan, as may be designated by the Government, not to exceed 40 miles in any one instance.

A third act deals with the guarantee of the bonds of the C.N. Saskatchewan Ry. The amount of the bonds to be guaranteed is increased to \$15,000 a mile, the rate of interest is fixed at $4\frac{1}{2}\%$, and an extension of time for construction granted. It is also provided that the route of the line set out in par. 5 of the schedule to chap. 11, statutes of 1912, may be changed so as to be routed from Handsworth on the company's authorized line from Lampman northerly, westerly or northwesterly.

In a statement made to the House in connection with these measures it was mentioned that the Government had guaranteed bonds for the building of 1,155 miles of line. The sale of the bonds had realized so far \$9,703,668.98, of which \$8,577,067.76 had been released to the company for work done.

The Saskatchewan Legislature has been informed that surveys for the proposed branches from Lampman northerly through the territory lying north westerly from Moose Mountain have been completed, but have not yet been approved by the Provincial Minister of Railways. The company has agreed that construction on these lines, the bonds for building which have been guaranteed by the Legislature, will be started early in 1914. The construction programme for 1914 had not been finally agreed upon between the Government and the company. The extension of the branch southerly from DeLisle, would probably be gone on with, but the final location plans had not been approved.

The line from North Battleford which has hitherto been in operation to Edam, Sask., 38 miles, has been extended to Marvin, Sask., 11 miles, tracking being reported to have been laid into that place Dec. 8.

The first through train on the branch line from Radville into Moose Jaw, Sask., ran into the temporary station on South Hill, Dec. 5. For some time previously the trains had only been operated to a point three miles out of the city. The line goes into the city on a trestle bridge over the river and the C.P.R., which is to be replaced early in the year by a steel structure. It was reported in Moose Jaw, Dec. 13, that an arrangement had been made under which the C.N.R. will join with the G.T. Pacific Ry. in building a union station at Moose Jaw, and will have running rights over the latter company's line to Regina. The Saskatchewan Legislature was asked, Dec. 12,

to consider a measure guaranteeing bonds for \$1,000,000 for aiding the construction of terminals and bridges in Moose Jaw. The bill provides that the works shall be immediately put in hand, and that when completed they shall be used jointly with the G.T. Pacific Ry. or any of its allied companies.

Moose Jaw press reports also state that a line is projected from that city southwesterly between Lakes Johnston and Chaplin to a junction with the line to Lethbridge, near Maple Creek, and for a line from Moose Jaw to Chamberlin on the line from Regina to Prince Albert.

The line from Camrose, Alta., southeasterly, on which grading is reported to have been completed for 60 miles, has been located through to Sibbald, at the Saskatchewan-Alberta boundary, on the Saskatoon-Drumheller line, 165 miles. This piece of grading is stated to be a 58 mile tangent. A new town, Alliance, is being laid out at mileage 59.5.

Canadian Northern Pacific Ry.—The Dominion Government Inspector went over the line out of Port Mann as far east as Hope, B.C., Nov. 20, for his final inspection. It is expected that this section of the line will be taken over by the operating department. The end of track easterly was reported to be at mileage 129, and ballasting has been completed to mileage 120. The grading is practically completed from this point to Kamloops. East of Kamloops 90 miles of track is reported to have been laid, and grading is well forward to the Albreda Summit. Eight of the bridges have been completed; three others are reported to be well forward as far as the steel work is concerned; and the substructures for the others are being progressed with. It is also reported that the section which is being built from the west to the Albreda Summit, is 90% completed so far as the grading is concerned.

The locomotive house at the Port Mann terminal is under construction, and the foundations are being piled for the machine shop and other buildings.

The question of the route of the tunnel, which will give an entrance from the north arm of the Fraser River to the terminal on False Creek, Vancouver, is still undecided, two routes being under consideration.

An area of about 80 acres has already been reclaimed from the False Creek flats, for the company's terminal. About 600,000 cubic yards of material were reported to have been deposited Dec. 4, and this is stated to represent about a sixth of the work to be done.

Vancouver Island Lines.—It was reported Dec. 9, in Victoria, that about 85% of the work on the Victoria-Alberni line had been completed, and that considerable progress had been made with the line from Victoria along the Saanich Peninsula. It is expected that steel will be delivered in order to start track laying in February. (Dec., 1913, pg. 584.)

Oil Burning Locomotives on C. P. R.—We were officially advised, Dec. 5, that 45 locomotives had been equipped for oil burning to operate between North Bend and Vancouver, the applying of the apparatus having been done at Vancouver. Seventy-nine locomotives have been similarly equipped to operate between Field and Kamloops, most of the work having been done at Vancouver, and the rest of it at Ogden shops near Calgary. No arrangements have been made for similarly equipping locomotives to operate on other portions of the Pacific Division.

The Grand Trunk Pacific Ry. opened the Fort Garry Hotel at Winnipeg, Dec. 10.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our appointments will confer a favor by advising us.

Algoma Eastern Ry.—J. P. MADER has been appointed General Agent at Sudbury, Ont. All reports, communications, etc., from agents, heretofore required by General Freight and Passenger Agent, are forwarded to him.

Canadian Northern Ry.—H. R. ARTHUR, heretofore chief clerk, General Manager's office, Winnipeg, has been appointed Inspector of Transportation, Office, Winnipeg.

O. D. PROSSER, heretofore assistant chief clerk, has been appointed chief clerk, General Manager's office, Winnipeg, vice H. R. Arthur, promoted.

WILLIAM KILBY, heretofore secretary to Assistant General Manager, has been appointed Fire Inspector, Headquarters, Winnipeg.

Canadian Pacific Ry.—F. B. TAPLEY, whose appointment as Assistant Engineer, Maintenance of Way, Eastern Lines, Montreal, was announced in our last issue, has been appointed Assistant Engineer in Assistant Chief Engineer's office, vice M. A. Fulington, transferred, and not Assistant Engineer, Maintenance of Way. We are officially advised that there is no Assistant Engineer, Maintenance of Way, Eastern Lines.

J. E. MORAZAIN, heretofore Assistant Superintendent, District 3, Eastern Division, Quebec, Que., has been appointed Assistant Superintendent, Montreal Terminals, vice A. C. Brady, deceased. Office, Windsor St. Station.

T. M. BARRETT, heretofore Purchasing Agent, Sleeping Dining and Parlor Cars and News Department, Calgary, Alta., is reported to have been appointed Chief Commissary Agent, same department, Montreal, vice A. S. Maynard, who, it is stated, has resigned to enter private business.

W. BULLANTYNE, heretofore in the Passenger Department, has been appointed chief clerk, Atlantic Steamship Department, Montreal, vice W. C. Casey, appointed General Agent, Passenger Department, Steamship Lines, Winnipeg.

JOHN GRIFFIN, District Freight Agent, C.P.R., Toronto, has resigned, to enter private business in Milwaukee, Wis.

W. C. CASEY, heretofore chief clerk, Atlantic Steamship Lines Department, Montreal, has been appointed General Agent Passenger Department, C.P.R. Steamship Lines, Winnipeg, vice J. S. Carter.

F. STAMELIN, heretofore Shop Foreman, Winnipeg, has been appointed Night Locomotive Foreman, Winnipeg roundhouse, vice J. Morton, transferred.

R. BROWN has been appointed District Master Mechanic, Medicine Hat, Alta., vice W. W. Webster.

Central Railway of Canada.—F. Stuart Williamson, M. Can. Soc. C.E., Chief Engineer, having resigned, has been appointed Consulting Engineer, Office, Montreal.

Grand Trunk Pacific Ry.—J. H. TODD, heretofore Assistant to Superintendent, Smithers, B.C., has been appointed Superintendent there, vice G. A. McNicholl, transferred to Traffic Department.

The following agents have been appointed: Holden, A. C. Fraser; Edmonton, Alta., O. J. Rowe, Berger, Alta., C. W. Storey, Tete Jaune, B.C., F. R. Harrison; McBride, B.C., J. S. Dodge, Rose Lake, B.C., R. A. Pike, Smithers, B.C., W. W. Noonan; Pacific, B.C., T. S. Constantine.

Grand Trunk Ry.—D. ROSS, heretofore

Locomotive Foreman, Madawaska, Que., has been appointed Locomotive Foreman, Coteau Jct., Que., vice W. A. Black, transferred.

J. H. RHYMB has been appointed Locomotive Foreman, Madawaska, Que., vice D. Ross, transferred.

W. J. HARDING, heretofore Locomotive Foreman, Depot Harbor, Ont., has been appointed an engineer of the power plant at Ottawa, Ont.

J. B. DUNLOP has been appointed relieving Locomotive Foreman, Mimico Yards, Toronto, during absence of J. H. Storcz, who was seriously injured recently.

W. GRINDY, heretofore in Union Stock Yards Co.'s service, and at one time chief clerk, Ticket Office, G.T.R., Toronto, has been appointed Station Ticket Agent, Toronto, vice A. Albertson, assigned to other duties.

W. A. BLACK, heretofore Locomotive Foreman, Coteau Jct., Que., has been appointed Locomotive Foreman, Depot Harbor, Ont., vice W. J. Harding, assigned to other duties.

D. W. THORNTON, heretofore Yardmaster, Michigan Central Rd., St. Thomas, Ont., has been appointed General Yardmaster, G.T.R., London, Ont., vice W. J. Ball resigned.

The following agents have been appointed:—Bain, Ont., C. Noecker; Ingersoll, Ont., F. N. Burke; Hickson, Ont., R. J. Campbell; Chesley, Ont., G. Reid; Cedars, Que., J. S. Bolduc.

Michigan Central Rd.—F. J. DEIMLING, heretofore Engineer of Construction, has been appointed Assistant Chief Engineer, vice A. L. Sarvey, assigned to other duties, Office, Detroit, Mich.

C. C. Hill, heretofore Division Engineer, Niles, Mich., has been appointed Engineer of Construction, vice F. J. Deimling, promoted. Office, Detroit, Mich.

F. B. MARBLE, heretofore Assistant to Chief Engineer, Detroit, Mich., has been appointed Division Engineer, Niles, Mich., vice C. C. Hill, promoted.

A. B. MCBURNEY has been appointed Yardmaster, St. Thomas, Ont., vice D. W. Thornton, resigned to enter G.T.R. service.

New York Central Lines.—E. A. McCARTHY has been appointed Travelling Passenger Agent, Montreal, vice A. E. Lock, whose appointment as Commercial Agent, Toronto, Hamilton and Buffalo Rv., Hamilton, Ont., was announced in our last issue.

Northern Pacific Ry.—A. M. BURT, heretofore Division Superintendent, Spokane, Wash., has been appointed Chief Engineer Maintenance of Way, vice W. C. Smith, Office, St. Paul, Minn.

South Eastern Ry.—F. S. Little has been appointed Secretary-Treasurer London and South Eastern Ry., London, Ont., in succession to his father, J. W. Little, deceased.

Use of Natural Gas on Intercolonial Railway.—Since the article on this subject which appears on page 14 was put in type, we have been officially advised, in answer to an inquiry, that no trouble has been experienced on account of mixing the natural gas and the Pintsch gas which is put into the car reservoirs at Montreal, while natural gas is put in at the eastern points. The I.R.C. has tanks placed on ordinary flat cars for transporting the gas from Moncton to Halifax and Levis, each tank holding 1,700 cu. ft. at one atmosphere. It is charged or loaded at about 14 to 15 atmospheres. There are separate tanks and compressors for unloading the tank cars and charging the passenger cars at the charging stations at Halifax and Levis.

Terminal Plans for Quebec.

An Ottawa press dispatch, Dec. 22, stated that the Minister of Railways had that day signed "the agreements which will enable the start of work on the immense terminal undertakings" in Quebec, which involve the building of "a union station, and also a freight depot, extensive car shops at St. Malo, and a large freight yard at St. Foye. A tunnel is to be built between the union station and the harbor front station."

The contract for the building of the shops at St. Malo, at a cost of about \$1,500,000, was let in September to J. Gosselin, Levis, Que., by the National Transcontinental Railway Commission. A description of the works covered by this contract appeared in Canadian Railway and Marine World, Sept., 1913, pg. 409. During Oct., the negotiations between the C.P.R. and the city of Quebec as to certain arrangements which would enable progress to be made with the laying out of union terminals in the city were completed, and we were officially advised of the signing of the same on behalf of the C.P.R. In November it was announced that a tunnel would be built in connection with the terminal plans at Quebec, from Lampson's Cove to St. Malo, near the site of the shops. (See Dec., 1913, pages 577 and 578.)

Kettle Valley Ry. and C.P.R.—The Board of Railway Commissioners has recommended the Governor-in-Council to sanction an agreement made June 2, between the K.V. Ry. and the C.P.R. providing for an interchange of traffic. On completion of construction the line will be taken over by the C.P.R.

Quebec Central Ry.—The Quebec Legislature is being asked to authorize the directors to fix by bylaw the time and place at which the annual meeting shall be held.

Canadian Government Railways

TENDER

SEALED TENDERS, addressed to the undersigned and marked on the outside, "TENDER, Division of Line North Sydney to Leitch's Creek," will be received up to and including

TUESDAY, JANUARY 6TH, 1914,

for the construction of a line of Railway from North Sydney to Leitch's Creek, N.S.

Plans and specifications may be seen at the office of the undersigned at Ottawa, Ont., at the Station Master's Office, North Sydney, N.S., and at the Office of the Chief Engineer, Moncton, N.B., where forms of Tender may be obtained.

All the conditions of the specification must be complied with.

L. K. JONES,

Assistant Deputy Minister and Secretary, Department of Railways and Canals, Ottawa, Ont. Ottawa, Ont., Dec. 16th, 1913.

CALGARY AND EDMONTON RAILWAY CO.

NOTICE.—The Calgary and Edmonton Railway Company will apply to the Parliament of Canada at its next session for an Act increasing its bonding powers, and for other purposes.

Dated at Montreal this 17th day of December, 1913.

H. C. OSWALD,
Secretary.

Pringle, Thompson, Burgess & Cote,
Ottawa agents.

Mainly About Transportation People.

SIR THOS. G. SHAUGHNESSY spent a week end in Ottawa recently as a guest of the Duke and Duchess of Connaught.

G. E. Rutley, who died recently at Winnipeg, aged 61, was father of B. G. F. RUTLEY, ticket agent, Union Station, Winnipeg.

W. E. Apps, son of WILLIAM APPS, who was at one time Master Car Builder, C.P.R., died at his father's house, Toronto, Dec. 3, age 29.

R. H. LEA, General Agent, Great Western Ry., of England, at Toronto, left there, for England, Dec. 13, on account of a death in his family.

F. C. SALTER, European Manager, G.T.R., G.T.P.R., and Canadian Express Co., who has been visiting Canada, has returned to London, Eng.

G. D. PERRY, General Manager, Great Northwestern Telegraph Co., Toronto, has been elected Vice President, Toronto Carpet Manufacturing Co.

S. W. HOPKINS, who died at New York, Dec. 14, was connected with the organization of the Chicago and Grand Trunk Rd., a subsidiary of the G.T.R.

J. QUINLAN, District Passenger Agent, G.T.R., Bonaventure Station, Montreal, returned to duty early in December, after an absence through illness.

The engagement is announced of Miss Edith M. Shaughnessy, youngest daughter of SIR THOS. G. SHAUGHNESSY, to R. M. Redmond, of Montreal.

F. BARLOW CUMBERLAND, ex Vice President, Niagara Navigation Co., who died at Port Hope, Ont., in September, left an estate valued at \$114,979.83.

W. D. REID, President, Reid Newfoundland Co., has returned to Montreal, from St. John's, Nfld., having completely recovered from his recent illness.

W. WHEATON, who, in partnership with a brother, carried out certain contracts on the National Transcontinental Ry., died in the Montreal Hospital, Dec. 15.

E. J. CHAMBERLIN, President, G.T.R. and G.T.P.R., and Mrs. Chamberlin, were week end guests of the Duke and Duchess of Connaught in Ottawa recently.

It was rumored in Ottawa during December, that R. W. LEONARD, Commissioner, National Transcontinental Ry., would be knighted, early in the New Year.

Persistent reports from Ottawa state that the Hon. F. COCHRANE'S health will necessitate his retirement from the position of Minister of Railways and Canals shortly.

FAIRFAX HARRISON, President, Chicago, Indianapolis and Louisville Railway, has been elected President of the Southern Railway, to succeed the late W. W. Finley.

J. E. GRIFFITH, who has been appointed Deputy Minister of Public Works for British Columbia, vice W. W. Foster, resigned, was at one time connected with C.P.R. construction in the west.

HON. F. COCHRANE, Minister of Railways and Canals, returned to Ottawa, Dec. 20, after an extended holiday. It is understood that his health has been much benefited by the rest and change.

W. E. DUPEROW, General Agent, Passenger Department, G.T. Pacific Ry., Vancouver, B.C., attended the recent meetings of the North Pacific Coast Passenger Agents Association, at Portland, Ore.

R. W. LEONARD, Commissioner, National Transcontinental Ry., has offered the necessary land and buildings for the establishment of a students' residence and training

school for Queens University, Kingston, Ont.

HUNTER BLAIR, who was found dead in his rooms at Toronto recently, was in the Canadian Northern Ry. service there. He is stated to have been a brother-in-law of R. M. Horne-Payne, the C.N.R. director in England.

G. STILSON, Supervisor of Track, G.T.R., Hamilton, Ont., who was injured recently at St. Catharines, when he was thrown off a car of a work train which was being backed into the yard, died in the General Hospital there, Dec. 4.

W. McNAB, Principal Assistant Engineer, G.T.R., gave an address in Montreal, recently, on the progress of the G.T. Pacific Ry., the principles of its success and the advantages of its coast to coast route with low grades, easy curves and excellent roadbed.

D. O. LEWIS, Engineer in charge of the construction of the Canadian Northern Ry.

H. R. Naylor,
Division Car Foreman, Eastern Division, Canadian
Pacific Railway.

on Vancouver Island, was elected vice chairman of the executive committee of the Victoria branch of the Canadian Society of Civil Engineers at the annual meeting, Dec. 11.

JNO. M. EGAN, who was General Superintendent, C.P.R., at Winnipeg from 1882 to 1886, is now President and General Manager, Kansas City Railway and Electric Ry. Co., of which R. J. Clarke, formerly Assistant Comptroller, Toronto Ry., is Comptroller.

D. A. WALLACE, whose appointment as Resident Engineer, District 1, Eastern Division, C.P.R., Farnham, Que., was announced in our last issue, was formerly on the Central Vermont Ry., there, and prior to that was in Illinois Central Rd. service at Chicago.

G. McLAREN BROWN, European Manager, C.P.R., who has recently been spending some time in Vienna, in connection with the company's Austrian business, and the disturbance it has been subjected to on ac-

count of political troubles, returned to London, Eng., Dec. 3.

F. STUART WILLIAMSON, M. Can. Soc. C.E., who has resigned as Chief Engineer, Central Railway of Canada, has been appointed Consulting Engineer for that company, and has opened an office at 103 St. Francois Xavier St., Montreal, for the practice of his profession.

E. E. BRYDONE-JACK, C.E., M. Can. Soc. C.E., Professor of Civil Engineering, University of Manitoba, was presented with a clock at Winnipeg, Dec. 17, by the Manitoba branch of the Canadian Society of Civil Engineers, in recognition of the services which he has rendered to the society.

D. S. SUTHERLAND, General Agent, Michigan Central Rd., Detroit, Mich., died there, Dec. 17. He was appointed General Agent in Aug., 1912, after having held the position of Divisional Superintendent there for about 25 years. He had been in the company's service for nearly 50 years.

SIR WILLIAM MACKENZIE, President, Canadian Northern Ry., who returned to Toronto, Dec. 13, from England, confirmed the report that he had while there disposed of £1,500,000 five per cent. land mortgage debentures, particulars of which were given in Canadian Railway and Marine World for December.

JAMES HOWDEN, the inventor of Howden's patent forced draught for steamships, died suddenly, towards the end of November, in Glasgow, Scot. and, aged 81. His first experiments with forced draught were conducted in 1862, but it was not until 1882 that the system was first introduced into steamships.

An unconfirmed report from Winnipeg says that R. J. MACKENZIE, who has spent most of his life in California during the past two or three years, will return to Winnipeg and again take an active part in Canadian Northern Ry. matters, particularly construction, and that he will be appointed Second Vice President.

S. C. HAYWARD, who died at Port Huron, Mich. Nov. 24, aged 84, was in G.T.R. service from early boyhood, holding various positions in the Point St. Charles, Stratford and Port Huron Shops. He retired from active service about 18 years ago, prior to which he had held the position of Master Mechanic for some years.

J. H. STORTZ, Locomotive Foreman, G.T.R., Mimico, Ont., met with a serious accident recently, when he was caught between a locomotive house door and the cylinder of a moving locomotive, when investigating some valve gear trouble on the locomotive. He was badly crushed, two ribs broken and his hip injured, but is reported to be progressing favorably.

W. A. BLACK, who has been appointed Locomotive Foreman, G.T.R., Depot Harbor, Ont., was born at Belleville, Ont., Mar. 27, 1880, and entered G.T.R. service as an improver, in 1900, and later served as a machinist, and to 1911, acted as Night Foreman and Assistant Shop Foreman, Belleville, Ont.; 1911 to 1912, Shop Foreman, Belleville, Ont.; 1912 to Nov., 1913, Locomotive Foreman, Coteau Jct., Que.

JOSEPH ABRAMS, who was recently appointed Wharf Freight Agent, C.P.R., Vancouver, B.C., was born at Manchester, Eng., Jan. 24, 1870, and entered transportation service in 1886, since when he has been, to 1891, yard clerk and checker, Cheshire Lines Committee, Manchester, Eng.; 1891 to 1899, freight handler, car sealer and freight checker, C.P.R., Winnipeg; 1899 to 1907, freight checker, delivery clerk and foreman, C.P.R., Vancouver wharf; 1907 to 1913, General Foreman, local traffic, C.P.R., Vancouver, B.C.

FRANK STAMELIN, who has been appointed Night Locomotive Foreman, C.P.R., Winnipeg, was born at Chatham, Ont., Oct. 18, 1863, and served his apprenticeship there, after which, to May, 1901, he served in various capacities with railway companies in Canada and the U. S. He re-entered C.P.R. service, May, 1907, and was to Sept., 1907, Shop Foreman, Kenora, Ont.; Sept., 1907, to June, 1908, Shop Foreman, Winnipeg; June, 1908, to Feb., 1909, Locomotive Foreman, Saskatoon, Sask.; Mar., 1909, to Dec. 1, 1913, Shop Foreman, Winnipeg.

JOHN WARDLE, who was recently appointed Commercial Manager, Metropolitan Ry., London, Eng., has had considerable railway commercial experience, having been 15 years with the Lancashire and Yorkshire Ry., in England, after which he was Assistant Secretary, G.T.R., London, Eng., and while holding this position accompanied the then President on a tour of the system in Canada and the United States. After holding that office for about four years, he was appointed London Manager of the G.T.R. Traffic Department, which position he held for about a year.

GEORGE HENDRIE, who died at Detroit, Mich., Dec. 29, aged 79, was a brother of the late Wm. Hendrie, the founder of the Hendrie Cartage Co., railway cartage agents. He was engaged in the cartage business in Hamilton, Ont., for a few years, but moved to Detroit nearly 50 years ago, establishing the first freight cartage line there. He was interested in the organization of the Duluth, South Shore and Atlantic Ry., now controlled by the C.P.R., and was President of the Detroit and Buffalo Steamboat Co., and at one time was a director of the Detroit and Cleveland Navigation Co.

LEWIS NORMAN, whose appointment as Storekeeper, C.P.R., Coquitlam, B.C., was announced in a recent issue, was born in Devonshire, Eng., Oct. 5, 1884, and entered C.P.R. service, Feb. 25, 1908, since when he has been, to Dec., 1908, clerk, Vancouver, B.C.; Dec., 1908, to Mar., 1910, storeman, Vancouver, B.C.; Mar. to July, 1910, on supply car, Vancouver, B.C.; July to Sept., 1910, shipper, Vancouver, B.C.; Sept., 1910, to Feb., 1911, relieving storekeeper, Kamloops, B.C.; Feb. to Oct., 1911, storeman, Vancouver, B.C.; Oct., 1911, to Feb., 1913, tracing and pricing clerk, Vancouver, B.C.; Feb. to Apr., 1913, Storekeeper, Kamloops, B.C.

FRANCIS EDWARD RUTLAND, whose appointment as Agent, C.P.R. Stockyards, Winnipeg, was announced in our last issue, was born in Essex, Eng., Nov. 17, 1868, and entered transportation service about 25 years ago. Prior to coming to Canada, he was engaged in railway work in South Africa, during and after the Boer War. He entered C.P.R. service in 1904, since when he has been, to 1905, register clerk, Local Freight Department, Winnipeg; 1905 to 1907, chief correspondence clerk, same department, Winnipeg; 1907 to Nov. 6, 1913, chief clerk, same department, Winnipeg. He is a commissioner for oaths and notary public for Manitoba.

J. G. SUTHERLAND, whose appointment continental Passenger Association, who died at Chicago, Ill., recently, after a short illness, was born at Bolton, Northumberland, Eng., May 15, 1832, and commenced railway service there, Apr., 1847, since when he has been, to Mar., 1857, junior clerk, chief clerk, and cashier, Newcastle and Carlisle Ry., Newcastle upon Tyne, Eng.; Apr. 29, 1857 to 1870, a plant to chief clerk, Audit Department, in charge of statistics and freight accounts, and chief clerk, auditor and General Passenger Agent, Great Western Ry. of Canada, now part of the G.T.R. Since March, 1870, his ser-

vice has been in the U.S., retiring from active railway work, Jan. 1, 1900, when he held the position of General Passenger and Ticket Agent, Chicago and Alton Rd.

JAMES CHARLTON, Chairman, Transas Car Service Agent, Alberta Division, C.P.R., Calgary, was announced in our last issue, was born at Aulac, N.B., Nov. 24, 1882, and entered railway service June, 1898, since when he has been, to Apr., 1901, operator and assistant agent, Intercolonial Ry. at various points; Apr., 1901, to June, 1902, operator, Pacific Division, and relieving agent, C.P.R., at various points; June, 1902, to May, 1906, dispatcher, C.P.R., Revelstoke, B.C.; May, 1906, to Feb., 1907, dispatcher, C.P.R., Calgary, Alta.; Feb., 1907, to Apr., 1911, dispatcher and acting Chief Dispatcher, C.P.R., Cranbrook, B.C., and Macleod, Alta.; Apr. to Nov., 1911, dispatcher and acting Chief Dispatcher, C.P.R., Calgary, Alta.; Nov., 1911, to Nov., 1913, Chief Dispatcher, C.P.R., Medicine Hat, Alta.

ALFRED H. SMITH, who has been appointed President, New York Central and Hudson River Rd., and Lake Shore and Michigan Southern Ry., New York, was born in the Western States in 1864, and has achieved all his railway experience with the New York Central Lines. He commenced service with the Lake Shore and Michigan Southern Ry. in 1879 as a messenger boy, subsequently transferring to the Purchasing Agent's Department, and later to the Engineering Department, under which he worked for several years as foreman and general foreman of construction on the change of grade and reconstruction of the line west of Toledo. From Oct., 1890, to Apr. 1, 1901, he was consecutively, Superintendent, Kalamazoo, Lansing, Franklin and Michigan Divisions; Apr. 1 to June 17, 1901, Assistant General Superintendent, Cleveland, O.; June 17, 1901, to Feb., 1902, General Superintendent; Feb., 1902, to July 1, 1903, General Superintendent, New York Central and Hudson River Rd.; July 1, 1903, to June, 1906, General Manager, same road; June, 1906, to Apr. 15, 1912, Vice President, same road; Apr. 15, 1912, to Mar., 1913, also Vice President, other N.Y.C. Lines; Mar. to Dec. 31, 1913, Senior Vice President, New York Central Lines in charge of operation, maintenance and construction.

JOHN WILLIAM PORTER, whose appointment as acting Chief Engineer, Hudson Bay Ry., Winnipeg, was announced in our last issue, was born at Aberdeen, Scotland, Oct. 15, 1877, and entered railway service in 1896, since when he has been, to 1902, pupil and assistant in office of Engineer in Chief, Great Northern Ry. of Scotland, Aberdeen; May, 1902, to Jan., 1903, draughtsman, Construction Department, C.P.R., Montreal; Jan. to Dec., 1903, draughtsman and transitman, C.P.R., Winnipeg to Fort William; Dec., 1903, to Mar., 1905, transitman, preliminary and location, C.P.R., Sudbury to Parry Sound, Toronto-Sudbury Line; Mar. to June, 1905, assistant chief of location party, Walkerton-Proton Line, C.P.R.; June, 1905, to Jan., 1906, Resident Engineer on Construction, Toronto-Sudbury Line, C.P.R., Alliston, Ont.; Feb. to May, 1907, Assistant Engineer, Georgian Bay and Seaboard Ry. (C.P.R.), Coldwater, Ont.; May, 1907, to May, 1909, Assistant Engineer, Toronto-Sudbury Line, C.P.R., Craighurst, Bala and Parry Sound, Ont.; Sept., 1909, to June, 1912, Division Engineer, District A, National Transcontinental Ry., Quebec, Que.; June, 1912, to Nov., 1913, Assistant District Engineer, District B, National Transcontinental Ry., Quebec, Que.

The total railway consumption of crude oil in 1912 is estimated at 32,000,000 barrels, an increase of 4,000,000 over 1911. The total mileage operated by fuel oil is 28,000 miles.

A Suit Over the Old Great Eastern Railway.

Some details of the early history of the old Great Eastern Ry. came out recently in the course of an action brought in the Quebec courts by Miss I. M. M. Campbell against the widow and administratrix of the late Hon. R. Prefontaine. The line was acquired by C. N. Armstrong in 1894, and subsequently an endeavor was made to settle the company's indebtedness, the creditors including Miss Campbell's father and Hon. R. Prefontaine, to whom \$10,000 each were due. Mr. Armstrong and the creditors agreed to have the line sold, and bid in by the South Shore Ry. at \$65,000. Mr. Prefontaine bought the railway, however, at auction for \$505, and later on transferred it to the South Shore Ry. for \$59,999, the S. S. Ry. turning over in payment certain subsidies from the Dominion and Quebec Governments. At the time of Mr. Prefontaine's sudden death in Paris, there was still due to him on account of the agreed on price, \$22,035.55, with interest, which was subsequently paid when the South Shore Ry. was acquired, along with the Quebec Southern Ry., by Senator Beique for the Delaware and Hudson Co., and amalgamated as the Quebec, Montreal and Southern Ry. Mrs. Prefontaine, her husband having died intestate, is administering the estate under the terms of her marriage settlement. Miss Campbell sought to recover the \$10,000 due to her father as one of the creditors of the old Great Eastern Ry., and Mrs. Prefontaine's counsel contended that she only had the usufruct of her deceased husband's property and personally could not pay out or alienate any portion of the property. The court upheld this contention, Dec. 7.

National Transcontinental Railway Bridges.

Between Moncton and Winnipeg there are 200 bridges having an aggregate length of 11 miles and a weight of 61,000 tons of steel; they cost more than \$6,000,000. Some of the most interesting structures were mentioned by R. F. Uniacke, Bridge Engineer, N.T.R., in an address at the Canadian Railway Club recently.

Many of the bridges are plate girder viaducts, among which is the one over Little Salmon River. It is 100 ft. high, 4,000 ft. long and contains 7,000 tons of steel. In the Bostonnais River bridge, where the deck plate girders are supported on comparatively low concrete piers, the spans are tilted out of a horizontal plane so that the girder webs are slightly inclined to the vertical and provide without shimming for the superelevation of the outer rail on a curve.

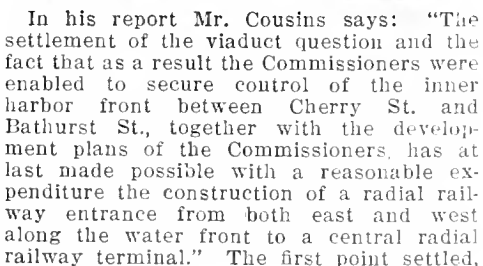

Falsework for the erection of the Bush River bridge truss spans and for the preliminary temporary support of a contractor's service track was made with the main bents capped at the proper elevation to support the chamber blocks for the trusses, and surmounted by centre pony bents to carry track stringers and rails and provide for a construction track in advance of the bridge erection.

The 80 ft. deck plate girder approach span of the Okeokodaski River bridge was supported at the shore end on a concrete pier that was wrecked by transverse displacement. The sub soil was found to be unable to support the 15 ft. fill that had been retained by the abutment pier. Temporary repairs were effected by supporting the end of the span on timber cribbing until a permanent low steel trestle could be built to replace the embankment.—Engineering Record.

Toronto Harbor Commissioners' Suggestions for Solving the Electric Railway Problem.

according to the chairman's letter, was the location of terminals for the transfer of passengers and freight among the three different services—steamships, steam railways and electric railways. This was fixed at the water front between Bay and Yonge streets, and the necessity of providing adequate connection with the steam and electric railways in the city and converging thereon led to the preparation of these comprehensive plans.

acquisition, or which may have been acquired by the city, from the Humber River, to Victoria Park Ave., on Kingston road, and to have a branch from Bathurst St., across the Western channel to and along the Island to Ashbridge Bay, and connecting up again with the water front line. In the next place, it is proposed to build a subway or tube line to a central terminal at the City Hall, connecting there with the previously projected tube line to St. Clair Ave. This tube line it is proposed to extend

provide a waterfront terminal between Bay and Yonge streets, to be used by all passenger steamships entering the port, and to have provision for the distribution of the passengers to all parts of the city. To provide for this distribution, and on the other hand for the collection of passengers, it is proposed that there shall be a line along the waterfront, partly on land belonging to the Harbor Commission, partly by the city, and partly on the right of way of the Toronto and York Radial Ry., in process of

to the old Belt Line Ry., then bringing it to the surface to extend it right to the northerly boundary of the city, about $5\frac{1}{2}$ miles from the City Hall. The various surface lines proposed would connect up these lines with existing civic lines, or would open up new territory. In most cases they are not more than suggestions of possible lines. But are given by the Commission as being probably the most suitable.

The final point in the proposals has to do with the entrance of the radial lines now

It has been announced that the Pennsylvania Rd. will extend its electrified zone to Elizabeth, N.J. This is a step toward the electrification of the entire New York division, which will probably be accomplished within the next few years.

The Port Arthur and Fort William Electric Railway.

On Dec. 1, the Port Arthur and Fort William Electric Ry., which for some years has been operated by a joint commission, passed under the direct and separate control of the councils of the two cities named, at the head of Lake Superior, each city taking over for operation under the direction of its own council, the portion of the line within its own borders. At the time the joint board was constituted the Port William City Council acquired by purchase the portion of the old Port Arthur Electric Ry., within its borders, and since that date all capital expenditure on the lines has been made by the two cities, each on its own behalf. The order of the Ontario Railway and Municipal Board creating the joint commission provided that its existence might be terminated on Dec. 1, 1913, and that, if so terminated, for five years thereafter, only one fare should be charged on the system, that is, for a fare collected in Port Arthur a passenger should be carried to any point in Fort William, and contrariwise. By an arrangement made between the councils of the two cities no alteration in the officers in charge of operation, or of the schedule, were to be made during December, pending adjustment of various matters, and the settlement of questions as to future management. The only difference noticeable by the public, was that at the boundary point between the two cities, the conductors of the various cars operating on the main line change fare boxes.

The railway has a total length of just over 40 miles, and the two systems have a mileage of approximately 20 track miles each. The main line extends from a point in Port Arthur, about which a definite understanding has not yet been reached, to a point in Fort William. An eight minute service is maintained on this line from 6 a.m., until midnight, then every hour. Each city has full control of traffic in its own boundaries, collecting fares, within its own bounds, but as on this main line Port Arthur cars will run into Fort William, and the reverse, it has been arranged for a change of fare boxes to be made at the boundary.

Certain rolling stock was acquired from Port Arthur by Fort William at the time the joint commission was formed, and since then each city has purchased such rolling stock as was necessary to meet the requirements of traffic within its own boundaries. On Dec. 1, Port Arthur was in possession of 16 double truck and one single truck pay-as-you-enter cars, and 3 double truck and 2 single truck cars of the ordinary type, while Fort William owned 11 double truck and 1 single truck pay-as-you-enter cars, and 5 double truck cars of ordinary type. Fort William has on order 5 single truck, and three double truck pay-as-you-enter cars. The Fort William cars are now heated by electricity, but they are being fitted with ordinary heaters. Power for the operation of the entire line is supplied by Port Arthur, in which city the car repair shops, owned entirely by Port Arthur, are situated. Each city has its own car barns.

The joint commission consisted of two members nominated by each of the cities, and these four appointed a chairman, the chairman in 1913 being G. L. Matthews, Port Arthur. The operating officials at the time of the transfer were: General Manager, M. O. Robinson; Purchasing Agent, A. R. Herman; Master Mechanic, F. Philp; Road master, J. Dillon; Line Foreman, N. Kennedy. Prior to the appointment of the joint commission the line was managed for Port Arthur by Commissioners elected by the ratepayers.

The Fort William City Council passed a resolution, Dec. 5, appointing M. O. Robinson Manager of the city electric railway, at a salary of \$125 a month, and on Dec. 8, the Port Arthur City Council passed a similar resolution appointing him Manager of the latter city electric railway at the same salary. He was General Manager of the entire line under the joint commission, and is now Manager of the two separate lines. The receipts of the two systems for the first two days of the separate operation are reported to have been as follows: Port Arthur—Receipts, Dec. 1, \$319.80; per cent of total, 40.2; Dec. 2, \$404.84; per cent, 41.7. Population, 18,500. Fort William—Receipts, Dec. 1, \$473.90; per cent, of total, 59.8; Dec. 2, \$560.66; per cent., 58.1. Population, 25,000.

British Columbia Electric Railway Percentage Payments in Vancouver.

A report was presented by the city auditors to the Vancouver City Council, Nov. 29, on the system of fixing the percentages paid by the British Columbia Electric Ry. to the city for suburban traffic. The auditors found that the percentages due the city, as reported by the company, on traffic within the old city limits, and on traffic within the annexed districts, where nothing was paid for the use of streets, were correct, but objection is taken to the system of calculating percentages, for traffic on various lines beyond these areas. The traffic on the particular lines is discussed in detail. As the result of a conference with the City Auditors, the company's officers agreed that the percentage in future shall be based on tests made of the traffic on the several lines affected every six months. Another question involved was in regard to settlers' tickets, of which during September 243,240 were used, the company's officers, while declining to withdraw from the position taken up that no percentage was due on this traffic, expressed a willingness to pay \$1,200 a year on account of it. The arrangement in both cases begins Jan. 1, and will extend during the currency of the franchise in the city, which expires in 1919.

The Ottawa Electric Railway's Suburban Fares.

The Ottawa Electric Railway gave notice some time ago that on and after Dec. 1 an extra fare would be charged to all passengers riding from Holland Ave., the western limits of the city, to Britannia and intermediate points. As a result of an application filed with the Board of Railway Commissioners on behalf of the city, asking the commission to investigate the company's tariffs, and its alleged unwillingness to make any further extensions in the city before the expiration of the franchise in 1923, an order was issued restraining the company from putting the proposed increase in rates in effect before Jan. 1, and the application was subsequently withdrawn, on the understanding that the matter will be brought up again toward the end of the year. The company contends that since the one fare from any part of Britannia to Ottawa, a distance of about 6 miles, has been in effect the receipts have not been sufficient to pay the fixed charges of \$50,000 on the \$750,000 invested in the line. When the line was opened in 1900 an extra fare was charged from the city limits. Five years ago the extra fare was abolished and a fare or transfer from any part of the city was honored on the line. The district through which the line runs has become fairly well settled during the last five years,

but the increase in traffic which resulted was not been sufficient to meet even the fixed charges.

Guelph Radial Railway Company's Report.

Following are extracts from the report for the year ended Sep. 30, 1913, of A. H. Foster, Manager Guelph Radial Ry., which is owned by the City of Guelph, Ont.:

Passengers carried, 1,192,129, an increase of 263,084 over 1912. Transfers issued, 153,012, an increase of 39,128 over 1912. The average fare is 3 4-5 c. with an increase of .022 per passenger car.

The extraordinary expenses for the year were approximately \$706.00, which includes repairs to track on Wyndham and Woolwich Streets, and the strengthening and repairing of a pier on the Dundas Road bridge. The earnings, \$49,816.99, show an increase of \$11,415.40, or 29.7% over 1912. The expenses, \$33,771.33, show increase of \$3,208.93, or 11.05%. The net profits show an increase of \$8,296.47, or 104.67%. The additions to real property were \$16,937.87. The surplus profits are \$29,654.11, an increase of \$9,985.66 over those to Sept. 30, 1912.

Hours of Labor on Toronto Railway.

Jos. Gibbons, Business Agent, Toronto Railway Employees Union, has made an application to the Ontario Railway and Municipal Board in which he sets out Sec. 272 of the Ontario Railway Act as follows:—"The Board may regulate the hours during which conductors and motormen, employees of a street railway company, may be required or permitted to work, but in no case shall an employee be permitted to work more than six days in a week, or 10 hours per day, and whenever practicable and reasonable such 10 hours shall be performed within 12 consecutive hours."

The application then states that the Toronto Ry. has in operation schedules that do not comply with the regulations specified in this section, the day's work in some cases being spread over a period up to 17 hours, and he asks that the Board make an order directing the company to operate its railway in accordance with Sec. 272, and also an order limiting the hours during which employees of a street railway may be permitted to work on Sunday to eight hours, the said eight hours work to be performed in eight consecutive hours.

Pay-As-You-Enter Cars on London Street Railway.

Canadian Railway and Marine World for December contained a description of six single truck p.a.y.e. cars built for the London St. Ry. by the Preston Car & Coach Co., with a floor plan and an illustration of the steel underframe. We were advised early in December that two of the cars had been put in operation and that the public had taken to them without any difficulty and appeared highly pleased with them. We have received the following information in regard to them:—

Every bit of space in the cars is fully utilized. Putting the forced ventilation heater in the vestibule with the motorman, makes room for one more seat for three passengers and also additional standing room for three or four more. The floor of the car is built out over the floor of the front vestibule to a point in line with the small partition just back of the motorman. While it might appear that this would crowd the motorman quite a bit, it is found that he has ample room. The floor is slightly extended in the same manner in the back vestibule in order that the conductor may stand further into the vestibule and at the same time be on a higher level than the passengers entering and paying their fares, the conductor thus being in a

provided just beside the number. The signs can then be changed without having to climb on to the roof of the car. The side signs shown as "Short," and referring to a short line which is operated, are provided by slipping a small sheet iron sign into sockets which are attached to the window posts just between the runway for the lower sash and the shade. This sign might be perforated and colored glass used to correspond with the same routing color. An advantage of this sign is that it also shows the passengers inside just what car they are on.

A feature of the doors which is being tried, to prevent clothing or hands being caught when the door is being closed, is that the edge of the door is cut away $1\frac{1}{2}$ ins. and the space filled up by a loop of soft rubber sheeting, which is not strong enough to injure the hands nor to hold clothing even should they get caught.

On putting the cars into service, the company inserted advertisements in the local papers, giving exterior views and floor plan of the car, showing entrance, fare box and exits, with the following reading matter, in which the co-operation of the public is asked to secure efficient working:—

To secure maximum convenience and

Extension Sought for the Windsor and Tecumseh Electric Railway.

The council of Sandwich East, Ont., applied recently to the Ontario Railway and Municipal Board to compel the Sandwich, Windsor and Amherstburg Ry. to build a belt line in connection with its subsidiary, the Windsor and Tecumseh Electric Ry. When the S. W. & A. Ry. Co. built the W. & T. E. Ry., 9.45 miles, after the original promoters had found they were unable to finance it, the S. W. & A. Ry. Co. purchased the franchises, stock, etc., of the W. & T. E. R. Co., a clause in the franchise from Sandwich East Tp. reads as follows: "That if, after three years of operation of the road, it paid, the company had then to complete a belt line between Tecumseh and Walkerville." The first line was built along the river and lake front, and the extension was to be built on a road a mile back, and would be approximately seven miles long. The council of Sandwich East Tp. has claimed for the past two years that the railway has been making lots of money, and that the extension should be built. The company contended that the line was not in that condition and that it was not under any obligation to build a belt line until the original line was on a paying basis. The township disputed the company accounts, although

London St. Ry. Cars, showing entrance and both ways out.

London St. Ry. Cars, showing signs and Closed Doors.

more commanding position.

The register is mounted just over the middle window of the rear vestibule. It is operated by foot pedals with the lever running upwards through the pipe stanchion just to the left of the conductor when he is facing the fare box. The mechanism works a rod from the top of this stanchion overhead to the register. Double registers are used, recording cash fares and tickets on one dial and transfers on the other dial.

In the body of the car proper, lift windows with sash fixtures are used instead of the drop windows. This enables the using of the thin walls in the car, which in turn enables the aisle to be made of maximum width.

The sign on the end of the car shown in the accompanying illustration as "Dundas," is illuminated, having two lamps arranged in the brackets with reflectors just behind the sign. Any name and desired color can be used, thus avoiding any possible confusion of getting the right color with the right name. These signs are distinguishable by color several blocks away and by reading the word quite a reasonable distance. The signs are mounted close to the end of the car, so that they may be reached from inside the car when the window is lowered or by standing on a small step

comfort of passengers, and minimize the possibility of accidents, patrons are respect fully requested to co-operate in making the use of the cars a success, viz.:—By being prepared to enter and leave the car promptly. Entrance at rear door only. When boarding the car be careful that the conductor is not closing the door at the time you take hold of the handles. Please have fare ready, if possible, so that it may be dropped into box without having to stop in vestibule, causing it to become crowded. Transfers are to be requested and given when paying fare. By moving toward front of car. Safety and convenience were the first considerations in designing these cars; therefore the doors must be closed and the steps folded whenever the car is moving. Exits at rear of car and also at front. Use front exit if at all possible. Please do not stand in the vestibule nor smoke on these cars. When leaving the car and carrying parcels, leave the left hand free for use in holding on to the handles. The company is endeavoring to provide a safe and pleasant means of transportation. If passengers will assist by refraining from blocking the passageway at the rear of the car, the success of the p.a.y.e. car is assured. As the company and the passenger are equally interested in improving the service, your co-operation is earnestly requested."

allowed access to the books and vouchers so that the same might be verified. The township did not take advantage of this offer but brought the matter before the Ontario Railway and Municipal Board which met in Windsor some time ago, and took the ground that if the township did not believe the company's records they would appoint independent auditors and, accordingly, Falls & Chambers, of Toronto, were appointed to make an audit. In connection with the report of the audit which verified the company's contention in every respect, the township again appeared before the Board, questioned the accuracy of the auditor's report and suggested the appointment of a railway expert to further investigate. The Board then adjourned the matter for two weeks to allow the township authorities to decide whether they would go to the expense of securing an expert's services or not.

The City of Saskatoon, Sask., recently received six complete cars from the United States, for operation on its municipal electric railway, but it is reported that four of the six have been returned as being defective in respect of material and finish, and not up to specifications. Two of the six were retained as cars were urgently required.

London and Port Stanley Railway Electrification.

The lease of the London and Port Stanley Ry., to the City of London, Ont., has been signed on behalf of the City Council, and the signing of the lease by the company, which is controlled by the city, has been authorized. The lease of the line to the Lake Erie and Detroit River Ry., which is the Ontario section of the Pere Marquette Rd., has been terminated, owing to the expiration of the lease, and the line has passed directly into the hands of the London City Council. Arrangements are being made with the P. M. R. for the operation of traffic over the line pending the electrification.

On Dec. 2, the City Council appointed a commission to operate the line, and to have charge of its electrification. The commission consists of four members, viz., Hon. A. Beck, M. L. A., minister in charge of the Hydro-Electric Commission for Ontario; P. Pocock, chairman of the Hydro-Electric Commission for the City of London; Alderman W. Spittal, and M. D. Fraser. The first two have been appointed for two years, and the two last for one year; all, however, are eligible for re-election. The commissioners, accompanied by the Mayor, H. J. Lamhe, Engineer of the Department of Public Works, and others, made a trip of inspection over the line Dec. 8. On the special train carrying the party, the commission was formally organized as follows: Chairman, Hon. A. Beck; Vice Chairman, P. Pocock; Secretary, pro tem, W. Spittal. At Port Stanley, the commissioners were shown the warehouse, 190 by 30 ft., which is being erected there by the Dominion Government, for import business. The commissioners discussed with the Reeve of Port Stanley the question of the erection of a new station and other terminal facilities there. It is said that a proposition will be made to the ratepayers of Port Stanley to contribute \$10,000 towards the cost of this work. The matter of station accommodation at St. Thomas was also discussed, and it was arranged to meet the St. Thomas City Council at an early date. So far as the work of reconstruction is concerned, the plans, it is stated, provide for the laying of new ties and steel in such a way that when it is decided to lay a second track it may be easily done. It is expected that tenders will be asked for the necessary work at an early date. Arrangements are being made for the continuance of the operation of the line by the Pere Marquette Rd. as at present, under which arrangement the Michigan Central Rd. obtains an entrance into London.

The line was formally handed over to the commissioners Dec. 9. Sanction to the leasing of the line to the London City Council is being asked from the Dominion Parliament.

The London and South Eastern Ry. was originally organized to build a line from London, Ont., south easterly to a junction with the Michigan Central Rd. It acquired a property in London, but never built any railway, and when the M. C. Rd. entered into an agreement to come into London over the London and Port Stanley Ry., the L. and S. E. Ry. leased its land to the M. C. Rd. for terminal purposes. The directors have granted an extension of the lease until the L. and P. S. Ry. is electrified, and a committee of the directors has been appointed to negotiate with the M. C. R. management as to future arrangements.

We are officially advised that the name of the commission having charge of the electrification and operation of the line will

be the London and Port Stanley Ry. Commission. Plans for the electrification are being prepared by the engineers of the Ontario Hydro-Electric Commission. It has not been decided when tenders for the work will be invited.

Judgment in Grand Valley Railway Suit.

The case of Wood vs. Grand Valley Ry. Co. came before the Appellate Division of the Ontario Supreme Court, Dec. 16, on an appeal by defendant, Pattison, from judgment of a Divisional Court of Dec. 20, 1912. Action by business men of St. George to recover damages for breach by defendant of contract to make traffic arrangements with the C.P.R., whereby current competitive freight rates will apply as from Galt and other points to all points east and west in Canada in consideration of plaintiffs purchasing \$10,000 first mortgage bonds of defendant railway company, and for repayment of amount paid by plaintiffs for said bonds. At the trial before Middleton, J., judgment was awarded plaintiffs for \$10,000 damages, costs, etc. This amount was varied and reduced by the judgment of the Divisional Court that defendant appealed from, and otherwise appeal was dismissed by Divisional Court.

The following judgment was given Dec. 16: Appeal allowed. Order of Divisional Court discharged and judgment at trial vacated. Judgment entered declaring that respondent is entitled to recover from the railway company and the appellant the damages sustained by reason of the breaches of the agreement complained of, directing a reference to ascertain the amount. The appellants and the railway company to pay the respondent their costs up to and inclusive of trial. Reserving further directions and subsequent cost, except costs of appeal to Divisional Court and to this court till after report. No other costs or any costs of any appeal. Cross-appeal of respondent dismissed without costs.

Civic Running Rights Over Toronto Railway.

The City of Toronto has requested the Ontario Government to proclaim the statute giving the Ontario Railway and Municipal Board authority in regard to the regulating of running rights and interchange of traffic for the purpose of arranging running rights over certain of the Toronto Ry. lines, or for an interchange of passengers, in accordance with amendments to the Ontario Railway Act, made in 1912, for that purpose.

A bill was originally promoted to give effect to the desire of certain lines to make arrangements with other lines for running rights and interchange, but the provisions were later incorporated in the Ontario Railway Act, such clauses not to come into effect until proclamation. The clause under which the city desires to effect the arrangement referred to, provides that any railway corporation shall furnish reasonable facilities for running rights and interchange of traffic to any other contiguous railway, and where they fail to agree as to terms and conditions the Ontario Railway and Municipal Board shall have authority to settle the differences between them and to enforce its decisions. It is also provided that such provisions shall apply notwithstanding any exclusive franchise purported to be held by any company. It is stated that if the proclamation is made, a number of applications will be made by other railways for interchange and running rights, including the entrance of various radial electric lines into cities where they have not such powers at present.

An Alleged Fake Accident Case in London.

A case against the London Street Ry. and the Grand Trunk Ry. is set down for the January Assizes in London, Ont. The plaintiff, Charles Nickels, was supposed to have been one of those injured when the London St. Ry. car No. 98 ran into the side of a G.T.R. freight train at the inter-switching crossing on Dundas St. East on July 24, about 11 p.m. He was removed to the Victoria Hospital, where he appeared to be suffering from several severe bruises and strains to the muscles of his shoulders and back. He was in the hospital about ten days. About the time he left the hospital a reporter of the London Advertiser, claimed to have discovered evidence showing that Nickels was not in the collision at all and that any claim for injuries he might make would therefore be a fake. This reporter claimed that Nickels had been several miles east of the city with another party, arranging to do some work building a silo or something of that nature and was at the time of the collision driving into the city with a Mr. Spettigue, that they were held up by the freight train and on the opposite side of the train from which the car came, that when the collision occurred, Nickels jumped out of the buggy and disappeared in the darkness. Spettigue is reported to have stated that he knew nothing about Nickels' whereabouts after he jumped from the buggy, but that he was certain that he could not have been in the collision. Nickels afterwards admitted to the London St. Ry.'s superintendent that he had been out in the country and was with Spettigue in the buggy but declared that he was in the collision. He was unable, however, to state how he got from the buggy, to the other side of the train, and into the car in order to be in the collision.

The crossing where this collision occurred was beyond the old city limits, where there were no street lights whatever in the vicinity and hence the crossing was very dark. The street cars had been operated for a number of years over this crossing under an order of the Board of Railway Commissioners, permitting the free use of the crossing by the street railway cars and requiring freight train conductors whenever crossing, to go ahead and see that all was clear before doing so. It seems that in the case in question the trainmen did this but did not afterwards protect the side of their train, and in the darkness the motorman did not see the train in time to avoid running into it. Since the accident an investigation has been made for the Board and it is expected that an order will be issued to have the crossing protected by interlocking derails and semaphores as other street railway-steam railway crossings are usually protected.

American Electric Railway Association.

The following officials of Canadian electric railways have been appointed on committees: Taxation Committee: G. Kidd, British Columbia Electric Railway; Wilford Phillips, Winnipeg Electric Railway; J. D. Fraser, Ottawa Electric Railway; Patrick Dubee, Montreal Tramways Co.; J. W. Crosby, Halifax Electric Tramway Co. Committee on Way Matters: W. F. Graves, Montreal Tramways Co. Committee on Equipment: W. R. McRae, Toronto Railway.

D. McDonald, President of the Canadian Autobus Co., informed the Montreal City Council by letter, Dec. 12, that in view of the delays in improving the streets the company, which has ordered its autohusses, will be unable to commence running them until early in the spring.

Electric Railway Projects. Construction. Betterments. Etc.

Berlin and Waterloo St. Ry.—We are officially advised that the Berlin, Ont., City Council has laid 3,600 ft. of double track concrete foundation, and new steel on its line between Wellington St. to Union St. It is proposed to undertake about half a mile of concrete construction on the line from King St. to the G. T. R. station in the spring. The work will be done by the city staff. V. S. McIntyre, Berlin, Ont., is Superintendent. (July, 1913, pg. 344.)

British Columbia Electric Ry.—In connection with the proposal of Burnaby, Westminster and Coquitlam, B.C., townships, to build a bridge across the Brunette River, it has transpired that the B. C. E. Ry. has prepared plans for the building of a cut-off into Westminster on its Burnaby Lake line, which will have to be provided for. Several suggestions in connection with this projected line have been made, and will be considered by F. L. McPherson, the engineer engaged to prepare plans for the bridge.

A contract is reported to have been let to R. Shields, Vancouver, for building of an interlocking control tower, electrically controlled, at the crossing of the Esquimalt and Nanaimo Ry., by the B. C. E. Ry. on the Esquimalt Road, Victoria. (Dec., 1913, pg. 592.)

Lulu Island Line Terminus, British Columbia Electric Railway, Granville Street Bridge, Vancouver. For description see Canadian Railway and Marine World, Dec., 1913, pg. 592.

Calgary Municipal Ry.—Press reports state that during this year the city council will let contracts for the building of about 10 miles of extensions of present lines. (Dec., 1913, pg. 592.)

The Edmonton Interurban Ry. Company has a charter from the Alberta Legislature to build lines from Edmonton, in various directions. It has laid track on a line from the city limits of Edmonton, to St. Albert, Alta., about five miles, upon which a self propelled gasoline electric car is being operated. There has been under consideration a piece of line to connect the southerly terminal of the line with the Edmonton Municipal Railway, about two miles, and it was expected to have this completed by Dec. 31. The officers of the company are: President, G. Barbeau; Vice President, J. H. Pleard; other directors, M. Klmpé, J. H. Garispy, L. Bureau. The first three are directors of the French Canadian Mortgage Co., the President being a resident of Paris, France. Felix Lantellier is General Manager, and H. Warner Chief Engineer. (Dec., 1913, pg. 592.)

Estevan Transit and Power Co.—The name of H. Nicholson, Estevan, should have been in our last issue along with the other provisional directors of this projected company. (Dec., 1913, pg. 593.)

Forest Hill Electric Ry.—Plans are reported to have been prepared for starting construction upon this projected line, early in the spring. The section to be built will start near the Toronto city limits on Forest Hill Road, run to Eglinton Ave., and westerly along that street to the old Belt-Line Ry. Property owners along the route are said to be aiding in financing the construction. (See also plan proposed by Toronto Harbor Commissioners.) (Sept., 1913, pg. 442.)

Halifax Electric Tramway Co.—Press reports state that a 500 k. w. motor generator set and other equipment for the railway generating plant is being installed in the power house at Halifax, N. S., by the Canadian General Electric Co. (May, 1913, pg. 237.)

Hamilton St. Ry.—We are officially advised that it is intended to build about 4.5 miles of new double track line during the present year. E. P. Coleman is General Manager, Dominion Power and Transmission Co., Hamilton, Ont. (Oct., 1913, pg. 494.)

Hull Electric Co.—We are officially advised that rails have been laid on the double track extension from Rivermead to the Jockey Club, at Connaught Park, 0.75 miles. (April, 1913, pg. 184.)

a spur of 200 ft. on Wellington St., from which point it is to be extended across property belonging to the Michigan Central Ry. Permission was also given the company to run over the city's line on Wellington St., from Forest Ave., to connect with this spur, which is to be used for transferring freight from the L. E. Ry. and T. Co.'s. line to the M.C.R. (Dec., 1913, pg. 594.)

At a meeting of the ratepayers of Aylmer Village, and Malabide Tp., held at Aylmer, Dec. 9, a resolution was passed authorizing the councils of the two municipalities to negotiate with the company for the building of a line, on a satisfactory route, on the basis of a guarantee of bonds for \$20,000 a mile for the mileage in their respective areas.

Medicine Hat Tramways, Ltd.—We have been officially advised that the action brought by E. J. Fagan for the purpose of quashing the bylaw, passed by the Medicine Hat, Alta., City Council, granting an extension of time to the Montreal Engineering Co., for the building of the projected electric railway in Medicine Hat, came before the courts at Calgary, Nov. 25. Judgment was reserved. (Dec., 1913, pg. 593.)

Montreal and Southern Counties Ry.—It is reported that the bonding and other work on the roadbed on the extension from Marieville to St. Césaire, Que., nine miles, has been completed, and that it was expected to finish up the overhead work by the end of Dec., 1913. A station is being built at Rougemont, midway between Marieville and St. Césaire. Construction will be gone on with all winter on the bridge across the Yamaska River, east of St. Césaire, which it is expected to have completed in the spring. (Dec., 1913, pg. 593.)

Press reports state that a contract has been let to the Canadian General Electric Co. for a 300 k. w. motor generator set, a bank of transformers and the other equipment for the substation now under construction at Rougemont, Que.

Montreal Tramways Co.—The Montreal City Council has under consideration a report from the Board of Control on the proposals of the M. T. Co., and the Autobus Co., respecting an underground railway. The Council is asked to lay down certain general principles before proceeding to the discussion of details. (Dec., 1913, pg. 590.)

The new car line in Westmount which connects the upper and lower levels of the city was opened for traffic Dec. 10.

Application is being made to the Quebec Legislature for an act in the company's interest. Formal notice was given some months ago, but the bill was not placed before the Legislature at the regular time. It is now printed and permission has been asked for the waiving of certain standing orders to enable it to be discussed. The chairman of the Legislature Committee on private bills is reported as stating Dec. 12, that the bill would ask for a 40 years extension of the franchise, and for the ratification of certain contracts with the city.

Nelson Street Ry.—Plans are being made, press reports state, for the betterment of existing lines, and for the building of some extensions during this year. (Aug., 1911, pg. 783.)

Niagara, St. Catharines and Toronto Ry. Application is being made to the Niagara Falls, Ont., City Council, for an extension of the franchise in that city. (Dec., 1913, pg. 593.)

Ottawa and St. Lawrence Electric Ry.—Press reports state that it is likely that construction will be started on the Ottawa-Morrisburg section of this projected electric railway, in the spring. It is also stated that it has been determined to provide a

International Transit Co.—Press reports state that plans are being prepared for the building of a line to connect the existing lines in Sault Ste. Marie, Ont., with Steelton, that the work will be done by the company, and that the rails will be supplied by the Lake Superior Corporation, which owns the I. T. Co.

Lacombe and Blindman Electric Ry.—Press reports state that about eight miles of grading have been completed out of Lacombe, Alta., toward Gull Lake and Rimeby, 30 miles. It is also reported that contracts have been let for ties and steel, etc., for the track laying, which it is proposed to go on with during the summer. It is also said that it is proposed to use gasoline electric cars on the line. E. R. Strathy, Winnipeg, is among the promoters. (Mar., 1913, pg. 141.)

London and Lake Erie Ry. and Transportation Co.—The Dominion Parliament is being asked to extend the time for the building of its already authorized line, to increase the bonding power from \$25,000 to \$30,000 a mile, and to authorize the building of the following additional lines: From Union in Yarmouth tp., to Sparta, from St. Thomas via Aylmer to Port Burwell. The St. Thomas, Ont., City Council, Nov. 25, granted the company permission to build

private right of way in Ottawa. (Nov., 1913, pg. 544.)

Ottawa Electric Ry.—The ratepayers of Eastview, Ont., will vote on a bylaw at the municipal elections in January, providing for the extension of the O.E.R. into the municipality, and for granting a bonus of \$25,000 therefor. (May, 1913, pg. 235.)

Port Arthur-Fort William Electric Ry.—The Port Arthur, Ont., City Council decided, Nov. 25, that it will be necessary in the near future to extend the line from Current River to Hodder Ave. The ratepayers will vote at the municipal elections on a bylaw to issue debentures for \$35,000 for street railway expenditures. The construction of the belt line has been completed, and it is expected that a regular car service will be put in operation over it at an early date. Press reports state that a proposition has been made to the Fort William, Ont., City Council for financing the building of an extension of the double track line on Victoria Ave., from near the Canadian Northern Ry. station along Victoria Ave., Edward St., and South Edward St. to a connection with the present lines in the west end. The City Council passed a bylaw, Dec. 5, providing for the expenditure of \$238,000 upon the street railway, and for the taking of a vote of the ratepayers thereon, at the municipal elections in January. (Dec., 1913, pg. 593.)

Sandwich, Windsor and Amherstburg Ry.—Plans are under consideration, press reports state, to rebuild about a mile of the Windsor-Amherstburg, Ont. line, eliminating some curves. (Nov., 1913, pg. 545.)

Saskatoon Municipal Ry.—The Saskatoon Sask., City Council made a trip of inspection over the newly built line to Sutherland, Dec. 2. It is 4.5 miles long, and will be operated by the Saskatoon City Council under a 20 year franchise granted by the Sutherland Town Council. The latter has power to purchase the line on the expiration of the franchise at a price to be fixed by arbitration. (Nov., 1913, pg. 545.)

St. John Ry.—Press reports state that it is expected to have the line extended to Crouville, N.B., by July 1, and that the company is willing to extend the line as far as Little River, provided the municipalities interested will strengthen the bridges. (Dec., 1913, pg. 593.)

Three Rivers Traction Co.—The Quebec Legislature has incorporated a company with this title to built electric lines in Three Rivers, Que., by arrangement with the City Council, and by arrangement with the various municipalities to Fond du Lac, Yamachiche, and other places in the counties of St. Maurice, Maskinonge and Champlain. The capital is fixed at \$600,000, and the city of Three Rivers is authorized to and the company by the purchase of bonds and by granting of exemption from taxation, and a franchise for 20 years. The company is being formed in connection with the Shawinigan Power Co.

Toronto Eastern Ry.—The grading from Bowmanville, and through Whitby to Pickering, Ont., is reported to have been completed, and track laying is said to be well advanced. It is expected to have the line between these points ready for operation early in the spring. (June, 1913, pg. 287)

Toronto Civic Car Lines.—The new track laid on the city streets during 1913 in connection with the civic lines was as follows: Danforth Ave. line, Greenwood to Luttrell Ave., 4.09 miles; Coxwell Ave. line, Gerrard St. to Danforth Ave., 0.57 mile. The St. Clair Ave. line from Station St. to Yonge St., 6.28 miles, was completed at midsummer. It is proposed to build a track 0.34 mile long to the St. Clair Ave. car barn.

The Board of Control has under considera-

tion plans for building a line from the St. Clair Ave. line southerly along Lansdowne Ave. to the C. P. R. crossing at Royce Ave.

Corporation Counsel Geary, in a recent report to the City Council said he hoped to be able to submit at an early date an agreement for the use of the Yonge St. line of the Toronto and York Radial Ry. within the city limits. (Feb., 1913, pg. 91.)

Toronto Ry.—The ratepayers of Toronto will vote at the municipal elections on a bylaw to provide by debentures \$963,890.25 for the purpose of paying for reconstructing, repairing and renewing pavements upon portions of streets occupied by the company's right of way.

The Board of Control has been asked to consider the question of negotiating with the Toronto Ry. Co. for an extension of the Harbord St. line from its present terminus at Bloor St., northerly along Ossington Ave. to Hallam St., then west to Dufferin Ave., and along Lappin Ave., to a junction with the Lansdowne Ave. line.

Toronto Suburban Ry.—Grading operations were continued during December on the extension from Lambton to Guelph, Ont., the principal point being north of Meadowvale, where the line runs under the C. P. R. Credit Valley Branch. Some difficulty is being experienced there in getting foundations for bridges, owing to the nature of the soil. It was expected that the grading would be completed through to Eden Mills by Dec. 30. Track laying will be started as early as possible in the spring, and it is hoped to have the line finished by the fall. (Dec., 1913, pg. 593.)

Windsor, Essex and Lake Shore Rapid Ry.—The Board of Railway Commissioners has approved location and detail plans for a station building on Talbot Road, Maidstone, Ont. (Feb., 1913, pg. 93.)

Winnipeg Electric Ry.—Track is reported to have been laid on the Winnipeg, Selkirk and Lake Winnipeg Ry., owned by the W. E. Ry., to Stony Mountain, Man., eight miles from Stonewall, and the overhead work is said to have been completed. The line branches off from the main line to Selkirk at Middlechurch, and proceeds in a nearly straight line to Stony Mountain. The branch is 24 miles long and it is expected to have it finally completed and in operation during next summer. While it is said that the branch will be extended to Balmoral no definite agreement for a franchise has been reached. (Dec., 1913, pg. 593.)

We are officially advised that the press reports stating that a contract had been let for the development of the water power at Big Bonnet Falls on the Winnipeg River, by the Winnipeg Water Power Co., a subsidiary of the Winnipeg Electric Ry. Co., are incorrect. It is probable, however, that arrangements will be made in the near future. (Dec. pg. 589.)

The Grand Valley Railway and Brantford Street Railway Litigation.

The company having failed to pay to the city of Brantford \$7,500, due for taxes, prior to Dec. 1, seven warrants for the seizure of the property of the Brantford St. Ry., covering real estate, movable assets, rolling stock, etc., were issued Dec. 2. The city, however, decided not to have them executed until after the hearing of the company's appeal against the recent decision of the Ontario High Court, reported in our issue of Oct., 1913, pg. 496, which is down for hearing in the Court of Appeal, at Toronto, at the current sittings.

The case came up for hearing at Toronto, Dec. 10, and the arguments were concluded

Dec. 12, judgment being reserved. During the hearing the Chief Justice granted the Brantford City Council special leave to ask to have the order set aside authorizing E. B. Stockdale, the Receiver, the right to appeal, and to change the Receiver should it be shown that there was a conflict of interest between his interests as Receiver and as General Manager of the Trusts and Guarantee Co., the trustee for the bondholders. This matter was set down for hearing, Dec. 22, and the appeal of the G.V. Ry. against the order made for a distress warrant for \$7,500 on account of taxes due the Brantford City Council was postponed until the same date. The case heard was the appeal of the G.V. Ry. against the decision providing for the forfeiture of the charter of the Brantford St. Ry., unless certain works on the way of betterment were done at once, and other works arranged for in the immediate future, and payment made of all sums due.

The Brantford City Council, Dec. 15, authorized the City Solicitor to make the necessary applications as authorized by the court.

The adjourned case, and the cases specially fixed for hearing in these matters, came before the Appellate Division, Toronto, Dec. 22. The court dismissed the appeal from the decision giving the city of Brantford permission to issue a distress warrant for taxes due in 1913. The specially entered case, viz., the city's application for the removal of Mr. Stockdale as Receiver of the company, was adjourned to Feb. 22.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry., and allied companies.—Gross earnings for October, \$753,501; operating expenses, maintenance, etc., \$561,902; net income \$191,599, against \$721,621 gross earnings; \$515,813 operating expenses, maintenance, etc.; \$205,808 net income for Oct., 1912. Aggregate gross earnings for four months ended Oct. 31, \$3,014,355; net earnings \$775,077, against \$2,735,207 aggregate gross earnings; \$787,214 net earnings for same period 1912.

Cape Breton Electric Co.—Gross earnings for October, \$36,793.71; operating expenses and taxes \$18,751.52; net earnings \$18,942.19; interest charges \$4,891.67; balance \$13,150.52; bond sinking and improvement funds \$1,190; balance \$11,960.52, against \$31,133.27 gross earnings; \$16,339.61 operating expenses and taxes; \$14,793.66 net earnings; \$4,412.50 interest charges; \$10,381.16 balance; \$1,206.67 bond sinking and improvement funds; \$9,174.49 net balance for Oct., 1912.

Dominion Power and Transmission Co. A dividend of 2% was paid Dec. 15 to shareholders of record on Nov. 30, on the limited preferred stock, which is entitled to a dividend of 10%, after which it becomes common stock. Dividends of 3½% have been paid on this stock, and it is anticipated that the remaining 6½% will be paid during the current year.

Hamilton St. Ry.—Gross receipts for quarter ended Sept. 30, 1913, \$181,463.09, on which the 16.397 percentage has been paid to the city.

Lethbridge Municipal Ry. Earnings for November, \$4,618.73, number of passengers carried, 111,618. Total earnings for 11 months ended Nov. 30, \$53,576.17.

London St. Ry. Gross earnings for October, \$27,791.58; expenses \$20,465.62; net earnings \$7,325.96; deductions \$2,680.49; net income \$4,645.47, against \$25,668.78 gross earnings; \$17,890.65 expenses; \$7,778.13 net earnings; \$2,450 deductions; \$5,328.13 net income for Oct., 1912. Gross earnings for Nov. \$26,347.73; expenses \$18-

692.04; net earnings \$7,655.97; deductions \$2,388.35; net income \$5,267.62; against \$25,442.85 gross earnings; \$18,371.43 expenses; \$7,071.41 net earnings; \$1,371.25 deductions; \$4,700.16 net income for Nov. 1912. Aggregate gross earnings for 11 months ended Nov. 30, \$302,489.05; expenses \$213,651.19; net earnings \$88,837.86; deductions \$26,876.08; net income \$61,961.78, against \$278,217.95 aggregate gross earnings; \$192,203.29 expenses; \$86,014.59 net earnings; \$26,461 deductions; \$59,553.59 net income for same period 1912.

Mount McKay and Kakabeka Falls Ry.—A committee has been appointed by the Fort William, Ont., City Council to meet the directors of the company with a view of discussing the purchase of the line.

Montreal Tramways Co.—The amount recently received by the Montreal City Council for percentages during 1913 was \$500,934.55, compared with \$409,510 for 1912.

Nelson St. Ry.—At a conference recently between the directors of the Nelson St. Ry. Co., and the City Council of Nelson, B.C., it was decided that the railway be operated under municipal control, with the present shareholders retaining their financial interest on a proportionate partnership basis. It is proposed to increase the number of shares by 25,000, making 75,000 in all, of which, the city is to acquire 40,000, thus getting control of the property.

Niagara Falls Park and River Ry.—See International Ry.

Toronto Ry., Toronto and York Radial Ry., and allied companies.—Gross earnings for October, \$861,235; operating expenses, maintenance, etc., \$415,021; net earnings, \$446,214, against \$754,104 gross earnings; \$371,485 operating expenses, maintenance, etc.; \$382,619 net earnings for Oct., 1912. Aggregate gross earnings for ten months ended Oct. 31, \$8,044,705; net earnings \$3,999,218, against \$6,975,148 aggregate gross earnings; \$3,567,719 net earnings for same period 1912.

Toronto and York Radial Ry.—The rate-payers of Toronto are being asked to authorize the issue of debentures for \$89,392 to provide for the purchase of the old Toronto and Mimico Electric Ry., from Sunnyside to the Humber River, a part of the Lake Shore Division of the T. and Y. R. Ry.

Winnipeg Electric Ry.—Gross earnings for October, \$257,312; operating expenses \$196,703; net earnings, \$160,610, against \$221,029 gross earnings; \$170,073 operating expenses; \$150,966 net earnings, for Oct., 1912. Aggregate gross earnings for ten months ended Oct. 31, \$2,328,548; net earnings \$1,196,985, against \$2,078,592 aggregate gross earnings; \$1,431,714 net earnings for same period 1912.

The Proposed Purchase of the Toronto Railway.

D. M. McIntyre, Chairman of the Ontario Railway and Municipal Board, has according to a statement in the daily press, informed Corporation Counsel Geary that it is the intention of the Board to procure the assistance of an adviser thoroughly versed in street carway transportation to report on the effect of application for new lines. This will be done when the pending construction of the new city streets is completed and the new routes established allowing a reasonable time to elapse to determine their effect upon the operation of the system, and to ascertain, in particular, the extent to which such routing will relieve the congestion in the downtown districts during the rush hours. The latter adds that the Board could not any longer ignore

the pending negotiations between the city and the company for the purchase by the former of the company's undertaking. Under such circumstances, it is suggested that the status quo should be maintained until a determination of the negotiations one way or another.

At a meeting of the Board of Control, Dec. 17, a motion was carried by three votes to two, to notify the Toronto Ry. Co. that the city will not proceed, with any further negotiations for the purchase of the property, but the City Council decided Dec. 22, to proceed with the negotiations.

The Toronto Rapid Transit Association has been formed with the objects of advocating for an extension of the powers of the Ontario Hydro Electric Commission, to include the purchase, construction and operation of a complete provincial system of rural and urban electric railways; to secure the elimination of private ownership of the supply of electric light, heat, power and traction; to defeat the proposed purchase of the Toronto Ry. and Toronto Electric Light Co., and to support the speedy construction of a rapid transit system by the city with connections to the suburbs, and the necessary terminal facilities. J. F. Ellis and A. W. Wright are respectively, temporary chairman and secretary.

Personal Paragraphs.

W. H. MUNRO, Local Manager, Peterborough Radial Ry., has been elected Secretary-Treasurer of the Trent Valley Water Conservation Association, which has been formed in the Trent Valley district of Ont.

J. W. MOYES, of Toronto, the promoter of the Ontario West Shore Ry., has been employed by the City of Toronto recently to report on the relative cost of operation of electric cars and motor busses.

J. B. SUNDERLAND has resigned from the Comptroller's Department, British Columbia Electric Ry., in which he has been engaged for the last five years, to take charge of the agency department of McDonald, Marpole & Co., Vancouver, B.C.

A. B. CORYELL has been appointed Superintendent, Electric and Tramway Department, Moncton Tramway, Electricity and Gas Co., Moncton, N.B., vice H. N. Price, resigned. Mr. Price has not been transferred to Pittsburgh, Pa., as intimated in the local press.

Electric Railway Notes.

The Hull Electric Co. has ordered two 800 k. w. transformers for its plant at Deschenes, Que., from Canadian General Electric Co.

The Hull Electric Co. has ordered four 42 ft. semi convertible, single end trailer car bodies, from the Ottawa Car Manufacturing Co.

The Port Arthur Electric Ry. has ordered one 21 ft. single truck, semi convertible, p-a-y-e car body from Ottawa Car Manufacturing Co.

The Montreal Tramways Co. has ordered a standard double truck combination locomotive and snow sweeper from Ottawa Car Manufacturing Co.

The Toronto Suburban Ry. has received two single end, single truck, p-a-y-e city cars from the Preston Car and Coach Co. The T.S.R. is installing its own equipment.

The Fort William Electric Ry. has received one standard single truck snow sweeper, with Westinghouse 101 B2 equipment, complete, from Ottawa Car Manufacturing Co.

The Brandon (Man.) Municipal Ry. has received a standard single truck, double end, long broom snow sweeper, with Westinghouse 101 B2 equipment, from the Preston Car and Coach Co.

The British Columbia Electric Ry. has received four single end, double truck city cars, with Westinghouse 101 B2 equipment and Westinghouse straight air brakes, from the Preston Car and Coach Co.

The British Columbia Electric Ry. has announced that the name of its station situated on the Hastings townsite on its Burnaby line will be Horne-Payne, after R. M. Horne-Payne, the Chairman of the company.

The Saskatoon (Sask.) Municipal Ry. has received six double end, double truck, p-a-y-e city cars, mounted on standard trucks, with Westinghouse 101 B2 equipment, Westinghouse straight air brakes, from the Preston Car and Coach Co.

We are advised that the self-propelled car built at Burton-on-Trent, Eng., for use on the Edmonton Interurban Ry., at Edmonton, Alta., has not yet been delivered. The car being operated on the line has been obtained from another source.

The Fort William Electric Ry. has on order with the Ottawa Car Manufacturing Co., five single truck and four double truck p-a-y-e cars, all of steel construction. Four have been delivered, and the remainder will follow early in the year.

The Port Arthur, Ont., City Council was advised recently by the joint board then operating the street railway service of Port William and Port Arthur, that it should purchase four additional single truck cars at once in order that an efficient service might be given on the recently completed belt line in Port Arthur.

The London, Ont., City Council decided, Dec. 1, that a vote be taken at the municipal elections in January, as to the operation of electric cars in the city. Under an Act of the Ontario Legislature a vote on this question can only be taken in places of over 50,000 population, and a certificate that London has this population has been given by the Ontario Government.

The British Columbia Electric Ry. has announced that tickets will be issued at single fare for the double journey for young people attending school from points on the recently opened line from Victoria up the Saanich Peninsula. The minimum fare will be 5c. Books of tickets will be issued, but they will not be available on Saturdays, Sundays, or school holidays.

The Toronto City Council passed a resolution Dec. 2, instructing the City Solicitor to apply to the Lieutenant-Governor-in-Council for a proclamation putting in force the statute passed in 1912 amending the Ontario Railway Act, with reference to the interchange of traffic and running rights between electric street railway systems owned or operated by different corporations lying contiguous to one another.

The Windsor, Essex and Lake Shore Rapid Ry. has ordered two interurban passenger cars from Tillsonburg Electric Car Co. Following are the chief particulars:—Seating capacity, 62; length over body, 44 ft.; length over bumpers, 55 ft.; width over all, 9 ft. 1½ ins.; interior trim, polished bronze; roof, monitor deck style; bottom frame, composite wood and steel; interior finish, oak; couplers, radial.

The Toronto Board of Control has recommended to the City Council the appointment of a Traction Commission to have charge of all the transportation interests of the city. It is proposed to have a commission of three, serving without salary, and at the

commencement, appointed for varying terms, so that eventually each member will serve three years, one retiring each year. The City Council to retain the power of veto over the actions of the commission.

The two cars which the Dominion Power and Transmission Co., Hamilton, Ont., recently received from Tillsonburg Electric Car Co., of which mention was made in a previous issue, are 51 ft. long over all, 49 ft. long over body, and 9 ft. wide over all. The bottom frame is composite wood and steel, the roof of the freight car type, with interior finish of chestnut and interior trim of polished bronze; the trucks are equipped with extra heavy rolled steel wheels, and the couplers are M.C.B. standard.

The Sandwich, Windsor and Amherstburg Ry. was sued recently for penalties for alleged breach of contract by the Walkerville, Ont. Town Council, and when the case came on for hearing the county judge dismissed it on the ground that it had not been shown that the town had suffered damage. The case was appealed, and the Appellate Division of the Supreme Court of Ontario gave judgment Dec. 16, reversing the previous decision, and giving the town \$1 damages and costs.

The London St. Ry. reached an agreement with the City Council of London, Ont., Dec. 11, as to the operation of street cars in the city on Sundays in the event of the ratepayers voting in favor of the bylaw at the forthcoming municipal elections. The cars will be operated for eight months in the year on Sundays from 8 a.m. to 10.30 p.m., and during June, July, August and September from 8 a.m. to 11 p.m.; with fares at 5c. cash, tickets seven for 25 cents, and children's tickets two for five cents, with transfers applying to all.

In a recent decision dismissing the action of the owner of a horsedrawn vehicle for damages caused by the vehicle being knocked over by one of the Montreal Park and Island Ry. cars the judge stated that while those in charge of cars must take every means to render their operation as little dangerous as possible, it must not be forgotten that the cars are a public necessity, and the inconveniences arising from their operation, which are reasonably necessary for their efficiency, must be submitted to. The cars have the right of way on their tracks, and it is the duty of others using the streets to respect that right of way.

A proposition is under consideration by the Vancouver, B. C., City Council for the operation of a motor bus service in the city. The applicants for the franchise are: F. Buscombe, J. G. Woods, J. Martin and J. Weart. No decision has been reached, but it was pointed out that the council some time ago had decided to make application to the Legislature for power to operate motor busses, or to give franchises for such a purpose. A similar application has been made to the New Westminster City Council.

The Cape Breton Electric Co. has applied to the joint local municipal bodies for approval of a fender with which its new double truck cars have been equipped, and which is of a different type to that already approved. E. L. Milliken, General Manager, stated that it was only a matter of form to have the fender approved by the different municipal bodies, but strictly speaking the company was breaking the law, when during the rush hours cars were operated with the different type of fender on, and the law would also be broken if the cars were run without a fender. The company operates cars in Sydney and North Sydney, N.S., and on the Sydney and Glace Bay Ry., out of Sydney.

The Imperial Privy Council, Dec. 12, declined to hear an appeal case in the matter

of damages for personal injuries received by one Bastien against the Montreal Tramways Co. The amount involved was comparatively small, but application was made that the appeal be heard, as there was a principle involved which would affect a number of other cases. The injuries were caused to Bastien by a street car belonging to the M. T. Co., but it is alleged on behalf of the company that the actual cause of the accident arose from the neglect of the Montreal City Council in not having the streets in a proper state of repair. The Lord Chancellor stated that the court, while fully appreciating the importance of the questions arising, did not feel, having regard to the amount of damages involved, that it was a case for hearing before that tribunal.

Electric Railway Track Laid in 1913.

Below is a table showing track laid on electric railways in Canada during 1913. The table is not published as a complete one, owing to the fact that some of the companies have not replied to the circular sent, but it is believed to be approximately correct. The * mark indicates that the figures given are estimated.

*British Columbia Electric Ry.—		Miles	Miles
Extensions in Vancouver

Total			164.15

The London St. Ry. laid 0.70 miles of second track on existing lines; the Galt, Preston and Hespeler Ry. laid some sidings.

So far as construction for the current year is concerned we have been officially advised by six companies that they have under contract or survey, 47.70 miles of new track, and subject to confirmation we understand that four other companies have under consideration about 20 miles of new lines. These figures are altogether apart from the lines under construction by the Toronto Suburban Electric Ry.; the projected extension of the London and Port Stanley Ry., and the projected lines out of Toronto under the Ontario Hydro Electric Commission.

The Canadian Northern Telegraph Co. has closed its offices at Vista, Man., and has opened offices at Salines, Ont., and Highland, Alta.

Telegraph, Telephone and Cable Matters.

W. J. Camp, Assistant Manager, C.P.R. Telegraphs, Montreal, lectured before the Montreal Electrical Society, Dec. 1, on the telegraph system.

The Board of Railway Commissioners has extended the time, to July 1, for approval of telegraph tolls of C. P. R., Canadian Northern Telegraph Co., Great North Western Telegraph Co., White Pass and Yukon Route and G.T. Pacific Telegraph Co.

The Canadian Northern Telegraph Co. has opened telegraph offices at Cereal, Chinook, Hanna, Oyen and Youngstown, Alta., and telephone offices at Lakeland and Lamsruth, Man., Pleasant Valley, Pathlow and St. Brieux, Sask., and has closed its telephone offices at Cereal, Chinook and Richdale, Alta.

On the completion of the wireless telegraph stations at Port Burwell, Toronto Island and Kingston, which it is anticipated will take place this winter, Canada will have the longest single stretch covered by wireless telegraphy, in the world, viz., from Port Arthur, Ont., to Cape Race, over 2,000 miles.

The C.P.R. Telegraph Department, which has been operating two duplex Morkrum printer circuits between Montreal and Toronto during the past year, has placed another similar circuit in operation between Montreal and Ottawa, and another will shortly be installed for use between Montreal and Quebec.

J. McMillan, General Superintendent, Western Lines, C.P.R. Telegraphs, announced in Winnipeg Dec. 11, that the following additional telegraph lines have been erected during the past season.—Manitoba Division, —1,065 miles of copper wire, 90 miles of iron wire, and 151 miles of train dispatching telephone circuit; Saskatchewan Division, —525 miles of copper wire, and 617 miles of copper wire and 90 miles of iron wire along new lines; Alberta Division, —1,650 miles of copper wire, 713 miles of iron wire and 508 miles of railway equipped with train dispatching telephone circuits, and 250 miles of wire along new lines.

It is announced that the Western Union Telegraph Co. will shortly re-start business in Alberta, under an arrangement with the Alberta Government. The company at one time had an office at Lethbridge, and operated over the Alberta Ry. and Irrigation Co.'s lines, but on the absorption of the A. R. & I. Co. by the C.P.R., the Western Union retired from the Province. It is stated that the telegraph operators intend to petition the Government not to enter into an agreement with the W.U.T. Co. unless the company agrees to pay a fair wage scale and abolish what are alleged to be black list methods.

R. S. Jenkins, who recently retired from the position of General Superintendent, C. P. R. Telegraphs, Winnipeg, was entertained there, Dec. 10, by the telegraph staff, including representatives from various points on the whole system. He was presented with a silver tea service and an illuminated address. He commenced his telegraph service with the Montreal Telegraph Co., at the age of 15, and later was engaged with the Dominion Telegraph Co. in Ontario, and subsequently returned to the Montreal Telegraph Co. He entered C.P.R. service in 1881 at Winnipeg, as an operator at Winnipeg Jct., when his telegraph office was a box car which had been used for cattle. He was later moved to Ossawa and Birds Hill, and to Winnipeg Jct., and was afterwards Superintendent of the commercial telegraph service at Winnipeg, on its inception, Sept. 1, 1883.

Marine Department

The Ocean Freight Rate Question.

By H. L. Drayton, K.C., Chief Commissioner, Board of Railway Commissioners.

Through the courtesy of Hon. G. E. Foster, M.P., Minister of Trade and Commerce, we are enabled to give the full text of the report presented to the Dominion Government by Mr. Drayton, on his recent visit to England in connection with the question of ocean freight rates, as follows:—

Acting on the instructions contained in a report of a meeting of the Privy Council, approved by the Administrator on July 19, 1913, I proceeded to England with the object of discussing with the Imperial authorities the question of governmental control of the charges made by the shipping companies to the public for the carriage of ocean borne freight. The question was one which had already engaged the attention of the Board of Trade of Great Britain, the conclusions of that Board arrived at being included in the communication from the Marine Department of the Board of Trade to the Under Secretary of State, Colonial Office, on Aug. 4, 1910. The material part of the conclusion is as follows:—

"We lie, for the above reasons, the Board will see great difficulty in the establishment of a joint Imperial for the control of ocean freight rates, they direct me to call Lord Crevel's attention to the recommendation made by the Royal Commission on Shipping Rings in paragraph 132 of their report, that to meet the possibility of cases arising where public interests are generally affected either by the charging of a rate or by its more or less permanent diversion, the Board of Trade should have power to appoint competent persons to investigate the matter. There seems no reason why His Majesty's Government should not discuss with the Canadian Government the question of holding a joint inquiry into the charges and the facilities afforded by the shipping companies engaged in the trade between the United Kingdom and Canadian ports, either on the basis of the recommendation of the Royal Commission, or on the lines of the facilities provided for the Canadian Investigation Bill, which is now before the House of Commons."

In view of the conclusion arrived at by the Board of Trade, a preliminary joint investigation, such as above suggested, was essential. The scope of such an enquiry of necessity would cover the whole situation, so as to enable the commissioners appointed for the purpose to determine whether the rates charged and facilities afforded by the shipping companies engaged in the trade between the United Kingdom and Canada were such as to require some form of governmental control or not. With this end in view, I endeavored to obtain the appointment of a joint commission to make a thorough and complete investigation of, and to report on the methods and practice, and rates and charges of ocean carriers doing business, or from time to time doing business, between ports in the United Kingdom and ports in Canada; and also of all terminal companies or port authorities of any port in the United Kingdom or in Canada through which traffic, whether of passenger or freight, between the United Kingdom and Canada passes; and also to investigate into and report on all insurance charges or other expenses that shippers from the United Kingdom to Canada, or vice versa, are subject to. I further recommended that the commission, in addition to matters so binding in the above matters, should be empowered to recommend what, if any, regulations it deemed advisable should be passed by the Imperial Parliament, or by the Dominion Parliament, or by both. I further recommended that it was necessary that the commission should have authority to sit at such places it might

desire, either in the United Kingdom or in Canada, with authority to compel the attendance of witnesses, production of documents, books, papers, etc., and to administer oaths; and also that the commission should have the right to employ accountants, traffic experts, clerical and other assistance. I further impressed upon the Imperial authorities that it was the desire of the Canadian Government that the investigation should be entered on in the near future, and, if possible, a report made so as to enable any necessary action to be taken by that government at the ensuing session of Parliament. In support of the necessity for an investigation, I relied upon the admitted fact of large increases in rates and the falling off of the ratio of imports from Great Britain to Canada, as well as the large increase of cost to the British consumer certain increases in rates in part

H. L. Drayton, K.C.
Chief Commissioner, Board of Railway
Commissioners for Canada

worked, the particulars of which I do not now venture to trouble you with. It will be noted that the investigation as asked was not confined to the freight situation merely, but also covered passenger traffic. In case there could be any exception taken to my request for an investigation on that score, I pointed out that no complaint was made at the instant in so far as passenger rates were concerned, but that, in order to arrive at what a fair, adequate and reasonable freight rate should be, the sources of revenue, with the expense common to both services, should be considered, and a proper allocation made of expenses so as to distinguish that part fairly chargeable to freight and that fairly chargeable to passenger traffic. This, of course, could not be done unless the passenger figures were placed before the commission of enquiry.

In addition to discussing the matter with

the Imperial authorities, I also had the opportunity afforded me of meeting the representatives of the different lines that are in conference with each other, and of hearing a statement of their position. As a matter of fairness to the companies, it is only due to state that the expense of carrying on a business in some particulars has very largely increased, so that a certain advance would undoubtedly be reasonable if the previous rates only afforded fair returns to the operating companies.

The action taken by the Board of Trade is shown in the following letter:—

"I am directed by the Board of Trade to refer to the discussion which took place on Aug. 22 between yourself and representatives of the Board and the Colonial Office on the subject of ocean freight rates, and I am to state that the Board of Trade have carefully considered the arguments and suggestions advanced by you at that discussion.

"The offer of co-operation in a joint inquiry which was made in a letter from Lord Crewe to the Governor-General of Canada on Aug. 19, 1910, appears to have met with no response from the Canadian Government until now; but on April 15, 1912, in pursuance of a resolution passed by the Imperial Conference of 1911, on the motion of the Canadian Prime Minister, a joint Royal Commission was appointed, representing the Dominion and the United Kingdom, in whose terms of reference the question of shipping freights was clearly included. Further, at the meeting of the Imperial Conference at which the resolution moved by the Prime Minister of Canada was under discussion, the question whether the subject of shipping arrangements and means of transport, etc., would be included in the reference to the commission was expressly raised by the Prime Minister of Australia and was answered in the affirmative by the President of the Imperial Conference.

"Since their appointment the Royal Commission have visited Australia and New Zealand, and have taken evidence on the subject of freight rates in relation to trade between the United Kingdom and those Dominions.

"In these circumstances, the Board, after consultation with the Secretary of State for the Colonies, feel that it would not be possible at the present stage to advise His Majesty's Government to appoint a second Royal Commission representing Canada and the United Kingdom only, to investigate a subject which the Royal Commission on the Trade of the Dominions are already examining and on which it is understood that this commission will very shortly be taking evidence in Canada." In any event, a commission possessing all the powers suggested by you could not be constituted without legislation, and it could not, therefore, be appointed or get to work until next year, by which time, it is understood, the Dominions Royal Commission will be visiting Canada.

"While, however, it is feared that the appointment of a special commission of the nature proposed is not possible, His Majesty's Government would be prepared, if desired, to communicate with the Dominions Trade Commission (of which the Canadian Minister of Trade is a member), informing them of the desire of the Canadian Government that the subject of shipping freights, etc., in the trade between Canada and the United Kingdom should be investigated with as little delay as possible. The Board of Trade hope that, in the circumstances, this course will meet the wishes of the Canadian Government."

Might I be permitted to say that, if the Dominions Trade Commission could take this matter up and make an interim report on it, if necessary, I do not think the enquiry could be in better hands. On receiving this advice, I attended on the Chairman of the Dominions Trade Commission, Sir Edgar Vincent, who told me that the question of transportation within the Empire was one which his commission had already taken some evidence on; and that, under the present arrangement, the commission would be in Canada next August. He also thought that, if necessary, a sitting of the commission could be arranged at an earlier date, in London, to take evidence. Notwithstanding the information which I received from the conference lines, I am still of the view that an investigation should be held.

For the Western movement, the lines forming part of the conference which are, the Allan, the Canadian Northern, the Canadian Pacific, the Cunard, the Dominion, the Donaldson, the Furness, the Manchester Liners, and the Thompson Lines, issue a tariff for the different seasons, it being drawn to include general minimum rates on practically all, or at least on the chief commodities moving. These minimum rates so called are practically the maximum rates that the lines obtain, and the shipper is in a position to know, as in my view he always should know, what the rate will be on a given commodity within a given period. No such rates are issued in so far as the eastern movement is concerned; but weekly lists are issued from time to time so that it may be entirely impossible for the Canadian shipper to know what his rates on flour or wheat may be in a month's time. I have been unable to at all convince the conference that this is an improper practice in so far as the eastern movement is concerned. The advanced reason why the admitted convenience can be given to the shipper shipping west is that there is never a scarcity of room on the western movement, while there may be a scarcity of space on the eastern movement. The position of the companies shortly is, that with the higher amount of business offering, and the possibility of shortage in boat accommodation, they should be allowed to take advantage of the shortage and charge a greater rate for handling the large than would be charged for handling the smaller amount. This practice the companies claim to be necessary. Whether it is necessary or not, it is certainly injurious to Canadian exporters, and is entirely against the usual basis of rate adjustments, at least so far as a land haul is concerned. It should be noted that, while it is true boats rarely, if ever, get a full cargo going west; during the present season the eastern rates have been so remunerative that a largely increased number of tramp boats have gone to Montreal not carrying English merchandise at all, but simply to get the return eastern cargo.

The effect of the present situation is that when the exporter of this country is not afforded sufficient facilities by the ocean carrier, the exporter is penalized for that situation. The Canadian exporter, by reason of the fact that, speaking in a general sense, nearly all the country's exports have a low value in proportion to the space occupied, and a comparatively low value in relation to the cost of transportation, is peculiarly affected by any increases in the cost of transportation, so that it becomes a matter of prime importance to keep such costs to a reasonable rate. While on some commodities the increased rate may be felt on the western movement, this is not the result speaking generally. So far as the western movement is concerned, apparently, the exporters are more concerned with the speed and regularity of service on many articles than they are in the rate; those that I now refer to being articles the value of which is large compared to the cost of transportation. This is evidenced by the fact that, in the arrangement that the conference has made, the Manchester Liners are allowed to absorb certain charges, with the result that, on shipment of goods originating in Manchester, the comparative cost works out as follows:—When shipping at Manchester, cartage from the warehouse to the Manchester docks, 2s. per ton; ship canal toll, 4s. 4d.; total, 6s. 4d. per ton. When shipping at Liverpool, cartage to the railway station, 1s. 6d.; railway rate from Manchester to Liverpool, 7s. 1d.; cartage to docks, 1s. 6d.; Liverpool dock and town dues, 1s. 10d.; total, 11s. 11d. per ton. These

illustrative figures show a movement (prior) on the printed lists which were published previous to the recent advance in railway rates and ship canal tolls. English railway rates have been increased 4%; ship canal tolls, 16%; and Liverpool dock and town dues, 10%. These increases do not affect, however, the proposition that it is considerably cheaper to ship at Manchester than at Liverpool. Notwithstanding this, a very large proportion of goods, originating not only in the Midlands but in Manchester itself, are shipped at Liverpool. The ship canal tolls shown in the above statement, I am advised, are now absorbed by the Manchester Liners; so that the saving, shipping by Manchester as against Liverpool would, on the information with which I have been supplied, amount to 9s. 11d. per ton. The claim that importers made to the effect that the British preference was absorbed by the increased rates does not appear to be borne out. The following statement, prescribed by the conference lines, would seem to be approximately correct:—

	Value
Woollen Goods	£90 p. 40 c. ft.
Cotton Piece Goods	£80 p. 40 c. ft.
Carpets	£50 p. 40 c. ft.
Felt Hats	£30 p. 40 c. ft.
Cutlery	£150 p. 40 c. ft.

No shipper has supplied me with any information which supports the general proposition, that is, that the British preference has been absorbed. I have no doubt, however, that on articles sold on the Canadian market by the British exporter, in close competition with exporters in other countries, the increases in rates of recent years have a detrimental and injurious effect on the traffic, and may account in part for the fall in ratio of British exports. The demand for investigation made by the Canadian Government, and acceded to as above noted by the Imperial authorities, is, therefore, justified by the exigencies of the traffic moving in either direction.

The position, when action was taken by your honorable body, was that steamship conferences were effective so that no competition was afforded beyond the sporadic competition that the tramp freight boat affords. Competition of this character affords no protection whatever to shippers requiring regular shipment in less than cargo lots. In my view, such a condition practically eliminates all competition, and requires some governmental control. This state of affairs obtained at the time of my interview with the steamship representatives in England. Since my return, I notice that the C.P.R. Co. states that it has withdrawn from the conference. I am unaware as to whether this action is dictated by a change of policy on the part of that company, or whether it is the natural outgrowth of the conflict existing between the C.P.R. and the German lines, which are in another conference. However this may be, I think the present opportunity for investigation in conjunction with the Imperial authorities is of too much value to abandon for this cause.

I should also inform you that I am advised by the steamship conference that the so called loyalty provision, under which a charge of 10% was made for primage, and which is shown on the official tariffs of the conference, being General Minimum Tariff 11, effective Jan. 1, 1913, and by General Minimum Tariff 11A for the summer season of 1913, has been withdrawn. Under the former practice, this charge of 10% was rebated in six month periods to all shippers who shipped no freight except by conference lines, and has been the subject of much unfavorable comment.

The matter of governmental control is

difficult. Certain conditions which apply to railways do not apply to ocean carriers. The carrying unit is a fixed unit. For this reason the sections of the Railway Act which prevent discrimination cannot well be applied. It would be against the interests, not only of the carriers, but, in the long run, of the commerce of the country, if a boat, being unable by reason of the state of the market to obtain a proper cargo at regular rates, could not be loaded with goods which would only move by reason of the special inducement that a cut at the last hour, having reference to that particular sailing, might afford, on the other hand, as at present advised, there would seem to be no reason why standard maximum rates should not be fixed by an independent authority, and that no increase should be allowed in standard maximum rates except with the consent of that authority.

In fixing maximum rates, regard, of course, would be had to, not only the fair rate on any given commodity, but what a fair proportion as between commodity and

Preferential		Rates.		
		1910.	1911.	Increase.
5% — 908s. p. 40 c. ft.		278s. 6d.	308s.	28s. 6d.
5% — 868s. p. 40 c. ft.		258s. 6d.	308s.	78s. 6d.
5% — 308s. p. 40 c. ft.		108s.	258s.	58s.
7 1/2% — 358s. p. 40 c. ft.		158s.	208s.	58s.
7 1/2% — 2258s. p. 40 c. ft.		258s.	358s.	108s.

commodity would be. For example, one of the most serious complaints against steam ship practices is made by the millers, who complain that a spread as between wheat and flour, which existed from 1907 to 1912, inclusive, varying from 1.52 cents for the year to 3.85 per 100 lbs. was increased in the early part of this year to 7 cents, resulting, as the flour exporter submitted, in a very unfair preference to the British miller; or, putting it conversely, in improperly penalizing the exporter of flour from this country. There is no doubt that the increase in the spread would militate much to the disadvantage of the Canadian shipper. At the same time, it must also be borne in mind that the milling capacity of Great Britain is constantly increasing. The milling unit is much larger, more economical and of greater efficiency, with the result that, so far as the metropolitan district of London is concerned, the local milling capacity since 1903 has increased from 420 sacks an hour to 850, so that the present milling capacity is well over five million sacks per annum. Large increases have also been noted at both Liverpool and Manchester. This increase in milling capacity is relied on by the carriers as accounting for any difficulty that Canadian exporters of flour may be at rather than increased ocean rates or the variable spread.

I am not covering in this report the question of the individual advances, not attempting to deal with their justification, as no useful result can be arrived at without a proper investigation and full production of papers. I should, however, draw to your attention that, in addition to what I have already said, the position of the liners is that all control of any kind is impossible to work out, and would be a great detriment to the shipping industry; and that the increased rates are justified not only by the increased cost of service already noted, but by the peculiar conditions of the Canadian trade. They point out that very little high rated package freight is shipped from Canada, and very little specie, ivory, silk, copper, and other high rated commodities are shipped to Canada; that many one time revenue producing commodities have either disappeared or are shipped in diminishing quantities owing to increased domestic consumption, e.g., butter and cheese; competition of domestic manufacturers, e.g., cotton goods and metals; domestic and U.S. mar-

ket conditions, e.g. grain reduced quantities of general cargo leave westbound fine goods and eastbound grain, flour and lumber, the only goods moving in considerable quantities on which revenue can be secured. In order that the position of the confederated lines may be fairly placed before you, I attach hereto a copy of an open letter to the Times from W. Black Noble, who attended the unofficial conference I had with the representatives of the liners at Liverpool. I should call attention to this paragraph of his letter:—

"Again, with a very few exceptions, the rates are not influenced by the law of supply and demand; they are, to say, so to speak, the result of lines in conference, agreeing on a rate altogether, and then, according to the value of the goods, it would be impossible for any trader to move, and accordingly, all the goods in question would cease to exist for all practical purposes. The result would be that a few years ago, and give a just and proper share of the profits of the transportation to both parties interested, and that there is really no existence."

While not agreeing with some of Mr. Noble's conclusions, this seems to me to be a frank and fair statement of the present position. Confederated lines (as the lines then were) can, as Mr. Noble states, make a rate altogether out of proportion to the value of the goods, and as a result, extinguish the traffic; and as a further corollary, as pointed out by Mr. Noble, eventually a fresh rate which would give a just and proper share to the profits of the transportation (as interpreted by the carrier) to both parties interested would eventually come into existence. This affirmation by a member of the conference of a condition under which the business of any given importer could, at any time, perhaps by the carrier's whim, lack of information, or desire for an excessive return, be at least temporarily extinguished, would appear of itself to call for the fullest investigation.

I desire to express my obligation to the Department of Trade and Commerce and the Montreal Harbor Commission for valuable information from time to time supplied.

In connection with the foregoing we are officially advised that the Dominion Government has requested the British Government to have the matter referred to the Dominions Royal Commission, of which the Hon. G. E. Foster is a member. Evidence will be taken in Great Britain and also in Canada, which the Commission is to visit this year.

Magnetic Chart, Etc., for Hudson Bay.

An Ottawa press dispatch says:—"As an aid to the navigators of Hudson Bay and Straits who find their compasses seriously affected by proximity to the magnetic pole, the Department of Naval Service will at an early date publish the result of investigations which have been carried on for some time past. A magnetic chart will also be published giving carefully worked out tables of the deviations to which the compass is subject at various points in the bay. The nearness of the magnetic pole causes the compass to point strange antics, which are to say the least of it, confusing to navigators, especially in foggy or stormy weather when everything depends on the compass for guidance. In one part of the bay the needle is actually dead, and wings free. In other cases it causes the navigator to travel landward if it is not carefully followed. All these deviations have been carefully worked out, and it is believed that a knowledge of these made possible by the possession of the chart will almost entirely obviate the present difficulties and save the navigators labor."

The Dominion Government has awarded the contract for the construction of section 5 of the Welland Ship Canal to the Canadian Breeding Co., Midland, Ont.

Investigation Into the Stranding of the Steamship Turret Chief.

An investigation into the stranding of the Canadian Lake and Ocean Navigation Co.'s, s.s. Turret Chief in Lake Superior, near Copper Harbor, Keweenaw Point, U.S., on Nov. 8, was held at Kingston, Ont., Nov. 21, by Commander H. St. G. Lindsay, R.D. R.N. R., Dominion Wreck Commissioner, assisted by Captains F. Nash and W. S. Batten, as nautical assessors. The following judgment has since been delivered:

The Turret Chief was on a voyage from Midland to Fort William, Ont., in water ballast, and left the Sault Ste. Marie Canal on Nov. 7 at about 6.30 a.m., with a crew of 17 all told, and drawing about 11 ft. aft and 6 ft. forward, the propeller being only half immersed. Proceeding out into Lake Superior the patent log was set off Iroquois Point at about 7.45 a.m. Whitefish Point was abeam at about 10 a.m., when a course was set, n. w. by n., by compass, for Passage Island. Everything seems to have gone well until about 9 p.m., when the wind, which had been southwesterly all day, shifted suddenly to the northward, and commenced to blow hard. At 9.30 the vessel fell off into the trough of the sea, apparently not being able to hold up against the wind and sea, and apparently remained in that position until she drove ashore at 4 a.m. on the 8th. No attempt was made by the crew to leave the ship on striking, as she had driven almost broadside on to the shore, and was soon driven up by the seas within a few feet of the land, where she lay, and there was apparently no immediate danger anticipated of the vessel breaking up, as only spray was coming over the superstructure. At 10 a.m. the master considered it unsafe to remain any longer on board, as the ice was forming fast on the weather (starboard) side of the ship, and likely to list her to seaward, so all hands left her by means of a ladder from the fore part of the ship to the shore. The vessel is still on the rocks, with very little water in her holds, showing that her shell plating cannot be badly damaged.

The court, after carefully reviewing the evidence adduced, is unanimous in its opinion that the stranding was caused by the vessel not being able to head up to the sea, owing to her light draught, and the propeller having no hold of the water, and also to her peculiar construction exposing a very high side to the wind, which, being strong on the beam, would tend to drive her to leeward very fast. The court is also of opinion that the master, Thos. Padington, did not do all that might have been done to try to save his ship, inasmuch as he did not appear to have made proper allowance for the large amount of leeway the ship was making, and therefore lost the run of the vessel's position, and apparently he did not try and find out what speed she was making through the water after the patent log was lost during the night, and the court is satisfied that had he not his ship on the other tack, and headed her to the eastward, he might have had some chance of keeping her afloat, knowing as he should have done that the land—Keweenaw Point—was to leeward and only about 30 miles off, when the wind came out from northwest at 9.30 p.m. The court therefore severely censures him for this error of judgment, and total ignorance of, or disregard to, the most essential part of the duties of a master, viz: a knowledge of the position of his vessel at all times.

The court criticizes the fact of this valuable vessel leaving port so light that her propeller was only half immersed, and short landed in the stokehold, especially at this season of the year. It was no doubt due to this that the vessel was not able to

head up to the sea. The court would suggest that either a deep sea lead and line, or a patent sounding machine would be very useful to vessels in circumstances like this in the inland waters, especially in Lake Superior, where soundings are of more than ordinary depth, and also that an officially fixed light load line for all vessels would be a great protection to lives and property engaged in navigation on the Great Lakes.

The Organization of Canada Steamship Lines, Limited.

As stated in Canadian Railway and Marine World for November the company which has been formed to absorb the Richelieu and Ontario Navigation Co. and other navigation companies acquired in that connection will be called Canada Steamship Lines, Ltd., the name originally chosen, Canada Transportation Lines, Ltd., not having found favor with the interested persons in Great Britain. The directors and London advisory committee are, as stated in our last issue. It will be noticed that Jas. Playfair, H. W. Richardson, F. A. McGee, W. Hanson, W. G. Morden and C. G. Boyne, who are on the R. and O. N. Co.'s board, are not on the new board.

The company has been incorporated under the Dominion Companies Act, with an authorized capital of \$25,000,000 divided into 125,000 7% preference shares and 125,000 ordinary shares, of the par value of \$100. The company, as stated in our last issue, is offering £1,254,720 16s. 5d. or \$6,106,308.51 of 5% consolidated debenture stock, part of a total amount of £1,849,317 12s. 10d., or \$9,000,000, repayable Aug. 15, 1943 at 105%. This stock is constituted by a trust deed and is secured by the company's lands, buildings and steamships and shares of other companies acquired or to be acquired, and by a general charge upon the undertaking. An accumulative sinking fund of 1½% per year is to be started in 1915. A portion of the consolidated debenture stock has been underwritten in Canada.

The company has been formed to acquire (1) The property of the Richelieu and Ontario Navigation Co., Ltd., which holds the whole of the shares of the following companies: Inland Lines, Ltd., Northern Navigation Co., Ltd., Niagara Navigation Co., Ltd., St. Lawrence River Steamboat Co., Ltd., Richelieu & Ontario Navigation Co. of U. S. A., Thousand Islands Steamboat Co., Ltd., and the steamships C. A. Jaques and Bickerdike, formerly constituting the Merchants Montreal line. (2) The Ontario and Quebec Navigation Co., Ltd. (3) The steamship Haddington. (4) Not less than 80% of the shares of the Canada Interlake Line, Ltd., and the Quebec Steamship Co., Ltd., and to carry on the business of the several companies as a single undertaking under one central management. This will give the company more than 100 vessels controlling the most important part of the passenger and freight transportation between Canadian ports on the Great Lakes and Montreal and Quebec, while the Quebec Steamship Co. runs lines from Quebec to ports on the Lower St. Lawrence and to New York, and from New York to the Bermudas and West Indies.

The transfer of the R. and O. N. Co.'s assets to the Canada Steamship Lines, Ltd., was completed at a board meeting of the former company, at Montreal, Dec. 12. The R. & O. N. shareholders receive \$12,000,000 7% preferred stock and \$4,000,000 common stock.

James Carruthers, President, is reported to have stated recently, that the London interests in charge of the financing of the company have come to the conclusion that the present is not an opportune time to

make any public issue, and the debenture stock has therefore been taken up by a syndicate composed of some of the most powerful financial houses in England, and by well known persons in Canada. On these subscriptions, 20% had then been paid up, and 30% was to be paid on Dec. 14, the balance being payable in two instalments, on Mar. 1 and May 1. The syndicate intends making a public offering of the debenture stock as soon as financial conditions are considered more favorable.

The combined net earnings of the different companies now owned by the new company, were, to Nov. 1, 1913, over \$1,450,000, and the officials report that the total net earnings for the year, notwithstanding adverse circumstances, will approximate \$1,700,000. An exact statement of the earnings will be published as soon as the returns are in after the close of navigation. The balance sheet shows that there are physical assets, valued by the Canadian Appraisal Co., at over three times the amount of the debenture stock, and the net earnings, without any of the advantage of the benefits of the consolidation, show as over three times the amount of the bonds, and sufficient to meet the fixed charges, the 7% dividend on the preference stock and a small dividend on the ordinary shares, which last, however, it is not the intention to pay for the present. With the savings that can be effected by the consolidation, the net earnings should approximate \$2,000,000 a year on the basis of the business that the different companies have done in the past year.

The interests in control of the R. & O. N. Co. have felt for some time that in view of the immense and rapid growth of the country and the consequent necessity for continuous additions and improvements to the property, in order to provide a service that would be at all satisfactory, a consolidation of this kind was necessary, if they hoped to secure the capital required, and further feel that in bringing together a fleet that will take care of and profit by both the bulk and package freight and the passenger business of such a large territory, they are putting the company on an absolutely sound basis, and that they can promise a better and more efficient public service.

The following is a consolidated statement showing the assets and liabilities of the various merged companies at Dec. 31, 1912, as prepared by the chartered accountants employed to examine the books:—

ASSETS.	
Investments, stores, supplies, etc.	1,167,856
Cash in banks and on hand	500,000
Balances, representing leases, contracts and goodwill, covered by common stock	8,589,647
Vessels (excluding Noronic)	\$16,866,814
Real estate, buildings and dock properties	5,450,268
	\$22,317,102
Sundry merchandise	\$ 150,000
Paid on Noronic in course of construction	280,079
	\$33,004,684
LIABILITIES.	
Accounts payable	\$ 555,538
Capital—7% preferred	\$12,500,000
Common, issued	12,000,000
	24,500,000
5% debentures to be issued	6,106,308
Underlying bonds and loans	1,842,838
	\$33,004,684

*For the purpose of valuation of the assets as security for debenture stock, the figure is reduced by the Canadian Appraisal Co. to \$19,250,406.

Note.—\$534,983 of the \$9,000,000 debenture stock will remain in the hands of the company for future issues, and in the meantime will be available for financing purposes.

A fleet of fifteen 1000 ton barges, each equipped with twin screw propellers driven by producer gas engines, is now under construction by the Alabama and New Orleans Transportation Co. to operate between the coal fields of Alabama and the C'ty of New Orleans, La.

Atlantic and Pacific Ocean Marine.

The Cairn Line s.s. Cervona was reported wrecked and a total loss near Bear Cove Point, Renew's Head, Nfld., Dec. 12.

The steamship which is under construction at Belfast, Ireland, for the White Star-Dominion Line's Canadian service, is to be named Regina.

The C.P.R. s.s. Rnthenia, which arrived at Montreal Nov. 25, was the last ocean vessel from a foreign port for the St. Lawrence navigation season of 1913.

The Osaka Shosen Kaisha is reported to have decided to build two or three 16,000 ton steamships at Kobe and Nagasaki, Japan, chiefly for freight service between Japan and Vancouver, in connection with the Great Northern Ry.

M. J. Haney, director, Canada Steamship Lines, Ltd., was visiting Bermuda early in December, in connection, it is reported, with a possible extension of the company's service, acquired with the Quebec Steamship Co., in the West Indies.

The vessel which the Union Steamship Co. of New Zealand is having built in Great Britain for its Canadian mail service is to be a sister vessel to the recently built Niagara, and it is stated will be named Ottawa.

The Allan Line s.s. Alsatian underwent her trials in the Clyde, Dec. 16, obtaining a speed of 20½ knots an hour over the measured mile. She will arrive at Halifax on her maiden trip about the middle of January and sail again on Jan. 31.

The Union Steamship Co. of New Zealand, which operates between Australasia and Canada under a mail subsidy contract, is reported to have ordered an additional steamship in Scotland, of approximately 16,000 tons, for a service between Australasia and U. S. Pacific ports.

The steamships which are under construction in Great Britain, for the C.P.R. Atlantic steamship service, some details of which were given in our last issue, have been tentatively named Metagama and Missanabie, but it has not been decided that these names will be given them when launched.

The Norwegian steamship Imperial Trans port, bound from Norway to Philadelphia,

put in at Louisburg, N.S., Dec. 15, 26 days out, with her fore plates badly strained on account of heavy head seas. Temporary repairs, consisting of timbers and concrete, were made to enable her to complete her voyage.

Vancouver press reports state that the Merchants and Shippers Steamship Co., at present operating between England and South American ports, will establish a steamship service between Australia and Vancouver, during this year, working in conjunction with either the Canadian Northern Ry., or the Great Northern Ry.

The Cunard Line is reported to have placed an order for the construction of another steamship, which is to be used solely for the Canadian service, and to be named Aurania. It is said she will be about 520 ft. long, and about 14,000 gross tons, with accommodation for second and third class passengers only. The operation of the company's Canadian service is said to have been exceedingly profitable.

It is reported in Montreal that Furness Withy and Co. will inaugurate a special steamship service from Montreal to Europe next season, in order to cope with the export grain trade. This decision, which the local management states it is not in a position to confirm, is said to be the result of the report of the Chairman of the Montreal Harbor Commission on the shipping of grain from Montreal, which has been dealt with in a previous issue.

The first sailing of the Royal Mail Steam Packet Co.'s s.s. Cobequid, under the new agreement for a faster mail steamship service between Canada and the West Indies, took place Dec. 5, from Halifax, N. S. A fortnightly service has been arranged, three other steamships being engaged in the service viz.,—Caraquet, Chaleur and Chignecto. Calls will be made at Bermuda, St. Kitts, Antigua, Dominica, St. Lucia, Barbados, Grenada, St. Vincent, Trinidad and Demarara, and St. John, N.B., will be called at on the return voyage.

Canadian Northern Steamships Ltd., has purchased the s.s. Principe di Piedmonte, which has been operating between Genoa and New York in the passenger and freight trade, and has leased her to the Uranium Steamship Co., in place of the s.s. Voltorno recently burnt at sea. The name of the

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during November, 1913.

vessel has been changed to Principello. She was built at Sunderland, Eng., in 1907, and is equipped with all the latest devices including wireless telegraphy. Her tonnage is 6,365 gross, 4,044 register. She will be placed on the same route as the Volturao, between European continental ports and New York, calling at Halifax, N.S. The Volturao which was lost was owned by Canadian Northern Steamships, Ltd., and chartered to the Uranium Steamship Co.

With reference to a report that the Hudson's Bay Co. had decided on an expenditure of \$4,000,000 for additions to its trading stations and stores throughout northern Canada, and on the construction of a number of vessels for operation from the Pacific coast to Great Britain, by way of the Panama Canal, we are officially advised that the company has no intention of building vessels for the route named. The actual transportation needs of the company recently entailed the building of some additional steamships, and six were decided on; two of these are now in service, one is under construction, and three are under consideration. The new store at Calgary, Alta., was recently opened for business, and it is in this direction that most of the recent development has taken place.

Maritime Provinces and Newfoundland.

The Lurcher Shoal lightship in the Bay of Fundy, which was taken off her station recently for repairs, has been replaced.

The Cape Breton Electric Co.'s s.s. Electronic has arrived at Yarmouth, N.S., where her machinery is being installed, after which she will be added to the ferry service between Sydney and North Sydney.

It is reported that dredging will shortly be commenced in the harbor at Stn Johns, Nfld., where it is stated that the ends of wharves only can now be used by vessels, and that the side dockage for a number of the wharves is absolutely useless owing to a gradual filling up.

The Terra Nova, the ship of Captain Scott's Antarctic expedition, recently left Cardiff, Wales, for St. John's, Nfld., where she is to re-engage in the whaling and sealing industry, in which she was employed until engaged for service in the Antarctic. Her figure head has been presented to the City Council of Cardiff.

The Consumers Fish and Cold Storage Co., Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 capital and office at Yarmouth, N.S., to carry on a general fish and cold storage business, and in connection therewith to own and operate vessels. W. D. Sweeney, Yarmouth, N.S., is interested, and all the others concerned are resident in Boston, Mass.

Work is in progress on the Courtenay Bay development in St. John harbor, a channel with a depth of 32 ft. at low water is being dredged, and there is under construction a breakwater on the east side of the bay, and a dry dock is under contract with the Dominion Government. The dry dock will be excavated in the point south of the old penitentiary grounds, and the breakwater will run out from the shore immediately east of the dry dock.

The Dominion Department of Marine will receive tenders, Jan. 7, for the purchase of the Government patrol boats Hudson, now at Port Elgin, N.B.; Doyle and Number One, now at Pictou, N.S.; and Number Two, at Harbor de la Cope, Campbell Co., N.B. They are to be sold as they stand without equipment. The Hudson was built at St. John, N.B. in 1902, and is crew driven by engine of 7 h.p., and has dimensions, length 57.7

ft., breadth 12.5 ft., depth 4.7 ft.; tonnage, 34 gross, 23 register.

The marine warehouse freight checkers at St. John, N.B., have applied for the appointment of a conciliation board to investigate the terms of employment and wages, and have named J. E. Moore, a freight checker at the wharves, and president of their union, to represent them on the board. The Shipping Federation of Canada has protested against the appointment of a board on the present application as it does not comply with the regulations of the Industrial Disputes Investigation Act, and that a number of the checkers have struck work illegally.

Province of Quebec Marine.

The Richelieu and Ontario Navigation Co.'s s.s. Murray Bay has been drydocked at Montreal for general overhaul.

It is announced that the projected extensions of the Alexandra, King Edward and Jacques Cartier piers at Montreal will not be commenced until next season, or pending the completion of the Dominion Government's proposed alterations at the entrance to the Lachine Canal.

The number of vessels passing through the Lachine Canal during 1913 was 664, of which 442 were Canadian, and 222 U.S. vessels. They represented a combined tonnage of 239,377, and made 10,197 trips. The number of passengers carried was 107,073, and the cargo tonnage, 4,977,559 tons.

It is reported that the Dominion Government has decided to undertake the work of straightening the Lachine Canal between Cote St. Paul bridge and lock 4, during the winter. The curve is 250 ft. long, and on its removal, a wharf about 1,000 ft. long will be built, with a power house on the west side of the curve near the present lock 4, for the operation of the canal gates.

Ontario and the Great Lakes.

The Department of Public Works has received tenders for the renewal of the south pier in Burlington channel, Hamilton.

The C.P.R. steamships Alberta and Athabasca will be docked at Port Arthur during the winter for general overhaul and repairs, at an estimated cost of \$70,000.

The dredging of a channel in the Mission River, at Port William, has been completed. There is now a channel 600 ft. wide, 25 ft. deep, and over 1,400 ft. long, available for navigation.

The United States s.s. Edward Buckley, which was lying aground at Harbor Beach, Lake Huron, for some weeks, has been released and taken to Sarnia, where she will be examined for bottom damage and repaired.

The results of the hydrographic survey conducted during 1913 by the Dominion Government are reported to indicate that first class harbor facilities exist in the vicinity of the mouth of the Nottaway River, on James Bay.

The Northern Navigation Co. will, in January, move its auditing and accounting offices from Collingwood to Sarnia, where the head office has been located for some time. An office will be maintained at Collingwood, in charge of an agent.

The ratepayers of Saint Ste. Marie recently voted in favor of subsidizing the Lake Superior Drydock and Shipbuilding Co.'s project for the construction of a drydock and shipbuilding plant there, to the extent of \$20,000 a year for 20 years.

The St. Lawrence and Chicago Steam Navigation Co. has declared a dividend of 8% for the past year, which would probably have been larger but for the loss of the s.s. James Carruthers, on which the company carried part of the insurance.

The steamboat Cornwall has been bought from the Calvin Co., Kingston, Ont., by the Donnelly Wrecking Co. She was built at Kingston in 1874, and was formerly named Algerian, and owned by the Richelieu and Ontario Navigation Co. She is paddle wheel, driven by engine of 61 h.p., and her dimensions are, length 176.6 ft., breadth 27.1 ft., depth 9.9 ft.; tonnage, 588 gross, 304 register.

The Northern Navigation Co.'s s.s. Huronic, which grounded at Whitefish Point during the storm of Nov. 9, will be dry-docked at Port Huron during the winter, when she will be thoroughly examined for any possible damage she may have sustained. It is stated that bilge keels will be placed on her in order to prevent her rolling in heavy weather, and that she will receive several other improvements.

The wireless telegraph stations which the Dominion Government is erecting at Toronto and Port Burwell are reported to be complete, and it is anticipated that they will be in operation from the commencement of the year, when communication will be maintained with the car ferry steamboats plying across Lakes Ontario and Erie. The station at Kingston will, it is reported, be ready for operation by the spring.

The Hamilton Harbor Commissioners have decided to build a warehouse, with the necessary appliances for the carrying on of harbor and transportation business. The building will be on the westerly end of the revetment wall recently built by the Dominion Government in Burlington Bay, near the foot of Catharine St., and which has been transferred to the Harbor Commissioners. A. W. Peene is acting Engineer for the Commissioners.

The Great Lakes Towing Co. has been awarded contracts for the release of the steamships Turret Chief and L. C. Waldo, wrecked in the recent storm on the Great Lakes. The Turret Chief is ashore on Keweenaw Point, six miles from Copper Harbor, and the L. C. Waldo is on Gull Rock, Lake Superior. The payment is on the basis of \$15,000 for the former vessel and \$20,000 for the latter. In both cases, the vessels have to be delivered at designated ports.

It is reported that the Great Lakes Protective Association has called upon its members for an assessment of 50% of the original contribution, which was settled at 4% of the insurance valuation. The Association carries 25% of the insurance on its members vessels. This action it is stated has been taken after a careful examination of the losses sustained through the storm of Nov. 9, which made the original amounts paid insufficient to meet all the claims for the season's losses.

In view of the accidents which have happened of late on the Great Lakes, where vessels have sunk and their whereabouts have not been ascertained, a Port Arthur mariner has suggested that each vessel should have attached to its topmast, by a coil of rope, a floating buoy, so that in the event of the vessel going down, its location would be marked. It is claimed that the device would be quite feasible, and surprise has been expressed that on account of its simplicity it has not been carried out before.

The U.S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for November, as follows:—Superior,

602.91; Michigan and Huron, 580.44; Erie, 572.28; Ontario, 246.06. Compared with the average November levels for the past 10 years, Superior was 0.60 ft. above; Michigan and Huron, 0.06 ft. above; Erie, 0.46 ft. above, and Ontario, 0.39 ft. above. It was anticipated that during December, Superior, Michigan, Huron and Ontario would fall about 0.2 ft., and Erie about 0.1 ft.

Hamilton merchants and vessel owners are protesting against the harbor rates charged by the local harbor commissioners, and approved by the Governor in Council. The Chairman of the Commission is reported to have stated that the rate was fixed in order to provide a sufficient revenue for the government of the harbor, and though he favored a free harbor, it could not be done unless the city made a sufficient annual appropriation for the purpose, which it did not seem likely would do.

A press report from Ottawa, Dec. 15, stated that it had practically been decided to have a thorough investigation by the Parliamentary Marine and Fisheries Committee, into the recent Great Lakes disaster, and that evidence would be called from among the persons and organizations interested, with a view to increasing the safeguards for passengers and sailors. It is anticipated that legislation will later be effected fixing a load line and providing for the inspection of vessels before they leave harbor.

A large bulk freight steamship, reported to be the largest of the kind in the world, is under construction at Port Arthur, and which, it is anticipated, will be ready for operation towards the latter part of next season. Her dimensions are:—length over all 625 ft., length on keel 604 ft., moulded beam 59 ft., moulded depth 32 ft. She will have a carrying capacity of over 9,000 gross tons. She has been designed to handle bulk cargoes of coal, ore and grain. The hull is on the Isherwood system, and is of

steel, with double bottom and side tanks 5½ ft. deep, up to the main deck stringer.

The Pelee and Lake Erie Navigation Co.'s s.s. Pelee was launched at Collingwood, Dec. 20. She will be utilized for passenger and freight business between Pelee Island and the main land. The general dimensions are,—length 146 ft., beam 24 ft., depth 18½ ft. to promenade deck. The propelling machinery consists of triple expansion engines of the jet condensing type supplied with steam by one Scotch marine type boiler, designed for a speed of 13 knots an hour under full load. She will be completed for operation on the reopening of navigation.

Following on the effects of the storm on Lake Huron, Nov. 9, during which a number of vessels were wrecked and lives lost, an inquest was held at Goderich into the death of one of the crew of the s.s. John A. McGean, whose body was washed ashore there. The verdict, which was delivered Dec. 14, merely stated that death was due to drowning owing to the wreck, but, in addition, the jury made a number of recommendations covering, chiefly, that Goderich should be properly and completely equipped as a harbor of refuge, and the more extensive use of wireless telegraphy, both on land and on the various vessels travelling the lakes.

The Lake Superior Dry Dock and Construction Co., the incorporation of which was announced in a recent issue, has a capital stock of \$1,500,000, divided into \$500,000 7% preference stock, and \$1,000,000 common stock. The City of Sault Ste. Marie, Ont., has granted a bonus of \$20,000 a year for 20 years, and has also granted a site for the erection of the plant. Arrangements are in course of progress for the granting of a subsidy by the Dominion Government of 3% per annum for 20 years on an approximate expenditure of \$1,338,000. It is reported that the contract will shortly be awarded to the British Construction Co., London, Eng., for the construction of the plant, plans for which have been approved

by the Dominion Government, and that bonds for \$1,200,000 are to be issued.

The s.s. Noronic, which has been built at Port Arthur for the Northern Navigation Co., is at Sarnia, where she will have her fittings and furniture installed during the winter. She is built on the Isherwood system with watertight compartments, and has five steel decks, main, spar, promenade, observation and boat. Her dimensions are:—length over all 385 ft., length between perpendiculars 362 ft., beam, moulded, 82 ft., depth, moulded, 28¾ ft. The propelling machinery consists of four cylinder, triple expansion engines, with cylinders 29½, 47½, 58 and 58 ins. diam., by 42 ins. stroke, supplied with steam at 200 lbs. working pressure by four 15½ by 11 ft., and one 12½ by 11 ft. Scotch boilers, under forced draught.

Vessels for Hudson Bay Service.—It is reported that tenders are being invited in Great Britain, for the construction of two steamships, to be named Nelson and Nottaway, for operation between Port Nelson on Hudson Bay, and Nottaway on James Bay, in connection with the North Ry., which is projected between Nottaway and Montreal, that they will be 14 knot vessels, making the trip between the two ports in 48 hours, that their dimensions will be,—length 265 ft., beam 49 ft., draught, about 20 ft., with a carrying capacity of 4,500 tons, or 150,000 bush. of wheat, that there will be passenger accommodation for 100 first class and 200 second, and that they are required for service by May 1915.

Thousand Foot Dry Dock.—If New York is not to be at a serious disadvantage, as compared with the ports at Quebec and Boston, it must provide its own dry dock for the accommodation of the largest ocean liners. At both Quebec and Boston dry docks are being built capable of accommodating ships 1,000 ft. long. The Dock Commission is planning to build a dock of this size at South Brooklyn.

(a) Recovered wreck.

British Columbia and Pacific Coast Marine.

H. B. A. Vogel, of South Vancouver, has been appointed Secretary of the recently constituted North Fraser Harbor Commission, with office, for the present, at Eburne.

The West Vancouver Ferry Board is carrying out some reinforcement work on the wharf at the foot of 14th St., at a cost of about \$20,000. The plans were prepared by Cartwright, Matheson and Co., Vancouver.

The Public Works Department has awarded the contract for the removal of approximately 200,000 yds. of sand and silt from the new channel across the Sandheads of the Fraser River, to the Navigation and Dredging Co., Vancouver.

One of the matters to be taken up and decided at a meeting of directors of the White Pass and Yukon Route, in London, Eng., early in the year, is the final arrangement for the establishment of the proposed steamship service between Puget Sound ports and Southeastern Alaska.

At an extraordinary meeting of shareholders of the Boscowitz Steamship Co., at Vancouver, recently, it was agreed that the company be wound up voluntarily, and W. S. Buttar was appointed liquidator. The company's property was sold some time ago, and incorporated with that of the Union Steamship Co.

C. H. Nicholson, Manager, G.T. Pacific Coast Steamship Co., Vancouver, recently stated that the report that the company had placed orders for the building of additional steamships for its service, was unauthorized and incorrect. On the completion of the transcontinental line some addition to the fleet will become necessary, but nothing of the nature of the report has taken place.

Wellington Comox Co., Ltd., has been incorporated under the Dominion Companies Act, with \$500,000 capital and office at Toronto, to carry on coal and oil mining business, etc., and in connection therewith to own and operate steam and other vessels, wharves, docks and other shipping facilities. The incorporators are all connected with the Canadian Northern Ry's, Toronto offices.

The Government Fisheries Protection cruiser *Malaspina*, a description of which was given in our last issue, arrived at Victoria, towards the end of October, from Glasgow, Scotland. She took 75 days on the voyage round Cape Horn. Her sister vessel, named *Galliano*, has been launched at Dublin, Ireland, where both hulls were built the machinery being installed at Glasgow.

Canadian Notices to Mariners.

The Department of Marine has issued the following:

403. Nov. 21. British Columbia, Vancouver Island, west coast, Barkley Sound, Sechart, warning steamer not now available for towing service.

404. Nov. 21. British Columbia, Clatsop Sound, Irish Point, Pillsbury Point, fog light established.

405. Nov. 24. Ontario, Lake Huron, Georgian Bay, approaching from south pier, temporary buoy established.

406. Nov. 24. United States of America, Lake Erie, Buffalo, approaching, Buffalo light vessel, day beacon, light buoy established.

407. Nov. 24. United States of America, Lake Erie, Buffalo, approaching, breakwater light vessel, day beacon, light buoy established.

408. Nov. 24. United States of America,

Lake Huron, southern end, wreck, gas buoy to be established.

409. Nov. 25. Nova Scotia, Bay of Fundy, Larcher Shoal, lightship replaced on her station.

410. Nov. 25. New Brunswick, east coast, Northumberland Strait, Shediac Bay, Pointe du Chene, Shediac harbor range lights improved.

411. Nov. 25. Quebec, River St. Lawrence, Quebec harbor, off mouth of St. Charles River, conical buoy replaced by gas buoy.

412. Nov. 25. Quebec, River St. Lawrence, ship channel, between Quebec and Montreal, temporary day marks at lighthouses.

413. Nov. 27. Quebec, River St. Lawrence, above Quebec, Pointe a Basile, range lights to be improved.

414. Nov. 27. Quebec, River St. Lawrence, above Quebec, Pointe aux Trembles en bas, light to be improved and are of visibility increased.

415. Nov. 27. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Grondines Point front range lighthouse, lantern removed, height of light diminished.

416. Dec. 1. Nova Scotia, Cape Breton Island, Bras d'Or Lake, Denys River south basin, buoys established.

417. Dec. 1. Prince Edward Island, north coast, New London harbor, entrance to French River.

418. Dec. 1. Quebec, Gulf of St. Lawrence, Seven Islands Bay, Seven Islands Wharf light established.

419. Dec. 3. Quebec, River St. Lawrence, Lake St. Louis, Lachine front range lighthouse, new foundation.

420. Dec. 3. Ontario, River St. Lawrence, Prescott Dominion Lighthouse Depot, light for experimental purposes, caution.

421. Dec. 3. Ontario, Georgian Bay, approach to Midland, westward of Gin Rocks, buoy withdrawn.

422. Dec. 3. New Brunswick, south coast, Bay of Fundy, St. John harbor, Courtenay Bay, channel, breakwater and dry dock, temporary lights.

423. Dec. 3. Nova Scotia, south coast, Blind Bay, Kieley Cove, buoys established.

424. Dec. 3. Newfoundland, south coast, Placentia Bay, Placentia harbor, range lights established.

425. Dec. 3. Newfoundland, south coast, Fortune Bay, Sagona Island, fog alarm established.

426. Dec. 3. England, southwest coast, Seven Stones light vessel, submarine fog signal established.

427. Dec. 3. Wales, west coast, Carnarvon Bay light vessel, submarine fog signal established.

428. Dec. 12. Nova Scotia, south coast, Whitehead Island, fog alarm established.

429. Dec. 12. Prince Edward Island, east coast, Cardigan Bay, Panmure Shoal, Wheeler Bar can buoy replaced for winter by a spar buoy.

430. Dec. 15. British Columbia, Vancouver Island, southeast coast, Victoria harbor, Middle Rock, beacon light replaced by temporary light buoy.

431. Dec. 15. British Columbia, Vancouver Island, Saanich Inlet, Finlayson Arm, Beacon Rock, day beacon erected.

432. Dec. 15. British Columbia, Llama Passage, Hunter Island, Serpent Point, day beacon erected; Denny Island, day beacon discontinued.

433. Dec. 17. Nova Scotia, south coast, Halifax approach, Chebucto Head, permanent light in operation.

434. Dec. 17. Quebec, River St. Lawrence, Portneuf en bas lighthouse, additional slats placed on skeleton frame.

435. Dec. 18. Quebec, Chaleur Bay, Paspebiac Point, intended change in character of light.

436. Dec. 18. Quebec, Gulf of St. Lawrence, Gaspé coast, Cape d'Espoir, intended change in character of light.

437. Dec. 18. Quebec, Gulf of St. Lawrence, Anticosti, southwest point, intended change in character of light.

Among the Express Companies.

The Canadian Northern Ex. Co. has opened offices at Deerpfield, Man., Cereal and Chinook, Alta., and has closed its office at South Moose Jaw, Sask.

The Canadian Northern Ex. Co. has closed its offices at Vista, Man., and Cardiff, Alta., and has opened offices at Salines, Ont., and Highland, Alta.

E. S. Cushing, heretofore cashier, American Ex. Co., Springfield, Mass., has been appointed cashier American and National Ex. Cos., Montreal.

T. McNeill, Agent, C. P. R., Liverpool, Eng., has also been appointed Agent, Dominion Ex. Co. there, vice F. W. Forster, deceased, who was Agent, C. P. R. and Dominion Ex. Co.

C. Stewart, a former employe of the Dominion Ex. Co., at Vancouver, and son of the late T. S. Stewart, at one time Superintendent, Western Division, Dominion Ex. Co., Vancouver, died there recently, aged 29.

The Dominion Ex. Co. has opened offices at Picton Landing and Trenton, N.S.; Jacques River, N.B.; St. Maurice and Marcell, Que.; Verwood, and Readlyn, Sask.; Okanagan Centre, Matsqui and Spillimacheen, B.C.

The Board of Railway Commissioners has established express delivery and collection limits for Levis, Que., and Liskeard, Ont., and has also established new limits for Edmonton, Alta., cancelling those previously fixed by orders 14987, Sept. 11, 1911, and 15759, Jan., 1912.

The Board of Railway Commissioners has ordered the reduction of express companies' charges for the handling of freight bills of lading, and money collections in connection therewith. Under present conditions the companies forward bills of lading for freight shipments, and charge 1% for the collection and return of money. The new rule provides for a charge of $\frac{1}{8}$ of 1%, with a minimum of 1% on \$100 on one company's line, and $1\frac{1}{2}$ % when over more than one company's line.

The Dominion Ex. Co. has issued instructions to its agents, stating that it has been brought to the company's attention that certain agents have been altering the charges on through waybills of foreign companies, covering business from the U.S., to agree with the rates as published in the Dominion's Joint Basing Transfer Tariff. Under a ruling of the Interstate Commerce Commission, the tariffs issued by the company originating the traffic must govern the charge, and hence agents receiving goods on through waybills should not change the charges according to the rates in the Dominion Ex. Co.'s tariffs.

Regina Municipal Railway.—Following is the operating account for Oct., 1913:

Gross earnings	\$22,430.29
Maintenance of way and structures	\$117.95
Maintenance of rolling stock	447.36
Purchased power	5,607.15
Conducting transportation	10,218.40
General expenses	1,671.21
	\$18,182.10
Interest and sinking fund charges	6,205.63
	\$24,387.73
Deficit	\$1,957.41

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Canadian General Electric Co. has issued bulletin No. 4131 on storage battery, industrial and mining locomotives.

Gold Car Heating and Lighting Co.—Frank A. Purdy, heretofore Manager, Canadian Gold Car Heating and Lighting Co., Ltd., Montreal, has been appointed Sales Manager for Gold Car Heating and Lighting Co., and Canadian Gold Car Heating and Lighting Co., Ltd., with office at 17 Battery Place, New York, N.Y.

The Independent Pneumatic Tool Company, of Chicago, Ill., has arranged with W. H. Rosevear & Son, of Winnipeg, to sell the Thor air tools in Manitoba, Alberta and Saskatchewan. A complete line of air drills and pneumatic hammers, as well as repair parts, will be carried in stock by W. H. Rosevear & Son for delivery direct to users in their territory.

The Ohio Brass Co., Mansfield, Ohio, has issued Construction Details of Some Prominent Catenary Roads, equipped with O. B. catenary materials, either wholly or in part, which contains a number of illustrations, with accompanying construction details. These include the Montreal and Southern Counties Ry., 15 miles of which were installed in 1912.

American Locomotive Co. has issued bulletin 1016, Pacific Type Locomotives, designed to increase capacity without increasing operating costs. It contains a tabular comparison of a large number of this type built by the company, and also a number of illustrations, including the following of locomotives built for Canadian railways:—Canadian Northern, 702; Canadian Pacific, 1,260; Grand Trunk, 199.

The Canadian H. W. Johns-Manville Co., Ltd., has removed its Toronto branch to larger premises at 19 Front St. East, where it has a floor area of about 35,000 sq. ft. in the heart of the wholesale district, which will enable it to carry a larger stock and have ample space for the display of its complete line of J-M asbestos roofings, packings, pipe coverings, building materials, electrical and railway supplies, automobile and plumbing specialties, etc. The entire building will be lighted by its Frink and J-M linolite systems of lighting, and one room will be used for exhibiting these systems.

Titanium Alloy Manufacturing Co., Niagara Falls, N.Y., has issued bulletin 3 of its rail reports, containing sulphur prints and microphotographs showing cross sections of seven standard and seven titanium treated open hearth rails, and claiming that the results of chemical and physical tests show that (1) the treated rails average better ductility, especially in the heads, and strength than the untreated; (2) the treated steel averages an increased shock resistance; (3) treated rails are less easily fractured by fatigue or constantly repeated stresses below the elastic limit, and (4) that treated rails show greater uniformity, indicating freedom from segregation and its attendant evils.

The Canadian General Electric Co., Ltd., has appointed W. G. Gordon, as Transportation Engineer to take charge of all inquiries in connection with electric traction. He

is a son of Rev. D. M. Gordon, Principal of Queen's University, Kingston, Ont. After graduating from Cornell in electrical engineering in 1899 he entered the testing department of the General Electric Co. at Schenectady, N. Y. While in the railway construction department he had charge for the General Electric Co. of the installation of the first electrically operated train on the Manhattan Elevated Ry., New York, and later of the installation of the first multiple unit equipments for the Northwestern Elevated Ry., Chicago, Aurora, Elgin and Chicago Ry., Lake Shore Electric Railway, etc., etc. Later, while in the railway engineering department, at Schenectady, he was closely associated with the further development of multiple unit operation for the New York Central lines and the Interboro Rapid Transit Co. He went to Australia in the G. E. Co.'s interests and was Manager and Engineer of the North Melbourne Tramways and Lighting Co., Ltd., later Engineer for the National Electrical and Engineering Co., Ltd., handling the New Zealand business for the G. E. Co., and finally Engineer for the Brisbane Tramways Co., Ltd., until his return to Canada.

The National Steel Car Co., Hamilton, Ont., has appointed J. G. Baukat as its engineer in charge of its passenger car department and of the design and building of cars. He was born in 1870, and was, from 1887 to 1895 working as a machinist and studying engineering, from 1895 to 1898, engaged in draughting and mechanical engineering on marine work, automatic machinery and general machine work; 1898 to 1899, in Port Chester (N. Y.) Ry. service as Assistant Engineer in charge of power and equipment; 1899 to 1902, Designing Engineer in railway department, General Electric Co.; 1902 to 1905, Chief Engineer, Schenectady Ry., in charge of rolling stock, repair shop, track work, trolley lines and construction work, and during this period supervised the construction of 30 miles of high speed inter-urban railway and the building of new car houses and a power house; 1905 to 1909, Assistant Superintendent of electrical equipment in charge of electrical rolling stock, repair shops and inspection sheds, New York Central and Hudson River Rd.; 1909 to 1910, Chief Engineer, Miami Valley Construction Co.; 1910 to 1911, Mechanical Engineer, Wilmington-Philadelphia Traction Co., in charge of the rehabilitation of rolling stock and equipment; 1911 to 1913, Superintendent of Equipment, Lehigh Valley Transit Co., and latterly connected with a private firm engaged in general electric railway engineering work.

Canada Machinery Corporation, Galt, Ont., has supplied 49 radial drills to the St. Lawrence Bridge Co. for its shop at La Chine, Que., in which the Quebec bridge is being fabricated. The drill has a 76 in. arm and round column. Sixteen of the drills are arranged for mounting on a floor plate, and the remaining 24 are provided with trucks, the trucks having wheels to run on a standard gauge track to be moved along as the work requires. Arrangements have been made for clamping the truck rigidly to the rails, and a prominent feature of the design is the ease with which the truck may be unclamped, moved to a new position and quickly clamped in place again. The drills have been provided with a direct connected motor mounted on the arm, and driving the drill spindle through spiral gears and an intermediate shaft. This, it is claimed, gives an exceedingly direct and strong drive and one possessing several novel features. The bearings, with the exception of the guide bearings of the spindle itself, are all of the full ball bearing type, and the spiral gears are made from

high carbon steel and bronze, totally enclosed with a large grease cup for lubrication. The motor is of the variable speed type with a range of speed sufficient for the work required, so that no change gears have been provided in the drive. The feed is of the all geared type, with four changes, and is also provided with a quick return and slow hand motion. The controller handle of the motor travels with a carriage, enabling the operator to start and stop or change the speed without leaving the carriage. The locking of the arm is done by means of the handle travelling with the carriage, this being a great convenience when working at the end of a long arm, as the operator does not need to leave the carriage for each adjustment. The machine, under test, has drilled 1 3/16 in. holes from solid high carbon steel at the rate of 10 ins. a minute, and owing to the ball bearing equipment the very high proportions of the horse power from the motor are delivered to the spindle.

Transportation Conventions in 1914.

Jan. 20-31.—American Electric Railway Association, New York. Midwinter meeting.
May 12-20.—American Railway Engineering Association, Chicago, Ill.

SPECIAL NOTICE TO CONTRACTORS.

Re Greater Winnipeg Water Supply.

(Estimated Cost \$13,500,000.00.)

Notice is hereby given to contractors that tenders will be invited early in the year 1914 for the construction of works necessary for the delivery of water from Shoal Lake to the Greater Winnipeg Water District. The following is a brief description of the proposed works:—

1. A dyke and channel for the diversion of the Falcon River into Snowshoe Bay.
2. 8.5 miles Concrete Aqueduct.
3. 10 miles Pipe Line (probably 1916 work).
4. 900 ft. Tunnel under Red River.
5. 8.5 Miles of Construction Railway.
6. Telephone Line.
7. Clearing and Ditching.

The fall season of the year affords the best opportunity for inspection of proposed route of the aqueduct, and it is recommended that contractors having a view to tendering on the work should send their inspectors over the line at as early a date as possible.

Particulars as to estimated cost of the work, map of approximate location and profile of aqueduct may be obtained from the undersigned.

M. PETERSON,

Clerk of the Corporation
Greater Winnipeg Water District,
City Hall, Winnipeg,
October 6th, 1913.

NOTE: Copy of the report of the Consulting Engineers, plan and profile of work, and typical details of design may be seen at the office of this magazine.

SOUTH ONTARIO PACIFIC RY. CO.

NOTICE. The South Ontario Pacific Railway Company will apply to the Parliament of Canada at its next session for an Act extending the time within which it may construct the railway authorized by section 1 of chapter 151 of the Statutes of 1912, and for other purposes.

Dated at Montreal this 11th December 1913.

H. C. OSWALD,

Secretary.

Pringle, Thompson, Burgess & Cote,
Ottawa agents.

GRAND TRUNK RAILWAY COMPANY OF CANADA.

NOTICE is hereby given that the Grand Trunk Railway Company of Canada and the Canadian Northern Railway Company will apply to the Parliament of Canada, at its next session, for an Act confirming and making valid and binding an agreement providing for the amalgamation of the said two companies and the formation thereof of one company under the name of The Grand Trunk Railway Company of Canada, and authorizing the issue by said Grand Trunk Railway Company of Canada of such additional common stock of the said company as may be necessary for the purpose of carrying out the terms of the said agreement, and for other purposes.

Dated at Montreal this 2nd day of December, A.D. 1913.

W. H. BIGGAR,

Solicitor for the Applicant.

CANADIAN NORTHERN RAILWAY COMPANY.

NOTICE is hereby given that the Canadian Northern Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time wherein the company may construct the lines of railway authorized by the Statutes of Canada for 1912, chapter 77, section 3 (hereinafter called the said Act), shortly described as follows:—

Regina southwesterly to international boundary.

Battleford westerly to the head waters of Brazeau River.

Regina northerly to Humboldt, thence to Pas Mission, and from a point on the line between Humboldt and South Saskatchewan River northeasterly to crossing of South Saskatchewan River by company's Prince Albert branch.

Also the lines of railway authorized by section 4 of the said Act, namely:

From Calgary westerly to Cochrane, Exshaw and Banff, and from Cochrane northerly to intersect the company's line near Pigeon Lake.

From Cochrane southerly to Nanton.

Also to confirm and ratify a lease from the Canadian Northern Montreal Tunnel and Terminal Company, Limited, to the company and to the Canadian Northern Quebec Railway Company and the Canadian Northern Ontario Railway Company, respecting the terminals and tunnel at Montreal.

Also to confirm the application of the company's navigation rights and facilities to any ports or places, whether Canadian or foreign.

Also to confirm and ratify an agreement between the Grand Trunk Pacific Railway Company and His Majesty the King respecting the western entrance to terminals at Winnipeg.

Also to confirm and ratify an agreement between the company and the Midland Railway Company of Manitoba respecting the operation of the joint section between Emerson and Portage Junction.

GERARD RUEL,

Chief solicitor.

Toronto, 10th December, 1913.

GRAND TRUNK RAILWAY COMPANY OF CANADA.

NOTICE is hereby given that the Grand Trunk Railway Company of Canada will apply to the Parliament of Canada, at its next session, for an Act—(a) providing for the holding of one annual general meeting of the company in each year, and for the submission once a year to the shareholders, debenture stock holders, and auditors, of statements of account and balance sheets; (b) authorizing the directors, if profits be deemed sufficient, to declare and pay interim dividends for the first half of any year, notwithstanding that statements of account and balance sheets for such half year had not have been previously submitted to the shareholders; (c) authorizing the creation and issue for the general purposes of the company of additional Grand Trunk Consolidated Debenture Stock, bearing interest at four per cent. per annum, to an aggregate amount the annual interest upon which shall not exceed £100,000 sterling, and for other purposes.

Dated at Montreal this 3rd day of December, A.D. 1913.

W. H. BIGGAR,

Solicitor for Applicants.

KETTLE VALLEY RAILWAY CO.

NOTICE.—The Kettle Valley Railway Company will apply to the Parliament of Canada, at its next session, for an Act—

(1) extending the time for construction of the lines of railway described in section 2 (a) (b) (c) of chapter 110 of the Statutes of 1912;

(2) authorizing it to construct a branch from a point at or near the Otter Summit by the most feasible route to the Aspen Grove mineral district not exceeding 30 miles;

(3) ratifying and confirming agreement with the Vancouver, Victoria and Eastern Railway and Navigation Company respecting Coquihalla Joint Section; and for other purposes.

Dated at Toronto, the 15th day of December, 1913.

CHAS. B. GORDON,

Secretary.

Pringle, Thompson, Burgess & Cote,
Ottawa Agents.

ALBERTA CENTRAL RAILWAY CO.

NOTICE is hereby given that the Alberta Central Railway Company will apply to the Parliament of Canada, at its next session, for an Act ratifying and confirming an agreement with the Canadian Northern Western Railway Company, respecting Rocky Mountain House Joint Section in the Province of Alberta.

Dated at Montreal, 18th December, 1913.

H. C. OSWALD,

Secretary.

Pringle, Thompson & Burgess,
Ottawa Agents.

Canadian Railway and Marine World

February, 1914.

National Transcontinental Railway Car Shops at Transcona.

The locomotive department buildings of the main repair shops which the National Transcontinental Ry. Commission is building at Transcona, Man., were described in Canadian Railway and Marine World for Feb., 1912, previous to which there appeared several progress articles. The locomotive buildings have since been placed in service by the Grand Trunk Pacific Ry. The development of the plans for the car department buildings was delayed for some little time on the change in Government in 1911, and in consequence, while the plans for the buildings themselves were prepared some time ago, and in most cases the buildings completed, it was only quite recently that

Transcona shops for the additional service of handling all repairs on the western lines for a considerable time to come at least. The G.T.P.R. took possession of the locomotive department buildings early last year, and is handling at Transcona all the repairs on its lines now in operation.

The site of the shops is on the open prairie, and in order to avoid trouble from flooding by spring freshets, and to secure a better surfacing than that afforded by the prairie soil, the site level has been raised about 4 ft. over the entire area occupied by the buildings, by a heavy gravel fill.

The various buildings have been grouped together as closely as possible to facilitate

latter with industrial tracks along the central midway. Additional intercommunication is obtained through an overhead 10 ton electric travelling crane, which runs the full length of the midway, connecting the front ends of all the main buildings. This crane is electrically operated, and the operator's cage is electrically heated by a heater of the street car type. All exposed parts of the crane are protected by hoods in the usual manner. Wherever possible, the steel runways are carried on abutments from the shop buildings, and the intervening steel columns are carried on concrete piers.

As shown in the isometric projection, the car department buildings are to the north,

Fig. 1. Isometric Projection of Locomotive and Car Department Buildings, National Transcontinental Railway

the interior arrangement, including the machinery installation, was completely decided on prior to calling for machinery tenders. The plans as originally prepared were revised by W. J. Press, Mechanical Engineer, N. T.R., which involved considerable rearrangement and the selection and installation of machinery, was also carried out under his supervision.

The shops are located in Transcona, six miles east of Winnipeg, on the N.T.R. main line. In conjunction with the shops being built by the Commission at Quebec, a preliminary description of which appeared in Canadian Railway and Marine World for Sept., 1913, they were designed to handle the repairs on the whole 1,800 miles of line from Moncton to Winnipeg. The G.T.P.R., in the construction of its section of the transcontinental line from Winnipeg westerly, did not build any shops, and will use the

intercommunication during the severe winter, the intervening distances being made as short as practicable, bearing in mind the advisability of future extensions. The accompanying isometric projection, fig. 1, shows that this feature has been very successfully developed, when it is remembered that the designers had in mind the future extension of the majority of the buildings upwards of 100%, without disturbing the general scheme. The total area of the combined shops will be about 17 acres.

The main buildings are arranged along a midway, which runs across the shop site from the public road to the locomotive house and freight yard adjoining the main line, and are served by a series of standard gauge and industrial tracks, the former connecting through the rear of the buildings to a ladder track at each end of the grounds and thence to the yards, and the

and the locomotive department to the south, the midway passing through each group of buildings. The divisional line is the through running track to the north of the power house, the latter being as centrally located as possible to reduce power and heat transmission losses to a minimum, as will be shown later in the article. The foundry and forge shop, being common to both groups, are located in a midway position, with the distinctively departmental buildings to the north and south.

The larger buildings of both groups are of steel construction, with self supporting steel frames on concrete foundations, with concrete walls carried up to the window level. The balance of the superstructure masonry is brick, carried up into a parapet wall all around the building, and capped with concrete coping. The roof drainage is carried down inside the building from re-

ceiving noppers in the roof, and through running traps to the sewers. All the large buildings are covered with a built up roofing, composed of felt and asphalt, covered with gravel. All windows throughout the plant have $\frac{1}{2}$ in. thick ribbed glass, and the skylights are glazed with $\frac{3}{4}$ in. wire glass. As additional protection against heavy snow loads on the roof, the skylights are carried on steel ribs, with rolled copper sheathing to carry the glass. Copper is used throughout for all flushing gutters and ventilators.

Mercury arc lights are being used for the principal interior shop illumination, with lamps and reflectors hung high in the shops. This form of illumination is satisfactory, giving an easy, even light, with no sharp shadows. In addition, there will be plug receptacles in all the buildings, at frequent intervals, for the attachment of cable lights. Daylight illumination is especially well provided for by ample window areas, and wide skylights, giving a maximum interior light distribution. The interior of all the shops will be finished in white, enhancing the interior lighting arrangements.

High and low pressure steam, and water,

tracks, one between each pair of shop tracks, and along each side, a 16 ft. gallery. In the scheme now under construction, the transfer table type of construction has been adopted, located on the west side of the midway, at the north end, with the easterly of the two shops adjoining the midway. The two shops will each be 120 by 200 ft., with an intervening 75 ft. transfer table, and 100 ft. approach tracks to the buildings, which are therefore 275 ft. apart. Each shop will have 9 working tracks, in as many bays, at 20 ft. centres, with an additional empty bay at the north end of the building.

The shops are the standard construction, of concrete lower wall, carrying a brick upper wall, spanned by steel trusses in the divisional line of each bay. Each bay is entered by double doors from both sides, through $12\frac{1}{2}$ by $16\frac{1}{2}$ ft. openings. Both ends of the buildings have galleries, that at the north end, 14 ft. above floor level, and extending over one bay, and that at the south end 24 ft. 8 ins. above the floor, extending over two bays. Both platforms are carried on the walls and 5 steel columns in the line of the truss above, and are composed of 4 in. reinforced concrete flooring

The east end of the north balconies carries a 12 ft. heating fan, the discharge duct from which leads down to a 5 ft. square concrete heating duct under the floor, extending across the north end of the shop, with longitudinal ducts of similar construction, leading off along each side wall, and along the central row of columns, all under the floor. In the side walls, between each of the doors, there is an outlet moulded in the concrete wall, and along the central row of columns, between each bay, there is a double discharge head. The north balcony also contains the lavatory, which is located on the west end. Both galleries are reached by stairs, centrally located in the end walls, but the south balconies in addition have a 6 by 10 ft. lift, of 2 tons capacity, situated between the two end bays, near the east side. The natural illumination of the shops is good, as in addition to the skylights, there is ample window accommodation in the doors and end walls.

Cars are brought into the shop over the transfer table, which operates the length of the shops, and extends beyond the north end to a through track along the north side of the grounds, over which the passenger

Fig. 2. Plan of Main Floor and Galleries of One of the Two Passenger Car Buildings.

compressed air, and drinking water are distributed about the plant, as explained in an article descriptive of the power house in Canadian Railway and Marine World, Oct., 1913. A tunnel extends the length of the midway, carried on the wall of which are all the mains from the power house, with connections leading from the tunnel to the various shops. On entering the buildings, the piping is carried on the trusses and steel work of the shop. Fuel oil is distributed in piping to such shops as require it. An extensive fire protective system is in use, comprising yard piping, with fire hydrants and hose houses at convenient intervals throughout the grounds. All the electric travelling cranes throughout the shops are operated on 3 phase alternating current, which is transmitted directly from the power house.

The Passenger Car Shop differs from the arrangement in the initial layout, which comprised one building, 115 by 260 ft., on the west side at the north end of the midway, and had four working tracks the length of the shop, each of which could accommodate four cars, making a capacity of 16 cars. There were also to be two service

cars carried on steel I beams. The ground flooring comprises a bed of 6 ins. of bituminous concrete, surfaced with 3 in. yellow pine.

Under all but the south two bays, the side walls are carried to a height of 46 ft. 4 ins., with a clear height under the trusses of 24 ft. 8 ins., which gives a 10 ft. 8 in. headroom on the north end balcony. The walls in the two south end bays are carried to a height of 55 ft. 10 ins., with a height to bottom of trusses of 37 ft., which with the gallery at a level of 24 ft. 8 ins. above the floor, gives a clearance on the latter of 10 ft. The gallery at the north end is low, as there is no working track beneath, but at the south end, greater elevation is required to clear the cars below. The steel roof trusses, at 20 ft. centres, are carried on the walls, and on central columns, of which there is a row down the centre of the shop between the working tracks. These truss columns also act as the central columns of the end galleries. The central depth of the trusses is $8\frac{1}{4}$ ft., dropping to 4 ft. 5 ins. at the side walls. Down the centre of the roof is a monitor, 29 ft. wide, and 10 ft. high, surmounted by a row of 24 in. copper ventilators, one over each bay.

The cars may be brought from either end of the yard. The transfer table is electrically operated, and the trolley arrangement has been ingeniously devised so as to minimize danger from accidental contact. This feed wire is carried in a channel in one of the walls, the contact shoe being so arranged that it bears upward against the feed wire, the latter carried in the top of the channel.

The Freight Car Shop is immediately to the south of the passenger car shop, abutting on the midway. It is of standard construction, concrete lower wall, surmounted by brick, and spanned by steel trusses, and is 195 by 600 ft., making it second only to the locomotive shop in size. It is divided through its length into three 65 ft. bays, by two rows of columns, supporting the roof trusses, which divide the shop crosswise into 24 ft. sections.

The side bays have a clear height from the floor to the lower chord of the roof truss of 20 ft., the truss itself having a depth of 9 ft. over the row of columns, sloping off to 5 ft. along the wall. In the central bay, there is a clearance of 30 ft., the truss having a depth at centre of 7 ft., sloping in both directions to a depth of 5 ft. over the

columns. Down the centre of each of the bays, there is a 25 ft. wide peaked roof skylight, surmounted by a row of 24 in. copper ventilators, one over each section. The central bay is spanned by a 20 ton travelling crane, which has a 5 ton auxiliary, and which operates the length of the shop. The height to base of crane rail is 22 ft., which is approximately the clearance below the crane itself. The locker rooms and lavatories are contained in 20 by 49 ft. brick annexes, one on the north and the other on the south side, centrally located. The heating

shop layout, containing a full equipment of machinery for the handling of repairs to this rapidly increasing type of rolling stock. From the west end, there are three entrance tracks as in the other bays, the central one of which extends through the shop, the outer ones cutting off at 125 ft. through the first five sections of the shop. On each side

expansion to the full size of the shop.

The shop equipment is as follows:

S1 Double angle shear, with shearing capacity up to 6 by 6 by 1 in. angles either square off or at an angle. Knives rectangular with four cutting edges. Mounted on a 6 ft. diameter turntable. Motor driven.

S2 Double end punch, 24 in. throat on each end, with capacity for punching up to 1¼ in. holes in 1 in. steel, or to shear 1 in. plates, 1½ in. round bars, or 6 by 1½ in. flat bars. Each end has architectural jaw, and each sliding head has a three gaged

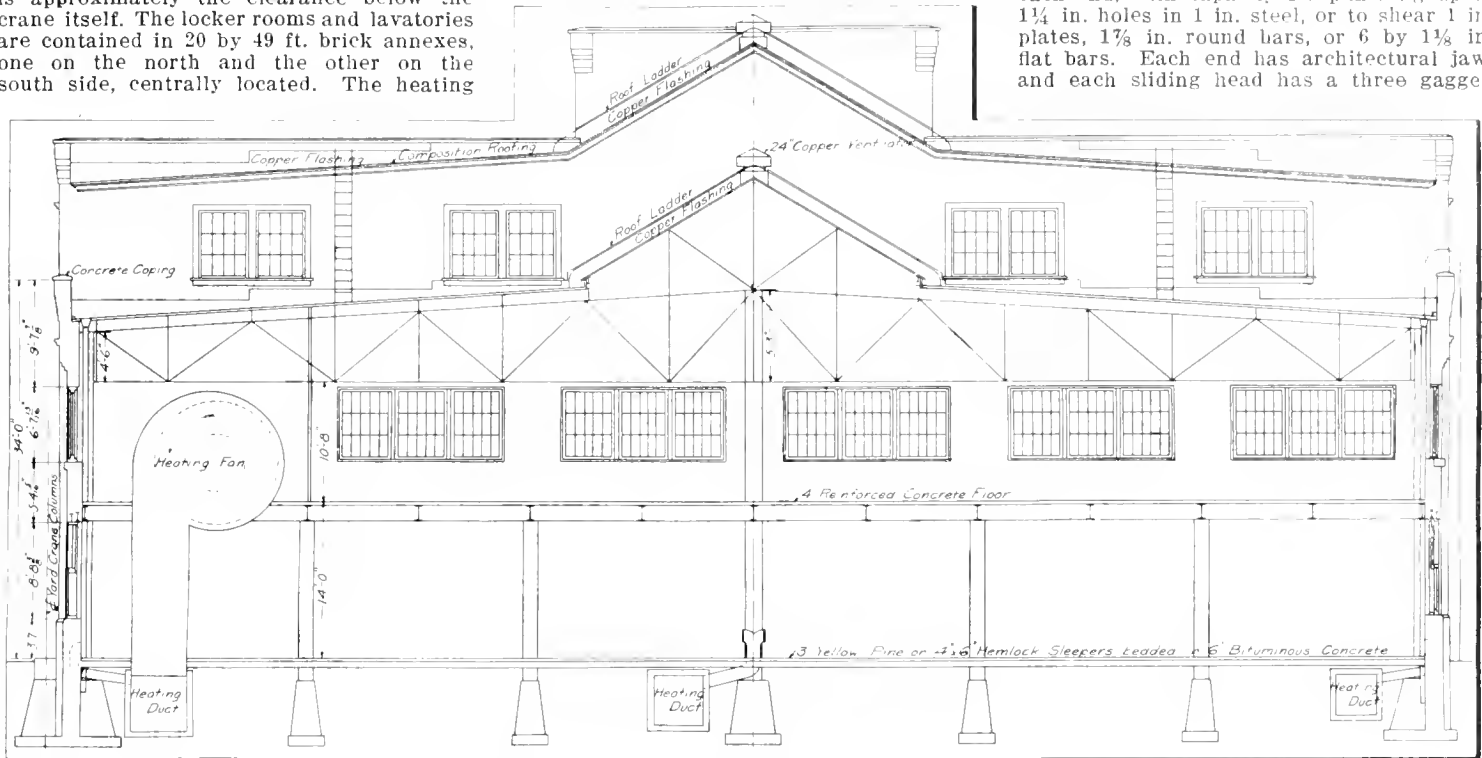

Fig. 3. Cross Section of One of the Passenger Car Buildings, looking towards High End.

plants are contained in two 22 by 25 ft. annexes on the north side, 60 ft. from each end. In each of these annexes, there is a 16 ft. fan, connecting with a concrete duct across the shop under the floor, with similar ducts branching off along the side walls, and along the row of columns, with outlet heads at each column.

The northerly and central bays contain three working tracks each, at 21 ft. centres, extending through the shop, and between

of the through track is located the machine equipment, which it will be observed is arranged in such a manner that the material on entering from the east end of the shop, passes in a natural path along a sequence of machines, depending on the particular member being fabricated, reaching the other end of the shop completely machined and ready for fitting to the car under repair. The two stub end tracks at the west end, will each hold three cars, giving

punching attachment. Motor driven.

S3 Combination high speed cutting off saw, for structural shapes such as I beams, T and girder rails, and round and square stock. The table is so arranged as to facilitate the mitring of beams, etc. Equipped with two saws. Motor driven.

S4 Gate shear, 120 in. between housings, with capacity up to 1 in. plates. Housing throat depth of 25 ins. 13½ in. knives, with four cutting edges. Counterbalanced

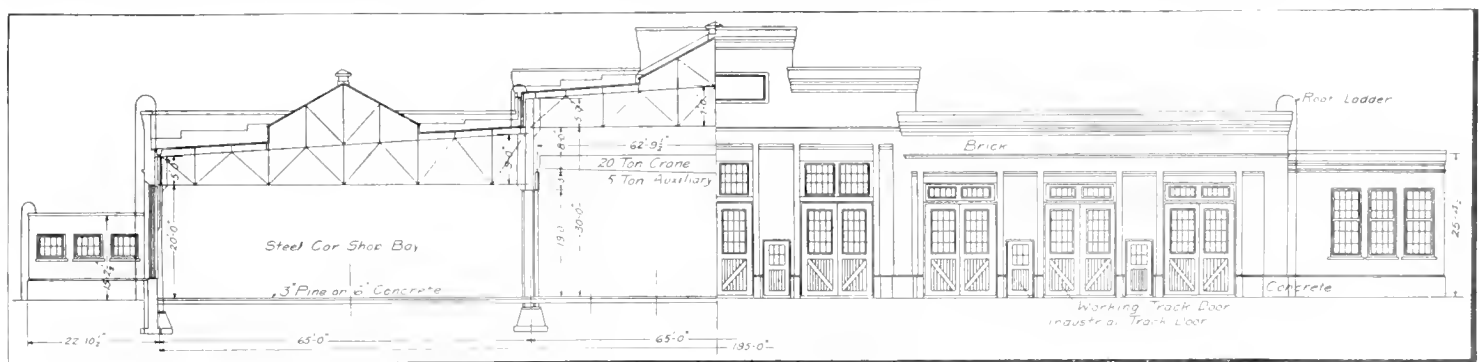

Fig. 5. Cross Section and End Elevation of Freight Car Shop.

these tracks in each bay, there is a 2 ft. gauge service track, with cross connections at nearly equidistant intervals along the shop length. The working track doors are 12¾ ft. wide, and the service track doors, 5 ft. The working tracks are laid on 7 by 8 in. by 8 ft. sleepers, and the service tracks, on 4 by 6 in. by 4 ft. sleepers. The flooring is of 3 in. yellow pine, on 4 by 6 in. hemlock sleepers, which, in common with the rail sleepers, are bedded in a 6 in. base of bituminous concrete.

The southerly bay is for the steel car

a normal steel car shop capacity of 6 cars, but it is obvious that the nearby tracks of the other two bays are quite accessible for steel car work. The tendency in modern rolling stock construction appears to be to get away from wooden construction, so that it is not too visionary to forecast the day, after the present stock of wooden equipment has been scrapped, when nothing but steel equipment will be in use. This shop has been laid out with that day in view, as while it meets all present requirements admirably, it at the same time is capable of

head, controlled by automatic stop. 90 in. flywheel. Total machine weight about 136,000 lbs. Motor driven.

S5 Horizontal Punch. 36 in. throat, with capacity for ¾ in. holes in ¾ in. stock, with 3 gag punching attachment. Equipped with 40 ft. overhead runway, extending 20 ft. in either direction, and provided with two hand operated hoists. Motor driven.

S6 Plate planer. Capacity of ¼ in. feed on ¾ in. plate at 40 ft. per min. 32 ft. cut at one setting, pneumatic clamps, holding up to 1 in. plate. Cuts in both directions.

Overs and 2 risings to permit of planing plate edges in successive settings. Motor driven.

S7. Plate straightening rolls. Capacity $\frac{5}{8}$ in. plates. Distance between housings, 4 ft. 2 ins. Six 10 in. rolls arranged in two tiers, equal number above and below. Independent vertical and horizontal hand adjustment. One upper roll central with bottom roll, with others intermediate. Lower rolls at 10½ in. centres. Motor driven.

S8. Horizontal punch. 24 in. throat, with capacity for 1 in. hole in 1 in. stock, and having 3 gag punching attachment. Similar runway to that with S5. Motor driven.

S9. Structural steel punch. Capacity for 1 in. holes in 1 in. steel. Maximum c to c. distance of outside punches is 38 ins., with depth of throat to centre of cast steel sliding head, 24 ins. Beam coping attachment so arranged that a beam coped at one end can be passed through without turning beam in the shop. Fitted with 8 complete gagged punching attachments. Main frame of partial steel. Spacing table arranged to handle beams from 10 to 20 ins. for both flange and web punching, and for 24 in. plates. Equipped with adjustable rollers for supporting beams and plates, and with guide rollers

in. gap, and capacity of 1 in. rivets with 80 lb. air. Equipped with four overhead electric hoists, each with capacity for 5,000 lbs., on a runway over centre line of pit. Runway is 160 ft. long, and bracketed to columns to give a clearance of 10 ft. for the hook in its highest position. 100 ft. pit.

S14. Metal cutting band saw. 36 in. wheels. Motor driven.

S15. Eight spindle arch bar drill. 10 ft. long. Three step cone drive geared 1 to 4. Motor driven.

S16. Double end punch and coping machine. Capacity for punching 1½ in. holes in 1 in. steel, and for shearing 1 in. plates, 1½ in. round bars, 6 by 1½ in. flat bars, and 4 by 4 by ¾ in. angle bars. Throat, 25 ins. Motor driven.

S17. Bulldozer. Crosshead face, 89½ by 16 in., with 24 in. stroke. Die space with crosshead forward, 44 ins. Motor driven.

S18. Bulldozer. Crosshead face, 63 by 12 ins., with 20 in. stroke. Die space, 38 ins. Motor driven.

S19. Rapid action punch. Capacity for ¾ in. holes in ½ in. steel at rate of 65 strokes per min. Throat, 16 ins. Motor driven.

S20. Draw bench. 50 ft. long, with pull-

wheels.

Triplex 3 by 8 in. hydraulic pump, with capacity of 35 gallons a minute against 1,500 lbs. pressure. Motor driven.

Thus, the parts enter the shop from the east, the sills and large plates, etc., passing along through the plate planer and beam punch, etc., to the rivetter, while the smaller parts pass down on the other side through the punches and shears, etc., to the rivetter. Forgings are made alongside, and such parts as can be so handled, are here assembled, before final assembling on the car. The cold working machinery is in the early part of the path, then the hot working machinery, and then the final assembly of the parts on the car. The routing is excellent, with no retrograde steps.

Along the south wall of the freight car shop, extending from the midway to the lavatory annex near the centre of the building, there is a storage platform, 288 by 21 ft. on the level of the ground. Centrally down this platform, there is a 2 ft. service track, with two turntable connections into the building, as well as connections at the front end of the platform. This platform is surfaced with 3 in. planking.

Along the outside of the platform, there is

Fig. 4 Plan of Freight Car Shop, showing Machine Tool Layout in the Steel Car Shop Section.

a tie punching fixtures to align the work. Carriage moved by hand carrying a pawl which drops into a notched strip along side of bed. Table length suitable for 40 ft. carriage travel. Weight about 64,000 lbs. Motor driven.

S10. Double end punch and shear. 18 in. throat on each side, and with a capacity to punch 3 in. hole in 2 in. steel, or shear 10 by 2½ in. bars, or 4½ in. rounds. Main frame partial steel. 5 in. stroke. Weight about 100,000 lbs. Motor driven.

S11. Plate bending rolls. Capacity for bending 10 ft. width of 5-16 in. plate. Pyramid arrangement of rolls, upper one 8 ins., and lower ones 6 ins. Top roll with solid extension for balancing, and back housing designed for removal of plates rolled to complete circles. Lower rolls 7¾ ins. c. to c. Motor driven.

S12. Horizontal bending and straightening machine. For 15 in. I beams and channels, either way. Jaw, 51½ in., wide, 26 ins. deep, and 16½ ins. high. Weight about 30,000 lbs. Bending ram to operate continuously when in use, and fed up to the work by a heavy screw and revolving nut, with a total adjustment of 4½ ft. Main frame of steel. Motor driven.

S13. Rivetting machine. 72 in. reach, 18

ing capacity of 10 tons. Motor driven.

S21. 4 ft. radial drill. High speed type. Capacity, 1 in. hole, 8 ft. 1½ in. drill radius, and greatest height from base to nose of spindle, 4 ft. 10½ ins. Spindle traverse, 15 ins., and head traverse, 3 ft. 1¼ ins. Motor driven.

S22. Double emery grinder. 24 in. wheel, 3 in. face. Motor driven.

S25. Two stationary rivet furnaces. Oil fuel.

S29. Air compressor. Capacity, 1,000 cu. ft., at 110 lbs. pressure. Two cranks, two stage, double acting, motor driven.

S30. Double furnace. 8 ft. wide by 6 ft. deep by 2½ ft. high per chamber.

S31. Double furnace. 9 ft. wide by 3 ft. high by 12 ft. deep per chamber.

In addition to the foregoing stationary equipment, there are other machines in the shop as follows:

Pipe bending machine complete.

Oxygen welding outfit, complete with tanks, 3 welding torches, 1 cutting torch, 3 welding tips, reducing valves and pressure gauges for oxygen or blaugas. Four 50 ft. lengths of hose for the torches.

Six portable rivet furnaces, complete with oil burners, oil reservoir, fan, and flexible compressed air connection. Mounted on

also a light shed on the platform, 170 by 8 ft., with a height in front of 8 ft., sloping to the rear to 7 ft. This shed contains storage bins for the freight car shop.

There is a similar platform along the north side from the fan annex to the midway, with service track midway down its length, with connections into the building. The platform has a 50 ft. long stock bin shed.

This article will be continued in our next issue.

Hardwood Ties on Panama Rd.—The use of ties of lignum-vitae (*guayacum resinata*) is a notable feature of the track construction of the Panama Rd., and the ties have given remarkably long service, those of good quality lasting for about 30 years under the tropical conditions on this road, even though unprotected by tie plates. The best quality of this timber is no longer available, however, as it is so valuable for use in connection with machinery and manufacture that it is not to be had at suitable prices for railway ties. Owing to its durability, the renewals on this 50 mile railway ranged from 4,000 to 10,000 a year (1880-1895) or 80 to 200 per mile, with an average of 7,000 or 140 per mile.

General Arrangement of C. P. R. All Steel Six Wheel Truck for Passenger Cars.

Canadian Pacific Railway's All Steel Trucks for Passenger Cars.

Within the past few years, a number of railways have adopted all steel trucks for service under heavy passenger train equipment. The C.P.R. has in use a type of four and six wheel steel truck that was designed by the General Master Car Builder, R. W. Burnett. The general appearance of the two trucks is clearly shown by the accompanying illustrations from photographs, and the details of the construction of the six wheel truck are illustrated by the line en-

flanges of the channels are cut away to admit the equalizers, and are, at the same time, stiffened by the pedestal plates. These are made of flat plates, which are first punched approximately to shape, and then milled to the exact size. In designing the truck, it was expected that these pedestals would bend in case of a derailment, but that they could easily be bent back into shape. Experience, however, has shown that when ever a derailment has occurred, the pedestals have not been distorted, and it has been possible to carry the car body to the end towards the centre of the truck, there is a better opportunity to install the axle light apparatus.

The side beams consist of two 8 in. channels, with their channels towards each other. They are riveted together with spacing blocks between, so that they present a smooth surface on the outside. The two beams thus formed are tied together by Z bar transoms, and straight gusset plates extending all the way across the truck of both the top and bottom channels. At the pedestals the lower

the snops on its own trucks.

For wearing strips, chilled cast iron liners are rivetted to the jaws, and these have shown wearing qualities superior to anything else that has been tried. Neither liner nor box has shown any appreciable wear, and the indications are that both will run indefinitely. At the bottom, the jaws are tied together by a short pedestal tie bar, held in place by a pin, fitted with cotters and without bolts or nuts. To remove a pair of wheels, all that is required is to take out two cotters for each pair of wheels, pull

The Proposed Change of the Toronto, Hamilton and Buffalo Railway's Route in Hamilton.

Brief mention was made in Canadian Railway and Marine World for January of the Board of Railway Commissioners' decision that it has power to consider an application for the issuing of an order to compel the T.H. & B. Ry. to abandon its present entrance into Hamilton, Ont., and adopt another route. As the question is one of great

was pressed for under secs. 26, 167, 237 and 238 of the Act. Mr. Cowan, who appeared for the municipality, also amended the application at the hearing by substituting the word "divert" for "abandon." Mr. Hellmuth, who appeared for the T. H. & B. R., made a preliminary objection by challenging the Board's jurisdiction to issue an order as applied for.

It appears that the railway as constructed in Hamilton, along Hunter St., was built under the terms of a by-law, passed by the City Council on Oct. 25, 1894, and numbered 755. It is a bonus by-law, which was passed after after an affirmative vote of the ratepayers had been taken. Under its provisions, the railway company received a bonus of \$225,000, on terms which appear to have been carried out. These terms call for the construction of the line, and require that the company build and always maintain a first-class passenger station in a central part of the city, at which all passenger trains must be stopped; and, after making certain other stipulations, provide for the route on which the line was to be constructed and the manner of construction, some of the railway through the city being constructed on the level and one part through a tunnel. The whole question of the construction of the railway seems to have been carefully considered and the civic requirements of that day provided for. This bylaw was confirmed and "declared to be legal, valid, and binding, to all intents and purposes" by Ontario Statute 58 Vic. (1895) ch. 68. In the same year, the Dominion Parliament, by chap. 66, ratified the bylaw, and declared it to be valid and binding upon the parties thereto, so far as such confirmation was within the powers of Parliament.

Mr. Hellmuth takes three objections to the Board's jurisdiction to make any alteration: 1st, that the bylaw, ratified and confirmed

C.P.R. All Steel Four Wheel Truck for Passenger Cars.

out the pins and lift the frame.

The absence of the end pieces necessitated the use of inside hung brake beams, and these are installed without any retracting springs, but with a special brake beam adjuster. This is very clearly shown in the half tone illustrations. It consists of a hanger carried by arms rivetted to the transom. Into the bottom of this hanger is screwed the carrier that supports the truss of the brake beam. No check nut or cotter is required to hold it in place, as it cannot turn, and the adjustment is effected by removing the pin from the brake beam, screwing the carrier to the proper position, and replacing it in the beam.

Bolts and nuts are avoided, and one of the arrangements for doing this is to be found in the bracket for the spring plank hangers. It will be seen that these are on top of the gusset plates. They are simple castings, with a seat for the lower pin. The pin is held in place by a wall over the hole at one end and a cotter pin put across the hole at the other end. To remove the pin, a hole is left in the wall, through which a drift can be pushed or driven.

In spite of the substantial appearance and actual strength of these trucks they are lighter than the composite trucks which they replace.—Railway Age Gazette.

Tree Snow Fences on Intercolonial Ry.—Canadian Railway and Marine World for Sept., 1913, contained an article on tree snow fences on the Western Lines C.P.R., in connection with which a Moncton, N.B., correspondent writes us that evergreen hedges have been in use on the Intercolonial Ry. for many years, especially between Newcastle and Campbellton, N.B., where some of them were set out over 20 years ago, since which others have been added on other portions of the line. Some of these hedges have grown to a height of over 20 ft., and have proved very useful, as a protection from snow and ice, as also ornamental.

importance to railway companies generally the decision given by the Chief Commissioner, H. L. Drayton, K.C., is now given in full as follows:

This is an application made by the City of Hamilton, Ont., for an order to compel the Toronto, Hamilton & Buffalo Ry. to abandon its entrance into the city via, Hunter St., and adopt, in conjunction with the

C.P.R. All Steel Six Wheel Truck for Passenger Cars.

G. T. R. and the Canadian Northern Ontario Ry., a common location in the north end of the city; and that the portion of the T. H. & B. R. in the city, colored yellow on a plan submitted, be permanently diverted to the said common entrance and location, and to directing the company to construct its tracks on the new route shown on the plan as such common entrance for all railways entering the city. The original application asked that the order be issued under sec. 237 of the Railway Act, but the application was subsequently amended and the order

as it is by Parliament, constitutes a special act, and therefore overrides the provisions of the general statute; 2nd, that the Board cannot authorize a relocation of an existing line, except upon the application of the railway company; and, 3rd, that the railway company could not, in law, have built its line on any other route, and that the Board cannot order the company to do that which, in law, it has no authority to do.

In so far as the first objection is concerned, in my view the question is covered by the decision of the Privy Council in C. P. R.

vs. Toronto and G. T. R. (1911), A. C. 461. In that case, the method of protection at certain streets was by agreement fully provided for. That agreement, as the bylaw in the present case, was ratified both by Parliament and Legislature. It is true that, since the agreement was made, the scope of railway operation dealt with was enlarged, the C. P. R. having acquired an additional 26 ft. of land to the south of and enlarging its former right of way; so the special act—as the agreement had become—really did not deal with the whole of the questions considered by the Board, and consequently did not in any way interfere with the Board's jurisdiction under the provisions of the general act. The decision, however, does not proceed on any such ground, but upon the broad, general principle that the subject matters are not the same. The judgment of Lord Atkinson, who stated the reasons for their Lordships' decision in the Toronto case reads as follows: "If the subject matter of the special act and that of sec. 238 of the act of 1906, as amended, were the same, then there would undoubtedly be a conflict between the two enactments. But they are not the same. The specified works, the power to construct and use them, form the subject matter of this special act. The subject matter of sec. 238 is the control of the Board over the railway companies, and the power conferred upon it to require the companies to construct such works as it may deem necessary for the protection and convenience of the public. These are wholly different matters. The two statutes can stand together. Effect can be given to each. There is no conflict between their provisions as contemplated by sec. 3."

As in the Toronto case, the company proceeded under the special act,—built its line and supplied its station and facilities. In my view, however, the enabling special act does not in effect provide that the company's work or appliances shall never be altered or changed, no matter how surrounding circumstances and conditions may change, or however inadequate and faulty the facilities so supplied may become.

A distinction, of course, exists between this and the Toronto case, in that it cannot fairly be said that the change here is necessary in order to protect the public in the use of highway crossings over the existing railway. The railway company has already filed plans for an overhead structure along Hunter St., the effect of which would be to eliminate highway crossings now more or less dangerous; but the subject matter of the bylaw and the validating legislation not being the question of the Board's jurisdiction or the limitation of that jurisdiction, should the act, under any other section, give jurisdiction to the Board to make an order as applied for, it seems to me that the cases are parallel.

In the Toronto case, the particular subject of consideration, in so far as this question is concerned, was the fact that the special act provided specifically for a certain measure of highway protection leaving the railway on the level—the jurisdiction of the Board to nevertheless elevate the railway for the protection of those using the highway was sustained. In this case, the special act undoubtedly fixes the railway location, an object, however, as much removed from the general question of the Board's control over the railway as that of the protection of the Toronto crossings could be said to be.

I should also point out that sec. 8 of the Dominion statute validating the agreement (58-59 Vic., ch. 66), specially provides that nothing in the act contained should affect any rights or powers conferred by the Rail-

way Act on the Railway Committee of the Privy Council. This provision would seem to indicate the intention to continue public control of the railway through the agency then used for such progress—the Railway Committee of the Privy Council—to which the Board may be said to be the statutory successor (sec. 11 of the Railway Act).

Dealing with the second objection, sec. 167 provides—"If any deviation, change, or alteration is required by the company to be made in the railway, or any portion thereof as already constructed, a plan of the portion of such railway proposed to be changed, showing the deviation, change, or alteration proposed to be made shall be submitted for the approval of the Board, and may be sanctioned by the Board."

Under sub-sec. 2, the plan of the portion of the railway proposed to be changed, if sanctioned, will be dealt with in the manner that the act provides for the original plan; and, under sub-sec. 3, the company may then make the deviation, change, or alteration, and all provisions of the act will apply to such portion of the line in the same manner as they applied to the original line.

In dealing with the approval of location plans, the Board, while bound by the general location as approved by the Minister, may, unless the Minister otherwise specifically directs, sanction a deviation of not more than one mile from any one point on the location approved by the Minister (sec. 159, sub-sec. 3 Railway Act). The approval of the Board must be obtained before construction takes place.

Under sec. 26, sub-sec. 2, "The Board may order and require any company to do forthwith any act, matter, or thing which such company is or may be required or authorized to do under this act."

Sec. 28 also provides that "the Board may, of its own motion, inquire into, hear, and determine any matter or thing which, under this act, it may inquire into, hear, and determine upon application or complaint, and with respect thereto shall have the same powers as, upon any application or complaint, are vested in it by this act."

Sub-sec. 2 further provides that the Board's powers may be exercised from time to time, or at any time as the occasion may require. Sec. 29 provides that the Board may review, rescind, change, alter, or vary any order or decision made by it while sec. 32 (2) gives the Board like powers in regard to regulations and orders made by the Railway Committee of the Privy Council.

I have had much difficulty in arriving at a conclusion as to the proper effect to be given to sections 26 and 28. It seems to be clear that, as a result of the provisions of sec. 28, the Board, of its own motion, may determine any question it would have a jurisdiction to determine on application or complaint. This section, however, of itself does not enlarge that jurisdiction which the Board would otherwise have after an application or a complaint was made to it.

Looking at the sections dealing with the locations of lines themselves, it might be said that the duty was thrown upon the company of submitting its location plans; that location questions were matters relating to the policy and business venture of the company and were directly dependent upon financial considerations. Hitherto, the Board's jurisdiction does not seem to have been exercised in compelling the company to file location plans, or in compelling the company to construct its railway by a specified time. It seems to have been taken for granted that the company was bound by the provisions of the act as to when the work of construction should be

commenced and as to when it should be finished, and that the Board's duty was to see that location plans, if filed, were proper, and work, if constructed, was sufficient and safe.

The Board's jurisdiction in dealing with a deviation is similar to that the Board exercises in dealing with the general location plan; and the fact that the Board's province as indicated by the appropriate section in each case is that of sanctioning instead of ordering is probably the reason why no application in the past seems to have been pressed for an order requiring either original railway construction or deviation in the supposed interests of any particular parties.

It must further be borne in mind that, so far as branch line construction required for industrial purposes is concerned, the Board's power is not confined to a mere sanctioning of the proposition by the railway; but the Board may order the construction of branch lines for industrial purposes under the provisions of sec. 226 of the act.

The language of the act differs in dealing with duties of the company to the public, on the one hand, and rights of the company which it may or may not exercise, on the other. For example: Signboards at highway crossings shall be erected and maintained (sec. 243); farm crossings shall be provided (sec. 252); modern and sufficient apparatus shall be provided and be used on all trains (sec. 264); on approaching highway crossings, the whistle shall be sounded and the bell shall be rung (sec. 274); and, under sec. 284, the company shall furnish adequate and suitable accommodation.

On the other hand, questions not related to the protection of the public either using the highways or the trains, and not concerned with the proper demands of traffic, but rather related to the management of the company itself, or the manner in which the statutory powers of the company may be exercised, seem to be dealt with in a different manner. For example: The company may make bylaws for "the appointment of all officers, servants, and artificers, and the prescribing of their respective duties and compensation to be made therefor" (sec. 121, ss. b). The company, again may exercise the general powers for the purposes of the undertaking contained in sec. 151 of the act, and which includes, under ss. (f), the construction and operation of the railway, and under ss. (p), the right, from time to time, to alter, repair, or discontinue it, and substitute another in its stead, as well as a general power which it may exercise to do all acts not enumerated necessary for the construction, maintenance, and operation of the railway, ss. (q). In like manner, under sec. 176, the company may take possession of the lands of other companies, subject, of course, to the Board's approval being first obtained. It is not necessary to multiply further instances for the purposes of showing an apparent distinction in the position of companies under certain sections of the Act.

In order to find a jurisdiction in this case, it seems to me that it is necessary to rely upon sections 26 (ss. 2), and sec. 28, and to treat said sections as applicable, notwithstanding any implication which might otherwise arise by reason of the different manner in which obligations, on the one side, and rights of the company, on the other, are treated. Apart from such sections, the Board's jurisdiction, in a case of a deviation, is to sanction and not to order. Under an analogous section, 261, the late Chief Commissioner held that the Board cannot open a road for traffic against the desires of the company or without its making an application for an order for such

A suggestion has been made in London, Eng., to the effect that the time has arrived when the services rendered by the wireless telegraph, in connection with recent marine disasters, should be fittingly recognized by granting G. Marconi some token of gratitude for his great achievements on behalf of humanity.

Canadian Railway Rolling Stock Orders in 1913.

Following are lists of passenger cars, freight cars, and locomotives, ordered during 1913, by the various railway companies, contractors and industrial companies in Canada, including such companies operating in the U. S. as are controlled by Canadian companies:

Passenger Cars

Railway Age Gazette

Telephone Train Dispatching on the Intercolonial Railway.

As announced in a recent issue of Canadian Railway and Marine World a contract was let recently for the installation of telephone train dispatching equipment on the I.R.C., between Moncton and St. John, N. B., 89.4 miles, respecting which we have received the following official information:

The contract includes the construction of a metallic telephone circuit of no. 9 B. & S. gauge hard drawn copper wire, weighing 210 lbs. a mile. The dispatchers will be

located at the divisional point, Moncton. Gill selectors and the latest type of telephone transmitter arms will be installed in each of the offices between Moncton and St. John so that the dispatchers may communicate with any station by telephone. In addition to this, portable telephones with line poles will be furnished for each train so that in case of emergency train crews may communicate with the dispatcher from any point of the right of way. Each office will be equipped with a test panel to enable trouble to be quickly located and cleared. The equipment furnished will be of the highest grade and largely similar to what

has been in use on the C.P.R. for several years. The Hall Switch and Signal Co., which has the contract, expects to have it completed at an early date.

Canadian Society of Civil Engineers, Victoria, B.C., Branch.—Following are the officers for the current year, elected at the recent annual meeting.—Chairman, F. C. Gamble; Vice Chairman, D. O. Lewis; Treasurer, A. E. Foreman; Secretary, R. W. MacIntyre; Auditors, H. A. Icke and F. A. Richardson; other members of executive, B. H. Harrison and L. W. Thoms.

Railway Mechanical Methods and Devices.

Cattle Guard Machine in Grand Trunk Railway Car Shops.

In Canadian Railway and Marine World for Oct., 1912, a full description of the then existing practice of making cattle guards at the G.T.R. car shops, at London, Ont., was given. This practice, while better than that to be found in the majority of shops, is being superseded by a more nearly automatic system of handling the parts, made possible by the construction of a special machine by A. Leclair, millwright in the G.T.R. Montreal shops. Several years ago, he devised a machine for sundry kinds of duplicate work in the Montreal shops, and it was found that it was useful in making the parts of a cattle guard, by adopting special fixtures to it. Since then, the machine has been used entirely for these guards, and so useful has it proved, that it has been decided to equip other shops of the system with the same kind of machine, only the latest development is a considerable improvement on the last production, specialized exclusively for the cattle guard slats.

made up for general work. This machine, being specially designed for cattle guard slats, is arranged with a special clamping jig. On the top of each of the three cross carriages, there is a stop block, the three lined up correctly. These stop blocks hold a wooden jig member, of a section to receive one side of a cattle guard slat. There is a corresponding jig section to the rear, which is adjustable on the carriage, by cams actuated by the vertical lever on the far end of the machine, clamping the member to be machined, in place in these vise jaws.

The details of the clamping mechanism are shown in the other illustration. The lever in the background is on the end of the cam shaft. Pulling the lever over towards the operator, locks the cams in position. On the cam shaft, there is a notched wheel, engaging with which is a knife edged lever, fulcrumed on the end frame. On the near end of the frame, there is a small dog, pivoted on the frame, and which holds the end of the lever down, retaining the jaws in their clamped position. By raising this dog, and giving the clamping lever a releasing pull, the jaws are loosened, so that the

operation. This machine is almost identically the same as the slat machine, only shorter.

The initial operation on the slats, that of bevelling the tops, is performed on the buzz planer. The slat stock is twice the depth of the completed slats. This stock is passed through the planer on the flat, with revolving knives above and below, spaced one before the other, so that as the stock passes through, channels are planed top and bottom, turning out two completed slats at the other end.

The final assembling of the slats to form the cattle guards is done in a vertical jig, fitting them on one at a time.

Crank Pin Turning Device at Quebec Central Railway Shops.

Considering the amount of machine work to be performed on the part, the work involved in putting a crank pin in shape, is considerable. As usually practised, the locomotive driving wheels are placed in a large hydraulic press, and the pin first of all

Machine for Trimming, End Bevelling and Drilling Cattle Guard Slats.

Clamping Mechanism of Cattle Guard Machine.

The machine which has been made in the Montreal shops for London, Ont., is shown in one of the accompanying illustrations, ready for shipment, but is unfortunately marred by the presence of an obstruction in the foreground which does not belong to the machine. The machine consists of a light cast iron frame construction, similar frames at each end and the centre forming the whole under structure. Carried in three bushings, one in each of the frames, there is a shaft extending the length of the machine, on which in any desired position may be secured saws or knife heads. These heads are protected by sheet iron hoods, attached to a shaft in the rear, and which may be shifted when it is necessary to get at the knife or saw.

Across the top of each of the three under frame sections, there is a carriage way, on each of which is mounted a carriage, an arrangement similar to the cross slide of a lathe carriage. These three carriages are operated in unison by the large handwheel shown in front, which connects, through a shaft and bevel gears, with a shaft under the cross carriages, spurs on this shaft meshing with racks on the under surface of the carriages.

The original machine of this type was

slat can be taken out quickly. Then, after inserting a new piece, the lever is pulled forward, and by the dropping down of the dog on the knife lever, the slat is clamped for operating.

The cutter head carries two saws, for trimming the slat to length, and also carries a double cutter head adjoining each of the saws. The initial construction had a single cutter head, but it was found that by making the cutter head in two parts, with knife blades of each set in an opposite direction, the cut was divided, and a better balance obtained. These double headed cutters shave off the end bevel of the cattle guard in the one pass across the machine.

Back of the cutter and saw shaft, there is a secondary revolving shaft, with heads that are adjustable along its length, in which there are drill heads, operating from this shaft through bevel gears. As the cutters and saws are performing their operations, the drills, properly spaced, drill the tie rod holes, so that the slat on coming from the machine is completed.

A somewhat similar machine has been made up for machining the separating blocks, which are bevelled at both ends like the slats, and have one tie rod hole in the centre. All this is performed in the one

pressed out. This generally requires the removal of the wheels to another point in the shop, which, in the case of a small shop, without adequate crane facilities, is a considerable task. In consequence, any device that is capable of being used directly on the crank pin when in place in the driving wheel, makes for a considerable saving in time, even if the actual time of machining by an applied device is not as short as when removed to a lathe.

In the Quebec Central Ry. shops, at Sherbrooke, Que. (G. M. Robins is Master Mechanic, and E. M. Green, General Foreman Machine Shop), such an applied device for turning crank pins is in use, and is illustrated herewith. The device depends initially on the fact that the threading for the crank pin nut is concentric and uniform with regard to the body of the crank pin. The body of the tool consists of two parts. An inner stem is threaded as a nut at one end, this end screwing on over the crank pin threading aligning the tool with the crank pin. This extending pin carries a long sleeve as shown. This sleeve carries on its inner end an offset arm, which extends over the crank pin surface, and in its extremity it has a small adjustable cutting tool. The inside guiding pin is stationary,

while the sleeve is revolved by an air motor, attached to an improvised train of gears. The gear train frame is held down by a link and turnbuckle to the floor. On the outer end of the device, there is a ratchet mechanism, for feeding the outer sleeve with its tool, over the face of the crank pin. This ratchet mechanism consists of a dog attached to the sleeve end, adjoining a cam disc, which is stationary. As the dog revolves with the sleeve, it follows the surface of the cam, dropping into an adjustable surface cut out at a certain point in its revolution, falling into a depression of a notched wheel, the latter being on a spindle connecting through a long screw with the inner stem. The outer end of this part is rigidly secured to a brace from the floor (not shown), so that as the screw is revolved slightly on each turn, the sleeve is fed forward a corresponding amount.

The operation of this mechanism is quite rapid, as from its simplicity, it requires but little time to assemble, and as the cut to be removed from the pin is usually very light, only enough to true it up from the oval shape into which pins tend to shape in service, the rapidity with which the cut can be taken is, considerable, resulting in a neat job, without the attendant task of removing the drivers. In fact, all that is necessary to do to handle a job is to remove the connecting and side rods, with their brasses, and the pin is prepared for machining.

Grease Cellar Press at Grand Trunk Ry. Montreal Shops.

The accompanying illustration shows the grease press in use at the G.T.R. Montreal locomotive shops, and which is located in a small depression in the floor adjoining a window. Alongside the press is the grease barrel, and in front of the press a working table. A special cast iron mould is used, the inside dimensions of which are the exact size of the block of grease to be moulded. The lower surface of the mould is the concave one to fit over the axle.

The practice is to first place a curved

subjected to a pressure from the ram, when the block is ready to be taken from the mould.

Through the under side of the mould there is a tapped hole. A hand bolt is screwed through this on the completion of the compressing, the bolt, coming in contact with the sheet metal mould liner, forces the block of grease out, when the operation is again repeated. This process is carried on in the wheel shop under J. Hunter, Foreman Wheel and Tender Shops.

Tapping Attachment at Grand Trunk Ry. Montreal Shops.

The accompanying illustration shows a very useful tapping attachment used in the G.T.R. Montreal locomotive shops, (J. Lees, General Foreman, Machine Shop,) for tapping through blind holes in castings. It is used in a reversing drill press, and of

Grease Cellar Press, Hydraulically Operated.

keyed to a threaded spindle, carried in the spindle of the lathe. A projecting pin from the upper spindle of the tool, projects into the lower members, making the two parts as one. Around the upper spindle, there is a square coiled spring, the tension in which is varied by a screw collar fitting over the thread of the spindle. This spring bearing down on the upper clutch disc, keeps the

Safety Tapping Attachment.

two closely engaged, but in the event of a hard spot in the casting being encountered, or the tap being stalled from any cause, the upper clutch disc will rise on the 45 degree engaging faces, allowing the tap to slip. The spring may be adjusted to whatever tension is desired, bearing in mind the strength of the tap. A safety device such as this has a marked saving in the number of taps required.

Crank Pin Turning Mechanism, Applied to a Locomotive.

sheet of thin sheet iron in the mould, next filling the mould by hand as full as it is considered desirable, then placing the mould under the press, the flat surface of which, descending under hydraulic power, forces the hard grease into all the crevices of the mould, forming a solid block. The surplus overflowing the top is trimmed off with a hand scraper, and the mould again

course would be of no value in a drill that had not a reversing attachment.

The device consists of a tap at the bottom the upper end of which is enlarged to form a clutch face, having two shallow radial clutch jaws. Engaging this face, there is a corresponding radial clutch surface. The power transmitting faces are at an angle of about 45 degrees. The upper disc is

A Long Girder Span Replacing a Howe Truss was put in place on the Duluth, South Shore & Atlantic Ry., a C.P.R. subsidiary, at its crossing over Bad River, near Shilo, Wis., recently. The Howe truss span was 150 ft. long and formed part of a timber trestle 955 ft. long. The entire structure was replaced by a plate girder viaduct of 30 ft. tower spans and 64 ft. intermediate spans, with a 121 ft. deck plate girder river span. This span complete weighed 108 tons. It was riveted up on two flat cars which were run on to the deck of the old span. The span was lifted off by a derrick car at one end and a galleys frame hoist at the other end, the cars were run out, the deck of the old bridge torn away, and the new span lowered between the old trusses on to the previously erected steel bents.

Signalling on Western Lines. Canadian Pacific Ry.—We are officially advised that there are now in operation automatic station protection signals of the upper quadrant semaphore type between Fort William and Winnipeg, upper quadrant automatic signals between Stephen and Field, and between McGillivray and Crowsnest, B.C., and automatic station protection signals through the Calgary terminals.

White Pass and Yukon Railway Co.'s Annual Meeting.

The annual meeting was held in London, Eng., Dec. 16. The chairman of the company, C. C. Macrae, said:—

I shall invite your attention to the principal figures in the accounts. Interest on local securities remains as usual. Dividends on shares of local companies yield £47,756, as against £31,112 in the previous year. On the debtor side of that account the figures are substantially similar to those in the preceding year, but the larger amount received from dividends paid by the local companies and various reductions in the items of expenditure increase the balance of profit carried to the balance-sheet by £15,178—or £41,018, against £25,840 in 1912. Going to the balance sheet, the item of our holding in securities of the local companies, taken at cost price, remains at £2,374,011. The balance due from local companies stands this year at £47,294, as compared with £56,509 in the previous year. The sinking fund investment is increased from £219,819 to £239,984, and we have a further credit this year of £4,849 expended in advance for the sinking fund contribution required for the year ended June 30, 1913. On the debit side of this account the items remain constant until you get to that of sundry creditors, which stands at £5,419, against £19,109 in the preceding year, or a reduction of £13,690. The item representing the sinking fund is increased in the natural course of the accumulations to that fund by an amount of £29,165, and the profit and loss account is brought up from £35,050 in 1912 to £44,392 in 1913, in the way shown in the balance sheet. Deducting from this £18,591 required for the sinking fund instalments due this year, there remains a balance of £25,801, which would have been sufficient to enable a dividend at least equal to that paid last year to have been distributed, but which, for considerations which I shall explain to you when I have finished with the figures, the directors recommend to be carried forward to next year.

Turning to the report of the President of the local companies, a comparison of the figures shows that in the rail division there were carried 10,898 passengers and 51,517 tons of revenue freight, against 10,441 passengers and 29,028 tons of revenue freight in the preceding year. This large increase of about 15 per cent in the tonnage of paying freight carried is very gratifying, and is principally due to the active development in the copper mining work done in the White Horse territory. The average load per car is also materially increased, an important matter as regards the cost of carrying. The operating expenses, which have shown substantial decreases in each of recent years, show a decrease of \$42,318, as compared with the previous year, and of \$109,416 as compared with the year before that. In the river division the number of passengers carried is, curiously enough, almost identical with that of the previous year, while the tonnage of revenue freight carried is increased by about 6 per cent, or from 15,825 tons to 16,723 tons. This traffic was worked with one steamer less than in the preceding year. It is also satisfactory to note that the season during which the fleet operated was prolonged by about a week at the opening, and that the last boat from Atlin to Caribou ran as late as Nov. 2, which boats are needed for delivery of mail in the highway of the White Pass companies. On this point I must ask you to note a statement in Mr. Dickeson's report to the effect that 120 small steamers endeavored to operate later than themselves with the result that they were all frozen out in Indian

River." Owing to the longer season there was an increase in the expenses of operating this division of \$5,931, but this was offset by the increased revenue obtained from the larger business done. On the winter mail service figures I need say nothing, except that they correspond fairly closely with those of the previous year, while the operating expenses are substantially reduced. The anomaly of the situation in which your chairman regularly finds himself at these general meetings is that he has to address you at the end of each year upon a report and accounts relating to the previous year only, while at the time he knows generally what has been the result of the companies' operations in the succeeding year—namely, the year in which he is speaking. I have myself always endeavored in my speeches at these meetings to confine my own remarks to the period strictly before the meeting—although later information has ordinarily been given by the President of the local companies—but, inasmuch as in the report before you we recommend the carrying forward of the whole balance of profit and loss instead of paying a dividend thereout, as the figures justify, and, inasmuch as our reasons for coming to this decision are due to circumstances which have arisen in the present year—that is, the year after that dealt with in the report before you—I am compelled to travel outside the period of that report in order to explain to you why we have come to this conclusion.

Briefly, then, let me say that in the present year we have been faced with an organized attempt to compete for our traffic, which has left us no alternative but to fight to hold our own and prevent ourselves from being driven out of the business which we have built up at such great cost and by so many years of hard work. It was a veritable fight for existence, and not of our seeking. But it was forced on us, and, that being the case, Mr. Dickeson has faced the situation with energy and resource. The war, although costly to both sides, and telling on the revenue of the company by reason of the cut rates, which are an invariable feature of these fights has resulted in this company maintaining and, I trust I may go so far as to say, even strengthening its position. But a situation has been created which will prove of the greatest permanent advantage to the enterprise, but in which it is of the utmost importance to the future interests of this company that its cash resources should be maintained at the highest possible level. This situation is of a character that, having regard to negotiations which are now pending in the way of its development it is most inexpedient that I should, at present, further explain it, and I must ask your forbearance to excuse me from now giving details and your trust in your board that they are doing what, with the knowledge they possess, they believe to be in your best interest. All I would say is that we have reason to hope these negotiations may prove to be successful, and if they turn out as we trust they may do, I believe, and I am fortified by the opinion of Mr. Dickeson, the position of the White Pass Co. will be stronger than it has been at any time in its history, and we may look forward with reasonable grounds of assurance to a future of prosperity for the company, and to very much more satisfactory results than those we have experienced in recent years of struggle with aggressive competition and declining traffics.

The report and accounts having been adopted E. Hansen of Montreal, and E. F. North of London, Eng., were re-elected di-

rectors.

O. L. Dickeson, of Vancouver, President of the local companies then said.

Last year I dealt at some length with the general conditions of the country, giving my impressions of the situation, and I will refrain, therefore, from again referring to the general conditions, except to say that the ideas expressed at that time remain unchanged, and quite briefly to touch upon interesting new developments. In the Atlin district the gold output increased as compared with the previous year, and additional investments in the improvement of properties in that district have been made throughout the summer, which should ensure further increase in the output next year. An important gold quartz property in the vicinity of Atlin has been opened up, and it holds promise of developing into a permanent paying property. The successful operation of this property would mean renewed interest in the prospecting for the development of other quartz prospects in that district. While the final figures are not available I am informed that the gold output in the Klondyke region increased this year, and a large additional undertaking for the operation of an area of placer ground has been financed and activities on a new and large scale should begin in the Klondyke region following the opening of navigation next year. In the Fairbanks district the production of placer gold decreased, roughly, from \$5,000,000 in 1912 to about \$4,000,000 in 1913, due to a lack of water. Considerable development and prospecting for gold quartz was carried on. The gold quartz industry in the Fairbanks district is very promising, but has not as yet reached the stage where it has created much traffic. Considerable prospecting was done on the streams tributary to the Yukon River. An entirely new and what promises to be an important discovery of gold was made at Shushanna in May, 1913. The new diggings are located in the White River mining district in Alaska, just across the boundary line from the Yukon territory, or approximately ten minutes north of latitude 62, longitude 142. From the time of discovery in May until September, when prospecting was practically abandoned owing to the lack of food supplies and to winter setting in, roughly \$30,000 was taken out of the discovery claim by a few men with the hand sluicing method. It was only late in July when this discovery was made public in Dawson, and intense interest was immediately manifested, and a stampede was made from all directions, with the result that several hundred people reached the diggings, but only in time to stake claims and return for additional supplies before the severe winter weather. In view of these conditions, very little prospecting was possible in the Shushanna district this year. Those who staked claims, however, are returning with supplies and are building cabins, etc., preparatory to prospecting their claims for gold as soon as spring opens.

While this discovery is approximately 320 miles from our line in the interior it is contiguous to our property by reason of our route being the easiest and safest for travel. And in order to assist in the development of this region and to lessen the burdens of the prospector, we have inaugurated a new service, placing in operation a winter trail direct from White Horse to Shushanna for the transportation of passengers and supplies. During the summer the Shushanna district is much easier of access than in winter, as our light draft steamers operating up the White River (tributary to the Yukon) land passengers and deliver supplies at a new town called Donjek, within about 90 miles of the discovery. From this

point to Shushanna the trip is overland by trail. Our mining engineer was sent to the district to make a general report of the prospects, and, while we do not wish to predict the extent of value of the discovery, from his report and from such general information as is obtainable from all sources, it is safe to say that the region holds promise of being a rich camp, which means added traffic for the railway and boats next year. The Tautlus coal mine, 200 miles below White Horse, on the Yukon River, installed new and more modern machinery, extended development work throughout the year, and explored new veins of coal. A series of tests of the coal has been made on our locomotives, and it has been demonstrated that it is suitable for our use. This means permanent local industry on the line, and is better for us than buying coal on Vancouver Island and paying duty for delivery in Alaska. In the White Horse district development work and shipment of ore continued throughout the season, the railway having carried 36,000 tons of ore during 1913, the largest ore tonnage in any year in the history of the company. The company has reason to feel much encouraged by the results of development work so far accomplished in this district, and the development under way undoubtedly promises permanency of traffic. The successful operations in that district will also lead to renewed activity along the same lines in other districts where similar copper prospects are known to exist. The railway transported ore throughout the winter of 1912 and 1913, and demonstrated the physical possibility of so doing at all seasons, but the winter carriage of ore did not prove sufficiently profitable under the state of development then existing. It was determined, therefore, last spring to mine and ship ore throughout the summer and to discontinue the production of tonnage in winter, devoting attention to development work only preparatory to handling the ore on a larger scale. It may be considered advisable to continue development work and not resume shipping for a considerable period, with a view to determining the extent and value of the deposit so as to enable the working out of an economic solution of operating the mine. Our tourist traffic has been increased this year, and we may confidently look forward to a much greater number of tourists when the country becomes better known to the pleasure seeking public. A satisfactory feature is that the tourists are well pleased, and many of them state that they will induce others to make this wonderful trip.

I cannot speak too highly of the attitude of the present Canadian Government in lending their assistance to new projects for the development of the Yukon. This year the Government appropriated an additional sum of \$50,000 for the improvement of the overland trail between White Horse and Dawson, and it is expected that additional appropriation will be made so as to place the trail in such shape as to admit of the use of automobiles for the transportation of freight and passengers, thus eliminating the present expensive methods of handling traffic on the trail and lessening the cost of transport to the public. The Government is also considering a proposition for the construction of a dam at Miles Canyon, near White Horse, the head of navigation, for the purpose of storing and controlling the flood waters, which will improve the transportation conditions at all stages of water in the river, and will ensure a longer season of open navigation. We confidently hope an appropriation for this purpose may be made in Ottawa during this winter, particularly as the amount of money required is so very small as compared with the benefit to be derived. The work could be started as soon

as the money could be available.

As a result of conditions growing out of a policy spread over a period of years of handling business destined to Dawson, a very serious situation arose which threatened to divert to the St. Michael's route a large portion of the traffic which we felt should properly be routed over our line. Negotiations for the adjustment of these conditions were carried on for a considerable period without, however, any acceptable conclusion being reached, and at last it became necessary to establish an entirely new connection for the interchange of traffic at Dawson in order to preserve our interests. Two new modern boats of American register were constructed for this purpose, and were placed in operation between Dawson and Fairbanks, on the lower river. As a result of the establishment of this new connection giving a through service to Fairbanks, we received approximately \$25,000 of gross revenue which we should not otherwise have received. The establishment of this service brought about a most vigorous rate war on the Yukon River. Rate wars are usually disastrous to all parties engaged, but our railway occupied the peculiar position of obtaining additional traffic at acceptable rates sufficient to offset the reductions which were made on the river to meet the cut in rates while at the same time our competitors handled at a loss all the traffic delivered by them to us as a direct result of the war. While it is our policy to work in harmonious relations with other transportation companies, we were not in this instance able to secure what we considered a fair and reasonable working arrangement. The rate war was not of our seeking, but in spite of it we find ourselves in a much stronger position than we were in before the inauguration of this new service. Further, one of the ocean lines, having a regular established service from Seattle to Skaguay as well as to St. Michaels, undertook to divert a large part of the traffic to the St. Michaels route, discriminating against their Skaguay route and our line. This made it necessary for us at once to arrange terms with a new and independent line of steamers to handle the traffic we control on the ocean; and the White Pass Co. could better afford to keep some such arrangement in effect permanently, even at a heavy annual loss in handling the traffic on the ocean, than forego its fair share of the Yukon traffic over the railway. It is not unlikely that this state of chaos in the handling of the ocean traffic may continue, and, if so, it is inevitable that we should at once take into consideration the question of the establishment of a permanent first class line to handle both freight and passenger business between Seattle, Vancouver and Skaguay. The boats operating on this run at present are sufficient to handle the traffic under ordinary conditions, and it would be unwise to establish such a service if the traffic between these points alone was the only consideration. But the White Pass, having already such a large investment to protect, the additional undertaking would be quite small having regard to the interests involved. We have been collecting data upon the question for some time for the purpose of determining the revenues to be derived and the future possibilities. The year 1915 would be an especially appropriate time for the inauguration of such a service to coincide with the Panama Pacific Exposition in San Francisco, from which we shall undoubtedly derive a large tourist traffic. If this link in the service were arranged the public would have the advantage of a first class through line from Seattle and Vancouver, via the White Pass, to Fairbanks—a distance of 2,600 miles. We should be free from all risk of discrimina-

tion against us on the ocean, and be able to pursue an unhampered policy in the steady development of business for our route.

In spite of the rate war, and indeed partly because of it, our gross business increased. The number of passengers carried in 1912 was 13,356, and in 1913, 18,938—an increase of 35%. The general freight tonnage amounted to 23,716 tons in 1912, and to 24,196 tons in 1913—an increase of 2%. Ore handled in 1912 amounted to 31,230 tons; in 1913, 36,693 tons—an increase of 17.5%. Naturally, under the conditions that have prevailed, the revenue per ton and per passenger will not show the same relative increase. But the figures that I have given show conclusively that we have more than held our own. The gross revenue of the company by the end of Dec., 1913, will be approximately \$1,215,000, a considerable increase over 1911 and a slight increase over 1912, which is a most satisfactory condition, having regard to all the attendant circumstances.

The Canadian Pacific Railway's New Terminals at Vancouver.

The construction of a modern terminal for the C. P. R. at Vancouver, the general features of which were described in Canadian Railway and Marine World, embracing both railway and steamship facilities, has been under way for more than a year, and the \$1,000,000 station has been advanced to such a point that the east section is to be ready for occupancy by Feb. 1. Work is being rushed to completion on the east end so that offices can be moved there from the old station, which adjoins the new building on the south, and which must be torn down before the present improvement scheme can be completed.

The new building is a steel frame structure six stories high, and has a frontage of more than a block on Cordova St., where the architectural design provides a series of massive Corinthian columns standing out from a brick background, with stone cornices and trimming. A four track passenger platform, 1,000 ft. long, is being provided.

Besides the station proper, the terminal work under way now includes inclined viaducts from Granville and Burrard Streets to the waterfront, the extension of several docks for distances ranging up to 450 ft., and the erection of structures for offices and waiting rooms on the piers. The Granville St. viaduct, whose lower end will form part of a combined passenger station and freight shed on one of the piers, will bring down all the wharf traffic from the chief thoroughfare of the city. This viaduct will pass the western end of the new railway terminal well above track level, and will cross the site now occupied by the old station, which as above stated, is to be demolished.

The Burrard St. viaduct will also bring traffic down to the docks from the city level by an incline over the yard trackage. Steel girders for the substructure of this viaduct had been placed before Dec. 1, but completion will not be possible until the old detention sheds on the wharf have been torn down. Dominion authorities have recently received tenders on a new structure for the Immigration Department, and as soon as this can be completed the old sheds will be removed to make room for a spacious viaduct terminus.

The dock scheme now in course of development by the railway company embraces a water frontage about $\frac{3}{4}$ mile long. The capacity of the freight sheds has already been increased by erecting new buildings extending to the present line of the property leased to other shipping interests, and new machine shops, where repair work is car-

ried on for the coasting steamers and ocean liners, have been provided. In the upper floor of one of the new buildings the company has equipped a hall which is to serve as a waiting room for the longshoremen. The quarters are spacious and comfortable, shower baths being among the conveniences installed.

Book Review.

Any of the books reviewed may be obtained through Canadian Railway and Marine World at the published price.

A CENTURY OF SAIL AND STEAM ON the Niagara River—By Barlow Cumberland. 198 pages, 9 by 6 in., with portrait and 12 illustrations; cloth boards. Musson Book Co., Toronto. \$1.50 net.

Under this title Barlow Cumberland wrote an interesting and valuable volume, the final proof sheets of which he corrected a few weeks before his death, Sept. 1, 1913. Considerable attention has been given by U.S. writers to the publication of historical accounts of the development of navigation on the Great Lakes, but this is the first serious attempt to give a history of Canadian navigation. The late Charles Gildersleeve, General Manager of the Richelieu and Ontario Navigation Co., intended to contribute a general history of navigation on Lake Ontario, but he died suddenly without having accomplished it. The late Mr. Cumberland then undertook to deal with the development of navigation on the Niagara River route, with which his career as a transportation official had been closely accomplished. The result is a volume of 198 pages, in the course of which is given the entire history of navigation on the river and the routes, particularly those on Lake Ontario, converging thereon. The history is more directly that of the Niagara Navigation Co., which entered into competition for traffic on the route in 1878, with the Chicora, and succeeded not only in subduing opposition, but in building up the great traffic now carried between Toronto and points on the Niagara River. The volume deals in an interesting, gossiping manner with the route, the vessels, sail and steam, which have navigated it, and with the men responsible for them. Other routes are referred to, but it is only as the steamboats, or men from them come on to the Niagara route. Probably for the first time the history is given of the Chicora, built in 1863 as a blockade runner, and still running, though largely replated in 1904, at a cost of \$37,000. The volume is illustrated with a portrait of the author, and reproductions of prints, etc., of various vessels that have been on the route.

As a result of the recent report of the conciliation board appointed to enquire into the wages, etc., of the G. T. R. telegraphers, it is announced that wage increases aggregating \$200,000 a year have been agreed upon, one half of the new rates to be granted as from Jan. 1, 1914, and the remainder as from Jan. 1, 1915.

The Canadian Northern Telegraph Co. has completed its telegraph line between Ottawa and Sydenham, Ont., thus making direct connection between Ottawa and Toronto. The telegraph line between Sudbury and Port Arthur is now being erected, and it is hoped to have it complete early in the year.

The City of Toronto and the Canadian Pacific and Ontario and Quebec Railways \$6,551,101, and the Grand Trunk Ry. \$5,302,010.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

General order 113, Nov. 5.—Rescinding order 8392, Oct. 7, 1909, approving standard conditions and specifications for wire crossings; and adopting rules for wires crossing railways.

General order 114, Nov. 12.—Approving general form of contract between Bell Telephone Co. and any company, municipality or corporation having authority to operate telephone systems, for interchange of business, etc.

General order 115, Dec. 19.—Suspending, pending investigation by the Board, the following tariffs: G.T.R.'s C.R.C. E.2838; C.P.R.'s C.R.C. E.2716; C.N.R.'s C.R.C. E.358; M.C.R.'s C.R.C. 2162; T. H. & B. R.'s C.R.C. 945; and O. & N. Y. R.'s C.R.C. 989.

General order 116, Dec. 24.—Suspending, pending investigation by the Board, increased minimum carload weights on buckwheat, oats, bran (in bulk), dried beet pulp, oat hulls (in bulk), pea hulls (in bulk), shorts, beets (except sugar), onions, turnips, and potatoes, as filed by railways subject to Board's jurisdiction.

20920, Nov. 28.—Authorizing Canadian Northern Ry. to build spur for Laurentia Milk Co., Battleford, Sask.

20921, Nov. 29.—Extending, to Apr. 1, 1914, time within which subway be completed at Thompson Road, Bertie Tp., Ont.; and, pending completion, G.T.R. to employ day and night watchmen there.

20922, Nov. 29.—Authorizing G.T.R. to operate over interlocking plant, St. Lambert, Que., without first stopping trains.

20923, Nov. 27.—Authorizing G. T. Pacific Ry. to build highway across main line at mileage 523.6, between Secs. 27 and 28-35-14, w. 3 m., Sask.

20924, Nov. 28.—Authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co. (G.N.R.) to open for traffic its double track between mileposts 145.81 and 153.619, B.C.

20925, Nov. 25.—Re rating of peanut butter. This order is given in full on another page.

20926, Nov. 29.—Authorizing C. N. Ontario Ry. to build transfer tracks between its Oshawa spur and Oshawa Ry., on east side of Lot 9, Con. 11, Oshawa.

20927, Nov. 29.—Amending order 20647, Oct. 23, re deviation of Lake Erie and Northern Ry., in South Dumfries Tp., Ont.

20928, Dec. 2.—Approving clearances as shown on plan of Montreal Ice Co.'s buildings at C.P.R. siding at Coma, Que.; men to be kept off sides of cars.

20929, Dec. 1.—Authorizing C.P.R. to open for traffic portion of its deviated line at bridge 39.49, North Bay Subdivision, Ont.

20930, Dec. 1.—Authorizing C.P.R. to open for traffic its Boissevain-Lauder Branch, Man., from mileage 0 to 36.4.

20931, Dec. 2.—Approving plans of automatic signals on C.P.R. Eastern Lines, from Montreal Jet. to Itherville Jet, Que.; West Toronto to Ilstington, Ont.; Markstay to Stinson, Ont.; Mattawa, Ont.; and Renfrew to Eganville, Ont.

20932, Dec. 1.—Authorizing C.P.R. to build spur for City of Regina, Sask., and to alter spur for Gus Pech Foundry and Mfg. Co., Regina, Sask.

20933, Dec. 1.—Approving location of C.P.R. stations on Virden-McAuley Branch, Man., at Two Creeks, mileage 12.5, and Harnsworth, mileage 8.7.

20934, Dec. 1.—Authorizing Magog Tp., Que., to build highway crossing over C.P.R. in Lot 1 B, R. 21.

20935, Nov. 29.—Authorizing C.P.R. to build spur for Holiday Bros., Winnipeg.

20936, Dec. 1.—Extending, for 30 days from date, time within which G.T.R. shall install bell at crossing of Mill St., Milverton, Ont.

20937, Dec. 1.—Authorizing G. T. Pacific Ry. to build spur to T. Latimer, Edmonton, Alta.

20938, Dec. 1.—Authorizing C. N. Ontario Ry. to build its ballast pit spur across 2 highways in Gloucester Tp.

20939, Dec. 1.—Amending order 20568, Feb. 26, 1910, re Michigan Central Rd. crossing of Plymouth Rd., Welland, Ont.

20940, Dec. 1.—Approving location of C.P.R. Swift Current-Northwest Branch from Sec. 15 21-29, w. 2 m., mileage 11.17, to Sec. 12-5-1, w. 4 m., mileage 11.17, and authorizing building of same across 2 highways.

20941, Dec. 1.—Approving location of C.P.R. Basano-Easterly Branch from n. e. ¼ Sec. 13-24-1, w. 4 m., mileage 12.19, to Sec. 6-26-21, w. 3 m., mileage 12.19, and authorizing building of same across 2 highways.

20942, Dec. 1.—Extending, to July 1, 1914, time for approval of C.P.R. tolls between points in Canada west of C. Line including Sudbury, Ont., to and from points west of Sudbury, from and to points east thereof, and east of and including Windsor, Ont., also included in said tariff; during such period, C.P.R. is allowed to charge tolls it was authorized to charge under arts 7-8 Edw. VII, chapter 61.

20943, Dec. 2.—Authorizing, until June 1, 1914, Campbellford, Lake Ontario and Western Ry. (C.P.R.) to operate trains over crossing of Oshawa Ry. at mileage 158.85, Prospect St., Oshawa, Ont.; crossing to be protected by flagman at expense of C.L.O. & W.R.

20944, Dec. 3.—Approving location of C.P.R. station at Wilkom, mileage 26.5, Virden-McAuley Branch, Man.

20945, Dec. 2.—Authorizing C.P.R. to build spur on land leased from Dominion Government, north-easterly of its right of way and Dog Lake, in Tp. 46, Algoma District, Ont., at mileage 58.8, Lake Superior Division.

20946, 20947, Dec. 1.—Extending, to July 1, 1914, time for approval of Great North Western Telegraph Co.'s and Canadian Northern Telegraph Co.'s tolls.

20948, Dec. 3.—Authorizing C. N. Western Ry. to build across and connect with city industrial spurs, Medicine Hat, Alta.

20949, Dec. 2.—Authorizing Canadian Northern Ry. to build spur for Scott Fruit Co., Regina, Sask.

20950, 20951, Dec. 1.—Extending, to July 1, 1914, time for approval of White Pass and Yukon Route, and G. T. Pacific Telegraph Co.'s telegraph tolls.

20952, Dec. 4.—Authorizing G. T. Pacific Ry. to build Government Road Diversion across its main line at mileage 81.86 west of Winnipeg, in North Alberta District.

20953, Dec. 5.—Authorizing C.P.R. to build siding at Melba, across highway between n.w. ¼ Sec. 18-17-3, and n.e. ¼ Sec. 13-17-4, w. 3 m., mileage 41.9 from Moose Jaw, Sask.

20954, Dec. 5.—Relieving C.P.R. from providing further protection at crossing of First Ave., Souris, Man.

20955, Nov. 24.—Ordering that crossing at Broadway St., Yorkton, Sask., be protected by watchman, appointed by C.P.R., from 8.30 a.m. to 8 p.m., except during grain shipping season, when crossing be protected night and day; wages to be paid 60¢ by C.P.R., and 40¢ by town.

20956, Dec. 5.—Extending, to May 15, 1914, time within which C.P.R. shall complete spur for Canadian Metal Shelter Co., Winnipeg, authorized by order 19325.

20957, Dec. 5.—Authorizing C.P.R. to build at grade, additional track (second track) across highways at mileage 40.8, 13.7, 50.3, 51.3, and 66.69, Swift Current Subdivision, Sask.

20958, Dec. 5.—Amending order 20502, Oct. 6, re revised location of C.P.R. double track, mileage 50.6 to 60.45, Moose Jaw Subdivision, Sask.

20959, Dec. 5.—Authorizing C.P.R. to use bridge 6.3, Teeswater Subdivision, Ont.

20960, Dec. 3.—Authorizing G.T. Pacific Branch Lines Co. to build spur for Hamilton Bros., Port Qu'Appelle, Sask.

20961, Dec. 4.—Approving G.T.R. plan B, Nov. 25, showing location of transfer track, Port Hope, Ont.

20962, Dec. 3.—Ordering G.T.R., within 60 days, to install automatic electric bell at crossing of highway, ½ mile west of Keane station, Ont., 20% of cost to be paid out of railway grade crossing fund.

20963, Dec. 5.—Authorizing G.T. Pacific Branch Lines Co. to operate trains over crossing of Canadian Northern Ry. Maryfield Branch to n.w. ¼ Sec. 9-5-6, w. 2 m., Assiniboia District, Sask., without stopping.

20964, Dec. 4.—Ordering G.T.R., within 60 days, to install improved type of automatic bell at crossing of public road west of Ste. Justine station, Que.; 20% of cost to be paid out of railway grade crossing fund.

20965, Dec. 4.—Extending for one year from Dec. 1, order 127-3, Dec. 6, 1910, which authorized C.N. Ontario Ry. to cross Hurdman's Road, Nepean Tp., and providing for protection of crossing by gates.

20966, Dec. 9.—Substituting plan 5315 of C.P.R. bridge 92.7 (Don viaduct), near Donlands, Ont., as revised to Dec. 5, for plans approved by order 20827, Nov. 14, openings to be left in bridge between piers 11 and 12 and 15 and 16, as shown on plan A.

20967, Dec. 10.—Approving proposed Supplement 2 to Canadian Freight Classification 16, submitted by G. C. Ransom, Chairman, Canadian Freight Association, to become effective by Jan. 20, 1914.

20968, Dec. 5.—Authorizing G. T. Pacific Ry. to build highway across its main line in Alberta at mileage 763.7 west of Winnipeg.

20969, Dec. 5.—Approving revised location of G. T. Pacific Ry. main line from Lot 5337 to Lot 5336, Cariboo District, B.C., and location of station in Lot 5336, at mileage 95, Yellowhead Pass west, B.C.

20970, Dec. 6.—Authorizing C.P.R. to rebuild bridge 2.0, Montreal Terminals, Eastern Division.

20971, Dec. 10.—Amending order 20775, Nov. 6, re C.P.R. spur for Fronteac Floor and Wall Tile Co., Kingston, Ont.

20972, Oct. 31.—Establishing express collection and delivery limits in Edmonton, Alta., and rescinding orders 14987, Sept. 11, 1911, and 15759, Jan. 8, 1912, in same connection.

20973, Dec. 4.—Establishing express collection and delivery limits in Levis, Que.

20974, Dec. 9.—Authorizing City of Edmonton, Alta., to operate its street railway over G. T. Pacific Ry. at 27th Street, pending installation of half interlocking plant required by order 20791; crossing to be protected by flagmen maintained by city; and cars to be stopped 100 ft. from diamond; trains to

approach crossing under control, prepared to stop if street railway cars are crossing.

20975. Dec. 9.—Extending, to Apr. 1, 1914, time within which G. T. R. shall install gates at crossing of Wallace Ave., Toronto.

20976. Dec. 9.—Authorizing Edmonton, Dunvegan and British Columbia Ry. to build bridge across Athabasca River, mileage 131, west of Edmonton, Alta.

21062. Dec. 22.—Authorizing C.P.R. to rebuild bridge 1.9, Prescott Subdivision, Ont.

21063. Dec. 22.—Authorizing G. T. Pacific Ry. to build across and divert highway at mileage 24, Rural Municipality 247, Saskatchewan District, Sask.

21064. Dec. 22.—Extending, to May 31, 1914, time within which G.T.R. shall complete siding for Farquharson-Gifford Co., Stratford, Ont., authorized by order 10874.

21065. Dec. 18.—Relieving G.T.R. from providing further protection at crossing of public road 1 mile south of Brunner, Ont.

21066. Dec. 22.—Authorizing Kettle Valley Ry. to build four bridges over Trout Creek, at mileage 7, 36.8, 24.4 and 23.15, west of Pentiction, B.C.

21067. Dec. 22.—Authorizing Saskatchewan Government to build highway crossing over Canadian Northern Ry. at Pinkham, Sask.

21068, 21069. Dec. 22.—Approving location of C.P.R. station in Milton, Ont., and authorizing it to take certain lands for enlarging its yard there.

21070. Dec. 22.—Authorizing C.P.R. to build extension to siding for O. Lemire, Cabane Ronde, Masconche, Que., mileage 15.88 from St. Martin Jct.

21071. Dec. 20.—Authorizing C.P.R. to build spur with siding for Balsam Lake Quarries, Toronto, at mileage 35.07 from Port McNicoll, Ont.

21072. Dec. 22.—Relieving G.T.R. from providing further protection at crossing of public road 1 mile south of Elmvalle, Ont.

21073. Dec. 22.—Authorizing C.P.R. to build spur for Kelley and Anderson, Bonfield, Ont.

21074. Dec. 22.—Relieving G.T.R. from providing further protection at crossing of first public highway east of Glencoe, Ont.

21075. Dec. 22.—Authorizing C.P.R. to build spur:

21070. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21071. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21072. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21073. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21074. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21075. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21076. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21077. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21078. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21079. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21080. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21081. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21082. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21083. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21084. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21085. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21086. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21087. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21088. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21089. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21090. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21091. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21092. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21093. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21094. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21095. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21096. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21097. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21098. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21099. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21100. Dec. 20.—Approving location of C.P.R. station at Colborne, mileage 181.1 from Glen Tay, Ont.

21030. Dec. 31.—Ordering Canadian Northern Ry. to build culverts of concrete or corrugated iron pipe, with area equal to a cross section of creek at high water, on Phillips' farm, Obelisk, Sask.

21031. Dec. 31.—Approving location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) station at mileage 1800 from Glen Tay, Ont.

21032. Jan. 3.—Authorizing Niagara St. Catharines and Toronto Ry. to open for traffic its line from town line between Grantham and Niagara Tps. to Niagara-on-the-Lake, mileage 7.1 to 12.1, Ont.; speed of trains limited to 15 miles an hour.

21051. Jan. 7.—Approving location of Toronto and Niagara Power Co.'s power line from conventional line between Halton and Wentworth Cos., northerly to tower 12, in Burlington, Ont.

21052. Jan. 5.—Approving location of Alberta Central Ry. station at Loeb Farm, mileage 61.11 from Red Deer, Alta.

21053. Jan. 5.—Authorizing C.P.R. to rebuild bridge 0.5 across Oxford St., London, Ont.

21054. Jan. 5.—Approving location of G. T. Pacific Ry. station at Endako, mileage 351.1, Prince Rupert East, B.C.

21055. Jan. 5.—Authorizing C.P.R. to build its Kootenay Central Ry., at grade, across highways at Shuswap Indian Reserve, mileage 91.5, and on Lot 947 (P.G.S.), mileage 101.16, East Kootenay District, B.C.

21056. Jan. 5.—Approving location of C.P.R. station in Lot 25, Con. 1, Hinchinbrooke Tp., mileage 5 from Glen Tay, Ont.

21057. Jan. 5.—Authorizing Bell Telephone Co. to charge tolls as filed with the Board, except Standard Tariffs, C.R.C. 1 and 2.

21058. Jan. 5.—Authorizing North American Telegraph Co. to charge telephone tolls as filed with the Board, except Standard Tariffs, C.R.C. 1 and 2.

21059. Jan. 7.—Dismissing application of Town of Chateauguay, Que., for order directing New York Central and Hudson River Rd. to make commutation (60 trip) tickets between Chateauguay and Montreal, good for one year.

21060. Jan. 5.—Authorizing C.P.R. to remove watchman from crossing of its Selkirk Branch by Winnipeg, Selkirk and Lake Winnipeg Ry., until traffic is resumed over same.

21030. Dec. 31.—Ordering Canadian Northern Ry. to build culverts of concrete or corrugated iron pipe, with area equal to a cross section of creek at high water, on Phillips' farm, Obelisk, Sask.

21031. Dec. 31.—Approving location of Campbellford, Lake Ontario and Western Ry. (C.P.R.) station at mileage 1800 from Glen Tay, Ont.

21032. Jan. 3.—Authorizing Niagara St. Catharines and Toronto Ry. to open for traffic its line from town line between Grantham and Niagara Tps. to Niagara-on-the-Lake, mileage 7.1 to 12.1, Ont.; speed of trains limited to 15 miles an hour.

21033. Jan. 2.—Authorizing G. T. Pacific Ry. and Canadian Northern Ry. to operate over crossing in St. Boniface, Man., without stopping trains.

21034. Dec. 23.—Ordering C.P.R. to install electric bells at crossing of 2 highways near Embury, Ont., mileage 7.5, and 8.4, Ingersoll and St. Marys Branch; 20% of cost to be paid out of railway grade crossing fund.

21035. Dec. 20.—Authorizing Oshawa Ry. for six months from date to operate over crossings on Ritsen Road, Oshawa, Ont.

21036. Jan. 2.—Authorizing C. N. Ontario Ry. to take, for purpose of crossing certain streets in Toronto, as authorized by order 18012, portions of Lots 17 and 16, east side of Albany Ave., Toronto, property of G. Webb and Toronto and Niagara Power Co.

21037. Jan. 2.—Amending order 20875, Nov. 21, 1913, Canadian Northern Ry. crossing of Winnipeg Electric Ry. near Helen and Pembina Sts., Winnipeg.

21038. Jan. 2.—Ordering G.T.R. to establish a rate of 8c. per 100 lbs. on imported wood pulp, in carloads, from Montreal Harbor to Windsor Mills, Que., to include terminal charges at Montreal which are included in rates of G.T.R. general tariff on imported merchandise.

21039. Jan. 2.—Authorizing Hamilton St. Ry. and Toronto, Hamilton and Buffalo Ry. to operate over crossing at intersection of Main and Trolley Sts., Hamilton, Ont., without stopping.

21040. Jan. 3.—Authorizing Algoma Central Terminals, Ltd., to build coal dock at Sault Ste. Marie, Ont., on conditions contained in order in council of Dec. 22, 1913.

21041. Jan. 2.—Authorizing C.P.R. to take certain lands in St. Athanasie Parish, Iberville Co., Que., for grading highway where it crosses its line at mileage 17.7.

21042. Dec. 31.—Authorizing C.P.R. to build spurs for Union Grain Co., St. Boniface, Man.

21043. Jan. 5.—Approving plan B-1436, Oct. 7, 1913, showing C.P.R. standard overhead farm crossing.

21044. Jan. 5.—Authorizing Canadian Northern Ry. to build across Bears Pass, mileage 210.6 from Port Arthur, Ont.

21045. Dec. 30.—Ordering C.P.R. to stop train 33 at Chatham on flag, daily, for 3 months from date.

21046. Jan. 5.—Ordering C.P.R. to erect passenger shelter at Dumville, Ont., to be completed by Mar. 1.

21047. Jan. 5.—Amending order 10547, June 10, 1913, re C. N. Ontario Ry. crossing on Eganville Rd., between Pembroke and Stafford Tps., to provide that subway be 25 ft. wide, to allow for sidewalk on northeast side, grade to be 1 in 20.

21048. Jan. 5.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to close portion of road allowance within its right of way, and divert same to cross railway overhead at mileage 51.09, when crossing there, as authorized by order 10360, is completed; and rescinding orders 10206 and 21046, Dec. 30, 1913, in same connection.

21049. Jan. 5.—Authorizing Algoma Central and Hudson Bay Ry. to build spurs in Sault Ste. Marie, Ont., without prejudice to rights, if any, of the city in respect of water lot at foot of Spring St., being considered as a continuation of said highway.

21050. Jan. 5.—Approving location of C.P.R. station at Carseland, mileage 100.1 on its Gleichen Shepherd Branch, Alta.

21051. Jan. 7.—Approving location of Toronto and Niagara Power Co.'s power line from conventional line between Halton and Wentworth Cos., northerly to tower 12, in Burlington, Ont.

21052. Jan. 5.—Approving location of Alberta Central Ry. station at Loeb Farm, mileage 61.11 from Red Deer, Alta.

21053. Jan. 5.—Authorizing C.P.R. to rebuild bridge 0.5 across Oxford St., London, Ont.

21054. Jan. 5.—Approving location of G. T. Pacific Ry. station at Endako, mileage 351.1, Prince Rupert East, B.C.

21055. Jan. 5.—Authorizing C.P.R. to build its Kootenay Central Ry., at grade, across highways at Shuswap Indian Reserve, mileage 91.5, and on Lot 947 (P.G.S.), mileage 101.16, East Kootenay District, B.C.

21056. Jan. 5.—Approving location of C.P.R. station in Lot 25, Con. 1, Hinchinbrooke Tp., mileage 5 from Glen Tay, Ont.

21057. Jan. 5.—Authorizing Bell Telephone Co. to charge tolls as filed with the Board, except Standard Tariffs, C.R.C. 1 and 2.

21058. Jan. 5.—Authorizing North American Telegraph Co. to charge telephone tolls as filed with the Board, except Standard Tariffs, C.R.C. 1 and 2.

21059. Jan. 7.—Dismissing application of Town of Chateauguay, Que., for order directing New York Central and Hudson River Rd. to make commutation (60 trip) tickets between Chateauguay and Montreal, good for one year.

21060. Jan. 5.—Authorizing C.P.R. to remove watchman from crossing of its Selkirk Branch by Winnipeg, Selkirk and Lake Winnipeg Ry., until traffic is resumed over same.

21171. Jan. 5.—Authorizing C.P.R. to build spur for Imperial Tobacco Co. of Canada, Calgary, Alta.

21172. Jan. 7.—Authorizing C.P.R. to build, at grade, additional main line track across 6 highways, mileage 47.9 to 51.54 from Broadview, Sask.

21173. Jan. 3.—Authorizing C.P.R. to build siding for J. Maloney, Toronto.

21174. Jan. 8.—Approving C.P.R. plan 54216 showing double tracking of bridge 33.2, Nipigon Subdivision, over Gravel River, near Hartley, Ont.

21175. Jan. 7.—Ordering G.T.R., within 60 days, to move its station at Bulstrode, Que., to location shown on blue print of Jan. 6, 1913.

21176. Jan. 8.—Authorizing C.P.R. to build across highways at mileage 7.94, 15.95 and 16.11, Broadview Subdivision.

21177. Jan. 8.—Authorizing C.P.R. to build a Y connection with its main line at mileage 5.94 from Lanoraie, across lands and streets in Joliette, Que.

21178. Jan. 8.—Amending order 21074, Dec. 22, 1913, re protection of G.T.R. crossing east of Glencoe, Ont., substituting Glencoe for Glencoe.

21179. Jan. 8.—Authorizing C.P.R. to build spur for E. Partington Pulp and Paper Co., St. John, N.B.

21180. Jan. 9.—Authorizing C.P.R. to build its Weyburn-Stirling Branch at grade across 62 highways, mileage 174.08 to 231.47, Sask.

21181. Jan. 6.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across G.T.R. spur at mileage 119.01 and 120.02, Cobourg, Ont., and authorizing the operations of trains over same for 6 months, all trains to stop before crossing and be flagged over by one of the trainmen.

21182. Jan. 5.—Ordering Michigan Central Rd., within 60 days, to install improved type of automatic bell at crossing of first highway east of Waterford Yard, Waterford, Ont., trees on northwest corner of crossing, on each side of private road, to be cut down.

21183. Jan. 9.—Authorizing G.T.R. to build siding for Grant and Jones, Lot 25, Con. 5, Rama Tp., Ont.

21184. Jan. 9.—Authorizing G.T. Pacific Ry. to build spur for Alberta Lumber Co., Edmonton, Alta.

21185. Jan. 9.—Authorizing G.T.R. to build siding for City of Toronto, south of Stephenson Ave.

21186. Jan. 9.—Authorizing G.T.R. to rebuild bridge 50 over Black Rock, Hibbert Tp., Ont.

21187. Jan. 9.—Amending order 21007, Dec. 10, 1913, re connection of London and Lake Erie Ry. and Transportation Co.'s line with Michigan Central Rd., at St. Thomas, Ont.

21188. Jan. 10.—Authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co. to build spur for Campbell River Lumber Co., near Crescent, B.C., to be completed within six months.

21189. Jan. 10.—Authorizing Canadian Northern Ry. and C.P.R. to operate trains over crossing in St. Boniface, Man., without first stopping.

21190. Jan. 12.—Authorizing Canadian Northern Ry. to open for traffic its revised line across Rainy Lake, Ont., from mileage 224.3 to 226.4.

21191. Jan. 9.—Approving location of C.P.R. Swift Current Northwesterly Line from mileage 169 to 175, and authorizing building of same across 7 highways in Alberta.

21192. Jan. 12.—Authorizing C.P.R. to open for traffic its third track from Queen St. subway to Royce Ave., Toronto.

21193. Jan. 10.—Extending to Mar. 15 time within which C.P.R. shall complete additional track to Dodge Manufacturing Co.'s siding, Toronto.

21194. Jan. 12.—Authorizing G.T.R. to build additional track across Inverness St., Caledonia, Ont.

21195. Jan. 6.—Authorizing G.T. Pacific Ry. to build bridge across Endako River, mileage 358 Prince Rupert East, B.C.

21196. Jan. 10.—Authorizing G.T.R. to rebuild bridge 48 over Black Creek, at milepost 120.21 from Black Rock, Downie Tp., Ont.

21197. Jan. 12.—Authorizing Sandwich, Windsor and Amherstburg Ry. and Canada Southern Ry. to operate over crossing of C.S.R. spur to Postum Cereal Co. of Canada, Windsor, Ont.

21198. Jan. 12.—Authorizing G.T. Pacific Ry. to build across and divert highways at mileage 461 and 357.3, Prince Rupert Easterly, B.C.

21199. Jan. 12.—Authorizing C.P.R. to build spur for J. I. Case Threshing Machine Co., Regina, Sask.

21200. Jan. 13.—Authorizing C.P.R. to open for traffic portion of double track from mileage 67.7 to 76.8, Moosejaw Subdivision, Sask.

21201. Jan. 13.—Authorizing C.P.R. to use bridges at Guy, Aqueduct and Mountain Sts., Montreal.

21202. Jan. 13.—Authorizing Canadian Northern Ry. to build across and divert public road on its Delisle Branch in n.e. ¼ Sec. 14-28-9, w. 3 m., Sask.

21203. Jan. 13.—Authorizing C. P. R. to use bridge on Decarie Ave., Montreal.

21204. Jan. 13.—Authorizing C.P.R. to build its Weyburn-Stirling Branch across 20 highways in Saskatchewan, mileage 290.145 to 316.765.

21205. Jan. 14.—Amending order 21114, Dec. 30, 1913, re crossing of highways by C.P.R. Bassano Easterly Branch in Alberta.

21206. Jan. 9.—Approving revised location of C.P.R. main line from mileage 125.14 to 126.76 (mileage 127 old line), and from mileage 129.83 to 131.65 (mileage 132.27 old line), through no. 28, Gallagher and Chapleau Tps., Ont.

21207. Jan. 9.—Authorizing G.T. Pacific Ry. to build bridge across Stoney Creek, mileage 397.1, Prince Rupert East, B.C.

21208. Jan. 14.—Authorizing G.T.R. to build siding for Plessisville Foundry Co., Plessisville, Que.

21209. Jan. 11.—Approving proposed Supplement 1 to Canadian Northern Ry. Standard Freight Mileage Tariff for its Eastern Lines, C.R.C. no. E 212.

21210. Jan. 15.—Amending order 18579, Jan. 24, 1913, re C.P.R. crossings of highways on its Swift Current Northwesterly Branch in Saskatchewan, and rescinding order 19037, Apr. 11, 1913, in same connection.

21211. Jan. 15.—Ordering C.P.R. to remove station at Kruezburg, Man., to road allowance at east end of yard.

21212. Jan. 15.—Approving Canadian Northern Ry. revised location, mileage 210.11 to 211.05, Rainy River District, Ont.

21213. Jan. 16.—Authorizing Canada Southern Ry. and G.T.R. to use crossing, Canadian Steel Foundries' siding, Crowland Tp., Ont.; trains to stop before crossing.

21214. Jan. 12.—Relieving C.P.R. from providing further protection at crossing of highway known as Cote du Sud, mileage 11 from Place Viger Station, Montreal.

21215. Jan. 16.—Authorizing C.P.R. to open for traffic portion of its double track from Waldeck to Eaman, mileage 99.4 to 109.4, Swift Current Subdivision, Sask.

21216. Jan. 8.—Amending order 21026, Dec. 15, 1913, re Canadian Northern Ry. spur for Thomson, McDougall & Co., Woodlands, Man.

21217. Jan. 16.—Rescinding order 19400, May 29, 1913, re exemption of C.N. Quebec Ry., from fencing portion of its right of way between mileage 23.5 and 34.

21218. Jan. 16.—Authorizing C.N. Alberta Ry. to build bridge across Stony River at mileage 200.3

21219. Jan. 15.—Authorizing G.T.R. to operate trains over Confederation Construction Co.'s siding, near Merritt, Ont.

21220. Dec. 27.—Ordering G.T.R. to build for W. J. Watson, Glencoe, Ont., a farm crossing on Lot 6, Con. 2, Mosa Tp., Ont.

21221. Jan. 16.—Authorizing G.T.R. to build extension of siding for Empire Cotton Mills, Ltd., at Welland, Ont.

21222. Jan. 16.—Authorizing C.P.R. to build at grade, roadways across its main line at Cummings, Sask.

21223. Jan. 14.—Ordering C.P.R. by June 1 to install gates at crossing of First St., Souris, Man., to be operated by day and night watchman; 20% of cost to be paid out of the railway grade crossing fund, maintenance and operation to be paid by company.

21224. Jan. 12.—Amending order 19763, July 4, 1913, re G.T.R. and T.H. & B.R. siding to Steel Co. of Canada, Hamilton, Ont.

21225. Jan. 16.—Limiting speed of G.T. Pacific Ry. trains over crossing of Amelia St., Winnipeg, to 10 miles an hour.

21226. Jan. 19.—Authorizing C.P.R. to build road diversion and build its Swift Current Northwesterly Branch at grade across highway at mileage 43.42, between Secs. 17 and 18-20-19, w. 3 m., Sask.

21227. Jan. 19.—Authorizing C.P.R. to open for traffic portion of its Weyburn Westerly Branch Line from Woodrow, mileage 145.7, to Shannavon, mileage 230.8; speed of trains over first 62 miles limited to 18 miles an hour, and over remainder to 10 miles.

21228. Jan. 19.—Authorizing C.P.R. to build spur for Brandon Holding Co., Brandon, Man.

21229. Jan. 19.—Authorizing C.P.R. to use bridge 5.7, Kipawa Subdivision, Lake Superior Division, Ont.

21230. Jan. 10.—Ordering C.P.R. to install improved type of automatic bell at second crossing east of Green Valley, Ont., by June 1, and relieving it of speed limitation against westbound traffic over said crossing.

21231. Jan. 20.—Approving location of G.T. Pacific Ry. stations at Reba, Sowden and Unaka, Ont.

21232. Jan. 10.—Authorizing C.P.R. to build spur for H. Hope & Sons, Monaghan Tp., Ont.

21233. Jan. 20.—Rescinding order 20808, Nov. 13, 1913, authorizing Canadian Northern Ry. to divert Rue La Verandrye, St. Boniface, Man.

21234. Jan. 9.—Ordering Georgian Bay and Seaboard Ry. (C.P.R.) to deepen ditch and provide uniform grade from right of way to Scugog River, Ops Tp., Ont.

21235. Jan. 14.—Ordering C.N. Quebec Ry. to install gates at crossing of Cuvillier St., Hochelaga, Que., by July 1.

21236. Jan. 20.—Approving C.P.R. plan showing clearances at siding to Canadian Rolling Mills Co., Montreal.

21237. Jan. 10.—Authorizing C.P.R. to build spur for Gray-Campbell, Ltd., Winnipeg.

21238. Jan. 21.—Extending for six months from date time within which Esquimalt and Nanaimo Ry. shall file Standard Tariff of maximum freight tolls for approval.

21239. Jan. 21.—Authorizing G.T.R. to build extension to siding for Independent Rubber Co., Grantham Tp., Ont.

21240. Jan. 5.—Amending order 20816, Nov. 12, 1913, re removal of C.P.R. and Great Northwestern Telegraph Co. wires from certain streets in Berlin, Ont.

21241. Jan. 21.—Ordering C.P.R. to install automatic bell at crossing in Port Haney, B.C.; 20% of cost to be paid out of the railway grade crossing fund.

21242. Jan. 22.—Approving Kettle Valley Ry. location between mileage 38.06 and 49, west of Penticton, B.C.

General order 117, Jan. 8.—Regulations re posting table of graduated charges by express companies. Order given in full under "Among the Express Companies" on another page.

General order 118, Jan. 15.—Ordering railway companies to accept freight consigned "to order" for delivery at flag stations and determining regulations for delivery at such flag stations. This order is given in full on another page.

Canadian Pacific Railway Appropriations for Western Lines.

George Bury, Vice President, C.P.R., Winnipeg, visited Montreal early in January to confer with Sir Thomas Shaughnessy as to the appropriations for construction on the Western Lines during this year. On Jan. 8, the following official statement was given out for publication:—

"Discussions involving expenditures in the west by the C.P.R. have been carried on in Montreal during the past few days between Sir Thomas Shaughnessy and George Bury, with the result that appropriations have been passed. The position this year is somewhat different from that of former years. 1913 was a year when large and comprehensive schemes for extensions, betterments, and double tracking the system were pushed. These schemes cannot be completed in a day or two, and must be carried to a certain point before further extensions are undertaken, so that the expenditures estimated for in the western appropriations of 1914 are almost entirely confined for the present to the completion of track laying, etc., on grading already built, on branch lines, extensions, and double tracking, the latter of which will eventually connect Winnipeg with Vancouver, and to the building of Rogers Pass tunnel, which will be pushed with vigor. So far as grading is concerned, no less than 600 miles are now ready for the rails, and there is extensive terminal work at Winnipeg, Calgary and Vancouver, the completion of which has been provided for. The consideration of the expenditures on any new railway construction or other works will come up again later in the year, when further data have been secured, and there will then be another conference with the President.

"Mr. Bury, when interviewed, said that under the direction of Sir Thomas Shaughnessy, C.P.R. expenditures had always been directed in accordance with the actual exigencies of traffic and with the building up of the western country, and it was owing to this comprehensive policy that the C.P.R. in 1913 was able to move such a large grain traffic so expeditiously at a time when the great strain of moving the harvest came. The facilities provided in rolling stock were such that car requirements in other directions were able to be met promptly, and other traffic moved currently as well as the grain."

Upon his arrival at Winnipeg, Jan. 12, Mr. Bury added the following to the foregoing statement: "There are 600 miles of branch line extensions, practically ready for steel, as follows: Empress to Bassano, 140 miles; Kootenay Central, from Golden to Fort Steele, 70 miles; Monitor to Kerobert, 75 miles; Alberta Central, west of Red Deer, 35 miles; Weyburn-Lethbridge line, west of Shaunavon, 90 miles; Gimli north, 26 miles; Suffield west, 30 miles; Coronation north-west, 45 miles. The mileage mentioned in connection with the above branch lines will all be completed this year and ready for operation. There is plenty of work to be done in double tracking, as there are 145 miles graded and ready for steel. There are 70 miles between Winnipeg and Calgary, and 75 miles on the British Columbia division.

Railway Rolling Stock Notes.

The Fessette Lumber Co. has ordered 10 logging cars from Canadian Car and Foundry Co.

The Dominion Coal Co. has ordered 25 wood hopper cars, 30,000 lbs. capacity, from Canadian Car and Foundry Co.

The Intercolonial Ry. has ordered 200 box cars, 80,000 lbs. capacity, from the Canadian Car and Foundry Co.

The Intercolonial Ry. has ordered 200 steel frame box cars, 80,000 lbs. capacity, from Canadian Car and Foundry Co.

The Grand Trunk Pacific Ry. has received 3 colonist cars, nos. 3040 to 3042, from the Canadian Car and Foundry Co.

The Eastern Car Co., up to Jan. 16, has delivered 1,281 steel underframe box cars, out of an order for 2,000, to the Grand Trunk Ry.

The Cape Breton Coal, Iron and Ry. Co. has ordered 20 steel hopper cars, 80,000 lbs. capacity, and 5 wood hopper cars, 30,000 lbs. capacity, from Canadian Car and Foundry Co.

The C.P.R., between Dec. 1 and 31, ordered 151 steel frame box cars, 35 stock cars and 4 vans, from its Angus Shops, and 15 tank cars from American Car and Foundry Co.

The Alberta Metropolitan Ry., which is building a short line to connect Calgary Jct. with the Calgary Municipal Ry., at Calgary, Alta., has not yet, we are officially advised, placed any orders for rolling stock.

The Confederation Construction Co., which has a contract on the Welland Ship Canal construction, has ordered another 4 wheel saddle tank locomotive from Canadian Locomotive Co., in addition to the one mentioned in our last issue.

The Canadian Northern Ry. has ordered 7 steel underframe first class cars, 5 steel underframe second class cars, and 40 all wood colonist cars, from Canadian Car and Foundry Co., and 15 colonist cars and 5 baggage cars, from Crossen Car Co.

The Board of Railway Commissioners has extended to June 30, the time within which the C.P.R. and the Dominion Atlantic Ry. shall equip their locomotives with ash pans that can be emptied without employes having to go underneath, except in cases of emergency.

The Canadian Northern Ry., between Dec. 13 and Jan. 13, received the following additions to rolling stock:—7 cabooses from its Winnipeg shops; 100 box cars from Canadian Car and Foundry Co.; 125 box cars from National Steel Car Co., and 100 flat cars, from Mount Vernon Car Manufacturing Co.

The Canadian Northern has ordered the following rolling stock:—7 steel underframe first class cars, 5 steel underframe second class cars and 40 all wood colonist cars, from Canadian Car and Foundry Co.; 15 all wood colonist cars and 5 baggage cars, from Crossen Car Co., and 5 baggage cars from Preston Car and Coach Co.

The Intercolonial Ry. has received the following additions to rolling stock:—11 box baggage cars, from its Moncton shops; 2 postal cars and 45 box cars, 60,000 lbs. capacity, from the Canadian Car and Foundry Co.; 4 Pacific locomotives, from the Montreal Locomotive Works; and 5 consolidation locomotives, from the Canadian Locomotive Co.

Sir William Mackenzie, President, Canadian Northern Ry., is reported to have stated recently that the company will make an immediate expenditure of about \$10,000,000 for additional rolling stock for the line

between Toronto and Port Arthur. The orders to be placed will cover locomotives, passenger cars, dining cars, sleeping cars and box cars.

The Canadian Northern will probably place considerable orders for locomotives and cars for both passenger and freight service, in the near future. The orders for the passenger equipment especially are likely to be large, in view of the intended opening for traffic of the line between Ottawa and Toronto, and also of the main line north of Lake Superior.

The G.T.R. has recently received, to Jan. 12, the following additions to rolling stock:—772 box cars from Canadian Car and Foundry Co.; 517 box cars, from Eastern Car Co.; 12 mikado locomotives, 63 in. wheel, from Montreal Locomotive Works; 1,596 box cars, from Western Steel Car and Foundry Co., and 523 gondola cars from Pressed Steel Car Co.

The G.T. Pacific Ry. rolling stock for which contracts were made for delivery during 1913, details of which have been given monthly in Canadian Railway and Marine World, included, 10 second class cars and 5 colonist cars, from Canadian Car and Foundry Co.; 15 sleeping cars, 6 parlor-cafe cars, 6 dining cars, 5 tourist cars, 10 colonist cars and 10 first class cars, from Pullman Co.; 15 express cars and 14 mail and express cars, from Osgood Bradley Car Co.

The C.P.R., between Dec. 1 and 31, received the following additions to rolling stock:—109 steel frame box cars, 9 single track snow ploughs, 1 single track flanger, 5 double track flangers, 3 wedge ploughs, 2 class U3 locomotives, and 1 class D4 locomotive, from its Angus Shops; 3 single track snow ploughs and 9 double track snow ploughs, from Canadian Car and Foundry Co.; 4 class D10 locomotives, from Canadian Locomotive Co.; 3 class N3 locomotives from Canadian Allis-Chalmers, Ltd.; and 15 tank cars from American Car and Foundry Co.

The two motor cars which the Pacific Great Eastern Ry. has placed in service on its line in the neighborhood of North Vancouver, are similar in type to those in use on the Southern Pacific Rd. in California. They are divided into four compartments, and are of the usual railway style. The engine is six cylinder and of about 150 h.p., developing a speed of 50 miles an hour. They are finished in mahogany, with floors of maple. Separate compartments are provided for smokers, and baggage, the seats are upholstered in rattan, and the cars are heated by steam.

The G.T.R. has ordered the following additions to rolling stock:—40 steel underframe first class cars, and 15 steel underframe suburban cars, from Canadian Car and Foundry Co.; 5 all steel postal cars, from Pressed Steel Car Co.; 4 steel underframe dining cars and 5 steel underframe parlor cars, from Pullman Co.; 10 steel underframe first class cars and 5 steel underframe combination second class and baggage cars, from American Car and Foundry Co.; 17 steel underframe first class cars, 10 steel underframe baggage cars and 7 steel underframe express cars, from Osgood Bradley Car Co.; 200 steel flat cars, 80,000 lbs. capacity, and 300 steel flat cars, 80,000 lbs. capacity, from Western Steel Car and Foundry Co.

In locomotive construction, the noticeable developments in 1913 were the increased use of superheaters and the tendency to regard the simple, superheated locomotive as the best all round machine for future use. Great interest was aroused by the

production in Europe of the first Diesel engine locomotive, a powerful engine, built for express service, containing a driving engine coupled to the driving axles, and an auxiliary engine working independently of these. The trials are being carried out, and it is said that the locomotive has fulfilled all expectations as to its hauling ability. It is too early, however, to make any definite statement as to the permanent usefulness of this type. With the increasing size of the locomotive has come a corresponding demand for mechanical stoking, the work of feeding the fuel to the huge modern boilers being more than one man can accomplish. Several types are being tried and in some cases good results have been secured. Undoubtedly, mechanical stoking has come to stay.

J. D. McArthur and Co., contractors, Dominion Government railway to Hudson Bay, have ordered four mogul locomotives from Canadian Locomotive Co., and not six, as reported in our last issue. Following are the chief details:—

Weight in working order	112,800 lbs.
Weight, total	129,500 lbs.
Wheel base, rigid	12 ft. 6 ins.
Wheel base, total	20 ft. 6½ ins.
Wheel base, engine and tender	49 ft. 3¾ ins.
Heating surface, firebox	133 sq. ft.
Heating surface, tubes	1,301 sq. ft.
Heating surface, total	1,434 sq. ft.
Driving wheels, diam.	50 ins.
Driving wheels, centres	Cast iron
Driving journals, diam. and length	8½ by 12 ins.
Cylinders, diam. and stroke	19 by 26 ins.
Boiler, type	Extended wagon top
Boiler, pressure	180 lbs.
Tubes, no. and diam.	240—2 ins.
Tubes, length	10 ft. 5¼ ins.
Brakes	Westinghouse
Weight of tender, loaded	115,400 lbs.
Capacity, water	5,000 imp. galls.
Capacity, coal	9 tons
Tank	U shape
Truck, type	4 wheeled, arch bar
Wheels, diam.	33 ins.
Wheel, type	Cast iron
Journals	5 by 9 ins.
Brake beams	Steel

The G.T.R., during a portion of 1912, and in 1913, contracted for the following rolling stock, for delivery during 1913. All of the equipment mentioned has been dealt with in Canadian Railway and Marine World, from month to month, and practically the whole of it was delivered during the past year. From Montreal Locomotive Works, 41 superheater Pacific locomotives and 50 mikado locomotives; from Canadian Locomotive Co., 15 switching locomotives; from American Locomotive Co., 25 mikado locomotives; from Baldwin Locomotive Works, 50 mikado locomotives; from Canadian Car and Foundry Co., 2,000 forty ton box cars; from Eastern Car Co., 2,000 forty ton box cars; from Pressed Steel Car Co., 2,000 thirty ton box cars and 1,000 fifty ton gondola cars; from Western Steel Car and Foundry Co., 3,000 forty ton box cars. During 1913, the following rolling stock was ordered, for delivery during 1914, all of which has also been previously mentioned. From Canadian Car and Foundry Co., 40 first class cars and 15 suburban cars; from National Steel Car Co., 10 baggage cars, and 500 stock cars; from American Car and Foundry Co., 5 postal cars, 10 first class cars and 5 second class and baggage cars; from Pressed Steel Car Co., 5 postal cars; from Pullman Co., 4 dining cars and 5 parlor cars; from Osgood Bradley Car Co., 17 first class cars, 10 baggage cars and 5 express cars; from Western Steel Car and Foundry Co., 200 fifty ton flat cars and 300 forty ton flat cars.

False Bills of Lading.—The Quebec Legislature has under consideration a bill to amend the Railway Act, by providing for the imposition of a penalty not exceeding \$1,000 on shippers making false bills of lading in order to secure lower rates for merchandise.

Railway Development.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—A start was made with the construction of the A. and G.W. Ry., under the new conditions, Jan. 3, when J. L. Coles, M.L.A., turned the first shovelful of earth for the building of the short piece of line which is to connect the Edmonton, Dunvegan and British Columbia Ry. with the right of way secured and partially graded by the old A. & G.W. Co. This junction point is at Carbondale, about two miles north of Sturgeon River, and 12 miles out of Edmonton, on the E.D. and B.C. Ry. A large gang is being set to work clearing up the right of way, and doing other work preparatory to the starting of grading in the spring. W. R. Smith is Chief Engineer of this line, as well as of the E.D. and B.C. Ry., and construction will be done by J. D. McArthur. (Jan., pg. 21.)

The Alberta Metropolitan Ry. is owned by the interests which own the Dominion Co-operative N.T. and Realty Co., Calgary, the officers and directors of which are:—President and Manager, W. J. C. Madden, Calgary, Alta.; Vice President, W. H. Clipperton, Toronto; Secretary-Treasurer, E. P. Maden, Calgary. The A.M. Ry. has power to build lines in and around Calgary, and is engaged in building a line from Calgary Jct. to a junction with the Calgary Municipal Ry. It is reported that at Dec. 31, 1913, about four miles of grading had been completed, and that it was expected to have the line in operation by July. The controlling company is engaged in the real estate business, and operates general stores on the land it is opening up for settlement. (Jan., pg. 21.)

Algoma Eastern Ry.—A regular train service has been put on the extension to Little Current, Manitoulin Island, Ont., the Board of Railway Commissioners having authorized operation over the bridge between Goat Island and Manitoulin Island, and on the spur to Little Current. (Oct., 1913, pg. 475.)

Bruce Peninsula Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway, to be operated by steam, electricity or other motive power, from Wiarton, northerly to Tobermory, Bruce County, Ont., with branch lines. Power is also asked to operate steamboats and car ferries. E. C. Spearman, Owen Sound, Ont., solicitor for the applicants.

Burrard Inlet Tunnel and Bridge Co.—The directors decided, Dec. 30, to invite tenders for the building of a bridge across the Second Narrows of Burrard Inlet, Vancouver, B.C., on plans prepared by Sir John Barry, London, Eng., at an estimated cost of \$2,225,000. Tenders will be received up to April 1. The company is formed of representatives of the cities of Vancouver and North Vancouver, and the municipal districts of North and West Vancouver, which have subscribed \$750,000 towards the erection of the bridge. The Dominion Government has promised \$350,000, and the British Columbia Legislature has voted \$400,000. The company is now asking the British Columbia Legislature to guarantee a bond issue of \$750,000.

The structure will be of steel with wide spans 45 ft. above high water level, and will be supported on six piers founded on rock. The draw span will measure 581½ ft. in length from centre to centre, and will revolve on a platform supported by four wrought steel cylinders, braced together and filled with concrete. The fixed spans

will be 232 ft. long. It will cross the Narrows at an angle of 75 degrees to the average direction of the flood and the currents, which at that point are very powerful. A channel with an average minimum depth of 35 ft. will be provided at the draw span. The floor will be 64 ft. 5½ ins. wide, on which will be laid a single track railway, a double track for street railway traffic, and an 8 ft. sidewalk. The approaches will be on easy gradients.

The Board of Railway Commissioners has approved location plan of the connecting line from Vancouver from station 0 to station 130-03.6, on the south shore of Burrard Inlet. (Jan., pg. 21.)

Calgary and Fernie Ry.—The Dominion Parliament is being asked to extend the time for the construction of this projected railway in Alberta and British Columbia; to change the head office from Fernie to Calgary, Alta.; to increase the bonding powers to \$60,000 a mile; and to authorize the company to enter into agreements with the High River and Hudson Bay Ry., the High River, Saskatchewan and Hudson Bay Ry., the Canadian Western Ry., the Canadian Northern Ry., the Grand Trunk Pacific Ry., or the Hudson Bay Ry. Hough, Campbell and Ferguson, Winnipeg, solicitors for company. (July, 1913, pg. 331.)

Calgary and Knee Hill Ry.—Local press reports state that engineers are locating a line from Acme along the Knee Hill Creek, Alta., to reach some coalfields in which it is stated the C.P.R. is interested. It is further stated that an endeavor will be made to secure a subsidy for the line under the terms of the act granting aid towards the construction of light railways, passed last session of the Alberta Legislature. (Aug., 1909, pg. 573.)

Cape Breton Ry.—See Inverness and Richmond Ry.

Delaware and Hudson Co.—We are officially advised that the company does not contemplate building any additions or extensions of its lines in Canada—the Quebec, Montreal and Southern Ry., and the Naperville Jct. Ry.—in the near future. (Oct., 1913, pg. 475.)

Dominion Atlantic Ry.—The Board of Railway Commissioners has authorized the opening for traffic of a portion of the grade revision from St. George St., Annapolis Royal, N.S., westerly to Allan's Creek, 2,792½ ft. (Jan., pg. 21.)

Edmonton, Dunvegan and British Columbia Ry.—Track has been laid to mileage 131 from Edmonton, of which 106 miles were laid during 1913. A construction train service is being operated to Mirror Landing, Athabasca Lake, Alta. W. R. Smith, Edmonton, Alta., is Chief Engineer. (Jan., pg. 21.)

Erie and Ontario Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway, to be operated by steam, electricity, or any other motive power, from Port Maitland on Lake Erie, to Smithville, in Lincoln county, Ont., and from Port Maitland to Port Colborne, Welland county, Ont., with branch lines. Power is also asked to operate vessels in connection with the railway. W. T. Henderson, Brantford, Ont., solicitor for applicants.

Glengarry and Stormont Ry.—The ratepayers of Cornwall, Ont., have approved of a bylaw granting a bonus of \$5,000 to aid in building a railway from the C.P.R. at St. Polycarpe, Que., to Sidney and Sixth Streets,

Cornwall, Ont., to be paid on the completion of the line.

C. L. Hervey, who is the principal promoter of the line, is also engaged in promoting a line from Cornwall to Hawkesbury, where a junction would be effected with the projected Calumet and Northern Ry., for the construction of which a separate charter may be procured.

High River, Alta., to Hudson Bay.—Press reports state that engineers are making surveys in the High River Valley district, through the Okotoks and Black Diamond oil fields. The engineers are said to be working at present east and west of the High Wood Falls at the foot of the Rocky Mountains, west of High River. There are two charters covering the construction of a railway in this district—the High River and Hudson Bay Ry., and the High River, Saskatchewan and Hudson Bay Ry. (See under these headings, April, 1913, pg. 169, and Feb., 1912, pg. 67.)

Intercolonial Ry.—A contract is reported to have been let to the Union Construction Co., North Sydney, N.S., for building a diversion of the line from North Sydney to Leitch's Creek, 4.3 miles. The cost is estimated at \$67,571.

Considerable extensions are being made to the yards at Amherst, N.S. It is said that the locomotive house is to be moved further to the west, so as to provide additional yard room. (Jan., pg. 18.)

Inverness Ry. & Coal Co.—Press reports from Sydney, N.S., Jan. 7, state that negotiations are in progress for connecting this line either with the Cape Breton Ry., now in operation from Point Tupper to St. Peters, N.S., or with an extension of the same from St. Peters to Sydney. The report also adds that the Cape Breton Ry. is to be acquired by Mackenzie, Mann & Co. interests, which own the I. R. and Coal Co., prior to the extensions being made.

Lake Erie and Northern Ry.—Application is being made to the Dominion Parliament to increase the company's bonding powers from \$30,000 to \$45,000 a mile, and authorizing the borrowing of money for "the acquisition, construction, extension or development of any property, assets or works other than the railway."

There is no truth in the report, officials of the company in Brantford state, that the company's franchise has been acquired by the C.P.R. The line was projected, according to the company's prospectus, to give connection to the various municipalities with the C.P.R. at Galt.

Construction on the line is suspended, but it is expected that the contractors will start work again early in March. (Jan., pg. 21.)

Michigan Central Rd.—The opening of the new station at Detroit, Mich., scheduled for Jan. 4, had to be advanced on account of a fire, Dec. 26, 1913, which destroyed the old station. The new terminal was therefore put into service on the evening of Dec. 26. It is located at Fifteenth St., 1½ miles west of the old station at Third Street, and is a combined station and office building 17 stories high, faced with limestone, brick and terra cotta. It is of the through type, with 11 tracks protected by a Bush trainshed. Three subways pass under the tracks and platforms, two of which have connections by stairway or elevator with each platform. The new terminal is part of the Detroit River tunnel improvement, and was built by the Detroit River Tunnel Co., a subsidiary of the M.C.R. The entire project involved extensive rearrangement of track facilities. (July, 1913, pg. 575.)

Newfoundland Ry. and Train Ferry Syndicate, Ltd., has been registered in England, as a private company with £1,000 capital.

and with no power to increase it, to acquire the benefits of a concession or agreement contained in two letters from the Colonial Secretary to the Newfoundland Government, authorizing the construction, equipment and operation of a railway from Southwest Arm, Green Bay, to Humber Mouth, Bay of Islands, and to adopt an agreement with H. C. Thompson. The permanent directors are, Scott Lings, H. C. Thomson and T. L. Gil-mour, and the registered office is at 13 Anstin Friars, London, E. C.

Norfolk and Elgin Ry.—The Dominion Parliament is being asked to incorporate a company with this title to build a railway to be operated by steam, electricity, or any other motive power, from Simcoe, via Bay ham, to Port Burwell, Ont., with branches. Power is also asked to operate car ferries to U.S. ports. Price, Garvey & Co., Toronto, solicitors for applicants.

North Ry.—The surveys for this projected line between Montreal and the National Transcontinental Ry., at Belle River, Que., are reported to have been completed between Calumet and Belle River, 170 miles. It is also reported that construction will be started in the spring. The route adopted will, it is said, give as favorable gradients as the National Transcontinental Ry. has. Application is being made to the Dominion Government for a renewal of the subsidies for the construction of the entire line from Montreal to Hudson Bay. (Oct., 1913, pg. 175.)

Northern Territorial Ry.—Application is being made to the Dominion Parliament for an extension of time for the building of the line from Fort Churchill, Hudson Bay, westerly to Port Essington, B. C., authorized to be built by chap. 125 of the statutes of 1912. (Dec., 1912, pg. 605.)

Pacific Great Eastern Ry.—We are officially advised that track has been laid on the section between Vancouver and Newport, B.C., about 42 miles, from North Vancouver to Dundarave, 4.5 miles, and on the section between Newport and Clinton, 168.5 miles from Newport to Cheakamus, 13.5 miles. Construction is being carried on upon the untracked mileage on these two sections by P. Welch, the contractor. Surveys are being proceeded with on the remaining section of the line from Clinton to a junction with the Grand Trunk Pacific Ry. at Fort George, B.C., 261 miles.

A train service was put in operation between North Vancouver and Dundarave, Jan. 1. Considerable progress has been made with grading between Dundarave and Caulfields, to which place the company is under agreement to have a train service in operation by July 1.

The Squamish Indian Reserve of 1,098 acres, at Newport, has been formally transferred to the company. The purchase price was \$175,000. It will be used for terminal purposes. (Jan., pg. 22.)

Prince Edward Island Ry.—We are officially advised that surveys are in progress for a branch from mileage 408 to Carter's Point, near Cape Traverse, P.E.I., three miles. This will be the permanent line to the car ferry terminal now under construction. (Jan., pg. 22.)

Quebec Central Ry.—We are officially advised that surveys are being made for an extension of the line now terminating at St. Camille, Bellechasse county, Que., to English Lake, Montmagny county, 20 miles. (Dec., 1913, pg. 575.)

Queen Charlotte Islands.—Portland, Ore., press reports state that plans have been prepared in that city by men interested in the development of some oil bearing lands on Queen Charlotte Islands, B.C., for the building of a six mile railway from Rennell Sound, on the northwest of Graham Island,

northerly. (See Queen Charlotte Island Ry., pg. 353; Graham Island Ry., pg. 351, and Island Valley Ry., pg. 351, all Feb., 1910.)

Reid Newfoundland Ry.—At the close of 1913, the company had laid 74 miles of track on the new branch lines under construction, as follows—Trepassey Branch, between Biscay Bay and Trepassey, 5.00 miles; Carbonear Branch, between Carbonear and Bay de Verde, 53.00 miles; Fortune Bay Branch, between Goobies and Black River, 15.00 miles; Heart's Content extension into Heart's Content, 1.00 mile. The Trepassey Branch is now completed, with the exception of the finishing up process, as also is the Carbonear Branch; some grading has been done at Black River on the Fortune Bay Branch, and the Heart's Content Branch has been completed. Some miles of grading have been done on the Bonne Bay Branch. (July, 1913, pg. 332.)

St. John and Quebec Ry.—During 1913, track was laid on 92 miles of the line known as the St. John Valley Ry., but covered by the general charter of the St. J. and Q. Ry. Track is laid from Gagetown to 18 miles north of Fredericton, N.B., 47 miles. Between this point and 21 miles south of Woodstock, 23 miles, grading is well advanced, the contract being carried out by the Hubbard Construction Co., Fredericton. From 21 miles south of Woodstock, to 24 miles north of that town, 45 miles, track has been laid, and 1.5 miles of grading is being completed to Centerville, by Kennedy and McDonald, Woodstock, N.B. Surveys for the line from Gagetown to St. John, 50 miles, and from Centerville to Andover, 26 miles, are not finally completed. The total length of the line from St. John to Andover will be 192.5 miles.

The Maine Legislature has incorporated the Quebec Extension Ry. Co., to build a line from Caribou, near Presque Isle, Me., to the International boundary near Megantic, Que. A. R. Gould, President, St. John and Quebec Ry., is the principal promoter of the line, and he is reported to have stated that it is projected as part of the St. J. and Q. Ry. It is said that the line will ultimately be operated by electricity, obtained from water powers to be developed at various points on the route. (Dec., 1913, pg. 575.)

Timiskaming and Northern Ontario Ry.—A revision of the line from mileage 250 to Cochrane, Ont., 2.8 miles is, we are advised, being made, the contract having been let to Macdougall and McCluskey, Cochrane, Ont. W. B. Clement, North Bay, Ont., is Chief Engineer.

A two stall locomotive house is under construction at Elk Lake, the terminus of the Elk Lake Branch. (Dec., 1913, pg. 575.)

Toronto, Hamilton and Buffalo Ry.—The railway situation at Hamilton, Ont., is at present in an interesting situation, brought about by the proposed entry of the Canadian Northern Ry., and the suggested abolition of level crossings on the T. H. and B. Ry. The latter company wishes to elevate the existing line, and the C.N.R. has surveyed a route entering the city limits near the G.T.R., south of that line, but crossing it east of the Stuart St. station, and paralleling the old Northern and Northwestern Ry. from Gage Ave. to the city boundary. The city is desirous of having all the railways passing through the city restricted to one right of way, and the Board of Railway Commissioners has recently decided that it has power to change the location of any line, when it is in the public interest to do so. The plan suggested by the city is that the C.N.R. from Toronto should connect with the G.T.R. near Desjardins Canal, at which point the T. H. and B. R. has also a connection, and that the G.T.R. right of way from that point, which is 120 ft. wide, should be followed to the Hamilton Jockey Club's

grounds, where the lines would diverge, the C.N.R. keeping to the north, and the T. H. and B. R. bending southerly, each to tie into its route outside the city, the T. H. and B. R. joining its present line east of Bartonville. The city also suggests that the companies provide a union station at the corner of James and Stuart Streets, about two blocks east of the present G.T.R. station. (Jan., pg. 22.)

Western Canada Power Co.—We are officially advised that the company has completed an extension of its line from Stave Falls to Stave Falls dam, near Vancouver, B.C., 0.5 mile. This is a construction line only. The company holds charters to build electric railways, under the title of the Burrard, Westminster Boundary Ry. and Navigation Co.

Western Central Ry.—The Dominion Parliament is being asked to extend the time for the building of this projected railway. Mowat, Langton and MacLennan, Toronto, solicitors for applicants.

Winnipeg, Man.—The Commissioners for the Greater Winnipeg Water District have let a contract to O'Brien, Fowler and McDougall Bros. for the supply of 400,000 ties for the construction railway to be built from Winnipeg to Shoal Lake, Man., in connection with the new water supply proposals.

We are officially advised by the Commissioners that the location of the railway and pipe line have not yet been completed. The preliminary surveys show that there will be about 35 miles of prairie work with a minimum of grading; the remaining 50 miles will be through a sparsely wooded country, with some muskeg but very little rock. It is merely a construction line, and as it will probably not be operated after the completion of the pipe line, the grading will be very light, and there will be very little curvature. It is expected to use 65 lb. rails. It is expected to let a contract for the line in March, but it has not yet been decided whether the Commissioners will build and operate the line, or whether the entire work in connection with the water supply will be let as one job. (Dec., 1913, pg. 575.)

Dominion Government Railway to Hudson Bay.

We are officially advised that track was laid to Dec. 31, 1913, from Pas, Man., for 86 miles. The line is under construction from this point to Port Nelson, on Hudson Bay, 337 miles.

J. D. McArthur, Winnipeg, the general contractor, was in Ottawa, Jan. 9, and is reported to have stated that grading and rock work will be carried on all winter, and that ties and steel are being taken in for the tracklaying during the summer. Over 1,000 men are in the camps.

A report was issued by the Naval Service Department at Ottawa, Jan. 12, respecting Hudson Bay. According to this report navigation is possible to and from James Bay, from July 15 to Nov. 15. Winter conditions generally prevail to the end of June, and navigation is sufficiently safe by the middle of July. The report also deals with conditions in James Bay, which is reported to be navigable from August to the end of November. There is a suitable location for a harbor at Comfort Point, at the east end of Ministikiwatin, on Rupert's Bay. It is a point in this bay which has been suggested as a terminal for grain carriers, crossing from Port Nelson, and transferring the grain to a railway running to Montreal or other points. It is in connection with this project that the North Ry. is being surveyed. (Dec., 1913, pg. 582.)

Steam Railway Track Laid in 1913.

Following the annual custom of many years, circulars were sent in December by Canadian Railway and Marine World to all steam railways in Canada, asking information as to new track built in 1913. Particulars of the replies received were published in our January issue, but by a typographical error the total of new single track was given as 3,344.50 miles instead of 3,144.50 miles as the detailed figures showed. A number of revised figures and additions have since been received, which brings the total mileage laid up to 3,213.67 miles, against 2,179.09 laid in 1912.

Following are the revised details:

	Miles.	Miles.
Algoma Central Ry.—		
Oba to Hearst, Ont.	49.00	
Algoma Eastern Ry.—		
Mileage 79 to Little Current, Ont.	6.57	
Canadian Northern Ontario Ry.—		
Between Montreal and Hawkesbury	10.00	
Between Ottawa and Capreol	120.00	
Between Ruel and Port Arthur	406.00	
Between Sydenham and Ottawa	54.00	
Canadian Northern Ry.—		
Manitoba—		
Winnipeg	3.34	
Deerfield spur	12.50	
Greenway extension	15.33	
Grosse Isle extension	22.80	
Oakland extension	11.69	
Saskatchewan—		
Goose Lake branch	25.78	
Jackfish line	17.10	
Macrorie east	8.59	
Macrorie west	31.57	
Moose Jaw line	1.85	
Prince Albert-Battleford	51.95	
Swift Current line	55.85	
Alberta—		
Main line	148.31	
Vegreville-Calgary	13.20	
Strathcona-Camrose	0.17	
Brazeau line	42.60	
Peace River line	30.65	
Strathcona-Calgary	1.28	
Canadian Northern Pacific Ry.—		
Yellowhead westerly	6.07	
Cisco to Hope	62.00	
Portions between steel bridges, Cisco to Kamloops	9.00	
Cottonwood to Kamloops	123.00	
New Westminster to Steveston ..	12.00	
Canadian Pacific Ry.—		
Interprovincial and James Bay Ry., Lumsden's Mills to Opemican, Que.	10.00	
Campbellford, Lake Ontario and Western Ry., Glen Tay to Agincourt, Ont.	182.60	
Manitoba—		
Snowflake west	10.00	
Virden-McAulay line	23.00

Weyburn-Stirling line	162.00	
Alberta—		
Suffield south west	32.30	
Gleichen-Shepard	25.00	
Alberta Central	40.00	
Lacombe branch extension	8.00	
British Columbia—		
Kootenay Central extension	19.70	
Whitewater to Kaslo	16.00	
Dominion Government Ry.—		
To Hudson Bay Pass and mileage 86, Man.	86.00	
Esquimalt and Nanaimo Ry.—		
McBride Jct. to Big Qualicum	15.80	
Osborne Bay Jct. to Crofton	3.20	
Edmonton, Dunvegan and B.C. Ry.—		
Mileage 23 to Mirror Landing, Alta.	106.00	
Fredericton and Grand Lake Coal and Ry. Co.—		
Mileage 11 to 24, N.B.	13.00	
Marysville Jct. to Marysville	2.84	
Grand Trunk Pacific Ry.—		
Regina-Boundary line, m. 92 to 155.	63.00	
Regina-Moose Jaw branch	92.00	
Prince Albert branch, m. 67 to 90	23.00	
Biggar-Calgary branch, m. 36.6 to 101.6	68.00	
Battleford to Rossman, Sask.	35.00	
Irricana to Calgary	33.00	

Balsam to Mount Park	31.00	
Main line, Beamont, B.C. easterly	20.00	
Main line, Tete Jaune Cache west.	165.00	
Intercolonial Ry.—		
Georges River to Sydney Mines	9.80	
*Kettle Valley Lines—		
On several sections	75.00	
National Transcontinental Ry.—		
In Province of Quebec	88.26	
In Province of Manitoba	2.22	
Pacific Great Eastern Ry.—		
North Vancouver to Dunbarave	4.50	
Newport to Cheakamus, B.C.	13.50	
Quebec Central Ry.—		
St. Sabine to St. Camille	5.00	
St. John and Quebec Ry.—		
Gagetown to Fredericton, N.B.	20.00	
Fredericton northerly	18.00	
Mileage 21 south of Woodstock to Woodstock, N.B.	21.00	
Woodstock northerly	24.00	
Sydney and Louisburg Ry.—		
Morien Jct. to Morien, N.S.	2.00	
Waterford Lake to Colliery 17	1.00	
Timiskaming and Northern Ontario Ry.—		
Montreal River to Elk Lake, Ont.	6.00	
Iroquois Jct. to Iroquois Falls	6.40	
Vancouver, Victoria and Eastern Ry.—		
Kilgard to Sumas Landing	5.05	
Western Canada Power Co.—		
Extension to dam at Stave Falls, B.C.	0.50	
Total	3,213.67	

Of this mileage 2,710.51 miles were laid in connection with three systems, the following being the comparison of the mileages laid by the same systems in 1912:—

	1913. Miles.	1912. Miles.
Canadian Northern Ontario	590.00	195.00
Canadian Northern Pacific	212.07	41.75
Canadian Northern Ry.	494.56	303.63
.....	1,296.63	540.38
Canadian Pacific Ry.	693.40	353.79
National Transcontinental Ry.	90.48	361.15
G.T. Pacific Ry.	630.00	608.75
.....	720.48	969.90
Total of the three systems ..	2,710.51	1,864.07

The reduced mileage of track laid on the National Transcontinental Ry. is owing to the fact that tracklaying on the entire line from Moncton to Winnipeg, 1,804 miles, is now completed.

Divided by provinces the track laid in 1912 and 1913 compares as follows:—

	1913. Miles.	1912. Miles.
Prince Edward Island	—	9.90
Nova Scotia	12.80	9.69
New Brunswick	107.84	26.61
Quebec	103.26	125.25
Ontario	840.57	502.02
Manitoba	221.88	14.62
Saskatchewan	765.40	501.04
Alberta	511.51	554.72
British Columbia	650.32	331.34
Total	3,213.67	2,179.09

The following single track was laid in Newfoundland by the Reid Newfoundland Co.:—

	Miles.
Carbonear to Bay-de-Verde	53
Goobies to Black River	15
Biscay Bay to Trepassay	5
Into Heart's Content	1
.....	74

In addition to the above new lines the C.P.R. laid second track as follows:

	Miles	Miles
*Quebec—Farnham section	3.00	
Ontario—Islington to Guelph Jct.	29.00	
Manitoba—Bergen north east	20.00	
Manitoba—Kemnay-Virden	35.00	
Saskatchewan—Whitewood-Grenfell	8.00	
Saskatchewan—Indian Head-Regina	21.60	
Saskatchewan—Regina-Pasqua	12.00	
Saskatchewan—Caron-Java	66.70	
British Columbia—Ruby Creek to Hammond	59.00	
.....	254.70	

toria and Eastern Ry. 7.12 miles from Arden to Still Creek, B.C., making a total of 267 miles of second track laid during 1913.

On the Minneapolis, St. Paul and Sault Ste. Marie Ry., a C.P.R. subsidiary line in the United States, 97.35 miles of track was laid as follows:—

	Miles.
Ambrose, N.D., to Whitetail, Mont.	85.74
Ironhub, Iron Mountain, Minn.	8.21
Range Jct. to Riverton, Minn.	3.36
Total	97.35

The Detroit and Huron Ry., a subsidiary of the G.T.R. in the United States, laid 14.50 miles of track, from near Cass City to Bad Axe, Mich., 14.25 miles, and from West Bay City to Bay City Terminal, Mich., 1.25 miles.

Passenger Rate Meetings at Buffalo.

The annual meetings of the International Water Lines Passenger Association, the Niagara Frontier Summer Rate Committee, and the Great Lakes and St. Lawrence River Rate Committee were held at Buffalo, N.Y., in January. The rate representatives met on Jan. 20 and 21, and prepared the rates for submission to the general meetings of the three associations.

At the International Water Lines Passenger Association meeting, Jan. 21, a gavel, made from mahogany from the Northern Navigation Co.'s s.s. Noronic and bound with silver, was presented to the retiring chairman, G. C. Wells, Assistant to Passenger Traffic Manager, C.P.R. The following officers were elected for the current year:—President, O. H. Taylor, P.T.M., Eastern Steamship Corporation, New York; Vice President, W. P. Hinton, G.P.A., Grand Trunk Pacific Ry., Winnipeg; Secretary, M. R. Nelson, C.C.P.D., Northern Steamship Co., New York.

At the Niagara Frontier Summer Rate Committee's meeting, Jan. 22, F. T. Grant, G.P.A., Rutland Rd., Rutland, Vt., was elected Chairman for the current year. The retiring chairman, W. S. Cookson, A.G.P.A., Grand Trunk Ry., Montreal, was presented with a gavel, the wooden portion of which was made from a piece of quartered oak taken from the Chateau Laurier, the G.T.R. hotel at Ottawa. The silver used for its ornamentation was secured from Cobalt, Ont. Imbedded in the head of the gavel is a section of U rail taken from what is probably the last piece of rail in existence which was laid on the G.T.R. in 1854. This rail was of a remarkably good quality of iron and was made by the Ebbw Vale Co. in Wales. The joints were known as chair joints, as there were no fish plates in use at that time. The rail was laid for 1,000 miles between 1854 and 1857, and the quality was so good that the rails wore away very evenly, some lasting for 18 years. The line at that time was known as the Atlantic and St. Lawrence Rd. The case in which the gavel was placed was made from wood taken from the G.T.R. central station at Ottawa.

The Great Lakes and St. Lawrence River Rate Committee met Jan. 22, and elected W. F. Herman, G.P.A., Cleveland and Buffalo Transit Co., Cleveland, Ohio, as Chairman for the current year.

The next meetings of all three associations will be held in Toronto in January, 1915.

Western Canada Railway Club.—At the monthly meeting, Jan. 12, D. R. Dover, Local Freight Agent, G.T. Pacific Ry., read a paper on "new credit system."

The C. P. R. is reported to have ordered 100,000 tons of steel rails from Algoma Steel Corporation, and 25,000 tons from Dominion Iron and Steel Co.

Birthdays of Transportation Men in February.

Many happy returns of the day to:—

S. A. Baker, Canadian Freight and Passenger Agent, Chicago Great Western Ry., Toronto, born at Morrisburg, Ont., Feb. 1, 1877.

B. H. Bennett, General Agent, Chicago and North Western Ry., Toronto, born at Cobourg, Ont., Feb. 6, 1858.

F. L. C. Bond, Division Engineer, Eastern Lines, G.T.R., Montreal, born there Feb. 21, 1877.

C. H. Booth, Local Freight Agent, Midland Ry. of Manitoba, Winnipeg, born at Banff, Scotland, Feb. 16, 1882.

T. Britt, General Fuel Agent, C.P.R., Montreal, born there Feb. 3, 1871.

G. E. Bunting, General Western Freight Agent, Allan Line Steamships, and Manager, Allan and Co., Chicago, Ill., born at Toronto, Feb. 8, 1873.

H. R. Charlton, General Advertising Agent, G.T.R. and G.T.P.R., Montreal, born at St. John's, Que., Feb. 9, 1866.

R. Colclough, Superintendent, Intercolonial Ry., Levis, Que., born at Bic, Que., Feb. 24, 1871.

F. W. Cooper, A.M. Can. Soc. C.E., Division Engineer, C.P.R., Montreal, born at London, Ont., Feb. 16, 1880.

R. Crawford, Northwest Agent, Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

R. W. Drew, Division Freight Agent, Kootenay and Boundary Divisions, C.P.R., Nelson, B.C., born at Kingston, Ont., Feb. 17, 1874.

E. A. Evans, M. Can. Soc. C.E., ex-General Manager and Chief Engineer, Quebec Ry., Light and Power Co., Quebec, born at Kensington, London, England, Feb. 26, 1855.

L. O. Genest, General Storekeeper, Western Lines, C.P.R., Winnipeg, born at St. Henri, Levis County, Que., Feb. 16, 1856.

J. H. Guess, General Purchasing Agent, Grand Trunk Ry., Montreal, born at Raleigh, N.C., Feb. 5, 1878.

J. C. Holden, A.M. Can. Soc. C.E., Division Engineer, C.P.R., Winnipeg, born at St. John, N.B., Feb. 1876.

T. C. Hudson, Master Mechanic, C.N.Q.R. and Q. & L. St. J. Ry., Joliette, Que., born at Brockville, Ont., Feb. 20, 1873.

H. Hulatt, Commercial and Traffic Superintendent, G.T. Pacific Ry. Telegraphs, Winnipeg, born in London, Eng., Feb. 15, 1883.

C. Gardiner Johnson, Lloyd's Agent for British Columbia, Vancouver, B.C., born at Dunblane, Scotland, Feb. 8, 1857.

R. S. Logan, Vice President, G.T.R., Montreal, born at St. Louis, Mo., Feb. 13, 1864.

John McCraw, Superintendent, Southern Division, Central Vermont Ry., New London, Conn., born at Craigville, Ont., Feb. 6, 1868.

G. L. McCrea, Local Freight Agent, C.P.R., Vancouver, B.C., born at Springtown, Ont., Feb. 9, 1876.

D. McDonald, District Passenger Agent, Canadian Government Railways, Montreal, born at Ste. Hyacinthe, Que., Feb. 28, 1862.

T. McNabb, ex-Master Mechanic, Alberta Ry. and Irrigation Co., box of Turin, Alta., born in Scotland, Feb. 16, 1849.

J. K. McNelly, Superintendent, District 2, Eastern Division, C.P.R., Montreal, born at Toronto, Feb. 24, 1874.

D. C. McDonald, Division Freight Agent, C.P.R., Regina, Sask., born at Elmville, N.S., Feb. 9, 1874.

I. MacPher, A.M. Can. Soc. C.E., Assistant Chief Engineer, National Transcontinental Ry. Construction, Ottawa, born at Bath, Ont., N.B., 1878.

C. S. McLaughlin, Superintendent, District 3, Southern Division, G.T.R., Levis, born in Scotland, Feb. 1, 1867.

V. J. Melsted, Engineer of Water Service, Western Lines, C.P.R., Winnipeg, born at Gardar, N.D., Feb. 20, 1887.

G. A. Montgomery, General Superintendent, Algoma Central and Hudson Bay Ry., and Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, Commercial Agent, G.T.R., Grand Rapids, Mich., born at Appin, Ont., Feb. 14, 1862.

M. G. Murphy, District Passenger Agent, C.P.R., Toronto, born at Halifax, N.S., Feb. 26, 1878.

G. J. O'Dowd, City Freight Agent, C.P.R., Quebec, born at Montreal, Feb. 4, 1874.

J. E. Proctor, District Passenger Agent, C.P.R., Regina, Sask., born at Sarnia, Ont., Feb. 17, 1878.

J. E. Robitaille, Comptroller, Roberval-Saguenay Ry., Chicoutimi, Que., born at Quebec, Feb. 17, 1870.

A. E. Rosevear, General Freight Agent, G.T. Pacific Ry. and G.T. Pacific Coast Steamship Co., Winnipeg, born at Montreal, Feb. 20, 1863.

H. H. Schaefer, Division Freight Agent, Intercolonial Ry., Moncton, N.B., born at Cologne, Germany, Feb. 10, 1848.

J. G. Scott, ex-General Manager, Quebec and Lake St. John Ry., Quebec, born there Feb. 13, 1847.

J. J. Scully, General Superintendent, Lake Superior Division, C.P.R., North Bay, Ont., born at Montreal, Feb. 3, 1872.

G. Spencer, Assistant Chief Operating Officer, Board of Railway Commissioners, Winnipeg, born in London, Eng., Feb. 21, 1865.

H. E. Suckling, Treasurer, C.P.R., Montreal, born at Gibraltar, Feb. 27, 1851.

Hugh Sutherland, Executive Agent, Canadian Northern Ry., Winnipeg, Man., born at New London, P.E.I., Feb. 22, 1845.

Sir Wm. C. VanHorne, K.C.M.G., Director, C.P.R., and President, Cuba Co., Montreal, born in Will County, Ill., Feb. 3, 1843.

F. L. Wanklyn, M. Can. Soc. C.E., General Executive Assistant, C.P.R., Montreal, born at Buenos Ayres, Feb. 25, 1860.

John L. Weller, M. Can. Soc. C.E., Superintending Engineer, Welland Ship Canal, St. Catharines, Ont., born at Cobourg, Ont., Feb. 13, 1862.

Canadian Government Railways Earnings Expenses.

The following figures, showing the receipts and expenditures of Canadian Government Railways for the fiscal year 1912-13, have been published unofficially. The figures for the Intercolonial Ry. are:—

Revenue.	
Passenger traffic	\$3,215,821
Freight traffic	7,911,817
Mails and express	470,866
Miscellaneous	385,976
Total	\$11,984,482
Working Expenses.	
Maintenance of way and structures	\$2,058,458
Maintenance of equipment	3,041,672
Traffic expenses	230,481
Transportation charges	6,378,894
General expenses	270,476
Total	\$11,979,982
Net earnings	\$4,004,500

The figures for the Prince Edward Island Ry. are:—

Revenue.	
Passenger	\$180,447
Freight	171,348
Mails and express	20,446
Miscellaneous	11,111
Total	\$383,412
Working Expenses.	
Maintenance of way and structures	\$135,414
Maintenance of equipment	86,656
Traffic expenses	4,414
Transportation charges	1,116
General expenses	5,581
Total	\$233,181
Net earnings	\$149,979

National Transcontinental Railway Construction.

Construction operations on the N.T.R. have been suspended until the spring. Track has been laid over the entire line from Moncton to Winnipeg, but there is still a great deal of finishing up to be done before through traffic will be opened up. On some parts of the line the track is being carried across streams by temporary wooden bridges. These, however, are to be replaced by steel structures. It is expected that the ballasting and other work will be completed by the end of this year.

Construction work is being proceeded with on the car ferry slips at Levis. The car ferry, for use between these points, was launched from the Cammell, Laird & Co.'s yards, Birkenhead, Eng., Jan. 10. (Jan., pg., 24.)

Grand Trunk Pacific Railway Construction.

Press reports from Fort George, B.C., Jan. 14, stated that the steel laying gang working from the east had reached that point, 1,279 miles from Winnipeg. The present end of steel coming easterly from Prince Rupert, is at mileage 324, which leaves about 175 miles of steel to be laid before track-laying will be completed through between Winnipeg and Prince Rupert. It is expected that the two ends of track will be joined early in May. A train service is being operated to mileage 1233 west of Winnipeg, and it is expected to start a service to Fort George in the spring. Easterly from Prince Rupert, trains are running to mileage 325.

Grand Trunk Pacific Branch Lines.—The question of the entry of the company's branch line from Lake Superior Jct. to Fort William, Ont., into Port Arthur, is under discussion. The latest route suggested was through the grounds of the Port Arthur Agricultural Association, but this was vetoed by the Chief Engineer of the Board of Railway Commissioners.

The Saskatchewan Legislature has passed the following acts affecting the company's lines in the province:—Approving the agreement between the G. T. Pacific Saskatchewan Ry. and the town of Weyburn, respecting the construction of a branch of the Regina-International Boundary line into the town. Authorizing the guarantee by the province of the securities of the company in respect of the construction of various lines in the province, as approved by the Lieut.-Governor-in-Council. Confirming an agreement between the G.T.P.B.L. Co. and the City of Regina, respecting terminals; authorizing the granting of aid towards the construction of terminals in Saskatoon, Regina, and Moose Jaw, for the G.T.P.B.L. Co. and the G.T.P. Sask. Ry., and authorizing the guaranteeing of the securities of the G.T.P. Sask. Ry. in respect of the building of certain lines, as approved by the Lieut.-Governor-in-Council.

We are officially advised the following branch lines are under construction:—Harte to Brandon, Man., 25 miles; Talmage, on the Regina-Boundary branch, to Weyburn, Sask., 15 miles, and from Gerrond to Prince Albert, Sask., 22 miles. There are, we are advised, a large number of branch lines contemplated in Saskatchewan and Alberta, many of which have been fully surveyed. The construction programme for this year has not yet been arranged. (Jan., pg., 24.)

The Intercolonial Ry. Dining Car Department, of which L. B. Archibald is Superintendent, has taken over the charge of the diningroom service at Moncton, N.B.

Canadian Northern Railway Construction, Betterments, Etc.

Mount Royal Tunnel and Terminal Co.—Supplemental letters patent were granted to the Canadian Northern Montreal Tunnel and Terminal Co., Jan. 10, changing the name of the company to the Mount Royal Tunnel and Terminal Co.

The Quebec Court of Appeal, Jan. 11, decided that the owners of property under which the tunnel is being constructed may bring actions for damages to property other than those which are taken cognizance of by the arbitrators dealing with the question of price. The original action was brought by the owner of a property at the corner of Bellingham and Maplewood Avenues, the sum claimed being \$9,000. The company claimed that the whole amount of the damage should be estimated by the arbitrators. This exception was dismissed in the lower court, and the judgment is now upheld on appeal.

The Board of Railway Commissioners has reserved judgment on the application of the company to expropriate the whole of the Rainville property, including a small strip not included in the original application. The company subsequently took only an easement for the tunnel, but the owner claimed damages to the property. The company said the property might be useful for station purposes in the future.

Canadian Northern Ontario Ry.—A through fast freight service was inaugurated between Toronto, Ottawa, Montreal and Quebec, Jan. 8, over the Toronto-Ottawa line, the last section of which was recently completed; thence over the old Great Northern Ry. and the old Chateauguay and Northern Ry. into Montreal, and over the old Great Northern Ry. to Quebec. A regular train service is operated from Toronto to Sydenham, Ont., and a limited service from Sydenham into Ottawa.

A bylaw will shortly be submitted to the ratepayers of St. Catharines, Ont., providing for a bonus of \$100,000 to aid in building the company's Toronto-Niagara line through that city. The agreement provides for the completion of the line from Hamilton to St. Catharines within three years, and its completion from Toronto to Niagara in five years.

Montreal-Ottawa-Port Arthur Line.—Track laying has been completed easterly from Capreol to North Bay, Ont., and construction trains are being operated over it. Track has also been laid to between 50 and 60 miles east of North Bay. Out of Ottawa, track is laid nearly to Pembroke.

The last spike on the section of this line terminating in Port Arthur, Ont., was driven near Little White Otter River, 254 miles east of Port Arthur, Jan. 1, by Sir William Mackenzie, who, accompanied by an official party, left Toronto by a special train and travelled over the line via Parry Sound to Capreol, which is the point at which the Montreal-Ottawa-Port Arthur line connects with the line from Toronto; thence to Ruel, where present permanent operation ceases, and then over the newly completed line to the point where the track laying was completed on New Year's morning. The journey was then resumed and the special train on to Port Arthur, which was reached at midnight. The party was entertained at dinner immediately afterwards, and speeches were delivered by the Mayor of Port Arthur, Sir William Mackenzie, President; Sir Donald Mann, Vice President; D. E. Hanna, Third Vice President, and others.

The building of this section of the line was entrusted to Foley, Welch and Stewart and the Northern Construction Co., in 1911, under the terms of a special agreement with the Dominion Government. Actual

construction work started early in 1912. The line has a gradient of 0.4%, with an almost perfect alignment, the final location being made over a period of four years by H. K. Wicksteed, Chief Engineer of Surveys.

Work has been suspended on the line for the winter, but it is expected that ballasting gangs will be put on in the spring in order to get the line in running condition by the fall. One lift of ballast has already been put on. Station buildings have been completed to mileage 183 out of Port Arthur.

Canadian Northern Ry.—The Board of Railway Commissioners has authorized the opening for traffic of the revised line across Rainy Lake, Ont., mileage 224.3 to 226.4.

The Lieut.-Governor of Manitoba, in his speech at the opening of the Provincial Legislature, referring to the building of the railway to Hudson Bay by the Dominion Government said:—"It is the fixed policy of my Government to extend the Oak Point line northward to intersect the same in such time as will guarantee our ability to take advantage, when the main line of the railway is ready for operation, of this through route to the markets of the world for the products of the farms of Manitoba. My Government believe that the opening of such a through route will prove of great benefit to the agriculturists of this Province." This line is being built by the C.N.R. and is in operation from Winnipeg to Gypsumville, 162 miles.

The Board of Railway Commissioners has authorized the opening for traffic of the extension of the Oakland Branch from mileage 24, for a further distance of 12 miles.

The C.N.R. is carrying on its construction work in Manitoba, Saskatchewan and Alberta, not only under its own charter, but also under the charters of the Canadian Northern Saskatchewan Ry., the Canadian Northern Western Ry., and the Canadian Northern Alberta Ry. The construction work done under the charters of these companies for 1913 is as follows:—

Grading was done on 23 lines and track laying on 19 lines. The main line out of Edmonton is being built under the Canadian Northern Alberta Ry. charter, and on this 34.28 miles of grading were done, and 143.36 miles of track laid to the provincial boundary. A 5 mile spur, known as Huffs spur, was also laid.

The work done on the various branch lines, arranged according to provinces, is as follows:—

	Grading. Miles.	Track laid. Miles.
C.N. Ry.	107.37	271.72
C.N. Sask. Ry.	4.00	—
C.N. Western Ry.	87.54	74.53
C.N. Alberta Ry.	34.28	148.31
Total	233.19	494.56

	Miles graded.	Miles track laid.
--	------------------	----------------------

Manitoba —		
Winnipeg cut off	3.98	3.34
Winnipeg & Northern Ry. ..	7.45	—
Deerfield (Oak Point line) ..	12.50	12.50
Greenway extension	2.94	15.33
Oakland extension	—	11.60
Grosse Isle extension	14.28	22.80
	41.15	65.66

Saskatchewan —		
Bienfait to Estevan	8.20	—
Canora northerly	1.90	—
Goose Lake branch	—	23.78
Jackfish line	—	17.10
Macrorie east	2.26	8.59
Macrorie west	34.83	54.57
Moose Jaw line	9.30	1.85

Main line	34.28	148.31
	124.10	236.21

Total for three provinces	113.10	104.56
---------------------------------	--------	--------

The three measures with respect to the guaranteeing of the company's bond issues by the Province of Saskatchewan mentioned in our last issue, have received final assent. The question of the construction programme for the year, under these acts, is now under consideration by the government.

Canadian Northern Pacific Ry.—The C.N. Ry. construction department at Winnipeg is supervising the Canadian Northern Pacific Ry. construction from the Alberta-British Columbia boundary to the Alberta Summit.

During 1913 grading was completed for 67.8 miles westerly from the provincial boundary, and 6.07 miles of track laid.

The remainder of the line in British Columbia is being built under the Vancouver construction department, T. H. White being Chief Engineer. Track was laid from Sumas to Hope, 41.75 miles, in 1912, and during 1913 an additional 206 miles of track was laid. Of this 12 miles was on the branch from New Westminster to Steveston, leaving 194 miles of track laid on the main line. Track has been laid from Hope to Cisco, 62 miles, and nine miles between the steel bridges under construction between Cisco and Kamloops; for 123 miles from Kamloops to Cottonwood. The distance from Cisco to Kamloops is 103 miles, and from Cottonwood to Yellowhead Pass is 134 miles. The company has under survey a line from Kamloops to Kelowna and Shuswap Falls, 141 miles, and a line from Westminster bridge to Lulu Island bridge, five miles.

Considerable progress is being made with the construction of the terminals at Port Mann. It is expected that the locomotive house will be completed early in February.

Sir Donald Mann, Vice President, arrived in Vancouver, Jan. 5, when he is reported to have said that the company's line would enter Vancouver by a tunnel three miles long, the exact location of which had not been settled. (Jan., pg. 29.)

Dominion Railway Subsidy Agreements.

The Dominion Government has entered into agreements under the act granting aid in the construction of railways, for the following lines:—

Canadian Pacific Ry., Jan. 8, for railway bridge over the Saskatchewan River, at Outlook, Sask. This bridge has been built and opened for traffic. It was fully described and illustrated in Canadian Railway and Marine World, June, 1913.

Kettle Valley Ry., Dec. 16, 1913, for a line from Merritt to Penticton wharf, B.C., 145 miles, and for a line from a point on the line between Merritt and Penticton wharf, about 25 miles south of Merritt, to a point on the Fraser River, near Hope station, B.C., 55 miles.

Kootenay Central Ry., Dec. 15, 1913, for a line from Golden, via Windermere and Fort Steele, B.C., to a point on the British Columbia Southern Ry., at or near Jukeson, 175 miles.

Locomotive Design.—The present tendency is to use larger cylinders, maintaining former steam pressures. The first step in this direction was to use larger cylinders with decreased steam pressure, but it has since been found advisable to maintain the pressure as before.

Canadian Pacific Railway Construction. Betterments. Etc.

Interprovincial and James Bay Ry.—The first 10 miles of this extension of the C. P. R. line, running from Mattawa, Ont., to Timiskaming, and Kipawa, Que., which branches off at Lumsden's Mills, and extends to Opemican, has been completed. The next point to which the line will be built, is said to be Ville Marie, but nothing has been decided as to when it will be put under contract.

Eastern Division.—The second track work has been completed to St. Johns, Que., the second section between Farnham and St. Johns, 12.7 miles, having been finished during 1913.

The company has under construction in Montreal, the Forsyth St. branch, 4.4 miles.

The Glen passenger car yard has been remodelled by building a ladder track across the body tracks, near the centre of the yard. This divides the yard into two independent sections, making possible the handling of trains in and out of the yard more expeditiously, and obviating the use of a Y, the trains being turned by going around the loop, which has been made possible by the use of the ladder. It is rumored that the car shops are to be rebuilt, to relieve the congestion at this point. A wheel lathe is to be installed shortly, so that wheels removed from cars in the shop drop pit may be turned there, instead of having to ship them to the Angus shops as at present.

Ontario Division.—All along the Campbellford, Lake Ontario and Western Ry., which extends from Glen Tay to Agincourt, Ont., 182.6 miles, gangs of men are engaged in putting the finishing touches to the work. The passenger and freight stations, and the other buildings are nearly all completed. It is expected that the line will be put in operation early in the spring. In preparation for the opening of the line, a second track has been laid from Agincourt to Leaside Jct., 12.7 miles. From Leaside Jct. into Toronto, a second track has been in operation for some time.

The Board of Railway Commissioners has authorized the opening for traffic of a third branch from the north side of the Queen St. subway at North Parkdale station, to Royce Ave., Toronto.

Although no official intimation has been received to that effect, it is said that a further distance of about 30 miles of second track will be laid on the Toronto-Windsor line this year. The present second track extends to Guelph Jct., and Galt is said to be the end of the next section to be put under contract.

We are officially advised that nothing has been decided with respect to the proposed cutoff between the London and the Muskoka subdivisions. One proposal is to build a line from Guelph to Bolton Jct., on the Toronto-Sudbury line. Surveys have been completed.

Lake Superior Division. The second track work on this division west of Romford, the point where the line from Toronto joins the transcontinental line, to Port Arthur, which has been under construction for about three years, will be continued during this year. The work is being carried on in short stretches at different points on the line, and in the reduction of gradients and diversions.

Manitoba Division. It is not expected that the Kildonan cutoff will be put in operation until the spring. The line is finished with the exception of some little work at the bridge across the Red River.

The work in progress at Winnipeg station is reported to have progressed faster

than was anticipated. The outside work on the hotel part of the buildings has been completed, and all the piles have been driven for the alterations at the Main St. subway. The plans for the proposed changes in this subway were finally approved by the Board of Railway Commissioners Dec. 31.

The construction programme for this year provides for the building of an extension of the branch now terminating at Gimli, northerly for 26 miles. Some grading has already been done on it.

Saskatchewan Division.—The construction programme for this year includes the building of a line from Kerrobert, Sask., for 75 miles, to Monitor, or a few miles west of the Saskatchewan-Alberta boundary. This will give a line through to Lacombe, on the Calgary and Edmonton Ry.

The Board of Railway Commissioners has approved of location plans for the line from Swift Current, northwesterly from mileage 169 to 175.

Alberta Division.—The construction programme for this year includes the following, probably completing certain lines which have been under construction for two or three years. From Empress, on the Lacombe-Kerrobert line, to Bassano, 79 miles; from Coronation, on the above line, northwesterly, 45 miles; from Empress to Bassano, 140 miles; from Suffield West for 30 miles, and for 90 miles west from Shaunavon, on the Weyburn-Lethbridge line.

The Board of Railway Commissioners has authorized the opening for traffic of the Suffield-Blackie branch, mileage 26.5 to 57.2.

Alberta Central Ry.—Application is being made to the Dominion Parliament to ratify an agreement with the Canadian Northern Western Ry., respecting the Rocky Mountain House joint section.

The construction programme for this year provides for the building of about 35 miles of track, west from Red Deer, in continuance of the 30 miles laid up to Dec. 31, 1913.

Kootenay Central Ry. is in operation from Golden to Spillimacheen, B.C., 40 miles, and it is expected that a train service will be put on a further 20 miles during the summer. Steel has been laid from Colvalli, northerly for 39 miles, but this section has not yet been put in operation.

The construction programme for this year provides for the building of about 70 miles, which will complete the line, the construction of which has been in progress for three years.

Rogers Pass Tunnel.—The driving of the pioneer tunnel at Rogers Pass, B. C., from which crosscuts will be made to the main double track tunnel, so as to drive it from different headings, is reported to have been made about 600 ft., from the eastern end. A good deal of the approach work at the western end of the tunnel site has been done, and it is expected to start the pioneer tunnel at an early date. The machinery for boring the main tunnel is being delivered and got in place. The contract for the tunnel is in the hands of Foley, Welch and Stewart, and we are advised, in respect of the press dispatches from Denver, Colo., stating that a contract had been let to J. A. Mellwee & Son, of that city, for the tunnel, that there had been some negotiations with that firm for the boring of the pioneer tunnel, but that no contract had been placed.

Vancouver Terminals. Work on the new terminals at Vancouver is reported to be making satisfactory progress. It is expected that the eastern wing of the new station building will be ready for occupation Mar. 1. When the new station is completed the present one will be torn down, and on its

site will be built the Granville St. viaduct. This will extend from the present end of Granville St. to the water front, and will connect with the passenger and freight sheds on pier D. The wharf accommodation is being rearranged on the most approved lines. (Jan., pg. 26.)

Railway Route Maps Approved.

The Dominion Minister of Railways has approved the following route maps:—

Canadian Pacific Ry., Jan. 9, from Guelph Jct. to Cedar Mills, Ont., about 35 miles.

From Caron to junction with its Bassano easterly line, Alta., 152.24 miles.

Kettle Valley Ry., Dec. 12, 1913, revised location from Hydraulic Summit to Penticton, B.C., 58.2 miles.

Pacific and Hudson Bay Ry., Jan. 9, from Bella Coola to Hutnarko River, B.C., 60 miles.

Great Northern Railway Lines in Canada.

Projected lines in Alberta.—Engineers connected with the G.N.R., or some of its associated companies, are reported to be engaged in locating a route for a line from Sweet Grass, Mont., through Taber, and the surrounding coal mining district of Alberta.

G.N.R. interests are reported to have purchased 25 acres of land in the vicinity of Calgary, Alta., and press reports state that it is for terminal purposes.

Vancouver, Victoria and Eastern Ry. and Navigation Co.—Plans are being prepared for the reconstruction of the car ferry slip at New Westminster, B.C., from which the car ferries operate to Sidney, Vancouver Island. The new slip, it is stated, will be 400 ft. long, three tracks wide, with an overhead bridge to raise and lower the apron according to the state of the tide. A new car ferry will be put on as soon as the slip is built. (Jan., pg. 28.)

Increased Width of Right of Way Through Bush Lands.—A. E. Doucet, District Engineer, National Transcontinental Ry., Quebec, who is a member of the Canadian Society of Civil Engineers Committee on Conservation, wrote this recently:—"As a railway man, and familiar with the operation of railways through timber country, I am more than ever convinced that our generally accepted width of 100 ft. for right of way is very much too limited. I know that this point has already been brought up before the committee, but it seems to me that in future the right of way through bush lands should certainly not be less than 200 ft., and a law should be passed to this effect for all future construction work."

Railway Lands Patented.—Letters patent were issued in connection with Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, during Nov., 1913, as follows:—

	Acres.
Calgary and Edmonton Ry.	1,275.60
Canadian Northern Ry.	194,844
Canadian Northern Alberta Ry.	11.60
Canadian Pacific Ry.	145,025
Grand Trunk Pacific Branch Lines Co.	13.72
Qu'Appelle, Long Lake and Saskatchewan Ry. and Steamboat Co.	5,825.06

Total 7,495.19

The Elimination of Grade Crossings in New England is at a standstill as the result of the financial condition of the railways. The Boston and Maine Rd., which has hitherto co-operated cheerfully with the states and the towns affected in the work of grade crossing abolition, this year announces its opposition to all such improvements on the ground that it has not the money to spend, and in the present state of the financial market it is impossible to obtain the money.

Canadian Railway AND Marine World

Canadian Society of Civil Engineers Committee Report on Track.

At the Society's recent annual meeting in
Montreal, H. R. Safford, Chief Engineer,
G.T.R., chairman of the committee on
tracks, presented the following report:—

Dear Sir,—Owing to a tremendous pres-
sure of business, we were not able to hold
a meeting until Dec. 1, 1913. This meeting
was attended by A. C. MacKenzie and my-
self. (F. P. Gutelius, the other member,
was not present.)

The subject assigned to the committee is
a very large and comprehensive one, and
the work to be carried on should be in ac-
cordance with a well defined programme,
and, in order to conform to the wishes of
the council as to procedure, it seems to us
that the council should give a general out-
line of the subjects which should be first
attacked. This is the procedure generally
followed in associations of this nature, and
is the one which we think will obtain the
best results from the committee.

The committee is so small that we do not
think we can carry on effective research
work in a satisfactory manner, because in
the work associated with track matters it
is quite desirable that results obtained by
the committee should be after a very gen-
eral study by the committee, which should
be representative not only as to individual
railways but locality. We are, therefore,
impressed that there should be an increase
in the membership of this committee to at
least 8 or 10, and a committee of this size
can accomplish much more effective work.

We, therefore, recommend for considera-
tion by the council the following action:—
That the council shall instruct as to the
general subjects it would desire given first
attention, and we might suggest that two
be selected from the following list: Re-
commended specifications for tie plates, for
angle bars, for various classes of tie treat-
ment, for bolts, spikes, etc. Recommended
practice as to size of ties, as to character
of timber, as to proper tie spacing. Econ-
omies of track labor, embracing the fol-
lowing: Proper methods of conducting
track work, of measuring efficiency, of
equating track values, of educating sec-
tion foremen, and numerous other subjects
could be suggested. That the committee
membership be increased to 10.

We believe in the creation of this com-
mittee the membership should not be entire-
ly confined to railway engineers, as there
will be some features involved where it
would be desirable to have the benefit of
the views of men connected with steel manu-
facture, treatment of ties and other sub-
jects which are associated with materials
going into track use.

Interchange of Passenger Traffic at To-
ronto.—R. L. Fairbairn, General Passenger
Agent, Canadian Northern Ry. lines east of
Port Arthur, has issued the following no-
tice:—"Arrangements have been completed
for the interchanging of passenger traffic
at Toronto between Canadian Northern
Eastern Lines and the G.T.R. and C.P.R.,
applicable for all classes of traffic to and
from all points. One coupon only will be
required from Toronto to any destination
on any of our allied lines—coupon to read
'Canadian Northern Ontario Railway.'
Division requirements will be given later."

Chuting of Concrete.—Observations show
that with wooden chutes of planed boards,
2 ft. wide, and from 8 to 10 ins. deep, the
preferable slope is 4 ins. per ft. Slopes of
2 ins. per ft. require a man to keep the
chutes clear, and of 6 ins. per ft., cause
the ingredients to separate, and require
the use of baffles to retard the motion.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings,
increases, or decreases, compared with those for
1912-13, from July 1, 1913:—

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,328,800	\$1,414,500	\$514,300	\$19,700
Aug.	1,824,800	1,416,200	408,600	37,800
Sept.	1,904,300	1,470,000	524,300	101,400
Oct.	2,687,100	1,683,000	1,004,100	208,800
Nov.	2,673,300	1,708,500	964,800	87,000
Dec.	2,256,000	1,632,000	624,000	43,000
	\$13,364,300	\$9,334,200	\$4,041,700	\$787,700
Incr.	\$1,325,000	\$ 537,300	\$ 587,700	

Average mileage under operation during 1913, 4,481,
against 4,297 in the previous year. Mileage operated
during Dec., 1913, 4,458.

Canadian Pacific Railway, Earnings, Etc.

Gross earnings, working expenses, net earnings,
increases, or decreases, compared with those for
1912-13, from July 1, 1913:—

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$11,993,662.27	\$7,576,269.09	\$4,116,793.18	\$833,383.72
Aug.	11,484,489.88	7,473,320.64	3,961,139.24	875,678.62
Sept.	12,187,082.17	7,741,503.48	4,415,578.69	1,052,748.84
Oct.	14,480,216.73	8,877,358.94	5,602,857.79	541,570.60
Nov.	13,407,015.31	8,518,769.25	4,888,246.06	680,107.02

	\$63,471,836.36	\$40,487,221.40	\$22,984,614.96	\$2,491,232.32
Incr.	\$2,164,923.71	\$ 1,215,741.39	\$ 249,182.32	

x Decrease.

Approximate gross earnings for Dec., \$11,695,000,
against \$12,108,000 for Dec., 1912. During Dec.,
1913, the mileage under operation was increased to
11,827.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings and ex-
penses of the G.T.R., C.A.R., G.T. Western Ry. and
D.G.H. & M.R. for Nov., 1913, as compared with
those for Nov., 1912:—

Grand Trunk Railway.			
	1913.	1912.	
Earnings	\$3,523,400	\$3,534,400	
Expenses	2,813,000	2,820,800	
Net earnings	\$710,400	\$713,700	

Canada Atlantic Railway.			
	1913.	1912.	
Earnings	\$200,000	\$223,500	
Expenses	215,300	211,400	
Net earnings	\$14,400*	\$12,100	

Grand Trunk Western Railway.			
	1913.	1912.	
Earnings	\$577,200	\$621,000	
Expenses	502,500	523,800	
Net earnings	\$74,700	\$97,200	

Detroit, Grand Haven and Milwaukee Ry.			
	1913.	1912.	
Earnings	\$241,000	\$243,400	
Expenses	210,200	197,600	
Net earnings	\$31,700	\$45,800	

*Deficit.

TRAFFIC RECEIPTS OF THE SYSTEM.

Aggregate from July 1 to Dec. 31:				
	1913	1912	Increase Decrease	
G. T. R.	\$23,137,502	\$22,408,122	\$729,380	
C. A. R.	1,264,634	1,271,732	—	\$5,098
G. T. W. R.	2,718,177	2,745,761	—	27,584
D. G. H. & M. R.	1,347,427	1,329,057	18,370	
Totals.	\$29,468,740	\$28,754,672	\$65,068	

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Provi-
nce and Lake Superior Branch, 1,101 miles, for Nov.,
were \$1,004,015; for Dec., \$555,526. Aggregate from
July 1 to Dec. 31, 1913, \$4,293,115.

Steel Rail Orders.—A press dispatch from
Sydney, Jan. 6, said that the Dominion Iron
and Steel Co. was finishing a large order
for rails for the Canadian Northern Ry.,
after which the rail mill would be shut down
10 days for repairs; that an order had been
received from the Australian Government
for 5,000 tons of rails, which was expected
to be followed by further orders from the
same source; that after the Australian order
is finished a big order for the C.P.R. will
be rolled, and later a 12,000 ton order of
60 lb. rails for the west.

Mainly About Transportation People.

R. B. ANGUS, director, C.P.R., left Montreal early in January, for a trip round the world.

LADY MANN left Toronto, Jan. 13, for England, en route to the south of France, to spend the winter with her son.

J. W. NORCROSS, Managing Director, Canada Steamship Lines, Ltd., Montreal, sailed from New York, Jan. 1, for Great Britain.

L. C. GILMAN, Assistant to the President, Great Northern Ry., has been made President of the Spokane, Portland & Seattle Ry. and affiliated lines, succeeding J. H. Young.

JOHN SEBASTIAN, 3rd Vice President in charge of passenger traffic of the Chicago, Rock Island and Pacific Ry., with office at Chicago, retired Jan. 1 on account of ill health.

W. D. SCOTT, heretofore General Superintendent, Great Northern Ry., at Seattle, Wash., has been appointed General Superintendent, Spokane, Portland and Seattle Ry.

C. S. MUSSON, Travelling Freight Agent, New York, Chicago and St. Louis Rd., Chicago, Ill., who died there recently, was born in Toronto, Dec. 23, 1844, and had been in that company's service since 1888.

F. A. DELANO, M. Am. Soc. C.E., former President and one of the receivers of the Wabash Rd., has been elected President, Chicago, Indianapolis & Louisville Ry., succeeding Fairfax Harrison, resigned.

GEORGE BURY, Vice President, C.P.R., Winnipeg, contributed an article on the primary producer and his future to the Toronto Globe's recent annual financial supplement.

DAVID SEATH, formerly Secretary, Montreal Harbor Commissioners, who has been ill with pneumonia for some time, was reported recently to be out of danger, and convalescing slowly.

W. S. PAINTER, formerly Architect C.P.R., who, with Mrs. Painter, has been staying some time in Montreal, has been visiting friends in Philadelphia, Pa., before returning to Vancouver, B.C.

HUNTER BLAIR, of the Canadian Northern Ry. service, who died in Toronto in December, was not, we are informed, a brother in law of R. M. Horne Payne, the C.N.R. director in England, as stated in our January issue.

LEWIS STOCKETT, General Superintendent, Coal Mining Branch, Natural Resources Department, C.P.R., Calgary, Alta., was re-elected President, Western Coal Operators Association, at the annual meeting in Fernie, B.C., Jan. 9.

C. A. MACDONALD, Comptroller, Northern Navigation Co., was presented with an address and a number of silver articles by the citizens of Collingwood, Ont., Jan. 16, on his removal to Sarnia, where the Northern Navigation Co.'s chief office is now located.

A. J. MITCHELL, Comptroller, Mackenzie, Mann and Co., Ltd., and Assistant to Vice President, Canadian Northern Ry., Toronto, and M. H. MacLEOD, General Manager and Chief Engineer, Canadian Northern Ry., Winnipeg, left Toronto Jan. 2 for a three weeks holiday in Florida.

EDMUND M. SHERWOOD, who has been admitted Master Car Builder, and Albert

HILLIER, N.B. Car Corp., at Sault Ste. Marie, Ont., 1, 1887, and entered railway service Nov. 1, 1892, since when he has been, Nov. 1, 1913, station master at Hillsboro, B., and formerly also at Sault Ste. Marie.

J. P. QUILTY, who has been appointed Superintendent of Station Service, Boston and Maine Rd., Boston, Mass., was born in New Brunswick, where he commenced his railway service with the Intercolonial Ry. He has been in Boston and Maine Rd. service for 27 years.

M. LILLIS, formerly Roadmaster on various sections of the C.P.R., between Brandon, Man., and Swift Current, Sask., who died at Broadview, Sask., Jan. 5, had been in C.P.R. service since its inception. The funeral was attended by a number of the chief officials of the company in the west.

CAPT. J. J. RILEY, for a number of years Superintendent of Pilots, Montreal, died there Jan. 8. The funeral, which was conducted at the Mount Royal Crematorium, Jan. 10, was attended by the Dominion Wreck Commissioner, under whom Capt. Riley had acted frequently as nautical assessor, and a number of Marine Department, and Harbor Commission officials.

John L. Hodgson,
Master Car Builder, Grand Trunk Pacific Railway

A. J. NIXON, Chief Operating Officer, Board of Railway Commissioners for Canada, died suddenly at Ottawa, Jan. 12. He was born at Waterloo, Que., in 1875, and entered G.T.R. service in 1889, serving in various capacities, as operator, dispatcher and Chief Dispatcher, until 1907, when he was appointed Assistant Superintendent at London, Ont. He was appointed Chief Operating Officer, Board of Railway Commissioners, in 1909.

W. C. CASEY, whose appointment as General Agent, Passenger Department, Atlantic Steamship Lines, Winnipeg, was announced in our last issue, was born at Moncton, N.B., Dec. 12, 1882, and entered transportation service, Aug., 1901, since when he has been, to Apr., 1902, ticket clerk, Intercolonial Ry., Moncton, N.B.; Apr., 1902, to Apr., 1903, ticket clerk, C.P.R., Halifax, N.S.; Apr., 1903, to Apr., 1910, Traveling Passenger Agent, C.P.R., St. John, N.B.; Apr., 1910, to Dec., 1913, chief clerk to General Passenger Agent, Atlantic Steamship Lines, C.P.R., Montreal.

E. F. L. STURDEE, whose appointment as Assistant District Passenger Agent, C.P.R., Toronto, was announced in our last issue, was born at St. John, N.B., Mar. 29, 1876, and entered C.P.R. service Dec. 1893, since when he has been, to July, 1894, office boy, Moncton, N.B.; July, 1894, to Aug., 1897, clerk and stenographer, Assistant General Passenger Agent's office, St. John, N.B.; Aug., 1897, to June, 1902, stenographer, rate and excursion clerk, Ontario Division, Assistant General Passenger Agent's office, Toronto; June, 1902, to Dec., 1910, excursion clerk, General Passenger Department, Eastern Lines, Montreal; Dec., 1910, to Dec. 1, 1913, chief clerk to General Passenger Agent, Eastern Lines, Montreal.

C. H. BOOTH, who has resigned the position of Local Freight Agent, Midland Ry. of Manitoba, Winnipeg, was born at Banff, Scotland, Feb. 16, 1882, and entered railway service July, 1900, since when he has been, to June, 1902, general clerk, C.P.R., Winnipeg; June, 1902, to Aug., 1904, billing clerk, Canadian Northern Ry., Winnipeg; Aug., 1904, to Apr., 1906, chief billing clerk, same road; Apr., 1906, to June, 1907, inward rate clerk, same road; June, 1907, to May, 1908, chief rate clerk, same road; May, 1908, to Oct., 1909, accountant, same road; Oct., 1909, to May 15, 1912, Assistant Local Freight Agent, same road, Winnipeg, on which latter date he was appointed to the position he has just resigned to enter private business.

JULES E. MORAZAIN, whose appointment as Assistant Superintendent, Montreal Terminals, C.P.R., was announced in our last issue, was born at Wheatland, Que., July 31, 1875, and entered C.P.R. service May 3, 1890, since when he has been, to May 24, 1890, clerk, Drummondville, Que.; Aug. 1, 1890, to Jan. 8, 1891, operator, Foster, Que.; Jan. 9 to Aug. 12, 1891, operator, Richfort, Vt.; Aug. 12, 1891, to Aug. 15, 1892, undertook a commercial course; Aug. 15 to Sept. 26, 1892, operator, C.P.R., Sutton, Que.; Sept. 26, 1892, to Feb. 8, 1894, operator, Highlands, Que.; Feb. 9 to July, 1894, operator, Richfort, Vt.; July to Oct., 1894, relieving operator at various points; Oct., 1894, to May 27, 1895, operator, Highlands, Que.; May 27, 1895, to Sept. 24, 1901, agent, Highlands, Que.; Sept. 24, 1901, to Nov. 3, 1908, agent, Mile End, Que.; Nov. 3, 1908, to Jan. 31, 1913, General Agent, Operating Department, Quebec, Que.; Feb. 1 to Dec. 6, 1913, Assistant Superintendent, District 3, Eastern Division, Quebec, Que.

HON. GEORGE A. COX, who died at Toronto, Jan. 16, was born at Colborne, Ont., May 7, 1840, and commenced business life as an operator in Montreal Telegraph Co.'s service, there. He was placed in charge of the company's office at Peterboro, Ont., in May, 1858, and remained in that town for 30 years. During this period he became interested in insurance business under the Canada Life Assurance Co., later becoming President, and founding several other insurance companies. He was one of the original organizers and directors of the Grand Trunk Pacific Ry., and a director of the Toronto Ry., and its subsidiary companies, was President for 17 years of the Canadian Bank of Commerce, a director of the Canadian General Electric Co., and of many other financial and industrial organizations. One of the most interesting episodes in his life was his connection with the management and reorganization of the Midland Ry. The main line was projected to run from Port Hope to Midland, taking in Peterboro. The enterprise was premature, and it was soon in financial difficulties too formidable to be overcome. In the absence of capital to complete the road the latter passed under the control of the British bondholders. The only way of escape

from financial ruin was to write off part of the debt, increase the capital sufficiently to enable the proprietors to complete the system, and transfer the management to Canada. Fortunately the creditors agreed to this solution, and he was chosen President in 1878. The line was continued to Midland, and a link was built to connect Peterboro and Lindsay. After the reorganization was a success the system was taken over by the G.T.R. and consolidated with other local lines into its present Midland Division.

BARON STRATHCONA AND MOUNT ROYAL (Donald A. Smith), High Commissioner for Canada, London, Eng., who died there, Jan. 20, was born at Archieston, Morayshire, Scotland, Aug., 1820, and was educated locally with the intention of following the legal profession. He, however, entered the Hudson's Bay Co.'s service in 1838, and spent 13 years on the Labrador coast, being afterwards transferred to the Northwest Territories, where he occupied various positions, towards the latter part of his service becoming, chief factor, Resident Governor, and Chief Commissioner for the company in Canada. He became involved in the Red River Rebellion in 1869, and received the thanks of the Governor General in Council for the ability he evidenced in that connection. On the organization of the Province of Manitoba, he was elected to the Legislature for Winnipeg and St. John, was later appointed on the Legislative Council for the Northwest Territories, and subsequently was also elected to the Dominion House of Commons for Selkirk. In 1874 he resigned his seat in the Legislature, retaining his seat in the Dominion Parliament until 1880, when he was defeated. He re-entered politics in 1887, representing Montreal West, until Apr., 1896, when he retired from political life in Canada on his appointment as High Commissioner for Canada in London, Eng., which position he held to the time of his death. He was associated with the Canadian Pacific Ry. from its commencement, but for political reasons his name was not included with those to whom the original charter was granted, and was a director and member of the executive committee since the early days of the company's history. In the early days of the railway, he, in conjunction with Lord Mount Stephen, risked practically the whole of his fortune on the construction of the road, and his work in this connection was eulogized, Jan., 1897, by Sir Charles Tupper, a former Prime Minister of Canada, in the words, "the C.P.R. would have no existence to-day, notwithstanding all the Government did to support that undertaking, had it not been for the indomitable pluck, energy and determination, both financially and in every other respect, of Sir Donald Smith." He drove the last spike in the C.P.R., Nov. 7, 1885. He was created a K.C.M.G. in 1886, a G.C.M.G. in 1896, was raised to the peerage as Baron Strathcona and Mount Royal of Glencoe (Scotland) and Montreal (Canada) in 1897, and created a G.C.V.O. in 1908. As an additional honor the peerage was granted with a special remainder to his daughter and her heirs. He has also been honored with university degrees and honorary positions, too numerous to mention, as are also his positions in connection with financial, industrial and educational institutions, and his benefactions of all kinds. Apart from his official connections with Canada, he constantly kept in close touch with the Dominion, and was a frequent visitor, having been in Ottawa and Montreal quite recently.

A Correction.

By an unfortunate mistake the first lines of each of the two paragraphs giving biographical data of J. G. Sutherland, Car

Service Agent, Alberta Division, C.P.R., Calgary, and of the late James Charlton, in our last issue, were transposed. The items should have read as under:—

JAMES CHARLTON, Chairman, Transcontinental Passenger Association, who died at Chicago, Ill., recently, after a short illness, was born at Bothal, Northumberland, Eng., May 15, 1832, and commenced railway service there, Apr., 1847, since when he has been, to Mar., 1857, junior clerk, chief clerk, and cashier, Newcastle and Carlisle Ry., Newcastle upon Tyne, Eng.; Apr. 29, 1857, to 1870, assistant to chief clerk, Audit Department, in charge of statistics and freight accounts, and chief clerk, auditor and General Passenger Agent, Great Western Ry. of Canada, now part of the G.T.R. Since March, 1870, his service has been in the U.S., retiring from active railway work, Jan. 1, 1900, when he held the position of General Passenger and Ticket Agent, Chicago and Alton Rd.

J. G. SUTHERLAND, whose appointment as Car Service Agent, Alberta Division, C.P.R., Calgary, was announced in our last issue, was born at Aulac, N.B., Nov. 24, 1882, and entered railway service June, 1898, since when he has been, to Apr., 1901, operator and assistant agent, Intercolonial Ry. at various points; Apr., 1901, to June, 1902, operator, Pacific Division, and re-

The Grand Trunk Railway's New Station at Stratford, Ont.

The new station which the G.T.R. has built at Stratford, Ont., was formally opened to the public, Dec. 17. It replaces the one which was built in 1867, and which for years has been inadequate for the needs of the traffic. A new station at Stratford was among the things promised on the occasion of the first visit of Sir Charles Rivers-Wilson and the late C. M. Hays, as President and General Manager respectively, to the city. This long promised station is now an accomplished fact.

The new building, of which an illustration is given on this page, has a frontage on Shakespeare St. of 151½ ft., and is 60 ft. wide at its widest part—the centre. At this point is the main entrance, which is sheltered by a canopy 18 ft. 10 ins. by 16 ft. 8½ ins. Inside the main door is a loggia, 15¼ ft. by 16 ft. 9½ ins., which leads to the general waiting room, 30 ft. 1¼ in. from front to rear, by 80 ft. In the centre, opposite the main entrance, is the ticket office, 15½ ft. by 16 ft., which extends 7½ ft. out on to the platform. To the right of the loggia are the men's smoking room and lavatories, and on the left the women's waiting room and lavatories. The lunch room,

Grand Trunk Railway Station at Stratford, Ont.

lieving agent, C.P.R., at various points; June, 1902, to May, 1906, dispatcher, C.P.R., Revelstoke, B.C.; May, 1906, to Feb., 1907, dispatcher, C.P.R., Calgary, Alta.; Feb., 1907, to Apr., 1911, dispatcher and acting Chief Dispatcher, C.P.R., Cranbrook, B.C., and McLeon, Alta.; Apr. to Nov., 1911, dispatcher and acting Chief Dispatcher, C.P.R., Calgary, Alta.; Nov., 1911, to Nov., 1913, Chief Dispatcher, C.P.R., Medicine Hat, Alta.

The C.P.R. medical system on the Pacific Division is, according to a Vancouver, B.C., report, being reorganized. F. W. Peters, General Superintendent, was in Nelson, B. C., Jan. 14, discussing the proposed standardization of the medical service with representatives of the men. The proposed system provides for a uniform fee and a uniform service among all the employees on the division, instead of the present monthly fee of from 75 cents to \$1.50, for which different services are given.

W. Holmes, stated to be chief clerk in the Mechanical Department, G. T. Pacific Ry., at Edmonton, Alta., was arrested, Jan. 16, on a charge of theft of passes, and D. H. Pierce, of the Hub Employment Agency, Edmonton, Alta., was also arrested on the same day for illegally selling G.T.P.R. passes.

with kitchen and store, 40 ft. by 32 ft., is to the right, with its main entrance from the waiting room, while to the left is the parcel and baggage office and baggage room, 38 by 32 ft. The second story is devoted entirely to offices. The western end is given over to the private and general offices of the Superintendent; next comes the Trainmaster's office, and on the south side are the dispatchers' offices. Following along are the offices of the Divisional Freight Agent, the General Yardmaster, the Supervisor of Bridges and Buildings, and the Resident Engineer. East of the station building, and connected with it by an umbrella roof of 75 ft., is the express building, 32 ft. by 57 ft. The central tower is 60 ft. high, and the two additional stories in it are fitted as file rooms.

The building is constructed of Saginaw vitrified brick on a concrete foundation, with a slate roof. The internal fittings of the public parts of the station are tile floors, oak panelled ceilings, with walls finished in burlap. A new brick platform has been laid.

Cast Iron Wheel Records.—H. H. Vaughan, Assistant to Vice President, C.P.R., read a paper on this subject before the Canadian Railway Club, Jan. 12.

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Supplement 2 to Canadian Freight Classification 16.

20967, Dec. 10. Re application of Canadian Freight Association, on behalf of railway companies, under sec. 321 of the Railway Act, for an order approving of proposed Supplement 2 to Canadian Freight Classification 16, containing certain increased, reduced and additional ratings on file with the Board. Notice of the proposed increased ratings having been given in The Canada Gazette, and the Board having invited consideration thereof by the Canadian Manufacturers' Association, the Montreal Chamber of Commerce, the Ontario Grocers' Guild, and the Boards of Trade of St. John, Quebec, Montreal, Ottawa, Toronto, Hamilton, Brantford, London, Winnipeg, Brandon, Regina, Saskatoon, Calgary, Edmonton, Vancouver and Victoria. Upon the consideration of what has been filed, and upon the recommendation of the Chief Traffic Officer of the Board—it is ordered that the said proposed supplement, as finally revised and submitted for approval by the Chairman of the Canadian Freight Association, by letter dated at Montreal, Dec. 6, 1913, be approved, to become effective not later than Jan. 20, 1914.

Milling in Transit at Sudbury.

Ontario and Manitoba Flour Mills for order directing C.P.R. to extend to the applicant's mill at Sudbury, Ont., the same milling in transit rates as are enjoyed by millers west of Fort William, Ont. It is ordered that the C.P.R. extend to the applicant the privilege of milling all rail grain at Sudbury in transit from Port Arthur, Fort William, and points west thereof, at the through rate to all points east of Sudbury and the Detroit and St. Clair Rivers reached by millers west of Fort William under milling in transit arrangements, subject to the regulations and restrictions thereof; and subject, also, to the same additional toll of 1c. for 100 lbs. for the terminal service at Sudbury, the said arrangement to come into force not later than Jan. 12, 1914.

Pulpwood Tariff, Temiscouata Railway.

21105, Dec. 23. Re Temiscouata Railway tariff, C.R.C. no. E. 217, effective Jan. 1, 1914, increasing rates on pulpwood, in carloads, from points on its line to Rivière du Loup for local delivery. Upon the application of Eastern Townships Lumber Co., complaining against the said increases. It is ordered that, for the present and pending the investigation by the Board, the said tariff be suspended.

Commutation Tickets for Chateauguay.

Jan. 7.—Re application of the Town of Chateauguay, Que., for an order directing the New York Central and Hudson River between Chateauguay and Montreal, good for one year. It is ordered that the application be refused. No one represented the town at the hearing.

G.T. Pacific Ry. Freight Mileage Tariff.

21131. Re application of Grand Trunk Pacific Ry. under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. 26, to apply between stations on its main line and branches in Alberta and British Columbia, between, and including, Thornton, Alta., and Prince George, B.C., including and cancelling the company's tariff, C.R.C. 18, applying between and including Thornton and mileage 1759 B.C., provisionally approved by order

18837, Aug. 5, 1913. It is ordered that the tariff, C.R.C. 20, be temporarily approved, pending judgment in the inquiry by the Board into the rates charged generally by the railway companies west of Crow's Nest, Canmore and Thornton.

Minimum Car Load Rates.

General order 110, Dec. 24. Re tariffs filed by railway companies subject to the Board's jurisdiction, increasing the minimum carload weights on buckwheat, oats, bran (in bulk), dried beet pulp, oat hulls (in bulk), pea hulls (in bulk), shorts, beets (except sugar), onions, turnips, and potatoes. It is ordered that, for the present and pending investigation by the Board, the said increased minimum carload weights be suspended. The schedules which are suspended are the following C.R.C. numbers:—Grand Trunk—E. 2857, E. 2859, supplement 14 to E. 2566, supplement 4 to E. 2708, Canadian Pacific—E. 2715, Michigan Central—Supplements 3 and 4 to 2022, supplement 1 to 1998, supplement 3 to 1721, 2159, Canadian Northern—Supplement 5 to E. 144, supplement 7 to E. 145, supplement 6 to E. 176, supplement 1 to E. 210, supplement 4 to E. 232, Ottawa & New York—986, supplement 1 to 215, supplement 1 to 417, supplement 3 to 755, Wabash, 758, Pere Marquette, 1696, Niagara, St. Catharines & Toronto, supplement 3 to 601, Toronto, Hamilton & Buffalo, 943, Quebec, Montreal & Southern, 493, Hamilton, Grimsby & Beamsville, 138, Napierville Junction, 121, Thousand Islands, supplement 5 to 218, Schomberg and Aurora, supplement 6 to 80, Hull Electric, F. 17, Essex Terminal, 214, Windsor, Essex & Lake Shore Rapid, 131, Chatham, Wallaceberg & Lake Erie, 312.

Charge for Refrigerator Car Detention.

General Order 115, Dec. 19. Re tariffs filed by railway companies imposing a charge for the detention of refrigerator cars over and above the car service charges prescribed by order no. 906, Jan. 25, 1906. It is ordered that, for the present and pending investigation by the Board, the following tariffs, viz.:—G.T.R. Co.'s C.R.C. no. E. 2858; C.P.R. Co.'s C.R.C. no. E. 2716; Canadian Northern Ry.'s C.R.C. no. E. 358; Michigan Central Rd.'s C.R.C. no. 2162; Toronto, Hamilton and Buffalo Ry.'s C.R.C. no. 945; and Ottawa and New York Ry.'s C.R. C. no. 989, be suspended.

21127, Dec. 29. Re tariffs filed by Canadian Pacific and Esquimalt and Nanaimo Railway Companies, imposing a charge for the detention of refrigerator cars over and above the car service charges prescribed by order 906, Jan. 25, 1906. It is ordered that, for the present and pending investigation by the Board, the following tariffs, namely:—C.P.R. Co.'s C.R.C. no. W. 1892, and Esquimalt and Nanaimo Ry. Co.'s C. R.C. no. 256, be suspended.

21128, Dec. 27. The tariff, C.R.C. 395, filed by Dominion Atlantic Ry., imposing a charge for the detention of refrigerator cars over and above the car service charges prescribed by order 906, Jan. 25, 1906; it is ordered that, for the present and pending investigation by the Board, the said tariff be suspended.

Minimum Carload Rates.

General order 116, Dec. 24. Re the tariffs filed by Railway Companies increasing the minimum carload weights on buckwheat, oats, bran (in bulk), dried beet pulp, oat hulls (in bulk), pea hulls (in bulk), shorts, beets (except sugar), onions, turnips, and potatoes. It is ordered that, for the present and pending investigation by the Board, the said increased minimum carload weights published in the C.R.C. schedules hereinafter mentioned be suspended, viz. Grand Trunk, E. 2857, E. 2859, sup-

plement 14 to E. 2566, supplement 4 to E. 2708; Canadian Pacific, E. 2715; Michigan Central, supplements 3 and 4 to 2022, supplement 1 to 1998, supplement 3 to 1721, 2159; Canadian Northern, supplement 5 to E. 144, supplement 7 to E. 145, supplement 6 to E. 176, supplement 1 to E. 210; supplement 4 to E. 232; Ottawa and New York, 986, supplement 1 to 215, supplement 1 to 417, supplement 3 to 755; Wabash, 758; Pere Marquette, 1696; Niagara, St. Catharines and Toronto, supplement 3 to 601; Toronto, Hamilton and Buffalo, 943; Quebec, Montreal and Southern, 493; Hamilton, Grimsby and Beamsville, 138; Napierville Junction, 121; Thousand Islands, supplement 5 to 218; Schomberg and Aurora, supplement 6 to 80; Hull Electric, F. 17; Essex Terminal, 214; Windsor, Essex and Lake Shore Rapid, 131; Chatham, Wallaceburg and Lake Erie, 312.

Railway Finance, Meetings, Etc.

Canadian Northern Ry.—A lease of rolling stock from the Imperial Rolling Stock Co. to the C.N.R., dated Dec. 1, 1913, and numbered series H.J., 1913, has been deposited with the Secretary of State at Ottawa.

A copy of a second supplementary mortgage dated Nov. 27, 1913, made by the C.N.R. to the British Empire Trust Co., and the National Trust Co. as trustees, has been filed with the Secretary of State at Ottawa. This mortgage is supplemental to one dated June 10, 1909.

Cape Breton Ry.—Sir William Mackenzie, President, Canadian Northern Ry., has denied the press reports sent out from Sydney, N.S., Jan. 7, to the effect that C.N.R. interests had acquired the Cape Breton Ry., which extends from Point Tupper to St. Peters, N.S.

Grand Trunk Pacific Ry.—It was reported in London, Eng., recently, that 65% of the recent issue of £2,500,000 5% notes had been taken up by the public, and were being dealt with on the market at a small premium.

Grand Trunk Ry.—A copy of an original counterpart no. 6 of an agreement of conditional sale between Blair & Co., the G.T.R. and the Equitable Trust Co., of New York, as trustees, series C., Nov. 1, 1913, has been deposited with the Secretary of State at Ottawa.

Ha Ha Bay Ry.—See Roberval and Saguenay Ry.

Roberval and Saguenay Ry.—From Jan. 1, the Ha Ha Bay Ry. ceased to exist, its charter and property having been acquired by the Roberval and Saguenay Ry., and its line merged into the larger project. J. E. A. Dubue, is President. (Jan., pg. 22.)

Quebec and Saguenay Ry.—Press reports state that this uncompleted line will shortly be transferred to the Canadian Northern Ry. Sir Rodolphe Forget, the President, recently stated that an official memorandum would shortly be issued in regard to the negotiations for the sale of the line, but did not say anything as to what company was making the purchase, or as to the terms. Sir Wm. Mackenzie, President, C.N.R., was equally reticent.

Temiscouata Ry.—Net earnings for November, \$3,277. Aggregate for five months ended Nov. 30, \$18,372.

White Pass and Yukon Route.—Gross earnings from Jan. 1 to Dec. 7, \$1,089,104, against \$1,115,033 for same period 1912.

The Canadian Northern Ry. is considering the adoption of telephone train dispatching on its Toronto-Sudbury-Port Arthur line.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—Unconfirmed press reports state that the position of Chief Operating Officer, rendered vacant by the death of A. J. Nixon, has been offered to W. H. FARRELL, Terminal Superintendent, G.T.R., Toronto.

Canada Steamship Lines, Ltd.—See details of organization in Marine Department in this issue.

Canadian Northern Ry.—F. A. SHAW, heretofore District Freight Agent, Montreal, has been appointed Division Freight Agent, Lines East of Port Arthur and West of Ottawa, vice F. A. Young, resigned to engage in private business. Office, 68 King St. East, Toronto.

Canadian Pacific Ry.—A. WILLIAMS, heretofore Assistant Superintendent, District 1, Lake Superior Division, Sudbury, Ont., has been appointed Superintendent, District 2, Atlantic Division, vice V. A. Harshaw, transferred. Office, Woodstock, N.B.

V. A. HARSHAW, heretofore Superintendent, District 2, Atlantic Division, Woodstock, N.B., has been appointed Superintendent, District 1, Atlantic Division, vice W. A. Cowan, assigned to other duties. Office, Brownville Jct., Me.

C. SENAY, heretofore agent at Mile End and St. Henry, Que., has been appointed General Agent, Quebec, Que., the position formerly held by J. E. Morazain, before being appointed Assistant Superintendent, there. We are officially advised that no appointment will be made for the present to the position of Assistant Superintendent at Quebec, which was held by J. E. Morazain prior to his appointment as Assistant Superintendent, Montreal Terminals, as announced in our last issue.

T. M. BARRETT, heretofore Assistant Purchasing Agent, Calgary, Alta., has been appointed Chief Commissary Agent, vice A. S. Maynard, resigned to enter private business. Office, Montreal.

A. O. SECORD, heretofore Travelling Freight Agent, Toronto, has been appointed District Freight Agent, Ottawa, Ont., vice H. A. Plow transferred.

L. G. ROGERS, heretofore Chief Dispatcher, Farnham, Que., has been appointed Assistant Superintendent, District 1, Ontario Division, vice W. Tansley, transferred. Office, Havelock.

W. COULTER, until recently Superintendent, District 3, Ontario Division, Toronto, has been appointed Assistant Superintendent, District 1, Ontario Division. Office, Trenton.

L. MULKERN, heretofore District Freight Agent, London, Ont., has been appointed District Freight Agent, Toronto, vice J. H. Griffin, resigned.

W. TANSLEY, heretofore Assistant Superintendent, District 1, Ontario Division, Havelock, has been appointed Assistant Superintendent, District 3, Ontario Division, vice F. G. Martyn, retired. Office, West Toronto.

H. A. PLOW, heretofore District Freight Agent, Ottawa, Ont., has been appointed District Freight Agent, London, Ont., vice L. Mulkern, transferred.

H. B. STEVENS, heretofore Chief Dispatcher, Sudbury, Ont., has been appointed Assistant Superintendent, District 1, Lake Superior Division, vice A. Williams, promoted. Office, Sudbury, Ont.

A. C. McLEOD has been appointed As-

sistant Trainmaster, District 1, Lake Superior Division, Sudbury, Ont.

E. P. BARKER, heretofore dispatcher, has been appointed Chief Dispatcher, District 1, Lake Superior Division, vice H. B. Stevens, promoted. Office, Sudbury, Ont.

D. C. MACDONALD, heretofore Division Freight Agent, Regina, Sask., has been appointed Assistant General Claims Agent, Western Lines, in charge of loss and damage freight claims. Office, Winnipeg.

T. F. MADDEN, heretofore of the company's New York office, has been appointed Travelling Passenger Agent, Steamships Department, Winnipeg.

D. BELL, heretofore clerk, Stores Department, Sutherland, Sask., has been appointed Storekeeper, Broadview, Sask., vice G. O. Jackson, transferred.

G. SANDSTROM, heretofore Roadmaster, Colonsay and Bulyea Subdivisions, Regina, Sask., has been appointed Roadmaster, Regina and Weyburn Subdivisions, vice L. Rimstead, deceased. Office, Regina, Sask.

L. B. COPELAND, heretofore Roadmaster, Regina Subdivision, Sask., has been appointed Roadmaster, Colonsay and Bulyea Subdivisions, vice G. Sandstrom, transferred. Office, Regina, Sask.

J. V. McNAB, heretofore Resident Engineer, Saskatoon, Sask., has been appointed Resident Engineer, Moose Jaw, Sask., vice R. C. Smith.

G. A. DELACHEROIS, heretofore transitman, District 4, Saskatchewan Division, has been appointed Resident Engineer, Districts 3 and 4, Saskatchewan Division, vice J. V. McNab, transferred. Office, Saskatoon.

G. O. JACKSON, heretofore Storekeeper, Broadview, Sask., has been appointed Storekeeper, Swift Current, Sask., vice V. B. Beardmore, resigned.

W. J. WOOD, heretofore foreman of lower floor, stores department, Ogden, Alta., has been appointed Storekeeper at Medicine Hat, Alta., vice A. Clark, transferred to Ogden as foreman of lower floor, stores department.

A. CLARK, heretofore Storekeeper, Medicine Hat, Alta., has been appointed foreman of lower floor, stores department, Ogden, Alta., vice W. J. Wood, transferred to Medicine Hat as Storekeeper.

H. FERGUSON has been appointed Assistant Purchasing Agent, Calgary, Alta., vice T. M. Barrett, promoted.

T. RIORDAN, heretofore Roadmaster, Red Deer Subdivision, Calgary, Alta., has been appointed Roadmaster, Calgary Terminals, vice J. N. Wiley.

D. H. FORD, heretofore Roadmaster, Laggan Subdivision, Calgary, Alta., has been appointed Roadmaster, Red Deer Subdivision, Calgary, Alta., vice T. Riordan, transferred.

A. LARSON, heretofore at Nelson, B.C., has been appointed Roadmaster Laggan Subdivision, Calgary, Alta., vice D. H. Ford, transferred.

H. B. WALKEM, M. Can. Soc. C.E., heretofore Assistant Division Engineer, British Columbia Division, Vancouver, is reported to have been appointed Engineer in Charge of Kootenay and Boundary Districts. Office, Nelson, B.C.

C. J. SIMMS, heretofore Assistant Division Engineer, Saskatchewan Division, Moose Jaw, is reported to have been appointed Assistant Division Engineer, British Columbia Division, vice H. B. Walkem. Office, Vancouver.

A. C. DOUGLAS has been appointed Purchasing Agent, Vancouver, B.C., vice A. J. Dana, retired.

A. G. VEITH has been appointed General

Representative for Austria, with full charge and control of all matters in respect to the company's business in Austria, reporting to the European Manager, London, Eng. Office, Vienna.

ARVID JACOBSEN has been appointed General Agent in Norway, with office at Karl Johangst 1, Christiania.

Grand Trunk Ry.—JOHN MORRIS, heretofore acting Road Foreman of Locomotives, London, Ont., has been appointed Road Foreman of Locomotives, there, vice R. H. Fish, recently appointed Trainmaster.

New York Central Lines.—H. L. INGER-SOLL, heretofore Assistant to Vice President, N.Y.C. & H.R.R., and L.S. & M.S.R., has been appointed Assistant to the President, New York Central Lines, New York, N.Y.

Midland Ry. of Manitoba.—A. CAMPBELL, chief clerk, Freight Department, Winnipeg, is reported to have been appointed Freight Agent there, vice C. H. Booth.

Northern Navigation Co.—See Canada Steamship Lines Organization in Marine Department of this issue.

Reid Newfoundland Co.—A. D. BROWN, heretofore Superintendent of Dry Dock, has been appointed Consulting Engineer. Office, St. John's, Nfld.

Salisbury and Albert Ry.—E. M. SHERWOOD, heretofore Assistant to the Manager, and station master, has been appointed Manager, vice A. Sherwood, resigned. Office, Hillsboro, N.B.

Toronto, Hamilton and Buffalo Ry.—H. T. MALCOLMSON, heretofore Car Accountant, has been appointed Superintendent of Car Service. Office, Hamilton, Ont.

Wabash Rd.—F. A. Delano has resigned as Receiver, leaving E. B. Pryor and W. K. Bixby as sole Receivers.

The Baffin's Bay Trading Co., Ltd., which has been incorporated under the Dominion Companies Act, with an authorized capital of \$100,000 and head office at Toronto, has as its three directors A. W. Scott, of New York, President; W. W. Evans, Vice President, and W. L. Pinkney, Secretary. The two latter are in the Canadian Northern Railway's Legal Department. Mr. Scott has been carrying on explorations for minerals in the Baffin's Bay district for the past two years, and also trading with the Esquimaux. The company will take over his interests and will also probably go into fishing operations. It has two schooners among its equipment.

Safety First on the G.T.R.—At the first meeting of the Safety Committee in Montreal, Jan. 12, it was reported that 24 division, shop and terminal safety committees have been organized with a membership of about 600. During December, these committees corrected about 500 unsafe physical conditions, and cautioned employees in about 500 cases. A number of important recommendations of local committees were dealt with. Since the inauguration of the Safety First movement on the system, it was reported that injuries to employees had been reduced 11.5%, and fatal accidents to employees about 50%, as compared with the same period of 1912.

Proposed New Incline Railway in Hamilton.—The City Engineer submitted to the Hamilton, Ont., City Council, Dec. 29, an estimate for the building and equipment of a new incline railway to the top of Hamilton Mountain at Sherman St. The total cost is put at \$247,200, of which \$130,000 is for cars and machinery, and \$25,000 for a 50 ft. steel span to carry the tracks of the Toronto, Hamilton and Buffalo Ry. across the route.

Kettle Valley Railway Construction. Etc.

The Kettle River Valley Ry. was incorporated by the Dominion Parliament in 1901, to build a railway from the International Boundary Line near Cascade City, B.C., along the valley of the Kettle River to Carson City, with a branch from near Grand Forks for 50 miles up the Kettle River Valley, and another by way of Greenwood to the International Boundary near Midway, B.C. The British Columbia Legislature also granted similar powers, and a charter was obtained in the State of Washington, for the building of a line from Cascade City to Republic, and from Republic by way of the San Port River Valley to Spokane. Under these charters the company built and put in operation in 1902 a line from Grand Forks, B.C., to the International Boundary, 3.91 miles, and from the International Boundary to Republic, Wash., about 15 miles. The building of the lines, both in Canada and in the United States, was not carried on without overcoming a good many difficulties, particularly in connection with the Great Northern Ry., which

Some extensions were subsequently built in Canada, and in 1910 the company had in operation about 40 miles of line in Canada and the United States. In that year an arrangement was made under which the B. C. Government granted subsidies for building the following lines:—From Grand Forks for 30 miles along the valley of the North Fork of the Kettle River; from Midway to Penticton, and from Penticton to Merritt, effecting a junction there with the Nicola, Kamloops and Similkameen Ry., a branch of the C.P.R. Work was started on these lines almost immediately, the act providing that the work done by the Midway and Vernon Ry. should be taken over. The cost of this work between Midway and Rock Creek was ascertained by a commission, and the amount was paid to the creditors of the old company by the Government, out of the sum provided by the subsidy. In 1912 an extension of the line was granted for construction, and an agreement was entered into for further construction, viz.: for a line from 25 miles south of Merritt, along the

and from the Coldwater River to Hope, is 52.3 miles. The lines mentioned in the 1910 agreement are to be completed in 1914, and the Coquihalla line in 1915.

The line as located from Midway to Merritt is 267.8 miles long, and the Coquihalla line from near Merritt to Hope, is 52.3 miles, making a total mileage of 320.1 being constructed under the two agreements. With the exception of the section D. W. E., Osprey Lake to Otter Creek Summit, 65.5 miles, the entire line is under contract, and construction is well advanced. The accompanying plan shows the route being followed from Midway to Merritt, and along the Coldwater River Valley to Hope, with the connecting lines. The V.V. and E. Ry. runs west through Princeton, and is now in operation as far as Coalmount. It is under construction through Tulameen to the point where section G. H. starts, this being the joint section. At Hope the V.V. and E. will connect with its own line now in operation easterly from Vancouver and Port Guichon through New Westminster. We are officially advised that the state of construction at Dec. 31, 1913, showed 254.66 miles under contract, on which 213 miles

Kettle Valley Railway Map, Showing Construction.

about the same time undertook active construction of the Vancouver, Victoria and Eastern Ry. Both lines were, however, built in the section along the boundary from Grand Forks westerly, the V.V. and E. Ry. running across the boundary at different points. The difficulty as to the projected extension southerly from Republic was ultimately settled by the withdrawal of the G.N.R., but the line is as yet only a projected one. In the vicinity of Midway, B.C., another difficulty was encountered in connection with C.P.R. proposals for a line through the same country, and by the commencement of active construction by the Midway and Vernon Ry. After having completed several miles of grading this company ceased work and abandoned its undertaking, and after lengthened negotiations an agreement was reached with the C.P.R., by which future construction was to be done by the K.V.R., the name of which had been changed to the Kettle Valley Ry., to conform with the title under which the lines were operated—the Kettle Valley Lines.

Coldwater River Valley to the Fraser River to Hope, 50 miles, under a guarantee of bonds, and for the building of a bridge, for which \$200,000 was provided, across the Fraser River, so as to enable a connection to be made with the C.P.R. In regard to this 50 miles of line a controversy arose with the V.V. and E. Ry., as to the route to be adopted, and after many surveys had been made and much negotiating, it was arranged that a joint line should be built by the K.V.R., for 39.2 miles, the cost to be equally divided between the two companies, the section to be operated jointly. The agreement provides that no subsidy shall be paid in respect of the line from Midway to Penticton; that the subsidy for the line from Penticton to Merritt shall be \$5,000 a mile, payable in cash or in 3% inscribed stock of the Province at the option of the Government, the mileage guaranteed is not to exceed 150 miles; the subsidy on the line from the Coldwater River to Hope is at the rate of \$10,000 a mile, not to exceed 50 miles. The actual mileage of the located line from Penticton to Merritt is 134 miles,

of grading had been completed, 163.1 miles of track had been laid, and 104.5 miles of ballasting completed. The following statement shows in detail the work done on the several sections, with the names of the contractors:—

Section A to B.—Midway to Hydraulic Summit, 75.6 miles. Grading and bridging completed, track all laid, 67 miles of ballasting completed from Midway. Contractors for grading and bridging, L. M. Rice and Co.

Section B to C.—Hydraulic Summit to Penticton, 58.2 miles. Grading 95% done; bridging 12% done; track laid for eight miles from Hydraulic Summit; no ballasting. Contractors for grading and bridging, Grant Smith and Co.

Section C to D.—Penticton to Osprey Lake, 39 miles. Grading, bridging and track laying completed, ballasting done for 16 miles from Penticton west. Contractors for grading and bridging, L. M. Rice and Co.

Section D to E.—Osprey Lake to Otter Creek Summit, 65.5 miles. Contract not yet let.

Section E to I.—Otter Creek Summit to Merritt, 29.5 miles. Grading, bridging, track laying and ballasting completed. Contractors for all work, McDowell, Gzowski and Co.

Section F. to G.—Coquihalla line, 12.8 miles. Grading and bridging completed, track laid 11 miles, ballasting done eight miles, from F. Contractors for grading and bridging, Twoby Bros.

Section G. to H.—Coquihalla line second contract, 39.5 miles. Grading 8% completed. No other work done. Contractors for grading and bridges, McArthur Bros.

A. McCulloch, Penticton, B.C., is Chief Engineer.

The Dominion Parliament is being asked to ratify the agreement with the Vancouver, Victoria and Eastern Ry., respecting the Coquihalla joint section; to extend the time for the building of the lines authorized by pars. a., b. and c. of sec. 2, chap. 110 of the statutes of 1912, and to authorize the building of an additional branch from near Otter Summit to Aspen Grove mineral district, 30 miles.

The company is making application to the Dominion Parliament for an extension of time for the building of its several lines, for the ratification of the agreement with the Vancouver, Victoria and Eastern Ry. re the construction of the Coquihalla-Hope line, and for the building of some additional lines. (Jan., pg. 21.)

Railway Companies May Refuse Shipments "to Order" at Flag Stations.

D'Arcy Scott, Assistant-Chief-Commissioner, Board of Railway Commissioners, gave the following judgment in Ottawa, Jan. 8.

W. G. McMahon, of Winnipeg, has brought to the Board's attention the practice of railway companies of refusing to take shipments, either c. l., or l. c. l. to flag stations, when consigned "to order." As a railway company has no agent at a flag station to guard the property pending proof of ownership by the production and surrender of the endorsed bill of lading, it is quite justified in refusing to accept shipments to flag stations when consigned "to order." This question was set down for the sittings at Ottawa on Oct. 23, 1913, for discussion with the railway companies; the Canadian Pacific, Grand Trunk, Canadian Northern, and Michigan Central, the Canadian Freight Association being notified. After hearing what was submitted by the C.N.R. and the G.T.P.R.—the other parties notified not appearing—the matter was reserved.

It would be convenient in many cases, to both shippers and consignees, if some arrangement could be made to provide for shipments consigned "to order" being sent to flag stations. They cannot be sent direct to flag stations; but such shipments might be consigned to the nearest regular station short of the flag station and the consignee notified, his address being given in the shipping order by the shipper for this purpose. He could then send the endorsed bill of lading and the freight charges, if any, to the company's agent, or produce them in person, and the goods could then be sent on from the regular station to the flag station. For the re-consignment from the agency station to the flag station, in the case of l. c. l. shipments, it would be fair to permit the railway company to collect the local rate. It must be remembered that the railway company would have to perform a special service, and it should be paid a fair amount for it. The goods upon reaching the regular station, in the case of l. c. l., would have to be unloaded into the freight house and left there until the consignee

sent, or called with, the endorsed bill of lading. The goods would have to be then re-loaded and again, unloaded at the flag station. I think in such cases, the local rate from the billing point on to the flag station would be fair remuneration to the railway company.

In the case of carloads, the unloading and re-loading mentioned in the case of l. c. l. would, of course, not have to be done. The car would be put on the siding and left there, and the consignee notified. Then, when he had done what was necessary to release the car, it would be picked up by a way freight and left at the flag station. It seems to me that for this service, the rate should be the through rate to the flag station, plus a \$3 additional charge for the extra terminal service and for rebilling. This is the general charge which the Board approved of for a somewhat similar service by order 6901, April 16, 1909, and it seems to me it would be fair remuneration to the railway companies for the additional service they would have to render in the present case. A detention allowance of 48 hours from the time of the dispatch of the notice of the arrival of the car by the agent to the consignee, should be sufficient for the surrender of the endorsed bill of lading at the agency station, after which the carrier will be entitled to charge and collect the authorized demurrage toll for each additional 24 hours (or part thereof) of detention, over and above the \$3 terminal service charge.

The following general order 118 was issued Jan. 15:—

1. That railway companies accept freight consigned "to order," for delivery at flag stations, provided that the shipper consign the freight to the regular station of the delivering carrier on the direct route, nearest to, but short of, the flag station where delivery is desired; That said shipper show on his shipping order the full address of the person to be notified of the arrival of the freight at the regular station, and the name of the flag station at which delivery is desired.

That the said addressee be given 48 hours, exclusive of legal holidays, from the time of the dispatch to him of the arrival notice, within which to give the agent in whose care the goods are held the endorsed bill of lading and directions for re-shipment to the flag station, lawful demurrage or warehouse storage, as the case may be, to be chargeable after the lapse of the said time allowance for any further delay in furnishing the bill of lading and directions.

That the additional charge for the further carriage from the said regular station to the flag station be the lawful local rate between the said stations in the case of less than carloads, and \$3 a car and the balance (if any) of the through rate from the original point of shipment, in the case of carloads.

Railway Construction in Progress.

It is estimated that during 1913 the various Canadian railways had under construction in one stage or another about 6,500 miles of new lines. Of this, about 2,000 miles was reported to have been placed in operation by June 30, the end of the statistical year, and since that date a considerable further mileage, probably another 500 miles, has been handed over to the operating department. This leaves about 4,000 miles of line actually under contract and in process of construction from the grading stage to the line on which track has been laid and the finishing up processes in progress. It has been estimated that at the end of the last construction season, the Canadian Northern Ry. had in hand over 1,500 miles

of lines, the C.P.R. about 1,000 miles, the Grand Trunk Pacific Ry. about 1,000 miles, and the Dominion Government line to Hudson Bay, about 500 miles, making a total of about 4,000 miles of new lines actually in process of construction.

In addition to the work in hand, the C.N.R. and the G. T. Pacific Ry. have in contemplation the construction of a considerable mileage of new lines in the West. Just where these lines will be, and what mileage will be put under contract during this year, has not yet been decided. This matter rests largely with the Governments of Saskatchewan and Alberta, as these two companies are under contract to build large mileages in both provinces under Government guarantee. If it were possible to finance all the construction asked for in these provinces at present, well on to 5,000 miles of new lines would be at once put under contract. The C.P.R. expenditures for the current year are almost entirely confined, so far as the western provinces are concerned, to the completion of track laying on the mileages of grading completed, and upon further stretches of second track work. Any new work to be started this year will be decided upon later. On the eastern lines the same policy is being pursued, the only construction at present contemplated being a further stretch of second track work west of Guelph Jct., and further stretches of second track between Sudbury and Port Arthur. The actual mileages of this work have not yet been settled.

Outside these three lines, the future new construction programmes are not arranged. The opening of the next construction season will see put in hand the Alberta and Great Waterways Ry., 350 miles, for which the J. D. McArthur Co. has the contract; and the remaining section of the Pacific Great Eastern Ry. in B.C., for which Foley, Welch and Stewart hold the charter in conjunction with G. T. P. Ry. interests. There is also the final contract to be let on the Kettle Valley Line, about 50 miles.

In Eastern Canada, the most important work under construction is the Canadian Northern Ontario Ry. line from Montreal to Port Arthur. Tracklaying has been completed between Port Arthur and Ruel, and the section of the line from Ruel to Capreol has been in operation for some time. Track has been laid altogether on 155 miles from Ottawa towards Capreol, and on practically all the Montreal-Hawkesbury-Ottawa section. The total length of this line, for which the Dominion Parliament voted a guarantee of bonds and other assistance, is 1,050 miles, of which the only portion on which track has not been laid is the 150 mile section between the present track end northwesterly from Ottawa and Capreol.

The C.P.R. has under construction considerable work between Romford Jct. and Port Arthur, Ont., in the way of diversions, lengthened sidings, etc., with a view of completing a second track.

Outside these works and the finishing up of the National Transcontinental Railway, there is, so far as we are advised, but little new construction in sight. Including the Nelson-Derby Jct. diversion, and the St. Romuald-Chaudiere second track on the Intercolonial, and a three mile revision on the Temiskaming and Northern Ontario Ry., there are less than 100 miles of new line under contract; about a similar mileage under survey, and about 700 miles of new lines projected. There are, in addition, several lines which have completed surveys for considerable mileages, such as the Canada Gulf and Terminal Ry., the Quebec and Saguenay Ry., the Joliette and Manuan Colonization Ry., and the Central Ry. of Canada, and which have done some construction, but which at present are marking time.

Cedar Crib and Trestle Construction on the Ruskin-Stave Falls Line in B.C.

An example of the extent to which round timber can sometimes be used in the construction of railway spurs of temporary lines is given in the recently completed extension of the Ruskin-Stave Falls line in British Columbia. About 230,000 ft. b. m. of hewed and round timber were used in crib and trestle work on this extension, which is 3,300 ft. long and cost about \$20,000. It was built

The extension of the Ruskin-Stave Falls line is being made by day labor by the Western Canada Power Co. under the direction of R. F. Hayward, Chief Engineer, and the personal supervision of J. F. Caham, Construction Engineer.—Engineering Record.

Canadian Railway and Marine World is indebted to Mr. Caham for the photographs from which the two illustrations above referred to were made. We are also indebted to him for the photograph showing a derrick which he had rigged up, put on a flat car and used for excavation of the

that the C.P.R. has had a valuation made of its physical assets, and in that connection a number of figures were given which are more or less inaccurate, and certainly misleading. The item may be described as the invention of an irresponsible writer, who has, presumably, abstracted figures from the company's annual report without due knowledge of their proper significance. No valuation as reported has been made.

Compound vs. Simple Locomotives.—Comparative tests on two 4 cylinder Pacific locomotives on the Paris, Lyons and Medi-

Cedar Crib and Trestle Construction on Ruskin-Stave Falls Line in British Columbia.

for hauling cement and other materials to the top of the present intake dam of the Western Canada Power Co., where extensive alterations are contemplated.

The line follows along a very steep side-hill in loose, sliding earth and required a large amount of retaining wall construction. The heavy timber growth was, therefore, utilized to good advantage, and cribs and trestles were built from cedar timber cut on the right-of-way or adjacent thereto. The cribs were built up as grading progressed, and in some of the longer and steeper slopes it was found convenient to terrace them in one or more sections. Several trestles were required at ravine crossings; and in order to give greater stability to these structures, timber crib foundations were built wherever the footings came on sloping ground. The road is of standard gauge and was built on a uniform grade of 5%, compensated, with a maximum curvature of 15 deg.

A typical trestle on crib foundation is shown in one of the accompanying illustrations. The timber in this trestle totals 50,000 ft. b. m. Including engineering supervision, the structure cost \$975.75. The amount of timber used in this trestle, if bought from the mill as dimension lumber at the regular rate of \$20 per 1,000 ft. b. m. would have come to \$1,180, while a probable additional cost of \$650 for erecting would have brought the total up to about twice the amount actually expended on the structure.

The timber crib shown in the other illustration contains 41,000 ft. b. m. and cost in place \$970, or about \$24 per 1,000 ft. b. m. This cost is considered somewhat higher than the average on the work, due to the very soft earth encountered at this point. In making a fill near the lower end of the line a rough timber trestle 600 ft. long with an average height of 28 ft. and a maximum height of 42 ft. was built at a cost of \$2 a foot, including ties and 56 lb. rails. This structure was only used until the fill was graded for permanent roadbed, and its heaviest loading was a 12-ton derrick engine with three 6-ton loaded dump cars.

penstocks and foundation of the additions to the power house. The derrick, of about 12 tons capacity, has, Mr. Caham says, proved cheap and efficient and of the utmost service, both on excavation and for handling stop logs, structural steel, etc.

terranean Ry. (France), one of which was a simple and the other a compound, working under exactly similar conditions, are reported to have shown that the compound will haul a 16% greater load, reach a higher speed and accelerate more rapidly. The

Derrick on Flat Car, Ruskin-Stave Falls Line

Michigan Central Rd. Assessment.—The difference between the Windsor, Ont., City Council and the Michigan Central Rd., respecting the assessment of the Detroit River Tunnel within the city limits, has been settled. The agreement provides for a fixed assessment of \$1,000,000 for 15 years, and the company's lands in the city are to be assessed at \$150,000 for a similar period.

C. P. R. Physical Assets.—The daily press has recently given publicity to a statement

saving in coal and water was respectively 20% and 13%. The tests extended over 4 years.

After the finding of the Board of Railway Commissioners, in the matter of Western railway freight rates, has been issued, the enquiry into telegraph rates will be taken in hand, when the various telegraph companies will be requested to present replies to the Government counsels' factum in the matter.

Electric Railway Department

British Columbia Electric Railway Co.'s Annual Report.

Following are extracts from the report for the year ended June 30, 1913, presented at the annual meeting in London, Eng., Dec. 19:—

The year covered by the report was one of difficulty and disappointment, mainly owing to the continued rise in the cost of operation and in the cost of all descriptions of supplies. Increased working expenses absorbed practically the whole of the large increase in gross earnings, in spite of continuous effort on the part of the management to economize. One of the causes of the increase in expenses was the protracted and stubborn strike in the coal industry which existed throughout the year, resulting in a considerable rise in the cost of coal, and necessitating the purchasing of supplies in the United States and in Australia. The expensive working conditions still continue and are affecting the current year's earnings. Moreover, the gross receipts of the railway have fallen off owing to the depression which is prevalent in British Columbia. The directors have undiminished faith in the future of British Columbia, and consequently of the company, and meanwhile have confidence that, by a small increase recently made in fares and by rigid economy, they will be able to maintain the present dividend basis.

For the 12 months to June 30, 1913, the gross receipts show an increase of \$1,035,869, or over 17%, and the net earnings, including income from investments and subsidiary companies, and after charging renewals, show an increase of \$77,552, or 4%, over the preceding year, but the surplus over the amount required to pay interest and dividends has failed from £67,670 to £28,242. The money actually expended up to June 30, 1913, amounted to \$45,168,312, and the amount paid out in interest and dividends for the year amounted to \$1,888,139, equal to 4.18% on the entire investment. The following charges have been made against the revenue account of the year, viz.:—

Provision for renewals maintenance (from which £40,102 16s. 8d. has been deducted for adjustments and expenditure on renewals during year).....	£140,653 13 3
Amount added to capital amortization.....	2,769 17 7
	<u>£143,423 10 10</u>

Net profit for year, after making above deductions.....	£381,424 12 2
Add balance brought forward from last year.....	7,731 19 7
	<u>£389,156 11 9</u>

Interest on debentures and debenture stock to June 30, 1913.....	£125,182 3 2
Dividends already paid—	
On 5% cumulative perpetual preference stock for year to June 30, 1913.....	60,000 0 0
On preferred ordinary stock for year to June 30, 1913.....	72,000 0 0
On deferred ordinary stock for six months to Dec. 31, 1912.....	48,000 0 0
	<u>305,182 3 2</u>

Leaving available for further distribution and reserve.....	83,974 8 7
From this the directors have recommended the payment of a dividend on the deferred ordinary stock at the rate of 8% per annum for the six months ended June 30, 1913, making 8% for the year.....	£48,000 0 0
To transfer to reserve fund.....	26,455 9 3
	<u>74,455 9 3</u>

To carry forward to next account.....	£9,518 19 4
---------------------------------------	-------------

There has been added to the reserve fund £67,544 10s. 9d., representing the premiums by which the price paid into the treasury exceeded the par value of £1,320,000 new share capital issued during the year, less expenses thereon, and after deducting the expenses and discount on an issue of £750,000 4¼% debenture stock issued in Jan., 1913. After the transfer now recommended by the directors as above, the reserve fund will amount to £553,000.

The growth of the company's enterprise is indicated by the following figures:— Miles of single track in operation—1909, 97.74; 1913, 357.82. Total cars of all classes—1909, 248; 1913, 873. The number of passengers carried during the year was 71,973,822, an increase for the year of 9,819,656.

In the monthly statements of earnings issued since July 1, 1913, the actual profits of the subsidiary companies have been included in the total income. Owing to the practical completion of the hydro electric installation at Lake Buntzen, it is now possible to ascertain with accuracy the cost of power. In the past the price charged to the railway for power by the Vancouver Power Co. had to be fixed somewhat arbitrarily, owing to the continually varying amount of the capital invested in the hydro electric installation. The railway has benefited at the expense of the power company, as the price charged was too low. This accounts to a large extent for the apparently unsatisfactory yield obtained by the company in the past from its investment in its subsidiaries.

In June last two of the directors, Messrs. Brown and Harvey, visited British Columbia, and during a stay of nearly three months thoroughly investigated existing conditions and future prospects. They report very quiet conditions of trade in the province, and a noticeable reaction from the progressive prosperity, which has been so marked a feature of the past ten years. They believe that the existing depression is almost entirely due to the prevailing stringent monetary conditions and that it will be dispelled by the return of confidence in Canadian undertakings and in the stability of the market for Canadian securities, resulting from the continuous adoption of careful methods of finance.

The dam and other works at Lake Coquitlam, which have been under construction for three years, were completed in July last. The satisfactory construction of these works reflects the highest credit on G. R. G. Conway, the Chief Engineer, and on his assistants, and the directors are glad to take this opportunity of publicly acknowledging their valuable services. The completion of this dam marks an important epoch in the company's history, providing an available reserve of over 57,000,000 k.w. h. of electrical energy. With the power secured from the Western Canada Power Co., the company is now placed in an exceedingly strong position in this respect. The new power house at Lake Buntzen has been completed, and the first of the three additional units to be installed therein is now in operation. The erection of the second and third units is being considerably delayed, owing to the difficulty of obtaining deliveries from the manufacturers, but it is anticipated that these units will be in op-

eration during the early part of 1914. A satisfactory contract has been entered into with the Western Canada Power Co., under which the company agrees to purchase a gradually increasing amount of power during the next 20 years. The extension of the Jordan River hydro electric power installation has been proceeded with during the year. To secure the necessary water storage for supply to the additional units a permanent reinforced concrete dam has been completed. By the completion of this dam the total maximum available water storage is increased to 927,900,000 cu. ft., equivalent to a reserve of approximately 14,500,000 k.w.h. of electrical energy. The electric plant at Jordan River has at present a capacity of 12,000 h.p. A third unit is in course of installation, bringing up the capacity to a total of 25,000 h.p. which is required to meet the demand in the City of Victoria and the surrounding districts. During the year the installation of the auxiliary steam plant, which at the date of the last report was under construction at Brentwood Bay, 12 miles from Victoria, has been completed and has a present capacity of 6,000 h.p. The plant has been designed on the most modern lines, and is held in reserve to meet the possible emergency of a breakdown in the company's other power plants on Vancouver Island.

In June last the new Saanich suburban line was formally opened for traffic. The line, approximately 23 miles long, runs as nearly as may be through the centre of the Saanich Peninsula, and opens a very fertile tract of country hitherto without satisfactory connection with the City of Victoria.

The directors again have pleasure in expressing their appreciation of the loyal and satisfactory services rendered by the management and staff in British Columbia.

The following capital account expenditures were made during the year:—

Rolling stock	\$1,068,984.16
Permanent and double tracking and sundry improvements	556,479.97
Track extensions	781,235.89
Lighting extensions	350,188.42
Power extensions	146,008.58
Steam plant	72,614.06
Lands and buildings	1,097,312.32
Electrical machinery	308,944.71
Extending light and power system	330,711.18
North Vancouver—rolling stock, meters, transformers, and initial installations..	30,864.98
Sundries	144,990.54
Transmission lines and railway feeders ..	134,139.10

\$5,022,413.91

Montreal Tramways Company's Service.

The M.T. Co., it is reported, has now about 200 more cars in service than it had at the same time last year. J. E. Hutcheson, General Manager, is reported to have stated that additional cars are being received at the rate of six a week. Special attention is being paid to the matter of overcrowding of the cars, and it is claimed that this will be considerably minimized by the substitution of new cars for a number of the older ones at present in service. The new cars have accommodation for 44 passengers, against 28 in the older ones.

All the cars are being repainted, green having been adopted as the standard color for city cars, and yellow for the suburban ones. On the new cars, signs will indicate both the destination and route, but it is stated that it is not likely that this method will be adopted on the other cars at present.

Prepayment Trailer Cars for Hull Electric Company.

Four prepayment trailer cars have been ordered by the Hull Electric Co. for service on its interurban line between Ottawa, Ont., and Hull and Aylmer, Que., to be delivered in March, to meet the spring and summer traffic. They will be of the single end type, somewhat similar to the trailer recently ordered by the Montreal Tramways Co. for the heavy service on its St. Catherines St. line. The general dimensions are as follows:—

Length over bulkheads 44 ft.
Length over bumpers 44 ft.
Length over body 33 ft.
Width of body over sheeting 8 ft. 6 ins.
Width of body inside 7 ft. 8 ins.
Height of body from bottom of side sills 9 ins.
Side posts, centre to centre 30 1/2 ins.
Length front vestibule 7 ft.
Length rear vestibule 7 ft.
Width of aisle 22 ins.
Length of seats 30 ins.
Seating capacity 54

The underframe will be of a composite wood and steel construction, with the sill running in one piece through the car from bumper to bumper. The cross sills will be of oak mortised and tenoned into the longitudinal sills, the whole being tied together transversely with 5/8 in. steel tie rods, with a thread and nut on each end. The centre of the frame will be supported by two

tically the same design and general dimensions as the motor cars by which they will be hauled, so that together they will form a neat working unit.

The Ontario West Shore Railway Muddle.

The Ontario Railway and Municipal Board has continued its enquiry into the methods employed in the promotion and construction, and subsequent abandonment of the Ontario West Shore Ry., a portion of which was built between Goderich and Kincardine. Canadian Railway and Marine World has already published details of what has been done in regard to construction, the bond guarantees of certain local municipalities, and the report of the Engineer of the Ontario Railway and Municipal Board on the present state of the road. The municipalities and the amounts of bonds guaranteed, are as follows:—Goderich, \$150,000; Kincardine, \$50,000; Ashfield Tp., \$125,000; Huron Tp., \$75,000. The total amount of bonds issued is \$600,000, the guaranteed portion of the issue realizing \$385,000. This was deposited with a trust company and paid out upon certificates of the engineer in charge of construction. The construction showed 16 miles of rails laid and 6 miles graded, as far as Amberley, and rails lying on the road from

\$385,000 had been spent on the partial construction of the road, and demanded an explanation of the matter. This, Mr. Moyes stated he would supply, but that certain books and papers, which he claimed to have handed to the company's Solicitor, were missing.

A development of this point took place a few days later, when a search warrant was applied for on behalf of J. W. Moyes, to search certain premises, when a trunk and a parcel, said to contain the missing papers, were recovered from the house named in the warrant, but no reason as to why they were being held, how they came into the person's possession, or what they were, has been given. The trunk and parcel were subsequently produced before the Board. At the resumed hearing a doctor's certificate was handed in, stating that Mr. Moyes was for the time, mentally and physically unfit to attend, or to prepare the statement of the expenditure, as promised. The Chairman again pointed out the seriousness of the matter, and how necessary it was that Mr. Moyes should clear his position. After some discussion it was decided that the trunk and parcel, above mentioned, would be opened in private, and all papers therein relating to private affairs taken out and handed to Mr. Moyes, and all papers pertaining to the Ontario West Shore Ry. would be retained by the Board, and dealt with later. At the Board's sitting, Jan. 21,

Prepayment Trailer Car for Hull Electric Co.

needle beams, suspended on two 1 1/2 in. steel truss rods. The flooring will be of hard pine, laid in a double thickness, with heavy builders' tarred paper between. The bumpers will be of 6 in. heavy steel channels, rigidly secured to the ends of the main sills with angle plates. The bolsters will be of the standard half diamond type.

The upper body construction will be of the standard interurban car type, with monitor roof and lifting sashes in the sides. The interior finish will be in natural color cherry, excepting the ceilings, which will be of asbestos board, painted. The seats will be of a standard type, covered with rattan, and non-reversible. The window curtains will be of pantasote material, with all steel roller. All interior fittings, such as grab handles, door locks, sash lifts, etc., will be in solid bronze, of a modern design, and polished. The entrance and exit doors will be equipped with automatic folding doors, controlled by the conductor from his position.

The car will be equipped with trailer truck, which have been ordered in the United States. Westinghouse schedule air brakes, Westinghouse combination car and air couplers, hand brakes, Consolidated Car Heating Co.'s electric heaters, interior electric light fixtures, standard M.C.B. and lamp steps, and brass railings for the prepayment arrangement.

The cars, which are being manufactured by the Ottawa Car Mfg. Co., will be of prac-

Amberley to about 4 miles short of Kincardine. The Board's Engineer, H. W. Middlemist, after careful examination of the work, reported that work to the value of about \$260,000 at the outside had been done, and that the road in its present condition is absolutely useless. The unguaranteed bonds, amounting to \$200,000, are it is stated, held by a bank against an advance of \$60,000 to the promoter.

J. W. Moyes, the promoter of the railway company, and also of the Huron Construction Co., which had the building contract, blamed the Ontario Government hydro-electric power scheme for the collapse of the railway project, as it had been the company's intention to develop the water power of the Maitland River, for the purpose of running the railway, and for the local supply of light and power. He stated that the Government scheme cut off this possibility, and without the extra revenue thus anticipated, the railway could not pay. He also stated that he ceased to be President of the railway company in June, 1911, and at that time handed all the papers and minute books to the company's Solicitor, S. C. Smoke, (since deceased). At a former sitting of the Board, the engineer in charge of construction had stated that the cheques for \$385,000 for work done, were signed on Mr. Moyes' instructions.

D. M. McIntyre, Chairman of the Board, commented very strongly on Mr. Moyes' failure to furnish information as to how

it was announced that \$180,000 of the unguaranteed bonds were deposited with a bank, July 23, 1908, and of these \$165,000 were delivered by the bank to J. W. Moyes, Nov. 10, 1913, the balance remaining in the bank. The balance of the \$200,000 of unguaranteed bonds are held by a trust company as security for an account, and instructions have been given that they are not to be disposed of pending the result of the present enquiry. An accountant is being engaged to examine the books of the railway and construction companies.

Toronto Civic Car Lines Results.

Following are the number of passengers carried and the receipts of the Toronto Civic Car Lines in 1913:—

	Passengers.	Receipts.
St. Clair Ave., opened Aug. 25	1,150,426	\$10,672.29
Danforth Ave., opened Oct. 1	517,024	8,841.11
Gerard St., operating all year	1,697,268	29,923.28
Total	3,364,718	\$49,436.68

Omnibusses in Winnipeg.—A draft bylaw embodying an agreement made between the City Council and the Winnipeg Motor Transit or Bus Co., has been prepared, and is under consideration. It provides for a five year franchise, with a possible extension for another five years, the council to have the right to take over the service at the end of the five year period.

The Street Railway Situation in Toronto.

Although the question of the proposed purchase of the Toronto Ry., with its allied company, the Toronto Electric Light Co., was not before the ratepayers at the municipal elections on Jan. 1, the voting was doubtless considerably affected thereby. The Mayor, H. C. Hocken, who was chiefly responsible for bringing the matter to the fore, and who conducted, on behalf of the city, the negotiations with the President of the company regarding the proposed purchase, was re-elected. Under ordinary circumstances Mr. Hocken would either have secured his second term by acclamation, or by a very large majority, but as a result of strong opposition to the proposed purchase his majority was only 4,577 out of a total of 43,095 votes polled. Alderman McBrien, who entered the field only a few days before the nominations, as a straight anti purchase candidate, polled 16,641 votes and Alderman Burgess, who also opposed the purchase, got 3,725 votes, the other 1,511 going to a Socialist candidate. Of the four members of the Board of Control elected, two announced themselves in favor of and two against, the purchase, while of the aldermen, a majority were in favor of the purchase during their candidature. In view of the popular vote, however, some of them may have changed their minds.

It is probable that at the next session of the Ontario Legislature, application will be made by the city, for authority to appoint a commission to be placed in charge of the civic transportation problems. The idea is to appoint to the commission, three well known local men, without salary, for a term of four years, but at the commencement, one would be appointed for two years, one for three years and one for four years. No member of the city council, nor any civic official would be eligible for appointment, and on the expiry of the term for which any member was appointed, he would be eligible for reappointment.

W. P. Gundy, President of the Toronto Board of Trade, in his address to the members, Jan. 19, stated that he was opposed to the proposed purchase on the terms proposed, and gave details of what might be termed an alternative scheme, which he believed would clear up the whole matter and avoid numerous complications which he feared would result if the present proposals were carried out. He said:—

"I believe that in order to obtain a complete clearing up of the whole situation, and a proper solution of the transportation difficulties, the Province of Ontario and the City of Toronto should unite on terms to be agreed upon between them in purchasing the stock of the Toronto Ry. Co. (if at a satisfactory price, and not otherwise) and thus secure control not only of the Toronto and York Radial Ry., consisting of the Metropolitan line, from North Toronto to Lake Simcoe; the Scarboro line, east from Woodbine along Kingston road; and the Mimico line, from Sunnyside to Port Credit. The Toronto Ry. Co. does not own the Toronto Suburban Ry., which holds the franchise in Ward 7, and operates lines of railway along Davenport Road, also from West Toronto to Lambton and from West Toronto to Weston. This Toronto Suburban Ry. is, however, owned by the Mackenzie interests, and it would be essential to include this line also. Under such a plan as I have outlined the Ontario Hydro Electric Commission, representing the Ontario Government, would retain for its own use the Electrical Development Co. and the transmission lines of the Toronto and Niagara Power Co., including the right of way between Toronto and Niagara Falls, and the radial railways, and hand over to the City

of Toronto all the property within the city. This, I believe, would be a complete clearing up of the whole situation in the City and Province, as it would avoid giving running rights for radial lines over the city streets to Sir William Mackenzie, which is one of the serious objections to the plan now before the people."

Reference to Canadian Railway and Marine World for May, 1913, pg. 238, will give the list of the companies which would be involved in such a scheme, with their capital stock, bond issues and interlocking connection with each other, with the exception of the Toronto Suburban Ry. Co., which although controlled by the Mackenzie interests, is a separate organization.

The draft agreement which the City Council instructed the Corporation Counsel to draw up recently, embodying the terms of the proposed purchase, which were the outcome of the recent negotiations, is reported to have been prepared and to be ready for submission to the city council.

The President of the Board of Trade, in his remarks quoted above, stated that the acquirement of the whole series of companies, would, among other things, "avoid giving running rights for radial lines over city streets, which is one of the serious objections to the plan now before the people." The original draft agreement, on which the negotiations between the Mayor and Sir William Mackenzie were based, provided, on this point, for the taking over by the city of such of the radial lines as were within the present city limits, the double tracking of such lines by the city, and the granting of running rights to the radial companies concerned, over such lines, the city to lay a third rail, if it desired to operate over these lines in connection with the city lines. If, therefore, the final draft agreement follows on the lines of the original one, there is no question of the radial lines operating over city streets other than at present. In fact they could not do so if it was so desired, unless the whole city system were rebuilt to standard gauge. Such a clause however, if included in the final agreement, would bind the city to retain the present radial lines within the city limits, at standard gauge, and also any other portions of the radial lines as may be included in the city by any future extension of boundaries. Thus, city cars could only operate over the acquired radial lines by the addition of a third rail or some other device calculated to overcome the difference of gauge.

The Toronto Rapid Transit Association, the formation of which was announced in our last issue, having for its alleged main object, the completion of a complete provincial system of rural and interurban railways, etc., has closed its office in Toronto, and, apparently, ceased to exist.

An Alleged Fake Accident Case in London.

In Canadian Railway and Marine World for January, reference was made to an action by Charles Nickles against the London St. Ry. and the G.T.R., for damages for injuries alleged to have been sustained in a collision between a street car and a freight train at the interswitching crossing on Dundas St. East, London, July 24, 1913. For the defence, it was claimed that Nickles was not in the collision at all, but had been driving in the country with another person, and on returning, was held up by the freight train, at the crossing, and when the collision occurred he jumped from the buggy and disappeared in the dark, and was later found on the other side of the crossing and near the damaged street car.

The case came on at the Assizes in Lon-

don, Ont., Jan. 16. After hearing a number of witnesses for the defence, including Nickles' companion in the buggy, all of which was corroborative, and altogether opposed to the story as told by the plaintiff, who called no witnesses, the Chief Justice dismissed the case with costs, remarking that while there were several features of the case which were hard to explain, the uncorroborated evidence of the plaintiff could not be accepted against the preponderance of evidence adduced by the defence.

Personal Paragraphs.

H. WARNER, Chief Engineer, Edmonton Interurban Ry., Edmonton, Alta., has resigned.

J. H. McGHIE, K.C., of Toronto, has been appointed Solicitor to the Ontario Railway and Municipal Board. This is a new position, and has been rendered necessary by the increase of legal work in the preparation of cases and papers.

J. F. H. WYSE, who for some time acted as engineer for the Ontario Railways and Municipal Board in matters affecting electric railways, has been appointed organizer and engineer of the Ontario Safety League, with office in Toronto.

A press report from Brantford, Ont., Jan. 18, stated that F. NICHOLLS, President, Canadian General Electric Co., Toronto, will be appointed receiver of the Grand Valley Ry., for three years, after which the city will be given the option of taking over the road. No confirmation of this can be obtained, but in any case, it is probably intended to refer to the Brantford St. Ry. only, which is a part of the G.V.R., and not to the entire system.

H. DOUGHTY, Superintendent, Regina Municipal Ry., gave an address before the Engineering Society, Regina, Sask., recently, on the welfare of employees. In this connection he mentioned the recreation room provided by the city for the railway employees, and recommended the adoption of the merit system, and the rule that no man should be discharged without a thorough investigation of the charges against him. As an instance of employees' efficiency he mentioned that although car mileage of 691,281 had been made, the city had only paid \$84 in damages.

A. B. CORYELL, whose appointment as Superintendent Electricity and Tramways, Moncton Tramways, Electricity and Gas Co., Moncton, N.B., was announced in our last issue, was born at Lansing, Mich., Feb. 13, 1865, and entered transportation service in 1901, prior to which he had several important positions with light and power companies in the U.S. From 1901 to 1902 he was General Superintendent and Purchasing Agent, Meridian Ry. Light and Power Co., Meridian, Mo.; 1902 to 1903, Superintendent, Master Mechanic and Purchasing Agent, Belt Ry., Shreveport, La.; 1903 to 1904, Assistant Superintendent and Electrical Engineer, Albany Electric Light and Water Plant, Albany, Ga.; 1904 to 1909, General Manager, Purchasing Agent and Chief Engineer, Huntsville Ry. Light and Power Co., Huntsville, Ala.; 1909 to 1911, General Manager, Chief Engineer and Purchasing Agent, Dayton Construction Co., Greenville, Tex.; 1911 to 1913, General Superintendent, Chief Engineer and Purchasing Agent, Southeastern Construction Co., Waycross, Ga. During the time he spent in Greenville and Waycross he built street railways there, putting both in operation, and managing them for some months. He also built portions of the street railway systems in Huntsville and Meridian.

Electric Railway Track Laid in Canada in 1913.

Canadian Railway and Marine World for January contained particulars of new track laid on electric railways in Canada in 1913 amounting to 164.115 miles, compiled from information supplied by railway companies, in response to the annual circular sent from this office, a few of the figures being estimated where returns had not been sent in. Since then replies have been received from several of the lines which had not previously reported, so that revised figures are given below, showing that 204.19 miles of new line were laid, against 106.56 miles in 1912.

Total		204.19

The London St. Ry. laid 0.70 miles of second track; the Saskatoon Municipal Ry. laid about five miles of second track on existing lines, and the Galv. Preston and Jlespeler Ry. laid some sidings. The Toronto Suburban Ry. has about 25 miles of its extension from Lambton to Guelph graded and ready for tracklaying, and the Toronto Eastern Ry. has another six miles about ready for tracklaying.

The Electric Railway Journal, New York, in its issue of Jan. 3, only credits Canada with 147.86 miles of new track laid in 1913, which is manifestly considerably under the mark.

Projected Hydro Electric Railway Lines in Ontario.

Specifications are being drawn up by the Ontario Hydro Electric Power Commission's engineer for the electrification of the London and Port Stanley Ry., under instructions from the London and Port Stanley Ry. Commission. The specifications are being based on the report on the cost, etc., of electrifying this city owned line, made by the Ontario Hydro Electric Power Commission's engineer, working in conjunction with S. B. Storer, consulting engineer, Syracuse, N.Y., and which was given in detail in Canadian Railway and Marine World for December, 1912.

At the request of the people of Huron County, the engineers of the Ontario Hydro Electric Power Commission have completed surveys on 166 miles of line in that county. These surveys have been made with the idea of connecting with London, St. Mary's, Stratford and Sarnia. Most of the towns in the county are included in the survey, which covers the following places: Goderich, Bayfield, Dashwood, Grand Bend, Crediton, Exeter, Hensall, Seaforth, Brussels, Wroxeter, Winham, Dunganon, Benniller, Clinton and Walton. The surveys are now awaiting the action of the Commission.

Applications have been received from practically all the municipalities in Lambton County, and from the municipalities in the district between Guelph and Georgian Bay. In the former instance, the Commission is requested to report on a system of railways, connecting Chatham with the country to the north. In the latter case, similar information is desired for a line connecting Guelph with some point on Georgian Bay between Owen Sound and Collingwood. Surveys on these lines will be commenced immediately.

A press report from London says that a survey is being made of a line between that city and St. Mary's and Stratford. It also says that seven projected routes have been surveyed for the main line from London to Windsor, and are awaiting final selection. The report also states that practically all the property owners along the line have agreed to give the land necessary for the right of way. This scheme is said to be to join the London and Port Stanley Ry. line 9 miles south of London, and from that point, by way of Glencoe and Chatham, the distance to Windsor is 104 miles.

At a meeting of the Berlin City Council, Jan. 19, it was decided to invite neighboring municipalities to join in a request to the Commission to have a report prepared on the cost of an electric railway from Berlin to Woodstock, via New Dundee, Plattsville and Tavistock. It is also proposed to discuss the question of having township electric lines built in Waterloo County.

We are officially advised that the press reports that a draft of the agreement under which the Ontario Hydro Electric Power Commission proposes to build and operate the projected electric railway between Toronto, Port Perry and Uxbridge, has been submitted to the municipalities interested, is incorrect, and that the draft had not been completed for submission to the committee, although there has been some correspondence between the Commission's engineering department and the municipalities respecting the headings, manner of financing, and for their suggestions.

The reports stated that the Commission was prepared to raise the money necessary for construction by an issue of bonds to be secured by debentures issued by the municipalities, thus enabling the securing of money under the best possible conditions; that the Commission would retain full control over the lines built, regulating and fix-

ing fares and rates for all classes of service; that the maximum fare was not to exceed 2c. a mile, with a minimum cash fare of 5c.; that arrangements might be made by the Commission for the interchange of traffic with other lines as might be desirable; that any applications for extensions of the line were to be considered by representatives of all the municipalities interested; that after all charges of operation had been met, and provision made for the fixed charges, the surplus if any would be divided among the municipalities according to the capital invested, the services rendered, the benefits derived and all other conditions.

It was further stated that the municipalities interested were being asked to send representatives to a meeting to be held at an early date to discuss the agreement, the plans for the line, and to deal with the whole question fully.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies.—Gross earnings for Nov., \$746,152; operating expenses, maintenance, etc., \$544,508; net income, \$201,644, against \$741,876 gross earnings; \$512,077 operating expenses, maintenance, etc.; \$229,799 net income for Nov., 1912. Aggregate gross earnings for five months ended Nov. 30, \$3,760,507; net income, \$976,721, against \$3,477,083 aggregate gross earnings; \$1,017,013 net income for same period, 1912.

Brantford St. Ry.—W. P. Kellett, General Manager and Chief Engineer, Lake Erie and Northern Ry., is said to have made an offer for the purchase of the Brantford St. Ry. It was reported in Brantford, Jan. 3, that the C.P.R. had secured control of the L.E. and N. Ry., and that the proposal to acquire the B. Ry. was a part of that company's plans.

W. P. Kellett had a conference with the Receiver of the company, and F. Nicholls, of the Canadian General Electric Co., in Toronto, Jan. 16, when he made a proposal regarding the future of the line. The Receiver intimated that the proposal would be submitted to the bondholders on Jan. 21. It is stated that all the money necessary to carry out the proposal has been arranged for, that if the deal goes through, a first class line, involving the reconstruction of the road and the supply of new rolling stock, will result, and that franchises for additional streets will be asked for, and a belt line will be run through Eagle Place and Parkdale.

Berlin and Waterloo St. Ry.—Press reports say that the statement for 1913 shows a gross profit of approximately \$10,000. After deducting the usual amount for depreciation, the net profits will be about \$4,000, of which Berlin will receive three quarters and Waterloo the remainder.

Calgary Municipal Ry.—The revenue for 1913 is reported as \$757,042.26. It is stated that the net receipts will, when audited, show some decrease owing to a new system of accounting, involving a considerable percentage of the revenue being set aside for street repair, maintenance and depreciation.

Cape Breton Electric Co.—Gross earnings for November, \$31,848.93; operating expenses and taxes, \$18,080.19; net earnings, \$16,768.74; interest charges, \$4,808.33; balance, \$11,960.41; bond sinking and improvement funds, \$1,190; balance for reserves, depreciation, etc., \$10,770.41, against \$34,562.72 gross earnings; \$15,809.75 operating expenses and taxes; \$18,752.96 net earnings; \$4,475 interest charges; \$14,277.96 balance; \$1,206.67 bond sinking and improvement funds; \$13,071.29 balance for reserves, depreciation, etc.

Electric Railway Projects, Construction, Betterments, Etc.

International Ry.—The Public Service Commission for the second district of New York has authorized the company to execute a supplemental mortgage amending one approved in 1912, so as to require it to expend for maintenance, or to reserve in a fund for such purpose, not less than 16½% of its gross operating revenue, and providing that no bonds shall be issued in future, except when the earnings available for bond interest are 1½ times the amount of interest on the bonds then outstanding and of those it is proposed to issue.

Niagara Falls Park and River Ry.—See International Ry.

Montreal Tramways Co.—The third call of 10% upon the new capital issued April 15, 1913, is payable by subscribers, Feb. 2.

Nelson St. Ry.—By a vote of 404 to 84 the ratepayers of Nelson, B.C., decided recently to purchase the franchise and property of the N.S. Ry.

Peterborough Radial Ry.—The Ontario Legislature is being asked to increase the company's bonding powers from \$20,000 to \$35,000 a mile of single track.

Quebec Ry., Light and Power Co.—The interest on the company's bonds, due Dec. 1, 1913, was not paid, and it is anticipated that, as was done in the case of the interest due last June, the amounts will be paid within the 90 days of grace allowed in the terms of the mortgage.

St. Thomas Street Ry.—Receipts for Dec., 1913, \$1,783.74, against \$1,304.06 for Dec., 1912. Passengers carried in Dec., 1913, 42,252, against 37,715 in Dec., 1912. The aggregate total receipts for the year showed an increase of \$4,832.82 over 1912.

Toronto and York Radial Ry.—The ratepayers of Toronto, by a vote of 15,126 to 7,726, approved recently of a bylaw authorizing the Toronto City Council to issue debentures to pay for the Toronto and Mimico Ry. section of the Mimico Division of the T. and Y.R. Ry. This piece of line extends from Sunnyside to the Humber River, and is being taken over by the city upon the expiration of the franchise. The purchase price was fixed by the Ontario Railway and Municipal Board, after the company and the municipality had come to terms upon most points involved.

Toronto Ry., Toronto and York Radial Ry., and allied companies.—Gross earnings for November, \$849,279; operating expenses, maintenance, etc., \$409,973; net earnings, \$439,306, against \$742,156 gross earnings; \$358,371 operating expenses, maintenance, etc.; \$383,785 net earnings for Nov., 1912. Aggregate gross earnings for 11 months ended Nov., 1913, \$8,893,984; net earnings, \$4,438,524, against \$7,717,304 aggregate gross earnings; \$3,951,504 net earnings for same period, 1912.

Winnipeg Electric Ry.—Gross earnings for November, \$360,082; operating expenses, \$198,874; net earnings, \$161,208, against \$345,091 gross earnings, \$181,051 operating expenses; \$164,040 net earnings for Nov., 1912. Aggregate gross earnings for 11 months ended Nov. 30, 1913, \$3,698,831; net earnings \$1,658,193, against \$3,403,683 aggregate gross earnings; \$1,595,755 net earnings for same period, 1912.

The figures given above represent the total earnings of the company, including receipts from lighting, etc. The actual street railway earnings for 1913 were \$2,384,597.28, an increase of \$269,604.48 over 1912. The amount received by the city as its percentage was \$125,788.96.

The British Columbia Electric Ry. will furnish a private ward in the Royal Columbian Hospital, New Westminster, to be called the B. C. Electric Ry. Ward.

Brandon Municipal Ry.—Two miles of additional track which was under construction at the end of 1912 were, we are advised, completed during 1913, the work being done by day labor, under the charge of J. Antonisen, Superintendent. The construction programme for this year has not been arranged. (Dec., 1913, pg. 592.)

British Columbia Electric Ry.—The total mileage of the company's lines on the mainland, in and around Vancouver, and on Vancouver Island, in and around Victoria, B.C., counted as single track, was at Dec. 31, 1913, we are officially advised, 370.09 miles. During 1913, there were 36.07 miles of line added, viz.—On the Vancouver city and suburban lines on the mainland, 9.66 miles, and on the Victoria city line and the Saanich Peninsula interurban line, 26.41 miles.

The Hastings St. car extension to North Burnaby, B. C., was opened for traffic Dec. 24. F. R. Glover, General Executive Assistant, stated in a speech at the opening ceremony, that this is the first of a series of lines which the company propose to build through the territory. This extension is two miles long. Another two mile extension out of Kerrisdale is completed, and is expected to be put in operation in February. Plans have been approved for the building of additional lines in South Vancouver, and from Kerrisdale to Point Grey, and it is expected that construction will be started in the spring. (Jan., pg. 38.)

Dunnville, Wellandport and Beamsville Electric Ry.—Press reports that the charter of this company was about to be purchased by the Toronto, Hamilton and Buffalo Ry., are denied by officials of that railway. The D. W. & B. E. R. Co. has power to build a line from Dunnville to Jordan and St. Catharines and other points in the Niagara peninsula.

Application is being made to the Ontario Legislature to extend the time for building the lines. (Dec., 1913, pg. 592.)

Edmonton Radial Ry.—The total length of the system of lines owned and operated by the city of Edmonton, Alta., under this title is 52.644 miles, counted as single track, of which 0.777 of a mile are spurs, terminals, wyes and loops; the remaining 51.867 miles is classified as follows:—Permanent double track, 30.891 miles; permanent single track, 1.186 miles; temporary double track, 8.837 miles; temporary single track, 10.343 miles; spurs, 0.610 mile. During 1913, the following mileage of new track were laid:—Permanent double track 21.024 miles; permanent single track, 0.630 mile; spurs, 0.123 mile; sidings, terminals, wyes and loops, 0.777 mile; total, 21.892 miles. Deducting the sidings, etc., this leaves 21.115 miles of new operating track, calculated as single track, added to the system during the year. The construction programme for this year has not yet been determined. (May., 1913, pg. 235.)

Estevan Transit and Power Co.—The Saskatchewan Legislature has incorporated a company with this title to build the lines mentioned in issue of Dec. 1913, pg. 593. (Jan., pg. 38.)

Forest Hill Electric Ry.—Application is being made to the Ontario Legislature to increase the bonding powers of the company to \$50,000 a mile, and for an extension of the time within which the company is required to expend \$50,000 on construction, from Apr. 6 to Dec. 15, 1914.

Fort William Electric Ry.—The city of Fort William, Ont., is applying to the Ontario Legislature to sanction a by-law to expend \$30,000 to build and equip an extension of the street railway to the corporation

stone quarry near Mount McKay; and also a by-law to expend \$238,000 for further improving and extending the street railway system. The present street railway debenture debt is officially stated to be \$851,000. (See Port Arthur and Fort William Electric Ry., Jan., pg. 39.)

Galt, Preston and Hespeler St. Ry.—The Town Council of Preston, Ont., has granted the company a franchise for 25 years, dating from Feb., 1913, when the previous 20 year franchise expired. The franchise gives the company permission to build a second track on its lines. (July, 1913, pg. 367.)

The Galt, Preston and Hespeler St. Ry. did no construction work during 1913, with the exception of putting in some service sidings.

Guelph Radial Ry.—The company is applying to the Ontario Legislature for an extension of time within which it may complete a number of authorized branch lines, and for power to build branches not exceeding half a mile each, in Guelph, Ont.

London and Lake Erie Ry. and Transportation Co.—Representatives of the municipalities interested in the proposed electric railway from St. Thomas via Aylmer to Port Burwell, Ont., met in St. Thomas recently, and discussed the matter. They decided to ask the L. and L.E. Ry. and T. Co. to put its proposition in writing, and to ask the Ontario Hydro-Electric Commission for information as to the conditions under which that body is prepared to co-operate with municipalities for the building of lines. (Jan., pg. 38.)

London St. Ry.—A start was made Dec. 25, in operating the L. S. Ry. with power supplied by the local Hydro-Electric Commission, and on Jan. 1, the line south of the

Medicine Hat Tramways, Ltd.—We are officially advised that pending the result of the litigation instituted by E. G. Fagan, to have the bylaw granting an extension of time for construction quashed, the company is not in a position to continue its arrangements for proceeding with the work in the spring. R. O. Sweezy, General Manager of the Montreal Engineering Co., which has the franchise, was in Medicine Hat, during the last week in January, negotiating for a settlement of the matter. (Jan., pg. 38.) Dundas St. line was being so operated. It is expected that early in February the entire line will be operated under the power agreement with the city. (Dec., 1913, pg. 593.)

Montreal and Southern Counties Ry.—Progress is being made with construction on the extension from Marieville to St. Césaire, Que., 9 miles, the work being done by the company's own staff. The bridge across the Yamaska River at St. Césaire, is being built by Ross and McComb. It is expected this section will be completed during the summer, after which the line will be continued from St. Césaire to Granby, 15 miles. Surveys have been completed into Granby.

The Montreal City Council, Jan. 12, after considering the report of the Board of Control, which passed on the report of the Municipal Tramways and Railway Engineer, recommending that the company's application to lay tracks on Youville and St. Peter streets be not entertained, decided to give the company permission to extend its line to Youville Square. The company desires to lay tracks on these streets in connection with its terminal improvements. (Jan., pg. 38.)

Montreal Tramways Co.—We were advised, Jan. 9, by the chairman of the Quebec

Legislature's Committee on Private bills, that no application has been made for the consideration of any act in the interests of the M. T. Co., and that the press statements referred to in our last issue, in connection with his alleged statement of a projected extension of the franchise are "utterly baseless."

The company's construction department is building an extension known as the Longue Pointe line, from Montreal to Pointe Aux Trembles, 6.78 miles of single track.

The company has acquired a block of land containing 411,200 square feet on the Lachine canal, on which it is proposed to erect car barns and yards for the Lachine cars. It is expected that the work of laying out this area will be started in the spring.

G. B. McLeod, who is the engineer in charge of tramway and railway affairs under the City Engineer of Montreal, is understood to have practically completed his report on the proposals of the M. T. Co., and of the Canadian Autobus Co., as to the construction of subways and underground lines in the city. It is not expected, however, that the report will be made public before Feb. 1.

The M. T. Co. has informed the Outremont Town Council that it proposes, early in the spring, to start construction on the extension of the Van Horne Ave. line to the town limits. (Jan., pg. 38.)

Morrisburg and Ottawa Ry.—At a meeting of the Morrisburg Council, Jan. 21, an application by the M. & O. Ry. was heard, for a right of way through the town. The council has already granted a right of way to the Ottawa and St. Lawrence Electric Ry., which right will expire on Oct. 1, if not taken advantage of, and it was announced that nothing could be done in the way of granting any fresh rights until after that date.

Morrisburg and Ottawa Ry.—Calls of 10% on the subscribed capital of the company are due and payable at the office of the company, Canada Life Building, Ottawa, Feb. 2, April 6, June 8, and Aug. 22. R. A. Bishop is Secretary. (Nov., 1913, pg. 544.)

Niagara, Welland and Lake Erie Ry.—Track was laid on 0.85 of a mile of line on North and West Main streets, Welland, Ont., during 1913. The company has under consideration the building of a line from Welland to Port Colborne and Port Erie, 39 miles, and from Welland to Niagara Falls, 13 miles. T. R. Cummins, Welland, Ont., is Engineer. (Oct., 1913, pg. 194.)

Nipissing Central Ry.—The new car barns at North Cobalt, Ont., have been completed and opened. The general and operating offices are located in the north-west end, while adjoining is a general waiting room. The barn will accommodate 10 cars and is fitted with three pits, two of which are in the workshop section. A room for motormen and conductors is arranged at the rear, and at the west end is the boiler and generator room. The building is of brick on reinforced concrete foundation, with a steel framed roof. (Sept., 1913, pg. 412.)

North Midland Ry.—Application is being made to the Ontario Legislature for an extension of time for the commencement and completion of the line.

The Ottawa, Rideau Lakes and Kingston Ry. is applying to the Ontario Legislature for an extension of the franchise power to \$10,000 per mile, and for a franchise for the proposed line.

The Peterborough Radial Ry. is applying to the Ontario Legislature for an extension of the franchise power to \$20,000 per mile, and for a franchise for the proposed line.

The Quebec Ry., Light and Power Co. added 1.87 miles to its tracks during 1913. It has no new work on hand or projected. (Sept., 1913, pg. 442.)

Regina and Moose Jaw Interurban Ry.—We are officially advised that surveys have been completed and a satisfactory route secured for the proposed interurban railway from Regina to Moose Jaw, Sask., 10 miles, and that it is expected construction will be started early in the spring. Nothing has been decided as to whether the line will be operated by gas or electric cars, in fact, we are advised Diesel oil engines may be adopted. J. Friedman, Seattle, Wash., is the principal promoter of the company, the organization of which is not fully completed.

St. John Ry.—We are officially advised that the company has under consideration the following extensions:—From Fairville to Manawanish Road, one mile, and from Kane's Corner to Crouchville, two miles. (Jan., pg. 39.)

St. Thomas St. Ry.—We are officially advised with respect to the projected extension of the line to Pinafore Park, St. Thomas, Ont., that nothing will be done for some time. (Dec., 1913, pg. 593.)

Saskatoon Municipal Ry.—The new electric railway built under an agreement with the Sutherland, Sask., Town Council, by Saskatoon and Sutherland Contracting Co., between Saskatoon and Sutherland, has been put in operation. The line, which is 4.5 miles long, will be operated as part of the Saskatoon Municipal Ry., under a 20 year contract. An hourly service is being given, with a 5c. fare, from Sutherland to the top of the Long Hill, where connection is made with the Saskatoon city system. (Jan., pg. 39.)

Toronto, Barrie and Orillia Ry.—The ratepayers of Barrie, Ont., have approved of a bylaw granting a franchise to this company for an electric railway in the town, and the property owners, voted in favor of granting the company a fixed assessment of \$15,000 during the continuance of the franchise.

The agreement provides for the building of a line with the necessary turnouts and switches on Elizabeth St., and such other streets as may be agreed upon, so as to give a continuous line through the town from the eastern limits south of the bay to the eastern limits of the town north of the bay. In the event of a line being built on Bradford St. the company is to assume the responsibility borne by Curran and Clement under the terms of about Oct. 17, 1913. The company also agrees to build during the currency of the franchise an electric railway from either Utopia or Midhurst stations on the C.P.R. Toronto-Sudbury line, to Barrie, entry into that town being made along Elizabeth St. This line is to be put under construction by April, and the lines in Barrie are to be ready for operation by Sept. 1. A freight and express station is to be provided, where all freight and express matter is to be received and delivered. No freight cars are to be run along its tracks in the town between 8 a.m. and 11 p.m., but express cars can be run at all hours. Five-cent fares are to be charged for distances up to three miles, and beyond that distance the fare is not to exceed 20c. Children's fares are to be 3c. for three miles, and 1c. a mile for distances over that. School children under 17 years are to be charged tickets at eight for 25c. An hourly service is to be maintained between 7 a.m. and 11 p.m. between Blake St. and Midhurst St. and a reasonable service from there to the town limits. The franchise is to run for 25 years, and the Town Council is to give the right, or giving a year's

notice prior to its expiry, to assume possession of the line within the town on the payment of the actual value as determined by the Ontario Railway and Municipal Board. If this right is not exercised the franchise is to be continued, the corporation having the right to take over the line under the same conditions at the expiration of any period of five years. The corporation reserves the right to grant a franchise to any other company for an electric railway in the town, and to use the company's tracks upon such terms as may be agreed upon. The company's property in the town is to have the value for assessment purposes of \$15,000 for eight years from Jan. 1, 1916. W. H. Jackson, Toronto, is interested, and we are informed that the final organization of the company is being completed, and that a statement of the company's plans will be made at an early date. (Jan., pg. 22, and also Monarch Ry., Feb., 1912, pg. 91.)

The Toronto, Barrie and Orillia Ry. is asking the Ontario Legislature to increase its bonding powers, to extend the time within which it is required to expend 15% of its capital on construction, and to authorize the operation of cars on Sundays.

Toronto Civic Car Lines.—The Mayor of Toronto, in his recent inaugural message to the City Council, said:—"During the past year we have put into operation the civic car lines on St. Clair Ave. and Danforth Ave. These lines are second to none in construction and equipment, and along with Gerrard St. line give us 16.96 miles of single track equipment with 24 double-end prepayment cars. While these lines will necessarily be operated at a heavy loss, the accommodation provided for the people living in these outlying districts is greatly appreciated. No doubt these lines will be extended in the near future to connect with the existing city system at points like Lansdowne Ave. and Royce Ave., and at Dovercourt Road and Van Horne St.

Toronto Eastern Ry.—We are officially advised that track was laid on 12.8 miles of line during 1913 as follows:—Whitby to Oshawa, 4.0 miles; Oshawa to Bowmanville, 8.8 miles; and that construction is advanced on the line between Whitby and Pickering, 6.1 miles. The contractor is Ewen Mackenzie, Toronto. Surveys have been completed for the extension of the line from Pickering to a point in Scarborough tp., 15 miles. It is understood that this line will connect with the Canadian Northern Ontario Ry., and enter Toronto over that line. E. W. Oliver, Toronto, is Chief Engineer. (Jan., pg. 38.)

Toronto Ry.—During 1913 there were completed 2,213 miles of new lines on the company's system in Toronto. (Jan., pg. 39.)

The Toronto Suburban Ry. has let a contract to Canadian General Electric Co. for the substation apparatus for the line from Lambton to Guelph, Ont., 46 miles, and which will probably be extended to Berlin, 13 miles farther on. It is said that this will be the first interurban line in Canada to operate at 1,500 volts direct current. The catenary type of overhead construction will be used, and there will be three substations at Islington, Georgetown and Guelph, respectively. Fifteen hundred volt rotary converters of 500 k.w. capacity each will be used, power being transmitted to the substations at 25,000 volts. Provision will also be made for the supply of power from a separate bank of transformers in each substation for distribution along the line for miscellaneous power and lighting purposes.

Winnipeg Electric Ry.—During 1913 there were laid 6.61 miles of new track on streets in Winnipeg; two miles of an extension from St. Boniface through part of

St. Vital; and 5.37 miles on a line through part of Fort Garry.

The Stonewall line, which is being built under the Winnipeg, Selkirk and Lake Winnipeg Ry. charter, branches off from the main line at Middlechurch. Track was laid to Stony Mountain, 9.77 miles during 1913, and it is expected to complete construction during this current year from Stony Mountain to Stonewall, Man., 7.5 miles. Wilford Phillips, Winnipeg, is General Manager. (Jan., pg. 39.)

Electric Railway Notes.

The Hull Electric Co. has ordered four pairs of trailer trucks in the United States.

The Toronto Ry. Co. is assessed for \$3,625,626 by the City of Toronto.

The Port Arthur Electric Ry. has ordered two single truck cars from Preston Car and Coach Co.

The Halifax Electric Tramway Co. recently received six 21 ft. closed cars from the Nova Scotia Car Works.

The Saskatoon, Sask., City Council has adopted a new schedule for the operation of cars on the municipal railway. Seven routes are to be operated, by six large and 10 small cars, two extra cars being put on during the rush hours. The Mayor stated that the traffic does not at present warrant the operation of more cars.

The Fort William Electric Ry. has been placed under the direct supervision of a street railway committee of which the following are members for this year: R. J. Mamon, Chairman; H. Murphy, M. B. Dear, A. H. Dennis, and the Mayor (S. C. Young). M. O. Robinson is Manager as well as of the Port Arthur Electric Ry.

A report was submitted to the Winnipeg City Council, Jan. 6, by the City Engineer, as to the cost of a municipal omnibus system in the city. The capital expenditure necessary for land and buildings is put at \$70,000, and for 40 busses at \$240,000, a total of \$310,000. The annual cost of the system is estimated at \$178,562. The probable revenue is put at \$175,000.

The Saskatoon Municipal Ry. rolling stock consists of 12 single truck, two motor cars, each with seating capacity of 32; they are 34 ft. 4 ins. long, 8 ft. 4 ins. wide, 11 ft. 5 ins. high, and with a wheel base of 8 ft., built in the United States; also 6 double truck, four motor cars, 45 ft. long over all, with a seating capacity of 44, built by Preston Car and Coach Co.

The British Columbia Electric Ry. Co. ordered the following rolling stock during 1913:—3 passenger motors, closed, 43 1-3 ft., interurban service, trucks standard C60, built at the company's shops; 30 freight cars, box, 60,000 lbs., 40 ft., interurban trucks, built at Seattle, Wash.; 30 freight cars, flat, 60,000 lbs., 41 ft., interurban service, built at Seattle; 3 sweepers, 28 1/4 ft., city service, built by Ottawa Car Co.; 15 logging cars, 80,000 lbs., 42 ft., interurban service, built at Seattle; 2 combination passenger and mail motors, 38 ft., interurban service, trucks standard C60, rebuilt at company's shops from old cars.

The Toronto Suburban Ry. is preparing specifications for cars for its line which is being built from Lambton to Guelph, Ont., and it is probable that an order for about ten 65 ft. cars will be placed in the near future. The electrical equipment will be supplied by Canadian General Electric Co. The cars will be equipped with four 55 h.p. motors of the latest type, fully ventilated, and the control will be of the multiple unit type to permit of train operation. The cars will operate on 600 volt line at approximately half normal speed, and chang-

ing from 1,500 volt to 600 volt trolley or vice-versa will involve no loss of time in adjustment of control apparatus.

The Port Arthur St. Ry. has ordered from the Ottawa Car Manufacturing Co., one single truck, p.-a.-y.-e. car, double end, double end control, for delivery in six weeks; and three double end, single truck, double end control, p.-a.-y.-e. cars, from Preston Car and Coach Co., for delivery in 75 days.

The London St. Ry. intended putting into operation a Sunday service over its lines, commencing Jan. 25, subject to the necessary amendments to its agreement with the city being satisfactory. The service as outlined by the city was a half-hourly one from 8 to 10 a.m., every 15 minutes from 10 a.m. to 10 p.m., and half-hourly from 10 to 10.30 p.m. Additional service may be given if deemed desirable. The fares will be the same as on week days, except that workmen's tickets will not be available.

The Niagara, St. Catharines and Toronto Ry. has ordered six interurban cars from the Preston Car and Coach Co. The body of these cars will be 56 ft. long, with steel underframing, steam car type of hood and full empire interior finish. Three of the cars will be equipped as combination baggage and smokers, and in the other three the baggage compartment will be eliminated. They will have multiple unit control for train operation, the intention being to operate the main line cars in one or more units, according to traffic requirements. Taylor trucks, electric markers, classification lamps, air sanders, etc., will be supplied, but, at the time of writing, the type of motor has not been decided on. The weight of the cars will be about 65,000 lbs. each, with a seating capacity of 66 passengers.

London and Port Stanley Railway Electrification.

The City of London, Ont., is applying to the Dominion Parliament for an act to confirm and declare to be valid and binding the lease of the L. and P. S. Ry. to the city; to ratify and confirm the appointment of the London and Port Stanley Railway Commission by the city council, and to authorize the commission to have the entire management and control of the railway for and as agents of the city, and to grant such powers as are necessary or expedient to enable the commission to have the whole management and control of the construction, equipment, maintenance and operation of the L. and P. S. Ry.

The city council has issued a notice to the effect that any motion to quash the by-law approved by the ratepayers and finally passed by the city council, Nov. 11, to provide \$700,000 for the electrification of the line, must be filed within three months from Dec. 20, 1913.

The Mayor of London is an ex-officio member of the commission, the appointed members of which are:—Hon. Adam Beck, M.L.A., Chairman, appointed for two years; P. Pocock, Vice Chairman, appointed for two years; W. Spittal, and M. D. Frazer, commissioners, appointed for one year. (Jan., pg. 37.)

In the electrification which the Chicago, Milwaukee and St. Paul Ry. is projecting on its mountain division, the installation will resemble in a general way that on the C.P.R. Rossland Branch, not only in point of electrical equipment, but also from the power sources. The 2,400 volt direct current system will be employed, and power will be obtained from a local power company, as in the C.P.R. installation.

The Windsor & Tecumseh Electric Railway Extension Application.

Canadian Railway and Marine World for January contained full particulars of the proceedings before the Ontario Railway and Municipal Board in reference to the application by the Sandwich East Township for an order to compel the company to build a belt line between Tecumseh and Walkerville. The Board has since decided that the present line in the township is not being operated at a profit, and that the company is not therefore as yet liable to build a belt line. The costs have been divided equally between the township and the company.

Crossings of Montreal Tramways Co.'s Tracks in Pointe aux Trembles.

The Quebec Board of Public Utility Commissioners on Dec. 27, 1912, authorized the Town of Pointe aux Trembles to open four streets across the Montreal Tramways Co.'s tracks, reserving provisions for their protection and maintenance for a further order. The matter again came before the Board recently, when it was shown that two of the streets had been opened, but had not been provided with fences, cattle guards and signs. The Board therefore ordered that the town forthwith construct such fences, wing fences and cattle guards as are ordinarily required at such crossings, and to erect the usual signs, the whole work to be done subject to the M.T. Co.'s approval, and in event of any difficulty between the parties the same to be determined by the Board's engineer. The work up to within 18 ins. of the M.T. Co.'s outer rails to be done by the town, and the other work between the spaces mentioned to be done by the town at the M.T. Co.'s expense. The work done by the town to be maintained by it, and the work done by the company to be maintained by the latter.

The Power Question in Manitoba.—The Manitoba Public Utilities Commissioner is preparing a report for submission to the Government, upon the subject of hydro-electric power. A report on this question has already been prepared by the water power branch of the Department of the Interior. The principal part of this report deals with the possibilities of development of power on the Winnipeg River, which is described as one of the most notable rivers for power purposes on the continent, having a considerable fall, and a most uniform flowage throughout the year. The maximum flowage is about four times its minimum flowage, in contrast with the Ottawa River, where the maximum flowage is about 40 times the minimum. It is estimated that at eight not distant power sites 400,000 continuous horse power can be developed.

Montreal City and Autobus Co.—The Quebec Court of Appeal decided Jan. 10, that the contract entered into between the City Council and the company is a legal and binding one. The original applicant to have the agreement quashed was D. Robertson, of the Montreal Tramways Co.

A charge for street railway transfers at Cleveland, Ohio, is likely to be put into effect after Jan. 1, to recoup the Cleveland Railway for losses sustained by the recent heavy snowstorm. The charge will be 1 cent per transfer.

The Ontario Railway and Municipal Board passed an order recently requiring the Hamilton St. Ry., to complete by May 19, the installation of all its double truck cars with air brakes of a type to be approved by the Board's engineer.

Answers to Questions on Electric Railway Topics.

Following are answers to questions in the American Electric Railway Association's question box, sent in by officials of Canadian electric railways:—

Shop Men's Instructions.—Should not more detailed and specific instructions and data be furnished shop men, and if so, what should be its nature? Shop men are disposed, in most instances, to do exactly what is desired, but in very many cases, do they really know what is wanted, and how to do it efficiently?

W. R. McRae, Master Mechanic, Toronto Ry.—"Most decidedly shop men should be furnished with full data and instructions relative to the work in which they are engaged. The practice of this company is to engage only those men who have had, at least, a good common school education and who speak English. Blue prints, printed instructions, both electrical and mechanical, are supplied the men. In addition to this, blue prints and instructions are posted in convenient places both in the shops and the several divisions. We also have an apprenticeship course, which has been very beneficial in securing trained men for the service."

Foremen's Visits to Other Shops.—While officers and heads of departments get together and interchange ideas at conventions, meetings, etc., is there not too much stay at home for foremen and sub foremen of smaller shops and departments? Would it not be to the advantage of the railway companies, creating as well a better feeling among the men who are on the firing line, to have occasional visits to shops, and see men engaged on lines of neighboring companies?

W. R. McRae, Master Mechanic, Toronto Ry.—"For the past few years, and it still is, the policy of this company to send officials and employees to neighboring companies' shops, to see what is being done along similar lines to their own work, the company, of course, paying all expenses. The above outlined practices, in conjunction with skilled, painstaking foremen, are undoubtedly responsible for the high standard of the shop men employed by this company."

Collection of Transfers and Free Tickets.—What are the advantages of collecting transfers and free tickets at the end of each trip?

F. L. Hubbard, Assistant to Manager, Toronto Ry.—"Do not see much, if any. Certainly no advantage under our system of collecting fares with portable hand box. The conductor makes a record of the transfers collected on each half trip and encloses the transfers for each round trip in an envelope, which is then sealed. At the termination of his run, the conductor wraps envelopes in a folder and deposits same at division office. Free tickets are deposited in fare box by passengers in same manner as revenue fares."

Advertising Attractions.—Of the following, which plan or system of advising the public as to band concerts, special entertainments, such as carnivals, circuses, ball games, etc., has given the best results—printed signs or notices on dash of cars, signs on interior or exterior of car windows, interior advertising rack signs, hanging of folders in cars so that passengers can help themselves to copies?

F. L. Hubbard, Assistant to Manager, Toronto Ry.—"We use boards with printed paper signs pasted thereon, 20½ by 21½ ins. in size, displayed on the upright portion of fender in front of dash of car. By limiting, as ever possible, the printed

matter to four lines in large type, a plain, bold sign is obtained, which experts consider is the best advertisement in the city for the purposes named. We use this method to advertise features at our summer park, and the privilege is much sought after for other large events in the city."

Road Construction. With crushed stone ballast and concrete paving foundation, are creosoted ties an ultimate economy? (a) When concrete paving foundation comes only to the top of the tie; (b) When concrete paving foundation comes 2 ins. above top of tie.

W. F. Graves, Chief Engineer, Montreal Tramways Co.—"Do not consider the use of creosoted ties an ultimate economy in any track construction with crushed stone ballast and concrete paving base."

What has been your experience regarding the wear of the grooved granite block paved up to the gauge side of the T rail track on a narrow street where the vehicular traffic is heavy? Do you find that a groove block

is necessary to leave the work to use toilets, when portable toilets are used?

W. F. Graves, Chief Engineer, Montreal Tramways Co.—"Most urban systems use the portable toilet in connection with the sewer manholes on construction work. They should be about 4 by 4 by 6 ft. in height, and under all circumstances have a roof. The matter of keeping check on track laborers should be directly under the supervision of the gang foreman, as toilets should be located sufficiently close so that he would have supervision of his men at all times."

Dominion Power and Transmission Co.'s Steam Plant.

The steam power station which is to be erected in Hamilton, Ont., by the Dominion Power and Transmission Co., is designed for the accommodation of six 10,000 kilowatt generating units, turbines, operated by steam at 200 lbs. pressure, 200 degrees superheat. The auxiliaries will be mostly steam driven, except the exciter, which will be motor driven. There will also be

Dominion Power and Transmission Co.'s Power House.

laid in connection with a T rail on such a street keeps vehicular traffic out of the railway strip, as compared with the modern groove girder rail?

W. F. Graves, Chief Engineer, Montreal Tramways Co.—"On a narrow street, where vehicular traffic is heavy, it should have the type of rail which offers the least resistance to getting in and out of the track, and that is the grooved girder rail. If necessary to use T rail, the granite nose block should be used in preference to any other block. The grooved block laid with T rail on such a street would probably tend to keep the vehicular traffic out of the railway strip, providing there is sufficient roadway on either side, but it is very much to the detriment of the car traffic."

Are there any systems using portable toilets, connecting to sewer manholes in streets where construction work is in progress? What is the best design of such portable toilets? What is the best method of keeping check on track laborers where

one or two steam driven exciters. There will be used surface condensers, turbine driven, air and hotwell pump, circulating pump and boiler feed pump. The feed heater will be of the open type. The boiler plant will ultimately consist of 14 units of 1,050 h.p., each equipped with superheaters and underfeed stokers."

The accompanying illustration shows the location of the boiler room, turbine room, offices and transformer house, as they will be when completed. Definite plans of the interior arrangements are not yet finally arranged.

The plans show two buildings. The larger one will be the boiler room, and the smaller one the transformer room. The foundation work for the first part of the structure is expected to be started early in March and will be done under the direction of the company's own staff. Tenders will be invited at a later date for the steel and other work of the structures. W. C. Hawkins, Hamilton, is Managing Director.

Marine Department

The Organization of Canada Steamship Lines, Limited.

During 1913 Canadian Railway and Marine World published full details of the various absorptions and amalgamations with which the Richelieu and Ontario Navigation Co. has been concerned, and also of the rounding off of the series by the formation of Canada Transportation Lines, Ltd., and the change of name to Canada Steamship Lines, Limited. Following is a complete list of the new company's officers: President, James Carruthers, heretofore President, Richelieu and Ontario Navigation Co., Montreal; Vice Presidents, W. Wainwright, Vice President, G.T.R. and G.T.P.R., Montreal; M. J. Haney, heretofore President, Canada Interlake Line, Toronto; J. P. Steedman, heretofore director, Richelieu and Ontario Navigation Co., Hamilton; Managing Director, J. W. Norcross, heretofore Managing Director, Canada Interlake

PETER PATON, heretofore Manager, Northern Navigation Co., Sarnia, Ont., Assistant Operating Superintendent Passenger Steamers, Office, Toronto.

H. H. GILDERSLEEVE, heretofore Manager Western Lines, R. & O.N. Co., Toronto, Manager, Northern Navigation Co. Office, Sarnia, Ont.

H. W. COWAN, heretofore Operating Superintendent, Canada Interlake Line, Toronto, Operating Superintendent Freight Steamers, Office, Toronto.

J. J. PHELAN, heretofore Assistant to Mechanical Superintendent, Richelieu and Ontario Navigation Co., Purchasing Agent, Office, Montreal.

R. DUGUID, heretofore Chief Engineer, Canada Interlake Line, Superintendent Engineer, Office, Toronto.

W. H. FEATHERSTONHAUGH, heretofore Shore Superintendent, Inland Lines, Ltd., Superintendent of Hulls, Office, Toronto.

JOHN F. PIERCE, heretofore Assistant

and Alecott, with jurisdiction over passenger matters from Sharbot Lake west in Ontario, and the State of Michigan, Office, Toronto.

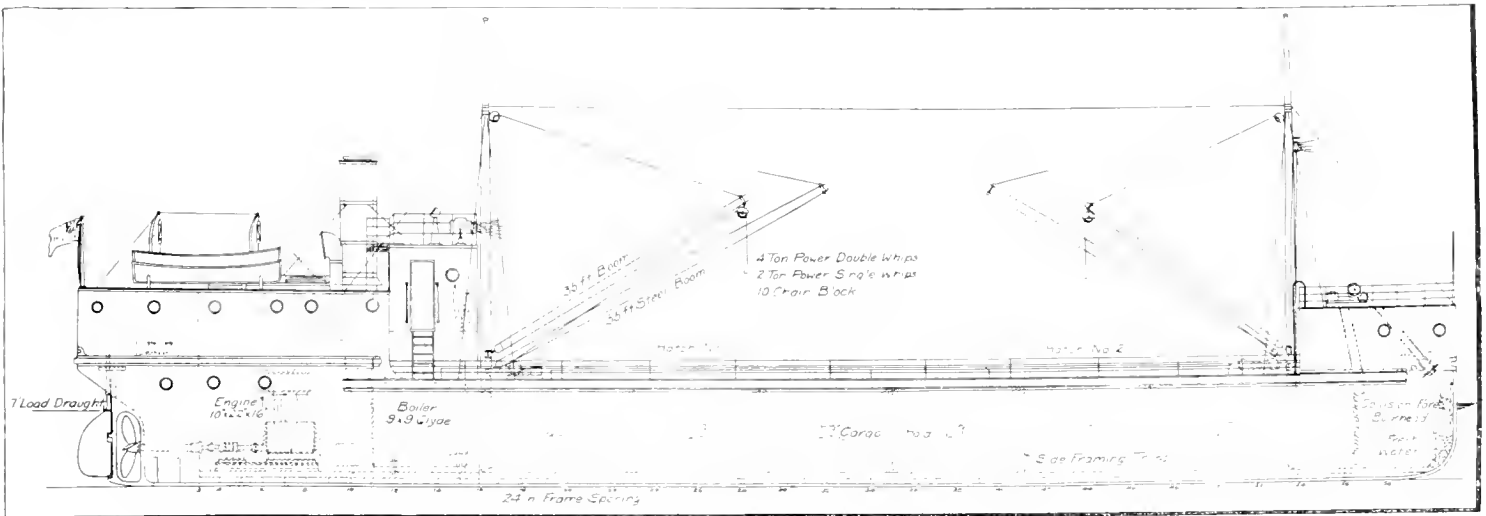

J. V. FOY, heretofore District Passenger Agent, R. & O.N. Co., Toronto, General Agent, Passenger Department, with territory covering Illinois, Missouri and Arkansas and west to the coast, Office, Chicago, Ill.

GEORGE PUJOS, Excursion Agent in charge of Ticket Department, reporting to the Passenger Traffic Manager, Office, Montreal.

S. J. MURPHY, heretofore Travelling Passenger and Excursion Agent, Niagara River Line, R. & O.N. Co., Toronto, Travelling and Excursion Agent, reporting to the General Agent Passenger Department, Toronto, Office, Toronto.

H. J. CRAWFORD, Travelling Passenger Agent, Rochester, N.Y., reporting to General Agent, Passenger Department, Buffalo, N.Y.

C. C. BONTER, Special Agent, Montreal, reporting to Assistant General Passenger Agent and General Baggage Agent, Montreal.

Dominion Government Steel Steam Lighters for Hudson's Bay Service.

Line, office, Montreal; General Counsel, C. A. Barnard, K.C., Montreal; Assistant to President and Secretary, F. Percy Smith, heretofore Secretary, R. & O.N. Co., office, Montreal; Comptroller, F. S. Isard, heretofore Secretary and Chief Accountant, Canada Interlake Line, Toronto, office, Montreal; Treasurer, J. I. Hobson, heretofore Comptroller and Treasurer, R. & O.N. Co., office, Montreal. The following appointments have also been made, effective from Jan. 1:—

W. E. BURKE, heretofore Traffic Manager, Canada Interlake Line, Ltd., Toronto, Assistant Manager, Office, Montreal.

H. FOSTER CHAFFEE, heretofore Passenger Traffic Manager, Richelieu and Ontario Navigation Co., Montreal, Passenger Traffic Manager, Office, Montreal.

L. A. W. DOHERTY, heretofore Freight Traffic Manager, Richelieu and Ontario Navigation Co., Toronto, Freight Traffic Manager, Office, Montreal.

GILBERT JOHNSTON, heretofore Mechanical Superintendent, Richelieu and Ontario Navigation Co., Montreal, Mechanical Superintendent Passenger Steamers, Office, Montreal.

THOMAS HENRY, heretofore Manager, Eastern Lines, Richelieu and Ontario Navigation Co., Montreal, Operating Superintendent Passenger Steamers, Office, Montreal.

General Passenger Agent and General Baggage Agent, R. & O.N. Co., same position in the new company, in charge of party business and baggage, and with jurisdiction over territory and ticket offices east of Sharbot Lake in Ontario and Quebec, Office, Montreal.

W. F. CLONEY, heretofore District Passenger Agent, R. & O.N. Co., Buffalo, N.Y., General Agent, Passenger Department, in charge of Buffalo, Rochester and Niagara Falls ticket offices, his passenger jurisdiction to embody New York State west of Syracuse, Pennsylvania, Pittsburg and west, Ohio and Southern States, Office, Buffalo.

J. F. DOLAN, heretofore District Passenger Agent, R. & O.N. Co., Boston, Mass., General Agent, Passenger Department, with territory covering Maine, Massachusetts, Connecticut, Rhode Island, New Hampshire, Vermont and the Maritime Provinces, Office, Boston, Mass.

J. W. CANVIN, heretofore District Passenger Agent, R. & O.N. Co., Alexandria Bay, N.Y., General Agent, Passenger Department, with territory covering New York State west to Syracuse, New Jersey, Pennsylvania east of Pittsburg, Delaware, Maryland, Virginia and Washington, D.C., Office, New York City.

HUGH D. PATERSON, General Agent Passenger Department, in charge of city and dock ticket offices in Toronto, Hamilton, Lewiston, Queenston, Niagara on the Lake

Dominion Government Steam Lighters for Hudson Bay.

The Department of Railways and Canals has ordered two steel steam lighters from Polson Iron Works, Toronto, for use at Port Nelson, Hudson Bay. They are to be of steel construction throughout, equipped with ice belt and docking keels, and with watertight collision bulkheads. The propelling machinery will consist of fore and aft compound, surface condensing engines with attached air and auxiliary feed and bilge pumps, the engine cylinders being 10 and 22 ins. diam. by 16 ins. stroke. Steam will be supplied by a Scotch marine type boiler 9 by 9 ft., and built under Government inspection for 160 lbs. working pressure. A full equipment of spare parts for the main engines and pumps, and a miscellaneous outfit will also be supplied. Each lighter will be equipped with two 15 ton cranes and two 4 ton cranes, steam winches, steam windlass, steam steering gear, wrecking pump, sanitary pump, water filters and complete electric lighting equipment. Living quarters for 10 men will be provided aft on a raised deck. The dimensions will be:—length over all 128 ft., length between perpendiculars 120 ft., moulded breadth 21½ ft., depth from bottom of keel to deck at side 10¼ ft., draught loaded 7 ft. Delivery is to be made by June 1.

Wireless Telegraphy on Canadian Vessels

The act providing for the compulsory installation of wireless telegraph equipment on certain vessels leaving Canadian ports came into effect, Jan. 1. The section giving details as to what vessels must be so equipped was given in full in Canadian Railway and Marine World for Oct., 1913. The majority of Canadian vessels which come under the act have already been equipped with the necessary wireless telegraph installation, but there are a few for which, at the time of writing, application for the necessary licenses have not been made. Of these, three operated last season on the Pacific coast, seven or eight on the Great Lakes, and one on the Atlantic coast. If, therefore, it is intended that these vessels are to be operated during the forthcoming season, as last, the installations must be made before the season opens.

Following is a list of Canadian registered vessels which have been equipped for wireless telegraphy by the Marconi Wireless Telegraph Co.:—

Newfoundland and Atlantic Coast:—Reid Newfoundland Co., Bruce, Invermore, Kyle, Lintrose; Harvey and Co., Bellaventure and Bonaventure; Job Bros., Beothic and Nascope; C.P.R., St. George; Canada Atlantic and Plant Line, A. W. Perry, Evangeline and Halifax; Boston and Yarmouth Steamship Co., Boston, Prince Arthur and Prince George; Dominion Coal Co., City of Sydney, Douglas H. Thomas and Morwenna; J. A. Farquhar, Seal; Holliday Bros., Aranmore; Quebec Salvage and Wrecking Co., Lord Strathcona; Dominion Government, Aberdeen, Acadia, Canada, Dollard, Druid, Earl Grey, Lady Grey, Lady Laurier, Lurher (light ship), Minto, Montcalm, Montmagny, Niobe and Stanley.

Great Lakes—C.P.R., Alberta, Assiniboia, Athabasca, Keewatin, Manitoba; Northern Navigation Co., Hamonic, Huronic, Noronic, Saronic; Canadian Towing and Wrecking Co., Empire and Province (barges), and St. Ignace; Dominion Government, Simcoe.

Pacific Coast:—Dominion Government, Estevan, Galilano, Malaspina, Margaret, Newington, Quadra and Rainbow; Union Steamship Co., Camosun; British Columbia Salvage Co., Salvor; R. Dollar, Robert Dollar; Grand Trunk Pacific Coast Steamship Co., Prince Albert, Prince George, Prince John and Prince Rupert; C.P.R., Mont-eagle, Princess Adelaide, Princess Alice, Princess Beatrice, Princess Charlotte, Princess Ena, Princess Mary, Princess May, Princess Royal, Princess Sophia, Princess Maquinna, Princess Victoria and Tees.

Of the foregoing vessels, the Dominion Government steamships Simcoe and Margaret are having the equipment installed, and the Northern Navigation Co.'s s.s. Noronic has just been completed. In addition to the vessels mentioned above, which are all engaged in purely Canadian or local service, there are a number of ocean vessels running to and from Canada, which are also equipped with the Marconi system, including the C.P.R. steamships on the Atlantic and Pacific oceans, the Canadian Northern Steamships' vessels, and numerous others.

Marine Casualties in 1913.—A cablegram from London, Eng., states that marine insurance losses during 1913 were unusually heavy, aggregating \$5,000,000. During the 11 completed months of the year 5,332 accidents of all descriptions to vessels were reported, 1,829 being collisions, 1,532 strandings, 895 weather damage and 423 fires and explosions. The number of vessels reported lost was 216 of which 62 were British.

St. Lawrence & Chicago Steam Navigation Co.'s Annual Report.

Following are extracts from the report for the year 1913 as presented at the annual meeting in Toronto, Jan. 13:—

The season of 1913 has been a satisfactory one financially to vessel interests on the Great Lakes. We regret, however, that in common with many other companies, we suffered from the unprecedented storm of Nov. 9 in the loss of the s.s. James Carruthers with many valuable lives, and we take this opportunity to extend our sincere sympathy to the bereaved families and relatives of our officers and men. We are pleased to state that the policy regarding insurance which you authorized some years ago has proved exceedingly satisfactory. We have collected \$272,794.09 from the underwriters on the s.s. James Carruthers and after providing for the full balance of her cost out of our insurance fund, we still have the substantial sum of \$61,096.94 at the credit of that account.

On account of the increasing business offering, your directors have placed an order for a large modern side tank steamer for delivery next autumn, and very satisfactory progress has been made in her construction to date. To meet the cost of this vessel your directors issued \$140,000 of new capital stock, offering the same to the shareholders at par.

The directors, from the earnings of the season, have paid a dividend of 8%, amounting to \$68,800 and have carried forward the balance \$63,504.61 to the credit of profit and loss, which added to the previous balance makes \$222,150.57 at credit of that account.

ASSETS.

Four steamships—Iroquois, W. D. Matthews, G. R. Crowe, and E. B. Osler	\$900,000.00
New steamship, expended to date	50,000.00
Bills receivable	20,000.00
Balance in Dominion Bank	315,935.57
	\$1,285,935.57

LIABILITIES.

Capital stock, old issue	\$860,000.00
Received on new issue	40,875.00
	\$900,875.00
Accounts and bills payable	101,813.06
Balance in insurance fund after deducting loss on s.s. James Carruthers less insurance recovered from underwriters	61,096.94
Balance of profit and loss carried forward	222,150.57
	\$1,285,935.57

PROFIT AND LOSS ACCOUNT.

Balance forward Jan. 2, 1913	\$158,645.06
Steamship earnings	\$150,161.53
Interest	1,500.40
	151,661.97
Cost of management	\$310,307.89
Dividend 8% payable Jan. 2, 1914	19,357.37
Balance carried forward	222,150.57
	\$310,307.89

At the annual meeting bylaws were passed authorizing the directors to borrow money from the Dominion Bank should it become necessary; also respecting the issue of \$140,000 of new capital stock.

The directors, who were re-elected for the current year, are:—President, W. D. Matthews; Vice President and Secretary, J. H. G. Hagarty; Managing Director, A. A. Wright; other directors, Jas. Carruthers, Capt. S. Crangle, G. R. Crowe, C. S. Gzowski and Sir Edmund Osler.

Society of Naval Architects and Marine Engineers.

At the annual meeting in New York recently, W. N. McFarland, who presided, in commenting on the use of fuel oil for ship propulsion, said that oil is economical when its cost in cents per gallon is not greater than one half the cost of coal in dollars

per ton; i.e., oil at 2c. per gallon is more economical than coal at \$4 a ton.

Two papers dealt with the possibility of building unsinkable vessels, and the changes in their structure to accomplish this. Wm. Gatewood, whose paper treated the latter feature, expressed the opinion that subdivision by transverse bulkheads, combined with suitable freeboard, is the logical method of preserving buoyancy and stability; that the proportion of the length of the vessel which may be damaged without danger of foundering should regulate the spacing and height of the bulkheads; and that for a coastwise steamer of standard type, carrying passengers small in number compared with the Atlantic liners, no other subdivision would seem necessary.

H. A. Everett, Assistant Professor of Marine Engineering, at the Massachusetts Institute of Technology, read a paper on the stability of lifeboats, which represented the results of inclining experiments and subsequent stability calculations upon four types of 28 ft. lifeboats:—1st, standard metallic; 2nd, standard wooden; 3rd, metallic; and 4th, collapsible wooden. The tests on the collapsible boat were not reassuring to those who believe in this type, as, even in an unloaded condition, water leaked into the pontoons or chambers between the decks. Of course, in any wooden boat, subject to the weather and wear of service, leakage is bound to occur; but when such leakage occurs in a space where bailing is impossible, the stability and buoyancy are seriously impaired.

Greater Safety at Sea.

The Revision Committee of the International Conference on Safety at Sea, which has been sitting in London, Eng., for some time, discussing rules and suggestions for securing greater safety for passengers and crews at sea, concluded its sittings Jan. 19. If the conclusions arrived at and the suggestions adopted by the committee are approved by the nations concerned, a time limit having been fixed at Dec. 19, 1914, it is provided that the regulations shall go into effect July 1, 1915.

Among a large amount of matters dealt with, the two chief features were the adoption of a plan for an arrangement lengthwise and crosswise of watertight compartments for vessels, which it is stated will make a vessel practically unsinkable; the exemption of passenger vessels carrying less than 50 passengers, or those plying within 100 miles of the shore, from the necessity of being equipped with wireless telegraphy, and the adoption of a miniature life-saving apparatus for children. The President of the conference was Lord Mersy, who presided at the enquiry into the loss of the s. s. Titanic.

The Minister of Marine gave notice in the Dominion House of Commons, Jan. 21, that he would introduce a bill to amend the Canada Shipping Act so as to make its provisions conform to the international regulations adopted at the recent conference in London, Eng., which dealt with matters pertaining to greater safety at sea.

First Vessel Through the Panama Canal.

The passage of the first vessel through the Panama Canal, from the Pacific to the Atlantic, was accomplished, Jan. 7, when the crane vessel Lavalley left the Pacific entrance to the canal. The trip was done by stages, chiefly for the purpose of showing the practicability of navigation through the canal, and no passengers were carried. The Lavalley is 100 ft. long, 10 ft. beam, and 15 ft. draught.

The Wabana-Annie Roberts Collision.

Commander H. St. G. Lindsay, Dominion Wreck Commissioner, recently investigated the collision between the British steamship Wabana and the Newfoundland schooner, Annie Roberts, which took place outside Sydney Harbor, N.S., Oct. 22, 1913, whereby the schooner was sunk and four persons drowned. Following is the judgment, concurred in by captains, F. Nash, J. M. Reith, and J. O. Grey, nautical assessors:—

The s.s. Wabana, which was under charter to the Dominion Coal Co., left Sydney, Oct. 22, at 5.25 p.m., for St. John, N.B., with a cargo of coal. On passing Southeast Bar light at about 6 p.m. a course was set (N. 60 W.) which would take her out to the Fairway buoy, and slightly to the southward of the range lights astern. Shortly after this a vessel's red light was sighted slightly on the port bow, and the order was given to port 10 degrees, which was done, and one blast of the whistle sounded. A little later, seeing that the vessel showing the red light was opening out her green light, the engines were stopped, and, as the sailing vessel appeared to be steering wild and yawing considerably, were ordered full speed astern, and the helm put hard aport, and three blasts sounded on the whistle; but the schooner, Annie Roberts, came on across the steamer's bow, apparently having hauled up to the southward, and was struck by the steamer's stem, somewhere amidships, and apparently went down immediately. The Wabana, after going astern for several minutes to keep clear of the Petrie reef to the southward of the fairway, lowered her boat and picked up one man of the schooner's crew, who was found clinging to a plank; but no trace of the other four could be found, although the boat remained in the vicinity for nearly an hour. The schooner was, at the time of the casualty, running back to North Sydney for shelter, having sailed from that port early in the morning, bound to Newfoundland, but on account of the

easterly wind and swell encountered during the afternoon had decided to turn back at about 4 p.m., and return to North Sydney, and in running before the wind with only her fore and main sails set, and boomed off wing and wing, and apparently steering no particular course, came into collision with the steamship.

The court, after carefully considering the evidence, is unanimous in its opinion that the collision between these two vessels, and the unfortunate loss of four lives, was entirely due to the negligent way in which the schooner was handled and navigated, as it would appear to the court that the Wabana's lights were apparently not noticed, or perhaps even seen, until that vessel was close to the schooner, and when those on board of her did see them in the panic which ensued, an order was given to "let her come up," which she did, with her head to the southward, with the result that she ran across the bows of the steamship. It would suggest itself to the court that those in charge of the schooner were engaged watching the lights and movements of the s.s. Morwenna, which came up on their starboard quarter, and passed them to starboard, going the same way, a few minutes before the accident, and therefore did not notice the Wabana's lights until she was close to the schooner, and the way the sails were trimmed probably prevented the man at the wheel from seeing ahead. The court is quite satisfied that no blame can be attached to the steamship, and that everything was promptly and properly done by the master of that vessel to try and avoid the collision, and the court is pleased to commend the efficient manner in which the boat from the Wabana was got away, and also the very proper steps that were taken by him immediately on his return to Sydney, in sending a vessel with a search light to the scene of the accident, although the effort was unfortunately quite unsuccessful. The court, although feeling the deepest sympathy for the relations of those who were unfortunately lost, cannot but severely criticize the lack of even ordinary care,

and of all knowledge regarding the Rule of the Road, which appear to have existed on board of the Annie Roberts. Such ignorance is not only a danger to the persons themselves, but it is a menace of the gravest character to any ship that may be navigating in their neighborhood.

Floating Equipment for Quebec Harbor Improvements.

The Quebec Harbor Commissioners have ordered three five-pocket steel dump scows of 300 yds. capacity, and three seven-pocket steel dump scows of 500 yds. capacity from Polson Iron Works, Toronto.

The five-pocket dump scows will be built of steel throughout, with oak doors in the hoppers, the doors being operated by hand through a worm gearing. Their dimensions will be, length 108 ft., moulded breadth 28 ft., moulded depth 9 ft.

The seven-pocket dump scows will also be built of steel throughout with oak doors in the hoppers, operated by patent steam winding gear with double cylinder 8 by 5 ins. engines placed in the hold. Their dimensions will be, length 144 ft., moulded breadth 31 ft., moulded depth 11½ ft.

Delivery is to be made in Quebec by the opening of navigation.

An action by W. J. Conners, of Buffalo, N.Y., against a U. S. weekly paper, for \$100,000 damages for libel, in connection with a contract held by him in 1900 for the construction of a grain elevator for the Montreal Harbor Commissioners, and which came before the Supreme Court at Buffalo, recently, was, it was announced, settled out of court, the terms not being made public. Mr. Conners was awarded the contract, and made a deposit of \$53,000, and after doing some preliminary work, withdrew, the Commissioners retaining \$6,000 as compensation. The periodical alleged that he surrendered the contract, to enable a contracting company in which he was financially interested, to get the contract at an enhanced figure.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

438. Dec. 20. British Columbia, Kootenay Lake, west arm, beacon lights established.
439. Dec. 20. British Columbia, Kootenay Lake, Kootenay Landing, range lights established.
440. Dec. 20. British Columbia, Slocan Lake, Silverton, light established.
441. Dec. 20. British Columbia, Columbia River, beacon lights established.
443. Dec. 26. New Brunswick, Bay of Fundy, Grand Manan Island, Seal Cove, buoy established off Wilcox Point.
444. Dec. 26. New Brunswick, St. John River, Belleisle Bay, Shampers wharf, lighthouse established.
442. Dec. 20. British Columbia, Columbia River, Upper Arrow Lake, Arrowhead, day beacon established.
445. Dec. 26. British Columbia, west coast, Barkley Sound, Ucluelet Arm, day beacon erected.
446. Dec. 26. United States of America, Washington, Juan de Fuca Strait, Cape Flattery light station, intended change in character of light.
447. Dec. 26. United States of America, Washington, Juan de Fuca Strait, New Dungeness light station, intended change in character of light.
448. Dec. 30. Canada, list of wireless telegraph stations.
449. Dec. 31. Ontario, Georgian Bay, Notawasaga Island, new illuminating apparatus.
450. Dec. 31. Ontario, Lake Couchiching, southern end, buoy to be established.
451. Dec. 31. British Columbia, Haro Strait, Discovery Island light station, new fog alarm building, change in fog alarm.
452. Dec. 31. British Columbia, Chatham Sound, Prince Rupert, Pillsbury Point, characteristic of fog bell, correction.
1. Jan. 2. New Brunswick, Bay of Fundy, Grand Manan Island, southwest head, change in character of light.
2. Jan. 7. Nova Scotia, Bay of Fundy, St. Mary Bay, Sissiboo River mouth, dredging, buoyage, position of lighthouse.
3. Jan. 7. Nova Scotia, south coast, entrance to Halifax harbor, Sambro outer bank, light ship placed for winter months.
4. Jan. 7. Nova Scotia, Cape Breton Island, east coast, Sydney harbor, obstruction north of Whitney pier marked by buoy.
5. Jan. 8. New Brunswick, Bay of Fundy, Deer Island Leonardville, lighthouse established.
6. Jan. 8. New Brunswick, south coast, Bay of Fundy, Passamaquoddy Bay, Chamcook harbor, lighthouse established.
7. Jan. 8. Nova Scotia, west coast, Peases Island, intended change in character of light.
8. Jan. 13. British Columbia, Vancouver Island, west coast, Barkley Sound, Amphitrite Point, light carried away, temporary light.
9. Jan. 13. British Columbia, Vancouver Island, east coast, Hammond Bay, light discontinued.
10. Jan. 14. Ontario, River St. Lawrence, Thousand Islands, Gananoque Narrows light station, hand fog horn discontinued.
11. Jan. 14. Ontario, Lake Ontario, Simcoe Island, Ninemile Point, intended change in character of light.
12. Jan. 14. Ontario, Lake Erie, Port Stanley, fog alarm established on west breakwater.
13. Jan. 14. Ontario, Georgian Bay, Meaford west pier, hand fog horn discontinued.
14. Jan. 16. Nova Scotia, Bay of Fundy, Luncarty Shoal, wireless telegraph apparatus installed on lighthouse.
15. Jan. 16. Nova Scotia, Bay of Fundy,

Minas Basin, Five Islands, lighthouse established on Sand Point.

16. Jan. 16. Nova Scotia, southwest coast, Baccaro Point, intended change in character of light.

17. Jan. 16. Nova Scotia, Halifax harbor, alteration in Examination anchorage.

18. Jan. 16. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Grondines upper range, back light improved.

19. Jan. 16. Labrador, east coast, Cape Harrigan, shoals to northward.

20. Jan. 20. Prince Edward Island, southwest coast, West Point, intended change in character of light.

21. Jan. 20. Quebec, River St. Lawrence, ship channel between Quebec and Montreal, Lake St. Peter, Pointe du Lac range, front light to be improved.

22. Jan. 21. Caution when approaching Canadian ports.

23. Jan. 21. Canada, signals to be made by vessels approaching ports when inconvenienced by searchlights.

Atlantic and Pacific Ocean Marine.

The Allan Line s.s. *Alsation* sailed from Liverpool, Eng., for Halifax, N.S., Jan. 17, on her maiden voyage.

The Allan Line *Orcadian*, which has been

running for some time in the River Plate trade, is reported sold to Italian purchasers for £14,000.

The C.P.R. s.s. *Montrose*, which sailed from Halifax, N.S., Jan. 2, was compelled to put back to port on the following day, owing to a breakdown of her engines.

Furness, Withy and Co., it is reported, have ordered four additional steamships for the North Atlantic trade. Two of these, it is said, will be built on the Tyne, and two at Middlesbrough, Eng.

The new Cunard liner *Aquitania* will possess the largest turbine engines ever built. They will weigh 1,400 tons and will contain over 1,000,000 blades, varying from 1½ to 20 ins. long. The engines will contain high, intermediate, and low pressure turbines.

The Royal Mail Steam Packet Co.'s s.s. *Carnarvonshire* was launched recently at Belfast, Ireland. She will be operated to the British Columbia coast, via the Suez Canal, with her sister vessel *Cardiganshire*, now on her maiden trip, and is expected at Victoria early in March.

Capt. H. F. Letson, heretofore Assistant Marine Superintendent, Cunard Line, New York, is reported to have been appointed Marine Superintendent for the same company's services to Halifax, Montreal and Boston, with headquarters at Boston, Mass.,

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during 1913.

The Canadian canal was opened April 14, and closed Dec. 15, 1913; season, 246 days.

The U. S. canal was open April 18, and closed Dec. 18, 1913; season, 235 days.

succeeding Capt. A. Ashley, recently deceased.

The C.P.R. s.s. Metagama will probably be launched during May, and the s.s. Missanabie about August. Both these vessels are under construction in Scotland for the C.P.R. Atlantic service. They will be about 12,000 tons, twin screw type, with accommodation for 520 second class and 1,200 third class passengers.

A press report from Paris, France, Jan. 21, states that at the North Atlantic Shipping Conference it was announced that all existing agreements in relation to the pooling of the traffic expired on that date. The request of the Hamburg-American Line for a larger percentage of the transatlantic steerage traffic was refused.

The Canadian Northern Steamships s.s. Principello, formerly Principe di Piedmonte, and owned by Genoese parties, and which has been leased to the Uranium Steamship Co., in place of the s.s. Volturmo, recently burnt at sea, is reported to have cost £120,000 to build in 1907. The price said to have been paid for her by the present owners is £135,000.

The Osaka Shosen Kaisha, one of the largest shipowning companies in Japan, is reported to be arranging for a freight and passenger service between Japan and Montreal, by way of the Suez Canal, and returning to the Orient via the Panama Canal. A representative of the company was in Montreal and the Maritime provinces recently studying harbor conditions.

A London, Eng., press dispatch states that it has been agreed amongst all the chief Canadian steamship lines on both the Atlantic and Pacific oceans, to grant substantial increases of pay to the captains and officers of their vessels, dating from Jan. 1. In addition, it is stated, that allowances will be given to officers when the vessel is laid up at home ports, also an annual bonus, and three weeks holiday on full pay.

The Reid-Donald Steamship Co., Ltd., the incorporation of which was announced in a recent issue, is operating a steamship between New York and the West Indies, and, it is reported, has another under construction. The company has an authorized capital of \$100,000. Following are the officers and directors.—President, J. A. Donald, New York; Vice President, D. Reid, New York; other directors, C. I. De Sola, T. Muirhead and G. Farrill, Montreal.

The Austro-Americana Line's s.s. Canada, which was purchased from the Hamburg American Line last year for its service between Canada and Austria as a competitor of the C.P.R., and which was formerly known as Bulgaria, has been resold to the Hamburg American Line. The Austro-Americana Line is a subsidiary of the Hamburg American Line, and was merely formed for the operation of the Canadian Austrian service. Reports do not indicate that the Austrian service has been discontinued.

The enquiry into the loss at sea of the Canadian Northern Steamships s.s. Volturmo, under charter to the Uranium Steamship Co., has just been concluded in London, Eng. The court found that the cumulative effect of the evidence was, that the fire originated among the chemicals carried as cargo, but it could not be attributed to spontaneous combustion. A tribute was paid to the officers and crew of their conduct, concluding with a reference to Capt. Inch, in the words, "it is sufficient to say he did his duty."

The Manchester Liners s.s. Manchester Commerce, which was docked at the Reid Newfoundland Co.'s dock at St. John's, Nfld., for repairs, after colliding with an iceberg in Belle Isle Strait in Oct., 1913, was floated out of the dock, Jan. 13. The re-

pairs covered the removal and replacing of 60 damaged plates, the erection of a new stem, and a number of lesser repairs, which the contract required to be completed in 59 days. The whole work was completed in 47 days, under the charge of W. E. Ladley, superintendent of Motive Power, R. N. Co.

The Royal Mail Steam Packet Co.'s s.s. Cobequid, en route from the West Indies to Halifax, N. S., ran ashore on the south-western end of the Trinity Ledges in the Bay of Fundy, during a heavy storm, Jan. 13, and became a total loss. Owing to the continuance of the storm, and the discontinuance of the wireless telegraphy, due to the fires having been put out, and there being no reserve power to operate the equipment, the wreck was not located until the following day, when the passengers and crew were rescued by the steamships Westport and John L. Cann.

Maritime Provinces and Newfoundland.

The Eastern Steamship Corporation, operating a steamship line between Yarmouth, N.S., and Boston, Mass., will run four round trips each week, between these ports, commencing with March. This is an increased service.

It is reported that the Reid Newfoundland Co. will probably order a new steamship shortly, to be built in Scotland, to take the place of the s.s. Duchess of Marlborough, which was wrecked at Battle Harbor last year.

The Department of Public Works announces that a channel, 8 ft. deep at low water and 100 ft. wide, has been dredged through the bar at the mouth of the Sissiboo River, St. Mary Bay, in the Bay of Fundy, N.S. The channel has not yet been swept clean, and it is known that there are some lumps in it at less than standard depth. It is intended eventually to deepen and straighten the channel up to Weymouth bridge.

Maritime and Newfoundland Steamship Co., Ltd., has been incorporated under the Dominion Companies Act, with \$150,000 capital, and office at Halifax, N.S., to carry on a general shipping business, and in connection therewith to own and operate steam and other vessels, and to carry on a general towing and wrecking business. The incorporators are: J. G. Farquhar, C. W. Rowlings, O. E. Smith, Hon. A. W. Redden and A. N. Whitman, Halifax.

An order in council has been passed, providing that steamships of not less than 2,000 tons gross, belonging to Norway, Sweden, Austro-Hungary and Japan, shall be admitted to the Canadian coasting trade in carrying freight and passengers between any port in Nova Scotia and any port in Quebec, and vice versa, on the same conditions as are applicable to Canadian vessels, until Dec. 31, 1914. The vessels chiefly affected are those engaged in the coal trade.

The Dominion Coal Co.'s s.s. Bridgeport, which sailed from Sydney, N.S., in October, for Montreal, with coal, and has not since been heard of, has been posted as missing at Lloyd's. It is reported that the loss on the hull is £64,000, and on the cargo £10,000. She was owned by Brown, Jenkinson and Co., London, Eng., and leased to the Dominion Coal Co., having been built specially for that trade. The s.s. Glace Bay, a similar vessel, owned by the same company, and chartered by the Dominion Coal Co., was also lost on the same route earlier in the year.

At the annual meeting of the Miramichi Steam Navigation Co., at Chatham, N.B., Jan. 13, the report showed that the earnings for 1913 were in excess of those for

the previous year, but on account of the heavy expenditure for alterations and improvements on the steamboats Alexandra and Sybella H., no dividend was declared. The officers for the current year are:—President, Hon. J. P. Burchill; Vice President, J. D. Creaghan; other directors, W. B. Snowball, R. A. Snowball, J. D. B. F. MacKenzie, John McDonald; Secretary and Manager, H. B. McDonald.

Province of Quebec Marine.

The Montreal Harbor Commissioners took their customary New Year trip down the harbor, on their steam tug Sir Hugh Allan, Jan. 2.

Reports for the navigation season of 1913 show a considerable increase in the export of grain from Montreal, and also in general freight and passenger traffic. During the season, 62,565,000 bush. of grain were received there, of which 53,351,000 were for export, as compared with 37,800,000 in 1912.

The Quebec and Lotbiniere Navigation Co., Ltd., has been incorporated under the Quebec Companies Act, with \$75,000 capital, and office at Ste. Croix, to carry on a general passenger and freight transportation business within the province. J. H. Boisvert, Quebec, Que., E. Boisvert, St. Antoine, D. Boisvert, Ste. Croix, S. Boisvert, Quebec, J. A. Boisvert, St. Raymond and G. Boisvert, Quebec, are the provisional directors.

La Compagnie de Navigation de Matane et Sept Isles has been formed in Quebec, Que., to establish a weekly winter steamboat service, as well as a summer service, between Matane and Seven Islands. It is stated that the scheme is quite feasible during the winter, especially for a small vessel, as the ice is constantly moving. J. A. Fafard is President of the company, which has the support of the Quebec Board of Trade.

It is reported that Canada Steamship Lines, Ltd., will probably order a new steamship to take the place of the s.s. Longueuil plying across the St. Lawrence, at Montreal. It is also announced that the company will shortly take up the matter of a service between Quebec and Bermuda, in which it is considered there are good possibilities. Its subsidiary, the Quebec Steamship Co., already operates a direct line between New York, Bermuda and other West Indian ports.

The Quebec and Levis Boards of Trade have protested against the breaking up of the ice formation in the St. Lawrence River at Cap Rouge, as it has the effect of blocking up the harbors at Quebec and Levis, and interfering with the navigation between the two ports. It is claimed that these two ports are the only two opposite each other on the St. Lawrence, between which a considerable trade is done throughout the winter, and that the means of communication should not be affected by what is stated to be a really useless breaking up of the ice. Local authorities state that the work done by the ice breakers does not in any way assist in the earlier opening of navigation, and even if the channel between Quebec and Montreal were opened earlier the shipping companies would still carry out their schedules to the seaboard.

Ontario and the Great Lakes.

The Ontario Car Ferry Co.'s car ferry steamship Ontario no. 1 has been equipped with a wireless telegraph apparatus for testing purposes.

The Canada Steamship Lines s.s. Dundurn arrived in Toronto harbor, crossing

the lake from Port Dalhousie, Jan. 1. It is reported that she will have a complete overhauling, and a number of extensive repairs during the winter.

Sprinkler equipments are now carried in a number of vessels plying on the Great Lakes. The cost of installation prevents equipments in many boats just as it does in the case of factories, but there is no doubt about its advisability.

The 1913 season is reported to have been the worst in the history of lake navigation for vessel losses, the approximate total loss being \$6,000,000, with a heavy loss of life. The great storm of Nov. 9 was the chief cause of the high loss.

The operator at the Point Edward wireless telegraph station has been presented with an engraved gold locket by Pickands, Mather and Co., managers of the Interlake Steamship Co., Cleveland, Ohio, in recognition of his services during the storm on the Great Lakes, on Nov. 9, 1913.

As the result of an investigation by the Dominion Government, locally, the crew of the lightship stationed off the Corsica Shoal, near Sarnia, were exonerated from charges of neglect of duty during the storm of Nov. 9. The enquiry was the result of local rumors to the effect that the vessel had been mishandled.

The large freight steamship which is under construction at Port Arthur, and which is said to be for Canada Steamship Lines, Ltd., will probably be launched soon after the opening of navigation. The work on the hull is progressing satisfactorily, and the engines, which have been built in Cleveland, O., have been received.

The Montreal Transportation Co.'s electrically propelled vessel Tynemount, a description of which has already been given in Canadian Railway and Marine World, and which is intended for service on the Great Lakes, sailed from the Tyne, Eng., recently, on her maiden voyage, to Santander, Spain. It is said that before coming to Canada, she will make a number of short sea voyages.

The Montreal Transportation Co.'s annual meeting was held at Montreal recently. Following are the officers and directors for the current year:—President, B. McLennan; Vice President, Farquhar Robertson; Managing Director, L. L. Henderson; other directors, T. A. Crane, A. Kingman, F. McLennan and A. G. Thomson; Secretary, W. Crawford.

The Dominion Government is reported to have awarded a contract to Jennings and Ross, for the construction of a large dam at the head of the Big Chaudiere, French River, at prices aggregating about \$23,124,400. This is said to be a portion of the French River improvement work, which is being undertaken as a preliminary to the proposed Georgian Bay canal undertaking.

A press report of Jan. 20, stated that a large amount of machinery had arrived on the site of the new Welland Ship Canal, five sections of which are under contract. Some of this machinery, it is said, was used on the construction of the Panama Canal. The Provincial Government has issued instructions regarding the prohibition of the sale of intoxicants within the canal area.

The Ontario Transportation and Pulp Co., Ltd., has been incorporated under the Dominion Companies Act, with \$10,000 capital and office at Thorold, Ont., to own and operate steam and other vessels in the passenger and freight trade, and to deal in pulpwood, etc. The incorporators are, W. Curtis, Jr., G. S. Brack, F. A. Dean, Jr., G. V. McCune, Thorold, Ont., and R. R. McCormick, Chicago, Ill.

A press dispatch from Ottawa, Jan. 18,

states that the channel improvements at Fighting Island, in the Detroit River, for which the Dominion Government included \$57,000 in the appropriations last year, will be of a wider scope than at first anticipated. A new channel between 3 and 4 miles long will be dredged, and it is stated that work will be commenced in the spring. Owing to the increasing traffic the additional channel has become a necessity.

A report from London, Eng., states that the cost of 11 total losses of insured vessels on the Great Lakes, during the storm on Nov. 9, 1913, was £483,600. The value of cargoes carried by 18 vessels known to have been lost amounts to a further £160,000. Seven vessels, apparently uninsured, which were also wrecked, are not included in the foregoing figures. The value of these vessels is given as £296,200, making the total estimated loss to shipping property £1,243,200.

The past year was one of great progress on the New York State barge canal, and it looks as though within about two years' time it will be possible for 1,000-ton barges to pass between the Great Lakes and the Atlantic, by way of the Hudson River.

A press report from Sarnia, states that the Northern Navigation Co.'s s. s. Saronic, which has been running between Sarnia and the head of the lakes for several years, will, on the reopening of navigation, be placed on the route between Toronto and Montreal.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for Dec., 1913, as follows:—Superior, 602.74; Michigan and Huron, 580.35; Erie, 572.14; Ontario, 245.91. As compared with the average December levels for the past ten years, Superior was 0.42 ft. above; Michigan and Huron, 0.15 ft. above; Erie, 0.45 ft. above, and Ontario 0.39 ft. above. It was anticipated that during January, Superior would fall about 0.3 ft., Michigan and Huron about 0.1 ft., Erie remain stationary, and Ontario rise about 0.1 ft.

British Columbia and Pacific Coast Marine.

The G. T. Pacific Coast Steamship Co.'s s. s. Prince John, which has recently had equipment installed for burning liquid fuel, sailed from Victoria, Jan. 5, for Ladysmith, where she loaded coal for Prince Rupert.

A press report from Vancouver states that the Dominion Government has made a grant of practically the whole of the foreshore at Newport, at the head of Howe Sound, to the Pacific Great Eastern Ry., as a seaport, on condition that the company expend \$2,000,000 in making harbor improvements.

The Dominion Public Works Department is making a thorough survey of the portion of the Columbia River within Canada, with a view to determining the possibility and probable cost of making the river navigable from its head waters to the international boundary. A report on the progress of the work will probably be made in the spring.

At the White Pass and Yukon Ry. Co.'s annual meeting in London, Eng., in December, O. L. Dickeson, of Vancouver, President of the local companies, referred to the steamboat service established by the company in the lower portion of the Yukon River, to the rate war which resulted, and to the probability of the company establishing a steamship line between Seattle, Vancouver and Skaguay. His remarks are given in full in the report of the annual meeting on another page of this issue.

The Dominion Government is reported to have acquired a site for its projected Pacific coast dry dock, at Lang's Cove, Esquimalt. The plans are being prepared by the Public Works Department, and it is stated that tenders will probably be called for early in the spring. It is estimated that the cost of the dock will be about \$4,000,000. The dimensions will be, length 1,150 ft., depth 40 ft., and width 120 ft., or practically a duplicate of the one which the Government has under contract at Lauzon, Que. It is reported that a similar dry dock will shortly be undertaken at Halifax, N.S.

Investigation of Wrecks on the Great Lakes.

Recent press reports stated that a commission had been, or was about to be, appointed, by the Dominion Government, to investigate the wrecks resulting from the great storm on the lakes on Nov. 9, and that Capt. J. B. Foote, of Toronto, had been named as one of the commissioners by the Dominion Marine Association. Though the question of appointing such a commission is under consideration, we are officially advised that no appointments have been made, nor has the question as to whether a commission is to be appointed, been definitely decided.

The origin of the report relating to Capt. Foote, is the recommendation of a joint meeting of the executive committees of the Dominion Marine Association and the Canadian Lake Protective Association, to the effect that it is advisable, on all wreck investigations relating to casualties on the inland waters, that the court should have with it an assessor familiar with conditions and practice on the lakes, and Capt. J. B. Foote was suggested as one who would be generally approved by all parties concerned.

J. A. Currie, M.P., gave notice in the House of Commons, Jan. 15, of the following resolution:—"That in the opinion of this House an enquiry should be held by a committee of this House regarding the disasters last fall on the Great Lakes and Atlantic Ocean, involving such terrible loss of life, with a view of ascertaining if by legislation such disasters can be avoided in the future, and that such committee have power to call witnesses, examine them under oath, and send for papers and documents, and report to this House from time to time."

Non-magnetic Rails and Track Signaling.

In order to accommodate the increasing use of track and signaling circuits on railways, with the necessity for bonding joints, points, and crossings, and separating rail sections to form the desired electric circuits, it is proposed by a German engineer to use non-magnetic rails. The non-magnetic track rails are made of nickel steel containing about 18 to 20% of nickel, and they are inserted at desired points in the ordinary magnetic track for controlling signals, brakes, etc., from the cars. For light railways, the whole of the track may be formed from these rails, which do not affect the action of the weak electric current used in controlling the railway.

Lloyd's Register of Shipping.—The general committee has appointed W. S. Abel, Professor of Naval Architecture at Liverpool University, to succeed the late Dr. S. J. P. Hearle as chief ship surveyor to the society. C. Buchanan, who was Dr. Hearle's senior assistant, has been appointed Principal of the Chief Ship Surveyor's staff. T. B. F. Benton, A. I. N. A., Toronto, has been appointed Surveyor for District of Lake Ontario and Collingwood, Ont.

Canadian Pacific Railway Dining Car Service Building at Vancouver.

The C.P.R. is erecting at Vancouver, for its dining car service, a building 185¾ by 52¼ ft. with basement and two stories above.

The machinery room in the basement, 32 by 20 ft. will contain a 20 h.p. electric motor, a 10 ton double acting horizontal ammonia compressor, 2 electric pumps for pumping brine through refrigerating pipes, and a 10 ton brine cooler. The ammonia compressor, when working in connection with a condenser and refrigerator of equal capacity, will have a refrigerating power equal to the melting of 10 tons of ice a day, when working continually for 24 hours at 120 revolutions a minute, and with cooling water having temperature of 60 degrees. The compressor will be fixed on a massive cast iron bed plate upon which will be formed girders for crosshead and bearing of crankshaft. The refrigerating pipes will be 2 in. brine pipes inside 3 in. ammonia pipes and will run up to the first floor, encircling the entire four walls of each cold storage room, pipes being laid one above the other the full height of the walls. The rest of the basement will be devoted to storing of supplies, and potatoes will be taken in by a chute which will run down the basement from the north track side of the building.

On the ground floor will be the commissary kitchen, 39 ft. 10½ ins. by 24 ft. 8½ ins. It will contain the latest equipment throughout, including a large range using either coal or coke, large sink for washing milk cans, drain pipe, hot and cold water faucets, etc. There will be a soap room just off the kitchen for manufacturing all soap used, containing vats and all necessary equipment. The kitchen and the bakeshop will be separate rooms connected by a doorway on the north side of the kitchen and the south side of the bakeshop. The bakeshop will contain two large brick bake ovens, movable mixing table, pastry table, movable bread racks, mixing machine, marble slabs, sink, drain boards, etc.

Next to the kitchen and the bakeshop will be eight cold storage rooms, constructed of nonperel cork, which contains 94% of pure cork and 6% of patent binder, making them both damp and mould proof. The floor will consist of two layers of cork, surmounted by a 2 in. concrete top, while the side walls and ceiling will be 5 ins. throughout solid corked. It will only be necessary to run the refrigerating machinery 12 hours per day, to keep the cold storage rooms as follows: Vegetable room from 40 to 45 degrees, kitchen refrigerator 32 degrees, ice cream refrigerator 30 degrees, fresh meat room 20 to 32 degrees, salt meat from 20 to 32 degrees, poultry room 32 degrees, fish room 35 degrees, and dairy and produce room 30 to 35 degrees below zero. The entire eight rooms will measure 24 by 43 ft., with an entrance from the kitchen and one from the east side. The dining car stores office, 9 ft. 10 ins. by 16 ft. 7 ins. will also be on the ground floor, as well as the wine and equipment room, soiled linen room, clean linen room, and linen room office. The linen room office will be between the clean linen room and the soiled linen room thus keeping the soiled linen at all time from coming into contact with the clean linen.

On the top floor will be the general office, and private office for the Assistant Superintendent. A large clothes closet will open off from the general office as will also the lost property room, and a long narrow filing room. A large store room for bar case goods, and one for dining car stores department case goods will be next to the general office on the north while the rest

of the floor will be used for silverware storage room, dining and sleeping cars department linen storage, seamstress room, pressing room, porters' assembly room, and cooks' and waiters' assembly and instruction rooms. There will be two large lavatories on this floor, and hot and cold water will be available at all times. Communication between general office, and porters', cooks' and waiters' assembly rooms will be held by means of large window counters opening directly into the rooms from the office.

There will be two outstanding features about this building, the heating and lighting, both natural and artificial. Fifty-two large radiators will be used in heating, and the electric lighting system will have a 21,500 watt capacity. There will be 102 windows to admit the sunlight.

The laminated floor construction will be unusually strong, in some places carrying as much as 300 lbs. to the square foot, the average weight being 125 lbs. The building is being constructed on heavy concrete piers, and of brick with heavy timber columns supporting the floors. Three staircases will give access to the three floors and there will be elevators, one at the east end and one in the centre of the building. Steel doors will be placed at the entrances to the stairways and the building is being built as nearly fire-proof as possible. The storage space will be very large, viz., 3,000 sq. ft. in the basement and 1,092 sq. ft. on the ground floor. Great difficulty was experienced in getting the basement constructed, it being necessary to contend with from 15 to 18 ft. of water when excavating was started. Two centrifugal pumps, one electric and the other steam driven, were in constant use pumping. The basement now, however, is thoroughly waterproof, and the elevator pits, which go down somewhat lower than the basement floor, are treated with a specially prepared waterproof combination, thus eliminating the possibility of water seeping through the floor.

Summoning Police by Train Wireless.

The wireless equipment now used on the Lackawanna Rd. trains has proved very serviceable on a number of occasions. Recently when a locomotive broke down, another one was summoned by wireless communication and much time was saved. The new means of communication was employed recently to summon two of the road detectives in order to arrest suspected crooks who were found riding between the baggage car and the tender. The detectives were on hand when the train pulled in at Binghamton, N.Y., and placed the men under arrest. No doubt wireless communication between stations and moving trains will prove useful in a thousand and one unexpected situations.

Locomotives Furnished Power during the replacement of a battery of worn out boilers, at the plant of Schaum and Uhlinger, of Philadelphia, Pa., recently. Two American type locomotives were rented from the Pennsylvania Rd., and while these were in operation the old battery of two boilers was replaced. The locomotives, whose connecting rods and valve gears had been disconnected, were hauled to a convenient point on a siding of the plant; their throttle valves were closed, and a connection piped from their auxiliary steam domes over the fireboxes to the main steam headers in the plant.

The C.P.R. has opened a children's nursery adjoining the women's waiting room at Windsor St. station, Montreal. It is equipped with bath tubs, cots and seats for the little ones, and rockers for mothers with infants in arms.

Modification of Express Freight Charges.

The Board of Railway Commissioners' general order 117 of Jan. 9, in the matter of the minimum through charge of express companies subject to the Board's jurisdiction, for shipments of express freight carried by two or more companies in Canada, is as follows:

"On and after Feb. 1, shipments of express freight subject to the table of graduate charges for shipments weighing less than 100 lbs. incorporated in the Express Classification for Canada, approved by the Board, the carriage of which between points in Canada involves the services of two or more express companies, subject to the Board's jurisdiction, shall be charged the appropriate graduate under the lowest through or aggregate rate per 100 lbs.

"Sec. c of rule 9 of the conditions of carriage of the said express classification, imposing, subject to qualification, a minimum through charge of 60c. when the through or aggregate rate per 100 lbs. is less than \$2, shall be abolished on and after said date. The said express companies shall, by lawful notice, jointly publish and file an amendment to the said express classification giving effect to this order on the said date.

W. H. Plant, General Auditor, Dominion Express Co., writes: "There has been misunderstanding in connection with the reduction of express charges to be made on Feb. 1. This has been due to examples of reductions having been given without having shown to what traffic the reductions refer. So there may be no confusion, and that the public may understand exactly, the following explanation is given. The order refers: 1. To shipments carried by two or more companies. 2. Between points in Canada. 3. To shipments subject to graduated charges.

Qualifications referred to in the paragraph 2 of the order indicates that when the graduate charge under rate of \$2 per 100 lbs. is less than 60c, such graduate charge will apply instead of the minimum. Therefore, the result is, after Feb. 1, section C of rule 9 will be discontinued, and when carried by two or more companies there will then be a single graduate on the through rate, without this minimum. The reductions are as follows:

Weight pounds.	40c	\$1.00	\$1.25	\$1.50	\$1.75.
1	Nil.	Nil.	Nil.	Nil.	Nil.
2	.05.	.05.	.05.	.05.	.05.
3	.15.	.15.	.10.	.10.	.05.
4	.20.	.15.	.15.	.10.	.05.
5	.15.	.10.	.10.	.05.	Nil.
6	.15.	.20.	.15.	.10.	.05.
7	.25.	.20.	.15.	.10.	.05.
8	.25.	.20.	.15.	.10.	.05.
9	.20.	.15.	.10.	.05.	Nil.
10	.20.	.15.	.10.	.05.	Nil.
15	.15.	.15.	.05.	Nil.	Nil.
20	.15.	.10.	Nil.	Nil.	Nil.
25	.10.	.05.	Nil.	Nil.	Nil.
30	.05.	Nil.	Nil.	Nil.	Nil.

John Pullen, President, Canadian Ex. Co., has issued the following statement: "It is our understanding that the new order is really the outgrowth or the working out to a finality of the judgment of the Board of Railway Commissioners in 1910 in the matter of joint rates on express shipments forwarded from an office of one company to an office of another company. Prior to 1910 these joint or inter company shipments were subject to a through charge made by combining the separate charges of each company. The first step taken as a result of the Board's order in 1910 was to establish a single through charge for two or more companies. The charges so arranged applied only to shipments weighing less than 100 lbs. This arrangement provided for a minimum charge for each of the carrying companies. This was more by way of ex-

ment to see how it would work out. The last and present arrangement waives the minimum charge for each company for the shorter distances, so that on a through shipment weighing several pounds for an office of one company to an office of another company, the former charge on which was 60c. as a minimum, will now be charged 35c. and upwards, according to the distance carried. Corresponding reductions have also been made in the same manner for shipments weighing less than 7 lbs. The present order has no bearing whatever upon the shipments carried by one company only, but where two or more companies are involved in the transportation."

Among the Express Companies.

The Canadian Northern Ex. Co. has opened an office at Langruth, Man.

The Canadian Ex. Co. has recently opened offices at Nash's Creek, N.B., Black Capes, Chandler and Marcell, Que., and Iroquois Falls, Ont.

The Dominion Ex. Co. has recently opened offices at McKinnons Harbor and Westchester, N.S., O'Leary, P.E.I., Kent Jct. and Wapske, N.B., Percival, Primate and Prussia, Sask., Consort, Ensigne, Erimibe, Keoma, Monitor and Veteran, Alta., Bear Creek, Cambie and Weyholme, B.C.

Press reports from the west state that despite the recent reduction in express rates, the companies operating there report that business is maintaining the average of former years. The volume of traffic to the east is stated to be rather less, but the traffic from the east showed some increases, while there was considerable increase in purely local business.

The Canadian Northern Ex. Co.'s returns to the Interstate Commerce Commission for July 1913, show total receipts from operation, \$86,256; express privileges \$33,546; total operating revenue \$52,711; total operating expenses \$33,422; net operating revenue \$19,289; taxes \$464; operating income \$18,824; mileage over steam lines 5,740; mileage over other lines 22.

The Canadian Ex. Co., in its report for July 1913, to the Interstate Commerce, shows total receipts from operation, \$311,254; express privileges \$141,779; total operating revenue \$169,475; total operating expenses \$118,582; net operating revenue \$20,892; taxes \$2,750; operating income \$18,142; mileage over steam lines 6,259; mileage over other lines 830.

Telegraph, Telephone and Cable Matters.

The C.P.R. direct wire between Toronto and Winnipeg was put into service early in January.

The Great North Western Telegraph Co. has opened an office at Phillipsburg, Que., and has closed its offices at Lionshead, Lyn and Manotick, Ont., Pabos Mills, Price and Waterloo, Que.

In connection with the construction of the Quebec bridge, eight iron box telephone sets have been installed for use at various points as building proceeds. The instruments are placed on a traveller 200 ft. high, two of them being connected with a sectional unit switchboard, which is equipped for 20 lines to the shore. The six other instruments will be used at different points, a flexible cable and reel allowing the traveller to be moved without disturbing the connections.

The Montreal Telegraph Co.'s annual meeting was held at Montreal, Jan. 8. The company's property, which is valued at \$2,151,822.55, is leased to the Great North

Western Telegraph Co., and its operation and maintenance is guaranteed by the Western Union Telegraph Co., under an agreement for 97 years, from July 1, 1881, which also guarantees the payment of dividends of 8 per cent. During 1913, four quarterly dividends, aggregating \$160,000, were paid, and in addition, a twelfth annual bonus of \$5,000 was distributed with the last quarterly dividend, the amount having been derived from the investment of the company's contingent fund.

The Great North Western Telegraph Co.'s office at Hamilton, Ont., has been completely overhauled, rewired and re-equipped, making it on a par with the company's best offices. A large steel frame switch, with slate charging panel in one end, has been installed, together with new natural white oak operating tables throughout. The placing of a special steel protector rack takes care of the liability of damage through high tension crosses on outside lines, while a new storage battery furnishes power for the lines, the battery being charged by a motor generator. Great improvement in working conditions is to be expected from the new plant. The work was done under the supervision of C. E. Davies, Supervisor of Equipment, and H. K. Clark, Electrician.

Marconi Wireless Telegraph Company of Canada. Limited. Annual Report.

Following are extracts from the annual report for the year ended Jan. 31:—

Under the new contract with the Canadian Government for the operation of wireless telegraph stations on the Great Lakes, four stations have been established and placed in operation during the past year; one station is being enlarged, and three other stations are to be built during the current year. The negotiations with the Newfoundland Government were brought to a satisfactory termination in December by completing a contract which will continue the company's exclusive rights in Newfoundland until 1926.

Under the agreements with the Newfoundland and Canadian Governments the following stations are operated:—Ten stations for Newfoundland Government, the controlling station of which, at Fogo, is the company's property; 22 stations in Eastern Canada and Newfoundland for the Canadian Government, 4 of which are the company's property, 5 stations on the Great Lakes, on behalf of the Canadian Government.

The number of steamships now operated by the company on its own behalf is 44, and in addition 4 steamboats are operated on behalf of affiliated companies. As the old contracts for the equipment of steamships expire, they are being replaced, wherever possible, by new standard contracts, by means of which better conditions are secured to the company. The standard ship contract is for five years.

The Trans-Atlantic station at Glace Bay, N.S., has been operated by the company on its own behalf throughout the year, and towards the end of the year the construction of the duplex receiving station at Louisburg and the construction of the 6 wire pole line connecting that station with the transmitting station at Glace Bay were completed. The duplex system will be put into operation as soon as its corresponding station, now in course of construction at Clifden, Ireland, has been completed. A large sum has been invested in these undertakings, but it is confidently anticipated that the increased returns will not only fully warrant the expenditure, but will also assist in bringing much better returns on the total outlay at the Glace Bay station.

The traffic receipts for the year show a

satisfactory increase in all departments. The ship and shore station receipts were \$52,322, against \$45,367 for the previous year. The Transatlantic traffic returns were \$44,950, against \$27,745 for previous year. There is an increase in the amount advanced by Marconi's Wireless Telegraph Co., Ltd., of London; this is more than counterbalanced by the increased assets in new stations and new plant.

Contracts for the sale of apparatus for the equipment of a large number of ship and shore stations are in hand for the current year, all of which will show a satisfactory profit. During the last session of Parliament the Canadian Government enacted a law making wireless equipment on passenger vessels plying in Canadian waters compulsory. This legislation, which becomes effective on Jan. 1, 1914, will result in further business for this company, owing to the necessity of equipping about fifteen additional steamers in Canadian territorial waters.

An important factor in the new business anticipated by this company during the coming year is the construction of two high power stations at Hudson Bay and Pas, Man., for intercommunication. This important contract was awarded to this company by the Department of Railways in connection with the construction of the new Hudson Bay Ry. by the government, and marks an important factor in wireless telegraphy, in the utilization of the Marconi system for covering wide distances over land. It is possible that further developments may ensue in this direction in the near future.

The following are the directors:—A. A. Allan, President; G. Marconi, Vice President; J. N. Greenshields, R. Bickerdike, G. C. Isaacs, G. M. Bosworth, W. D. Birchall, J. H. Lauer, General Manager.

Wireless Telegraph and Telephone Progress in 1913.

Because it is a young branch of electrical engineering, there is a great deal to be said annually about the progress of wireless telegraphy. Early in 1913 communication was established for the first time directly between Germany and the United States. Several new stations have been built or are building for transatlantic wireless service. During the fall wireless telegraphy gave another demonstration of its importance to navigation, when the s.s. *Volturno*, afire and fearing immediate destruction in a storm, summoned a rescue fleet by wireless telegraphy, which arrived in time to save a large part of the crew and passengers. To aid the mariner in finding his way across the ocean, wireless signals are sent out daily from the Eiffel Tower in France and from the Arlington station in the United States. A number of wireless stations have been established in Canada, on the Atlantic Coast, on the St. Lawrence River, on the Great Lakes, at Pas, Man., and at Port Nelson, Hudson Bay, and on the Pacific Coast. Wireless telegraphy is being used on trains to permit of communication with stations along the line. Wireless or induction train signal systems are being tried on some lines.

Considerable progress has also been shown in wireless telephony. Spoken messages were sent 600 miles from Rome to Tripoli. At this late date it seems remarkable that material progress should have been made in telegraph and cable systems. During the year a system has been devised which permits of sending the regular dot and dash signals over cable lines and relaying them automatically over land lines.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Standard Underground Cable of Canada, Ltd., Hamilton, Ont., has increased its authorized capital from \$500,000 to \$1,000,000.

Calendars for 1914 have been received from F. H. Hopkins & Co., Montreal, B. Greening Wire Co., Hamilton, Ont., the W. W. Butler Co., Ltd., Montreal, Flannery Bolt Co., Pittsburgh, Pa., the Hiram L. Piper Co., Ltd., Montreal.

The United States Light and Heating Co. has removed its New York City branch sales office from 30 Church St. to 210 West 50th St., which brings the New York United States Light and Heating Co.'s service station and sales office in the same building. The general offices remain at 30 Church St.

Independent Pneumatic Tool Co., Chicago, has issued circular W., describing and illustrating the different Thor roller bearing piston air drills, grinder, wood boring machines, single valve chipping hammer, one-piece riveting hammer, and two sizes of electric drills furnished with universal motors.

Gold Car Heating and Lighting Co.—Frank A. Purdy, heretofore Manager, Canadian Gold Car Heating and Lighting Co., Ltd., Montreal, has been appointed Sales Manager for Gold Car Heating and Lighting Co., and Canadian Gold Car Heating and Lighting Co., Ltd., with office at 17 Battery Place, New York, N.Y. He was born in New York, N.Y., Sept. 2, 1866, and started with the Gold Car Heating Co., July 1, 1905, as salesman. On Jan. 1, 1907, he was appointed Manager, Canadian Gold Car Heating and Lighting Co.

Canadian General Electric Co.—At a meeting of directors in Toronto, Dec. 27, to commemorate the 24th anniversary of the organization of a syndicate to enquire into the feasibility of establishing in Toronto, a system of incandescent lighting, which syndicate subsequently organized the C.G.E. Co., the President, Frederick Nicholls, made an address, in which he sketched the company's history. Of the eight original directors, six are still on the board, the other two having died. The syndicate started with a capital of \$10,000. Now the company has assets of about \$25,000,000, and a dividend has been earned and paid every year. During the 25 years, \$6,286,744 has been paid in

dividends, and a surplus equal to 40% of the paid up capital has been accumulated. Mr. Nicholls held that there is absolutely no "water" in the capitalization, every share, both common and preferred, have been sold for cash, at par or better, the average cash received by the company being \$118 a share. The company has sufficient cash and current assets to pay off its whole indebtedness, also the entire issue of preferred stock, and still leave nearly \$50 in net quick assets for every share of common stock, in addition to all the capital assets. The value of real estate, buildings and machinery is greatly in excess of the book values, and after deducting \$1,000,000 reserved for depreciation, there remains \$95 in capital assets for every share of common stock, so that the common stock represents a value of \$140 a share. The company has no bond or mortgage indebtedness.

Transportation Conventions in 1914.

March 17-20—American Railway Engineering Association, Chicago, Ill.
April 21—American Association of Freight Agents, Houston, Tex.
May—American Railway Claim Agents, St. Paul, Minn.
May 18-22—International Railway Fuel Association, Chicago, Ill.
May 19—American Association of Demurrage Officers, St. Louis, Mo.
May 20-22—Freight Claim Association, Galveston, Texas.
May 20-23—Association of Railway Telegraph Superintendents, New Orleans, La.
May 21-22—American Association of Railroad Superintendents, St. Louis, Mo.
May 26-29—Master Boiler Makers' Association, Philadelphia, Pa.
May 28—Association of American Railway Accounting Officers, Atlantic City, N.J.
June 10-12—Master Car Builders' Association, Atlantic City, N.J.
June 15-17—American Railway Master Mechanics' Association, Atlantic City, N.J.
June 16—Train Dispatchers' Association of America, Jacksonville, Fla.
June 24—Association of American Railway Accounting Officers, Minneapolis, Minn.
July—International Railway General Foremen's Association, Chicago, Ill.
Aug. 18—International Railroad Master Blacksmiths' Association.
Sept. 8-10—Roadmasters and Maintenance of Way Association, Chicago, Ill.
Oct. 20-22—American Railway Bridge and Building Association, Los Angeles, Cal.
Nov. 17-19—Maintenance of Way and Master Painters' Association of the United States and Canada, Detroit, Mich.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries.
Canadian Car Service Bureau, J. Reilly (acting), 401 St. Nicholas Building, Montreal.
Canadian Electric Railway Association, Acton Burrows, 70 Bond Street, Toronto.
Canadian Freight Association (Eastern Lines), G. C. Ransom, Canadian Express Building, Montreal.
Canadian Freight Association (Western Lines), W. E. Campbell, 502 Canada Building, Winnipeg.
Canadian Railway Club, I. Powell, St. Lambert, Que.
Meetings at Montreal, 2nd Tuesday each month, 8.30 p.m., except June, July and August.
Canadian Society of Civil Engineers, C. H. McLeod, 176 Mansfield St., Montreal.

Canadian Ticket Agents' Association, E. de la Hooke, London, Ont.

Central Railway and Engineering Club of Canada, C. L. Worth, 409 Union Station, Toronto. Meetings at Toronto 3rd Tuesday each month, except June, July and August.

Dominion Marine Association, Counsel, F. King, Kingston, Ont.

Eastern Canadian Passenger Association, G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal, R. W. H. Smith, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto, R. B. Wolsey, 94 King St. West, Toronto.

Great Lakes and St. Lawrence River Rate Committee, Jas. Morrison, Montreal.

International Water Lines Passenger Association, M. R. Nelson, New York.

Niagara Frontier Summer Rate Committee, Jas. Morrison, Montreal.

Nova Scotia Society of Engineers, A. R. McCleave, Halifax, N.S.

Quebec Transportation Club, J. S. Blanchet, Quebec.

Ship Masters' Association of Canada, Capt. E. Wells, 45 John St., Halifax, N.S.

Western Canada Railway Club, W. H. Rosevear, 25½ Princess St., Winnipeg. Meetings at Winnipeg 2nd Monday each month, except June, July and August.

MAIL CONTRACT.

SEALED TENDERS, addressed to the Postmaster-General, will be received at Ottawa until Noon, on Friday, the 13th March, 1914, for the conveyance of His Majesty's Mails, on a proposed Contract for four years, six times per week each way, over Streetsville (via Huttonville and Churchillville) Rural Mail Route from the Postmaster-General's pleasure.

Printed notices, containing further information as to conditions of proposed Contract, may be seen and blank forms of Tender may be obtained at the Post Office of Streetsville, Huttonville, Churchillville, and at the office of the Post Office Inspector, Toronto.

A. SUTHERLAND,
Post Office Inspector.

Post Office Inspector's Office,
Toronto, Jan. 23rd, 1914.

CANADIAN NORTHERN RAILWAY COMPANY.

NOTICE is hereby given that the Canadian Northern Railway Company will apply to the Parliament of Canada, at its next session, for an Act defining the manner of execution of the company's securities and the denominations of issue.

Line Construction Material for Electric Railways

After careful and thorough tests for quality and efficiency, covering a wide range of manufacturers, we can supply you with the highest grade of overhead line material.

Safety Strain Insulators

All metal parts of Northern Electric Safety Strain Insulators are made of drop-forged steel, and are completely insulated with Electrose Compound. The insulator here shown has a tensile strength of 7,000 lbs., and a dielectric strength of 12,000 volts.

Trolley Ears

We can supply these in either clinch or solder type for round or grooved wire. We also have a complete line of mechanical screw clamps, which afford a great saving of time and labor.

Other specialties include all types of Hangers, Insulated Bolts, Section Insulators, Overhead Frogs and Crossovers, Pole Brackets and Pole Fittings, etc.

March, 1914.

Cast Iron Wheel Records.

By H. H. Vaughan, M. Can. Soc. C. E., Assistant to Vice President, Canadian Pacific Railway.

Practically all railways have abandoned any form of cast iron wheel record which follows the history of each individual wheel. Apart from the enormous amount of work in reporting and entering the movements of several hundred thousand wheels which are in service in a large system, it is practically impossible to avoid incorrect numbers being reported. The difficulty of straightening out the errors that arose, errors which frequently were not disclosed for years after they actually occurred, and the correspondence involved in the attempt, were sufficient reasons for discarding a system that did not furnish sufficient useful information to justify its expense. The writer has not investigated methods used on other roads to describe them with accuracy in this paper, but believes that apart from the records maintained for guarantee purposes, the only systems in general use are those in which the average life of wheels removed from service for various causes, is determined in various ways. It is usual to show a figure for the average life of

12 to 18 years to be shown for wheels, when as a matter of fact they are lasting about 5 or 6.

The figures showing the life of the actual wheels removed can be obtained with considerable accuracy and with simple reports and records. Each wheel is marked with its number, the date cast, etc., so that no complications are introduced by recording the date put into service and the date removed. While no record is usually kept of any time the wheel may be out of service, or the movements of the car under which it has been placed, these factors are relatively unimportant on a large number of wheels, and the average life of the wheels removed is a figure of sufficient importance on any road to justify the records and statements required. It should properly be kept by weight of wheels, so that any alteration that occurs in the life of wheels under the same weight of equipment may be distinguished from the changes due to the introduction of a greater proportion of heavier equipment or similar causes.

known, the number removed in each year's life for each cause may be expressed as a percentage of the number made and this percentage may be compared year by year to determine the comparative service obtained from the different wheels.

As the records are compiled in the C. P. R., no attention is paid to the date the wheel is put into service. For wheels made in any one year, the number removed in that year are taken as being removed in the first year of their life, those removed in the next year, as in the second year of their life and so on. This introduces an inaccuracy in the case of any particular wheels placed in service towards the end of the year, but the error becomes unimportant after a year or so and the labor of compiling the record is greatly reduced. The statement obtained by this system is shown in fig. 1— which gives the results for 600 lb. wheels cast by the C. P. R. in 1902, the first year for which this statement was prepared. Similar statements have been made up for the same weight of wheel with its subse-

1912	138	0.45	18.83	30	0.10	8.24			0.81			0.02	175	0.58	28.61	188	0.62	18.00	1		4.44	364	1.20	51.06

wheels obtained by dividing the number in service by the number removed per year, but this figure is not of much value, as it depends more on the rate at which the number of wheels in service increases than on the actual life of the wheels removed. Thus if the number of wheels in service remained stationary for a period of years, while the number of wheels removed increased 25%, it would indicate a decrease in the average life of the wheels of 20%, while if during the same period the wheels in service had increased 50%, the same increase in the number of wheels removed would indicate an increase in the average life of 20%. Now if the increase in the wheels in service had taken place in two or three years, it would have had comparatively little influence on the wheels removed, so that an increase in the life of the wheel might be shown by these figures, while a reduction had actually occurred. In addition reports of wheels removed on foreign lines are not obtained correctly, especially for wheels removed on handling companies account and in general it is not uncommon for a life of

While the average life of wheels removed affords valuable information over a period of years, it does not enable the result of any variation in the quality or service of the wheels to be detected until considerable time has elapsed, and then only in a general way. When the wheel foundry methods of the C. P. R. were revised in 1908, it became desirable to introduce some system by which it could be determined whether better service results were being obtained or not, without the complications of the old individual records. This was accomplished in a satisfactory and simple manner by comparing for each year's make of wheels, of the same weight and manufacture, the number removed for various classes of defect in each year of their life. This system does not require any additional reports over those commonly used. The only information needed is the make of the wheel, weight, date cast, maker and cause of removal, items that are likely to be reported accurately and which are those required for a record of any kind. As the number of wheels of any group cast in each year is

quent modification to 645 lbs. and 625 lbs. up to 1912, one of the advantages of this system being that with the records that had been kept it was possible without too much work to go back as many years as necessary to compare the results with those of previous years.

This statement, fig. 1—while giving all the information that is obtained for the wheels it refers to, does not enable any comparison to be made easily, and for that purpose a series of such statements for wheels made in successive years are combined as shown in fig. 2. This statement shows the number of the wheels of the weight it relates to made in each year, and the percentage removed in each year of their life for all causes, except worn flange, slid flat and removed from tenders. A similar statement, fig. 3, shows the percentage removed each year for worn flange, and slid flat and similar statement, fig. 4, shows the percentage of broken wheels and broken and chipped flanges for the same series. It is evident that similar statements may easily be prepared for any cause of remov-

it is desired to investigate, but those shown are the ones that have been considered important. The elimination of wheels slid flat, worn flanges and removed from tenders, leaves a balance, that while not corresponding to the classification of manufacturers and operating defects, is broadly affected by the quality of wheels turned out, so that the statement, fig. 2, is a record of the foundry output in this respect.

made or purchased for renewals. The former will evidently not be placed under foreign equipment to the same extent, but as this number has been under 10% of the total number placed in service each year its effect can be allowed for.

The reliability of the statement as a whole is confirmed by the fact that since 1908 it shows a decreased percentage of wheels removed and that the average life of the

An important point in this statement is the general agreement of the results shown throughout the life of any series of wheels with those shown in the first year or two. It appears almost certain that if the wheels are of good quality and carefully inspected there will be less poor wheels to fail in the first year or so, and this result will persist throughout their life. This result is certainly true in the case of 1904 and 1908 wheels and if it is confirmed by further experience, this form of statement furnishes a simple method of determining within a comparatively short time the service that may be expected from any group of wheels without the necessity for complicated records.

Figs. 3 and 4 are also interesting statements. Wheels slid flat, or worn flanges are not chargeable against the foundry, but they may be largely affected by the shops. Careless tapping and mating, cars down on side bearings and sundry other causes for worn flanges are all avoidable and results may be followed by means of this report. Slid flat wheels are also caused by improper maintenance and operation and may be

This statement shows several interesting features. There is evidently a decided variation in the percentage of the wheels removed of different years make, and it is only reasonable to suppose that where a larger percentage is removed in a given time, say 5 or 7 years, the life of the wheel is less. If this be granted some years makes are evidently considerably superior to others, for instance those made in 1904 were far better than the average, while those made since 1908 have been uniformly good.

If all wheels made were accounted for, there would of course be no assumption involved, but by an inspection of fig. 1 it will be seen that of the wheels made in 1902, only 51% have been accounted for in 1912. It is improbable that 49% are still in service and the difference is therefore to be accounted for by wheels placed under foreign cars or removed on foreign roads and not reported. This discrepancy might be reduced if the number of wheels of any make placed under foreign cars were deducted from the number made before calculating the percentage, but it would introduce a complication of doubtful advantages. The chief effect of this factor is in comparing wheels received under new cars with those

1910	5	4	5
1911	5	4	5
1912	5	5	5
1913	5	5	5

largely reduced by care.

It will be seen from this statement that there is comparatively little difference between the wheels removed for being slid flat of the various years make. There is, however, a most decided difference in the number removed for worn flange, the wheels made in 1906 being considerably better than those of previous years, while there is a still greater reduction in 1908. The percentage of 1908 wheels removed in 5 years

flanges from manufacturer A were about equal to the earlier C. P. R. wheels, and greater in number than from the C. P. R. wheels made after 1907. Those from manufacturer C are closely the same as

Figs. 5, 6, 7, show similar statements for the wheels supplied by three separate manufacturers, giving the same information for the same weight of wheel as figs. 2, 3, and 4. It will be seen in fig. 5 that 1907 wheels from manufacturer A compare very closely with the 1908 C. P. R. wheels on the percentage removed for foundry causes, but that for the balance of the groups of wheels, poorer results are shown. In fig. 6 the removal of wheels for worn flanges from manufacturer B is exceedingly small, while the number removed from other manufacturers compare with the later C. P. R. results. Wheels from manufacturers B and C we cars, so that it would be case of B particularly the tapping. In fig. 7 the removal of wheels for

Before leaving this description of these records it is interesting to note that they

Fig. 8.—Failures Caused by Manufacturers' Defects on Wheels Cast in Successive Years for 60,000 lbs. Capacity Cars for C. P. R.

may be easily plotted and figs. 8 to 14 show weights of wheels of C. P. R. make. Figs. 8, 9, and 10 show the percentage of wheels of 600 lbs., 650 lbs., and 700 lbs. weight respectively, removed for causes other than

Reference has been made throughout this paper to the revision of the C. P. R. foundry methods in 1908 and to the results obtained since that date, which evidently show a considerable improvement. Prior to that date the mixture had been handled by

The writer considers one of the most important factors in obtaining good wheels is that of inspection. Absolutely uniform and perfect foundry practice is of course the great thing to obtain and the most difficult, but that is the portion of the subject which would be better described by some competent wheel manufacturer. Inspection should detect those wheels which for any reason depart from the accepted quality, and for this purpose the wheels to be tested should be selected with care and sufficient wheels broken from any days run to en-

sure the rejection of any that are either too hard or too soft. This may be accomplished by comparing the tapes and chill tests and rejecting all soft and hard wheels until it can be determined within reasonable limits.

membered, that out of the ordinary lot of wheels, 60% will run through their life and be removed without any defect that reduces the life of the wheel so that it looks very much as though the question of getting the

tensively used on the C. P. R., and the trouble that occurred was caused by its improper use and not on account of its quality. Since that time its use was abandoned for about two years and it has subsequently

Fig. 9.—Failures Caused by Manufacturers' Defects on Wheels Cast in Successive Years for 80,000 lbs. Capacity Cars for C.P.R.

Fig. 13.—C.P.R. Wheels Removed on Account of Broken Flange.

is that the wheels accepted are good.

Inspection should, of course, detect all ordinary defects, but it can be carried on to properly protect the heat, and this is most important. One thing should be re-

other 40% out of the way by better practice or improved inspection were the important ones.

The question of mixtures is a very vexed one. Prior to 1908 charcoal iron was ex-

been employed to the extent of 10 or 15% of the mixture. In spite of the great reputation of charcoal iron, it is a question to what extent it can be better than coke iron after being melted up in a cupola heated by

coke. This statement is not intended to refer to the use of iron with a low sulphur content to prevent the constant increment in sulphur which occurs from remelting with coke, but refers to the value of charcoal iron as against coke irons. Good results have certainly been obtained from the latter if properly handled, but on the other hand if any advantage in strength can be shown for charcoal iron the additional cost is not worth considering. The great question at the present time is that of improving the quality of the chilled wheel. It has only one serious point of weakness, the danger of broken flanges. The records show that the number of broken flanges has been greatly reduced since 1908. If this is correct, the causes are, the reinforced flange, careful manufacture, good inspection and a rather hard wheel. The reinforced flange was introduced in 1906-7 when the 600 lbs. wheel was changed to 645 lbs. and it would appear that this change made a

grey iron beneath it taking less than its share on account of its greater elasticity. It is therefore necessary to maintain a sufficient depth of white iron to resist a force of this nature, which is that brought on the flange by the rail, and it is evident that the white iron is greatly assisted when backed up by a large amount of grey iron, which is the case when the flange is reinforced as in the latter designs of wheels. This is probably the correct explanation of the greater amount of flange breakage with soft wheels, and it is apparently confirmed by the results that have been obtained.

There is good ground for expecting that the use of the reinforced flange and better knowledge of the causes governing the strength of white iron may lead to considerably better results being obtained from the chilled wheel in the future.

On light equipment, with less severe brake service than is usual today, the chilled wheel has given excellent results and is

AMERICAN RED CROSS ABRIDGED Text Book on First Aid (Railroad Edition).—By Major C. Lynch, U.S.A. 150 pages, 5 by 7 ins., 19 plates. Paper cover. P. Blakiston's Son and Co., Philadelphia, Pa. 50 cents.

GOVERNMENT OWNERSHIP OF RAILWAYS.—By S. O. Dunn, Editor Railway Age Gazette. 400 pages, 5 by 7½ ins. Cloth. D. Appleton & Co., New York. \$1.50 net, \$1.62 post paid.

This is a comprehensive discussion of the desirability of government ownership of railways under different political and economic conditions, and especially of the desirability of government ownership of railways under the political and economic conditions existing in the United States. It

Fig. 11.—C.P.R. Wheels Removed on Account of Worn Flange.

great improvement.

The C. P. R. practice has during the past few years run to a hard wheel, the rule being to use the M. C. B. limits for depth of chill, applying them to the pure white iron only. This was introduced on account of an investigation made of a number of wheels causing derailments on account of broken flanges, which showed that the majority were soft wheels, having 3-8 in. or less depth of chill. It would certainly appear that a light chill is a cause of weakness, not only in the tread under heavy loads, but in the flanges. This may be explained by the structure being that of a hard rigid surface joined to a softer and less rigid back. Grey iron while often considered as a rigid material has only about 50 to 60% of the rigidity of the white iron, which probably corresponds closely to that of hardened steel. When this compound structure is subjected to any force, placing a tensile strain on the surface, this strain is largely localized on the layer of white iron, the

even now most economical and satisfactory in most respects. Flanges practically never break through the line in which they are restricted in strength, and until they do so, there is every reason to hope that the cast wheel may be able to hold its own, and in time to render the good service it has in the past.

The foregoing paper was read before the Canadian Railway Club in Montreal recently.

Where tube lengths of 12 or 14 ft. were common 14 or 15 years ago, lengths of 20, 22 and even 24 ft. are used in present day practice, with the result that smokebox temperatures have decreased from about 750 to 800 degrees, to 550 to 600 degrees, the only increase of energy required being the slightly greater draft in the smokebox to pull the smoke through the longer tubes.

The maximum rate of combustion per sq. ft. of grate area per hour for bituminous coal of good quality is 120 lbs., and for hard coal, from 55 to 70 lbs.

Fig. 14.—C.P.R. Wheels Removed on Account of Broken Wheel.

gives concisely the history of the relations between railways and the state in the leading countries, and outlines the causes which have led to the adoption of government ownership where it now prevails. It then discusses the following points: The relative economy and efficiency of public and private ownership and management. The adequacy, quality and safety of the transportation service rendered by railways under the two policies. The policies followed and the results of ratemaking under public and private management. The financial results to the public of state ownership. The effects of public ownership on the condition of labor. The political effects of government ownership. The concluding chapter summarizes the discussion in the preceding parts of the book and the conclusions reached.

The evaporative value of tubes or flues varies with the difference in length, diameter and spacing.

Esquimalt and Nanaimo Railway Mechanical Terminal Facilities at Victoria, B.C.

The recently completed group of buildings forming the Esquimalt and Nanaimo Ry. terminal plant at Victoria West, B.C., comprises a locomotive house, machine shop, car repair shop, boiler and engine houses, store, etc.

The locomotive house has 10 stalls, each 13 ft. 7 ins. at the front, 26 ft. 5 ins. at the back, and 90 ft. deep. The walls are of 13 in. brickwork on strong concrete foundations, and the roof is of timber construction covered with felt and gravel. The usual locomotive pits are provided, together with one drop pit 7½ ft. wide. The walls of these are of 10 in. concrete, to which is fastened, by means of anchor bolts, the 6 by 12 in. timbers carrying trackage. For a width of 3 ft. all around the pit, 3 in. planking is spiked, the intervening floor space being finished off with cinders.

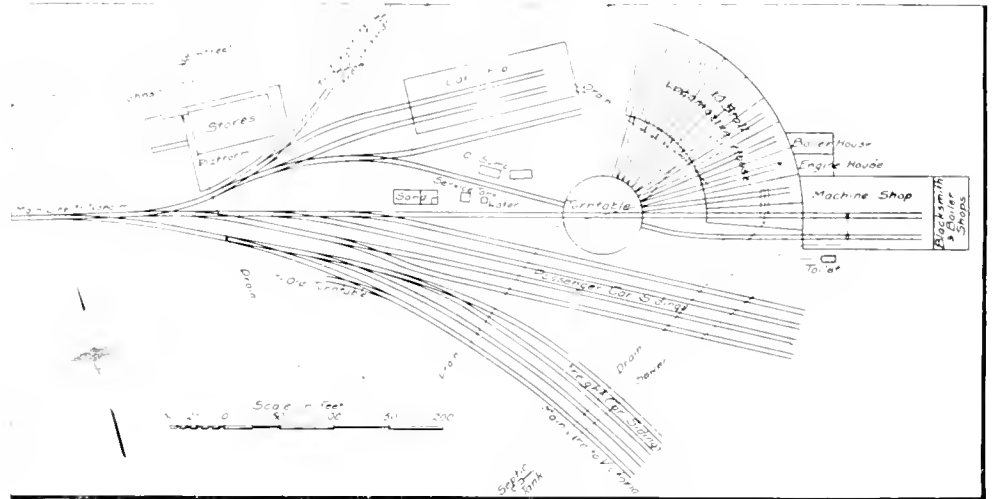

The machine shop is 68 by 112 ft., and 18 ft. high to the under side of roof truss, and is provided with two locomotive pits and one drop pit similar in construction to those in locomotive house. The shops abut end on to the back of the locomotive house, one track entering from the end stall, and one from the outside of the locomotive house, thus providing outgoing and incoming tracks over turntable. The roof is pitched and is carried by six timber trusses at 16 ft. centres; these are supported on brick piers standing out 4½ ins. from the 13 in. walls. Good lighting has been secured by three large skylights on the roof, together with ample sidelights, two windows being fixed in each bay. Bench accommodation has been supplied for the fitters, and the whole floor has been planked over. A width of about 36 ft., extending the length of the building, has been reserved for the installation of machinery tools, which are now being fixed, and include:—18 ft. wheel lathe, 16 ft. Bertram lathe, Bertram gap lathe, 20 ft. gap lathe.

be located the steam hammer, two circular and one oblong forges, together with one set of shears and one set of rolls. This building is 32 by 68 ft.

The engine room and boiler room are located in the angle formed by the two main buildings, the former being 31 ft. 10 in.

the usual features necessary for the economical handling of repair work.

The store is one story and basement, the walls of the former being 13 in. brickwork, and of the latter of 18 in. concrete. On the ground floor a space of 38 by 56 ft. is reserved for the store proper and is equipped with a hand power elevator to serve the basement, and also shelving for the reception of supplies. At the east end of this floor there are three rooms, the outer two being offices for the Master

Esquimalt and Nanaimo Ry.'s Mechanical Terminal Layout at Victoria, B.C.

by 20½ ft. and the latter 45¾ ft. by 19½ ft. The engine provided is 75 h.p. and of the tandem compound type. The air compressor is of the imperial cross compound steam driven type X, made by the Ingersoll-Rand Co. Two 100 h.p. standard C.P.R. locomotive type boilers, carrying 130 lbs. pressure, are being installed. They are equipped for fuel oil, which will be pumped to the burners from a 4 by 6 ft. circular auxiliary tank, located underground outside the building. This tank, in turn, will be

Mechanic and Storekeeper respectively, while the centre one is intended to house seven Bowser self registering oil pumps. The different varieties of oil to be used will be stored in 2 by 4 by 12 ft. oblong tanks, made of 3-16 in. plate. These are located in the basement in a reinforced concrete fireproof chamber, 15½ by 24½ ft., the feed piping leading direct therefrom to the Bowser pumps above. The remainder of the basement floor is intended for the storage of heavy material brought

8 ft. screwing machine, small Bertram lathe, a large and small drill, wheel press, planer, and shaper. The main shafting will be bracket fixed to the track piers, and the counter shafting to the under-side of the roof trusses.

The blacksmith and boiler shop is a continuation of the machine shop, partitioned therefrom by a 9 in. brick wall. In it will

be supplied by gravity from the service tank located near the turntable.

The car repair shop is 50 by 150 ft., and of 13 in. brickwork. The roof is pitched and covered with corrugated iron, the whole being carried by eight timber trusses at 16¾ ft. centres. Here, as in the other buildings described, car pits of concrete construction are provided, together with

down by the elevator. A platform has been erected round three sides of the building to facilitate the handling of deliveries from the track and street.

Eight feet from the centre of one of the tracks leading across the turntable is the concrete fuel oil storage tank, 22 by 8 by 10 ft. high, which is entirely underground. The walls are 10 ins. thick with a 12 in.

roof, the latter being strongly reinforced with T iron and expanded metal to ensure the safe carrying of trackage above. Near the storage tank, and equidistant between the two tracks crossing the turntable, stands an 8,000 gal. circular steel service tank, supplied by pump from the storage tank, from which the oil proceeds by gravity to the auxiliary tank near the boiler house. Locomotives will also receive their supply of fuel here by means of two sway pipes which radiate from the bottom of the tank, one to each track. Close by is the water standpipe, so that when taking oil, locomotives can also receive their water supply without change of position. A sand plant has been built 20 ft. from the water standpipe along the same track. The erection is of timber construction and of standard C.P.R. design. Generally speaking, the whole plant as above described is of an up to date character, all buildings are lit throughout by electricity, and are also equipped with water hydrants for fire protection.

The buildings are located to the extreme northwest of the ground, being allotted for terminal purposes. The layout of the freight yards, sheds and passenger station has not been completed, but the accompanying plan indicates the general scheme, so far as the shop layout is concerned.

The work of erection commenced April, 1913, and has been carried out by the contractor, E. R. Doe, of Victoria, B.C., under the direction of R. A. Bainbridge, Division Engineer, with A. L. Kennedy as Engineer in Charge. We are indebted to H. E. Beasley, General Superintendent, for the foregoing information.

The Most Powerful Electric Locomotives.—The New York Central Rd. is having built for its terminal service six electric locomotives which will be the most powerful yet constructed. They will be capable of developing 2,000 horse power continuously or 2,600 horse power for one hour. The equivalent tractive effort is 14,000 lbs. at 54 miles an hour continuously, or 20,000 lbs.

Proposal for Appointment of Royal Commission on Transportation.

The Canadian Society of Civil Engineers has submitted the following memorial to the Dominion Government:—

The time is now opportune to appoint a Royal Commission on transportation and allied problems. The early opening of the Panama Canal and the great development in all lines of industry from one end of Canada to the other raise questions demanding the most careful solution.

The report of the Transportation Commission made in 1898 contains a great deal of valuable data, but is now largely obsolete.

Such a Commission should consist of seven members, viz.:—one railway engineer, one hydraulic engineer, one railway manager, a lawyer, a transportation manager familiar with lake and ocean navigation, two eminent business men, one from the east, one from the west, and a secretary. Such report should include and, whenever possible, make recommendation on the following matters:

Water Routes.—River improvement, lake and gulf, dealing with existing systems—proposed systems from the commercial and engineering sides, harbors, docks, graving docks, types of ships and barges for inland service.

Winter and other Ports.—National and local, required facilities and equipment having regard to the handling of grain, merchandise, manufactures, coal and the other heavy bulk products to the end that the most economical method be secured. There is a necessity for an even, steady movement of traffic throughout the year. How may this be accomplished at the least possible cost to the people of Canada? The water power possibilities, as an incident of navigation on the St. Lawrence, Ottawa, and other important rivers. It is believed by competent men that the St. Lawrence may be converted into slack water navigation from Montreal to Lake Ontario by the building of about five dams and five ship several million horse power of energy may

respect.

Railways.—In what respect is it possible to improve, having regard to terminals, receiving and delivering freight in large cities and at other important points? How may transportation be rendered more economical? What should be the policy of the country regarding new railways? What conditions should be made on behalf of the public? A reasonable definition of what earnings and expenses should be. To what extent should regulation extend in order that capital may be secured for the continued requirements of the country and the public be sufficiently protected?

Routes and Outlets.—The Atlantic seaboard. The Pacific seaboard. The Hudson Bay. The Great Lakes.

The Canadian Society of Civil Engineers represents practically every qualified engineer in Canada. It is with a knowledge of the importance of the subject and of how easily great mistakes, causing enormous waste of money, can be made, that your memorialists have approached the subject, in the hope that you may see fit to grant such a Royal Commission to the end that our common country may be benefited.

The Blacksod Bay Atlantic Route.—Discussing the proposed short route across the Atlantic via Blacksod Bay, Ireland, the Shipping World draws attention to the fact that passengers dislike very much the trouble and annoyance of any transshipment, and American and Canadian travellers are not likely to take kindly to a railway journey across Ireland, a steamer passage across the Channel, and another railway journey to their destination. Further, on the reverse journey, passengers will prefer to embark either at Liverpool or Southampton to being subjected to the inconvenience of going direct to Blacksod Bay by train and a coasting steamer. Such a service could not be a success without handling a large amount of cargo, and as Blacksod Bay is so far removed from the large industrial centres, this class of traffic is not likely to be attracted.

See opposite page.

at 49 miles an hour at the one hour rating. Each locomotive will haul, if necessary, a 1,200 ton train on level track, continuously, at 60 miles an hour. They are insulated for 1,200 volts to enable them in the future, should it be desired, to operate on this voltage. They have a higher efficiency than any other high speed electric locomotives yet built.

be had at very low cost. Such a possibility suggests a development in manufacturing of incalculable value to the country and would seem worthy of special report. The existing canal system on the St. Lawrence is expensive to maintain and operate. The suggested system would seem to offer an canal locks, and that as an incident thereto, opportunity for large savings in both

Experimental Fireproof Trains.—The Great Western Railway of England has put in service two experimental fireproof trains, each consisting of four cars. The cars are built entirely of steel, and are lighted throughout electrically. Wood has been practically eliminated from these trains. The only wooden construction is the footboard on the outside.

National Transcontinental Railway Car Shops at Transcona.

The first instalment of this article in the last issue described the freight car shop and the passenger car shops, as well as giving a general description of the whole plant, including the locomotive department. The second instalment follows:

The Passenger Car Paint Shop is 87 by 340 ft., of an exactly similar type of construction to the passenger car shop, with concrete sub walls, surmounted by brick walls, spanned by steel trusses. There are

tors, one over each section.

A 17 ft. wide building, 15 ft. high, adjoining the main building near the centre, and extending the length of three shop sections, contains the auxiliary shop facilities, including foreman's office, lavatory and wash room, and the indirect heating plant. A 12 ft. fan connects with a 2½ ft. square concrete duct across the shop, with branch concrete ducts along each wall, all these ducts being under the floor. In the wall

color bins, putty mixer, grinder, glass rack and pot racks, the latter to the rear of a counter, separated from the east side of the building by an aisle, over which the supplies are served. This counter has a central flap top. A telfer overhead track enters a door on the north side, making a partial circuit of the building and out on the east through a door on that side.

A platform extends along the east and north sides. At the south end on the east side, the platform is at the level of the stores interior, sloping up near the north end to the platform level along the north

Fig. 6.—Plan of Passenger Car Paint Shop.

four working tracks extending the length of the building, the central ones at 21 ft. centres, and the outer ones 21 ft. centres.

Between each of the outer pairs there is a 2 ft. industrial track. The working tracks have 12¾ ft. doors in each end of the building, with 5 ft. doors for the service tracks. The two service tracks have a cross connection through small turntables, 130 ft. from the west end, leading across to the planing mill, which is immediately to the south.

under each truss there are outlets. The shop is kept thoroughly drained by traps in the floor, which is of 6 in. concrete. These traps are located at 40 ft. centres along the centre line of each of the working tracks, a 3 in. wrought iron down pipe, connecting with a longitudinal pipe of the same size, to cross pipes, each of which cares for a quarter of the shop. The floor from the wall has a 1 in. drop to the traps, and from the service track to each side, and also from the centre there is a ½ in. drop to the traps.

side, which is at 4 ft. above the ground level, with a 3 in. drain slope towards the outside. The platform width on the east side is 5 ft., and on the north 6 ft. The north side platform adjoins the yard track, and on it will be unloaded all the supplies to be brought into the building through the north door over the projecting overhead track.

The Upholstering Shop is situated in the larger gallery of the east passenger car shop, and is reached from the lower level either by the stairs or by a hoist, as mentioned in the description of that building in the February issue. It contains the following equipment:

Machine for washing bunk curtains, etc., with benzine. Diameter of drum 36 ins., and 50 ins. high.

Extracting machine, with benzine tank and fittings complete, for extracting benzine. Rotary drum 30 by 14 ins.

Washing machine for blankets, etc., 50 by 36 ins.

Rotary extracting machine, with soap and water fittings, 30 by 14 ins.

Soap tank with fittings complete with steam heating coil to boil soap water for washing and extracting machine. Drum 3½ ft. by 30 ins.

Steam box, 18 by 11 by 7 ft., with steam coil at back, and sliding doors at front, for drying blankets.

Steam table to steam edges of blankets, with copper steam pipe attached to one side of 9 by 6 ft. table.

Frames to stretch blankets, 9 ft. by 6 ft. 8 ins.

Stretching tables for frames, operated by compressed air.

Feather renovating machine, to renovate and clean feathers in connection with two feather bunks, 8 by 6 ft.

Hair picking machine.

Benzine tank for 500 gals. Bowser equipment.

Electric cutter.

The Planing Mill, 100 by 300 ft., is of the

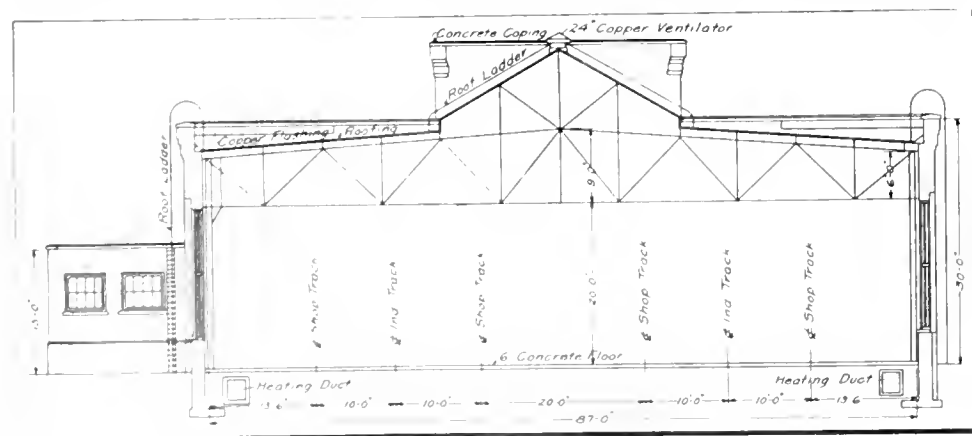

Fig. 7.—Cross Section of Passenger Car Paint Shop.

The shop is divided into 20 ft. sections, cross wise of the shop, by the roof trusses, and in each of these sections there is a large window, providing excellent illumination, in conjunction with the skylights in the monitor roof. The steel roof trusses have a clear 87 ft. span across the shop, and the bottom chord is 20 ft. above the floor. The central depth of the spans is 9 ft., sloping to 6 ft. at the side walls. A monitor, 25 ft. wide, with a depth of 10 ft. above the truss, extends the length of the shop, surmounted by a row of 21 in. copper ventila-

The Paint Storehouse, 40 by 30 ft. is of the standard construction, with concrete lower walls, carrying brick upperwork, and spanned by steel trusses. It is situated to the rear of the passenger car paint shop, to the north of the lumber sheds. Inside, there is a clear height to bottom of truss of 12 ft. The floor of the building is raised above that outside about 2¼ ft. by a gravel fill, surfaced with 3 in. planking. Along the west and south sides there is a 3½ ft. wide platform, raised 2 ft., for a tank and oil storage stand. In the centre are the dry

standard construction, with concrete lower walls, surmounted by brick masonry and spanned by steel trusses. It adjoins the passenger car paint shop, to which it is very similar in design, and abuts on the midway, the second building from the north end. The roof structure is carried on through steel trusses spanning the building at 20 ft. centres. The central depth of the span is 10 ft., sloping to 7 ft. at the side walls. A 20 ft. monitor, 8 ft. deep, extends the length of the building, surmounted by a 24 in. copper ventilator over each section. There is a clearance of 20 ft. below the lower chord of the truss and the floor. The latter is composed of 3 in. pine, nailed to 4 by 6 in. sleepers bedded in 6 ins. of bituminous concrete.

Slightly west of the centre of the building, along the south wall, there is a lavatory room, 40 by 15 ft., and 10 ft. high, containing the usual lavatory conveniences, including lockers, etc. On a platform surmounting this room is the heating fan, reached by a ladder at one end. The heating duct from the fan passes down through one end of the lavatory room to a cross tunnel under the building, from which heating ducts branch off under the floor along each wall, with headers midway in each section.

Power table feed mechanism. 40 ft. travelling steel timber table. Roller stands, timber rolls, layout stops and ratchet clamps. Variable speed automatic feed to head with cross travel for timbers 24 by 21 ins. 16 in. gainer head with 2 to 4 ins. expansion. Motor driven.

P6. Automatic band rip saw. 5 in. blade ripping 28 ins. between saw and fence, and 14 ins. under guides. 8 in. power driven feed rolls with 48 by 46 in. table. Feed 20 to 120 ft. per min. Flexible coupling motor driven.

P7. Timber planer and sizer. Planer capacity to 20 by 16 in. timbers. 40 to 100 ft. per min. feed. Floor motor driven.

P8. Double automatic railway cutoff saw. Capacity 34 ins. wide, to cut 14 ins. by 12 ft. long. 36 in. saws. Floor countershaft with flexible coupling motor drive.

P10. Leclair gaining machine. Flexible countershaft, direct motor driven.

P11. Extra range vertical hollow chisel car mortiser. Universal boring attachment, with adjustable chisel ram and stationary timber bed. Capacity up to 18 by 20 ins., with 2½ in. square chisels. Countershaft with flexible couplings, motor driven.

P12. Large car rip saw. Capacity to rip 14 ins. thick with 36 in. saw. 82 by 52 in. iron table. Motor driven.

driven.

P18. Automatic railway cutoff saw. Saws up to 24 ins. Saw projection of 7½ ins. and cutting 22 ins. wide. Power feed to saw with foot control with three speeds of forward and quick return. Motor driven.

P19. Heavy four sided inside or outside moulder. 15 by 6 ins. cylinders to be of crucible steel forgings, to be four sided and to be slotted on each side. Four 9 in. rolls with spring pressure for feed. Motor driven.

P20. Automatic railway cutoff saw. To cut 20 ins. wide by 4 ins. thick, with table 66 by 23 ins. Power feed stroke with foot control adjustable to 20 in. length or less, with three speeds forward and quick return cushioned by air cylinder. Motor driven.

P21. Improved standard rip saw. To rip 16 ins. to inside flange and 22 ins. to outside flange. 22 in. saw to cut 7 ins. thick. Table, 72 by 39 ins., and to have parallel lift of 5 ins. and arranged for use of gang saws or cutter heads on the mandril, 16 in. saw. Motor driven.

P22. Improved standard rip saw. To rip 16 ins. inside flange and 22 ins. to outside flange. Saw to cut 7 ins. thick. 70 by 36 in. iron table, to have parallel lift of 5 ins. by screw and bevel gears, with self locking adjustable ripping fence and arranged for

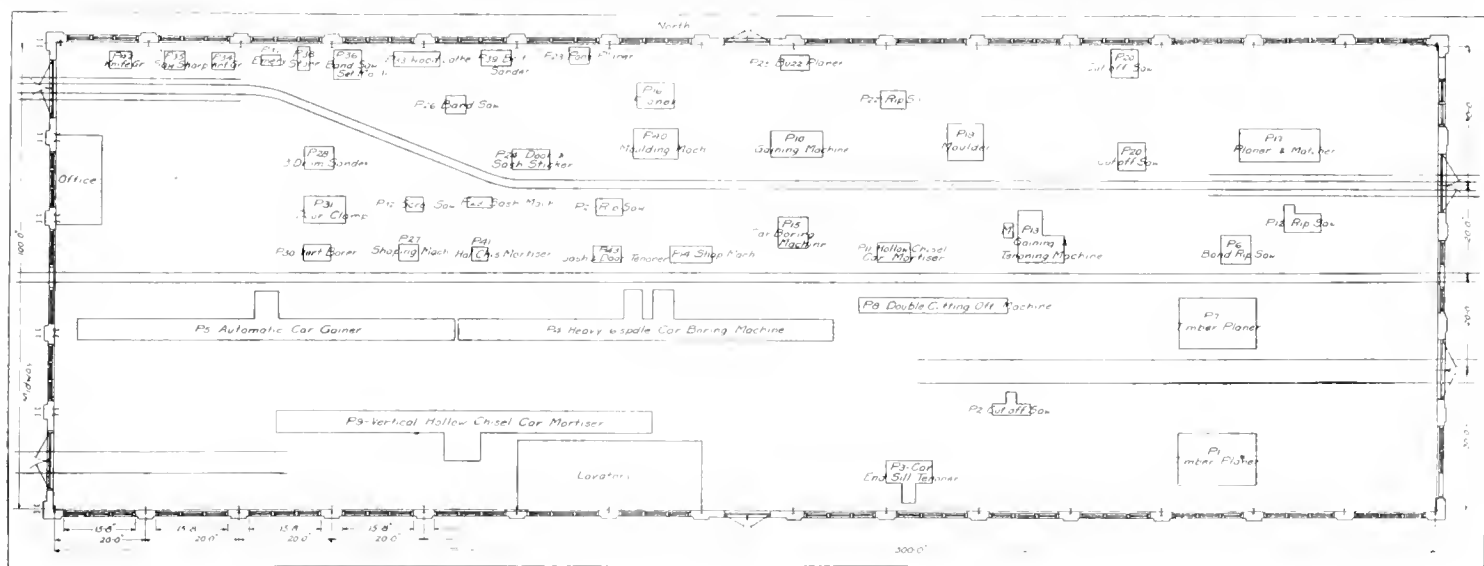

Fig. 8.—Plan and Machinery Location of Planing Mill.

The machine equipment of the building is most complete, and is as follows:

P1. Timber planer. Capacity up to 20 by 16 ins. Feed from 40 to 100 ft. per min. Floor motor driven.

P2. Automatic railway cutoff saw. Table 8 by 2 ft. To cut 12 by 16 ins. 36 in. saw. Floor motor driven.

P3. Vertical automatic car sill end tenoner. Single, double, or triple tenons without reversing timbers. Arranged with variable speed automatic power feed to 13 in. cutter heads with range for working 16 in. square timbers. Three 13 in. heads.

P4. Standard heavy six spindle car boring machine. Two universal and four vertical spindles with hand table feed, combined with extra range vertical hollow chisel car mortiser. Power table feed working to a 40 ft. travelling steel timber table. Boring capacity for 4 in. bits and 14 in. square timbers. Mortiser with adjustable chisel ram, direct geared feed and quick reverse, 18 in. stroke and 16 in. cross adjustment of tool plunger. Mortiser capacity for 3 in. square chisels and 18 by 20 in. timbers to 10 in. deep. Self contained countershaft arranged for motor drive with flexible motor couplings.

P5. Extra heavy automatic car gainer.

P13. Leclair combined gaining and tenoning machine. Heavy universal car tenoner for single, double or triple tenons, with gap frame to work 14 in. high timbers. Gaining attachment. Motor driven.

P14. Two spindle shaping machines. Spindles 26 in. centres. Knives drop below surface. Table 40 by 58 ins. Motor driven.

P15. Medium three spindle car boring machine. Capacity up to 2½ in. diam. and 14 in. deep. 3 fluted timber feed rolls connected to hand wheel, and one wedge screw clamp quick acting spindle carriage adjusting levers. Arranged for 14 in. bits and 12 in. wide timber. Complete set of bits 7-16 to 2 ins. Motor driven.

P16. Cabinet smoothing planer. Capacity from 1-16 to 6 ins. thick, by 30 ins. wide. Spring pressure feed roll control. Feed speeds from 15 to 40 ft. per min. Motor driven.

P17. Double cylinder four sided planer and matcher. 15 ins. wide and 6 in. opening with 3 pairs of 10 in. feed rolls, 6 bit round top and bottom cylinders, high speed steel cutters, 12 bit matcher heads, jointing attachment for all heads, and power driven grinder for top and bottom heads. Profiling attachment with jointer and grinder for same. Feed up to 200 ft. per min. Motor

use on gang saws or cutter heads on the mandril, 16 in. saw. Motor driven.

P23. Pony planer. Single cylinder 24 ins. wide, opening 6 ins., with two pairs of gear driven feed rolls, cylinder fitted with two knives and belt on each end. Motor driven.

P24. Combination door and sash sticker. Boring and grooving attachments. Top, bottom and outside arbors with ploughing and boring attachments on each square head. Knives, grooving saws, boring bits. Motor driven.

P25. Buzz planer. Cylinder 24 ins. wide, slotted on four sides, fitted with two knives. Table faced with steel plates next to cutter head. Cutter head vertical adjustment. Motor driven.

P26. 36 in. special band saw. To take 15 in. stock below doors, and equipped with safety doors. 29 by 33 in. table. Motor driven.

P27. Two spindle shaping machines. 26 in. centres, one piece frame. Knives capable of dropping below surface. Table 40 by 58 ins. Motor driven.

P28. Three drum sander. Drums 61 ins. wide. Paper applied spirally. Brush cylinder on finished work. Power hoist for upper feed roll frame. Change gears for variable

speed control. Reverse gear. Motor driven.

P29. Sash mortising and relishing machine. Routing and wedge cutting attachment. Two hollow chisels and bits, relishing bit and head with knives, tool holders, stops and layout gauges. Routing bit, with blind router, five saws with door relishers, and two with wedge cutters. Motor driven.

P30. Single spindle vertical borer. Universal table and gear driven head, two speeds. Bits up to 2 in. diam. and 12 in. twist. Bits 3-8 to 1½ in. Motor driven.

P31. Heavy door clamp. For doors, sashes or blinds. Up to 4½ ft. wide rails, 9 ft. 4 ins. long. 12 clamp dogs and end clamp bar, foot release lever.

P32. Scroll saw. 36 in. square table, with central 8 in. diam. cast iron plate. The strain to be raised or lowered for thicknesses up to 12 ins. Pump to blow dust away. Motor driven.

P33. 20 in. double end wood lathe. Large face plate for back of headstock. Floor stand and rest for large diameters. Centres and chucks. Belt driven from line shaft.

P34. 30 in. knife grinder. Carriage has automatic feed and stop and water pump. 24 by 1½ in. emery, wet or dry. Belt driven

P42. Automatic knife grinding machine. Automatic travel of slide, screw cross feed variable in taper at will, water attachment with pump.

P43. Sash and door car tenoner. Carriage wide and long, moving on roller bearings. To cut tenons 7½ ins. long at one pass. Motor driven.

All shapers, rip and cross cut saws and buzz planers are equipped with patent safety guards, to minimize danger of operating to the mechanics. Machines P10 and P13 are special gaining machines invented by A. Leclair, millwright in the G.T.R. Montreal car shops. Machines of his design, in use in the different G.T.R. car shops, have been described in these columns recently.

The north portion of the mill contains all the smaller wood working machinery, all the machines being served by a 2 ft. industrial track extending through the building. Entering the building from either end, in line with the industrial track, there is a standard gauge track, over which the timber may be brought into the shop in car lots for machining, and be reloaded for shipment if required. It will be observed

passenger car and freight car shops makes for a rapid handling of the material from the mill to the assembling shops. The material from the stock sheds to the rear of the mill passes through the latter, coming out at the midway end completely machined, with practically no retrograde movements in that shop, thence across the midway to either the passenger car or freight car shops. The wood working machinery used principally on passenger car work is grouped for the most part in the northwest portion of the mill, where it is handy to the passenger car shop. The open space in that portion of the mill is an assembly floor for the fine fittings.

The Lumber Shed is to the rear and in line with the planing mill. It is a purely frame building, 60 by 165 ft., and is spanned by wooden trusses at 15 ft. centres, being also divided into three 20 ft. longitudinal bays by supporting columns. The wall intervening columns are all 8 in. square timbers, extending to a height of 17 ft. above the ground, the lower end encased in concrete and sunk to a depth of 4½ ft. The wall framing consists of 2 by 4 in. studding at 2 ft. centres, with 6 by 1 in. cross brace,

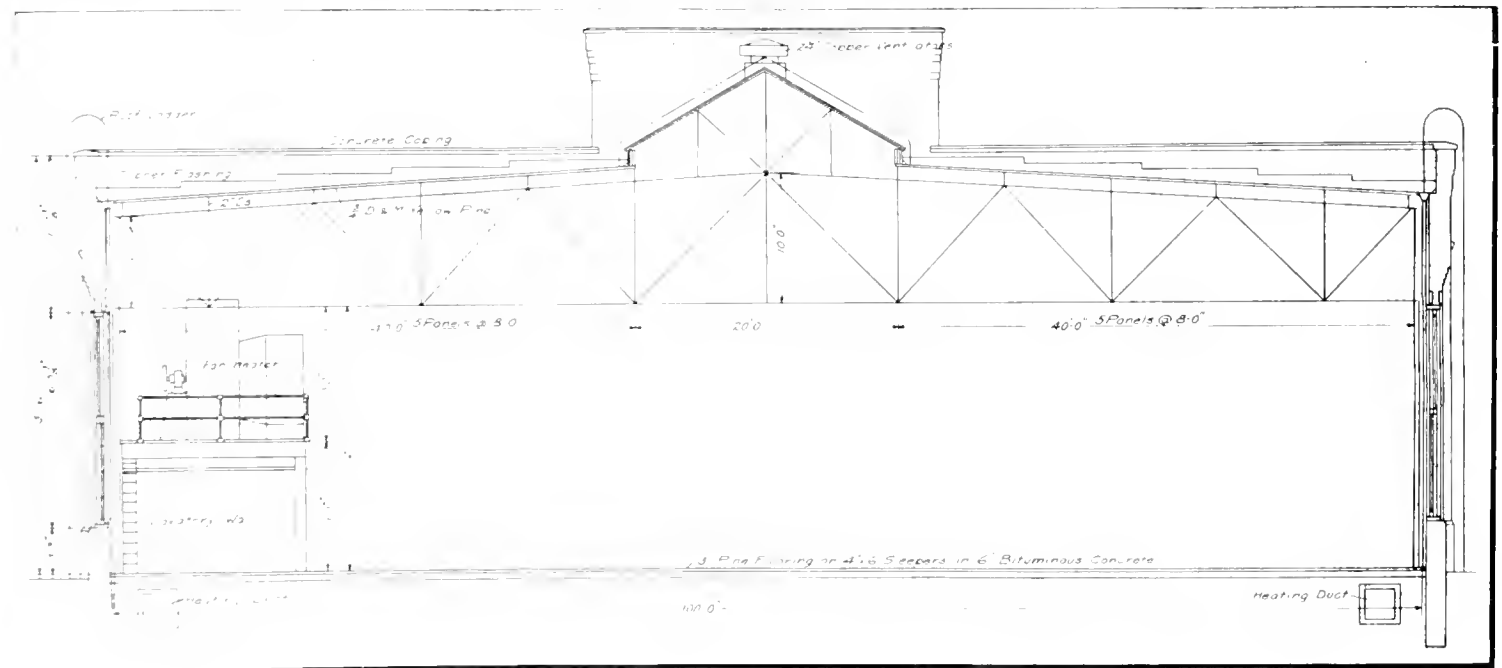

Fig. 9.—Cross Section of Planing Mill.

from line shaft.

P35. Circular saw sharpener. To sharpen cross cut saws from 6 to 44 ins., rip saws 12 to 55 in. Square or bevel teeth. Belt driven from line shaft.

P36. Band saw filing and setting machine. Stickling attachment. Belt driven from line shaft.

P37. Double emery grinder. Two 12 in. emerys, respectively 1 and ½ in. faces. Belt driven from line shaft.

P38. Grindstone. 60 by 8 ins. Trough. Belt driven from line shaft.

P39. Belt sander. Capacity 5 ft. 2 ins. by 12 in. by 1 in. Motor driven.

P40. Four-sided extra heavy moulding machine. Frame built up from plain cast iron bed plate. Table working by screw working on ball bearings. Feed consists of an under and two upper driving rolls, and controlled through a friction clutch for starting and stopping. Feeds from 15 to 60 in. Motor driven.

P41. Hollow end of mortiser. Compound circular table for making mortises at an angle with the face of the stock. Chisels 1½ to 3½ in. square, 23 in. stroke. For material 5½ by 8 in. Motor driven.

that the location of the machinery is open in its nature, allowing ample space for manipulating the smaller timber members without interference. The machines are so arranged with regard to each other as to facilitate the sequence of operations.

The heavier and larger members are handled in the south section of the shop, between which and the other section there is an industrial track, running the length of the shop along its centre line. From both ends there are standard gauge tracks entering the building, the west one 50 ft. long, and the east one 100 ft. long, used for the same service as in the former instance. The machinery in this section is so arranged as to give a continuous movement of the members through the shop. The principal parts handled in this section will be the side and end sills. These will enter from the west, passing through the planers, the end sills passing through the tenoner, and side sills through the mortiser. Thence they will pass to the boring and mortising machines, completing the series of operations at the west end, where they can be loaded on cars on the standard gauge track.

The proximity of the planing mill to the

the outside covered with 1 in. sheathing. The roof trusses consist of a lower 6 by 10 in. member, with 4 by 6 in. bracing, and 6 by 8 in. stringers. The roof is covered with 1¾ in. sheathing, covered with prepared roofing. In every other section, there are two 6 by 10 in. skylights in the roof, one in each side.

Through the centre of the shop there extends a standard gauge track for bringing in and taking out the stored lumber. The dimensions of the building are such that most of the lumber may be stored at right angles to this central track, from cars on which it can be unloaded.

The Dry Kiln is contained in a brick and concrete building, 40 by 50 ft., to the south-east of the planing mill, near the lumber shed, in length from east to west. Through the centre there is a concrete separating wall, dividing the kiln into two separate sections. Each section contains two 4 ft. 11 in. tracks, at 9 ft. centres.

The side and dividing walls each contain a 2 in. air space, inside of which there is a 4 in. wall to the kiln interior, with a 9 in. wall to the outside. The dividing wall has this thickness each side of the air space.

In the ends of the buildings, each half has two double doors opening outwards. The roof slopes from the central dividing wall towards the sides, with a height of 11 ft. 4 ins. at the centre, and 9 ft. at the side walls. The roof consists of 4 ins. of reinforced concrete. This is carried on 12 in. I beams spanning each section, at 10 ft. centres, with two intervening 8 in. I beam stringers in each section. The wall over the end doors is supported on a through 12 in. I beam, spanning the full width of the building.

Each end of the kiln is served by a transfer table, operating in pits 80 ft. long, located 10 ft. beyond the end of the building. These pits are 5 ft. wide and 1 ft. 7½ ins. deep, with a 2 ft. gauge track extending the length of the pits, in the bottom. Lumber can be loaded from the adjoining yard tracks to kiln cars carried on the transfer tables, passing in at one end, and, when dried, out at the other.

The foundations of the building are of concrete, carried down to a safe depth. The floors of the kiln, and the portion of the yard in front of the building ends, and extending to the concrete transfer pits, are of 6 in. concrete, with a ¾ in. cement finish.

The control cabinet for the heating control apparatus is a small leanto, 3 by 2 ft., with the outer wall 2 ft. high, sloping up to the kiln wall at the west end. The control cabinet is of concrete and covers a concrete chamber 2 ft. deep, which contains the pipe connections. The roof of the cabinet is hinged at the top to make the interior accessible from the outside only. This hinged roof consists of two thicknesses of tongued and grooved pine, fitted diagonally, with a 1-8 in. sheet of asbestos between, the whole covered with galvanized sheet iron. Inside the cabinet, at a height of 12 ins. above the ground level, or 3 ft. above the bottom of the pit, there is a floor, through which project the control valve wheels and gauge connections.

Through the bottom of the control cabinet pit the steam and return connections with the power house pit are made, steam entering in a 4 in. main, and the return through a 3 in. main. Inside the pit both divide, one for each kiln room, the steam passing through the walls in 3 in. mains, and the return in 2½ in. mains. Along the inside wall of that end of the kiln rooms there is a concrete pit, 15 by 18 in., extending the width of each room, the mains from the control cabinet passing along this pit, the steam main on the bottom of the pit, and the return carried on the side wall of the pit. Each room is divided into 7 units of heating pipes, which consist of 2 in. pipes laid on the floor of the room, extending the full length, the condensation passing out to the return main at the far end, and thence back to the pit. The heating units consist, four of 3 pipes, two of 5 pipes, and one of 10 pipes, making 32 heating units of 2 in. pipe, each about 45 ft. long. Each end header is connected from the steam main by a 2½ in. connection. The control cabinet contains valve wheels for both steam and return for both rooms, and also a recording thermometer for each room mounted on a side wall, and pressure gauges mounted on the floor. On the rear wall there is carried the electrical control apparatus for the interior lighting.

This article will be concluded in our next issue.

With saturated steam, the average maximum horsepower is reached at a piston speed of 700 ft. per min., remaining constant up to 1,000 ft. per sec., then slightly decreasing; with superheated steam, it is reached at 1,000 ft. per min., remaining constant for greater speeds.

Birthdays of Transportation Men in March.

Many happy returns of the day to:—

W. G. Annable, General Passenger Agent, C.P.R. Atlantic Steamship Lines, Montreal, born at Ottawa, Mar. 3, 1875.

John Archibald, Locomotive Foreman, C.P.R., Coquitlam, B.C., born at Edinburgh, Scotland, Mar. 13, 1872.

C. H. Bowes, Assistant General Passenger Agent, C.P.R., Vancouver, B.C., born at Bangor, Me., Mar. 22, 1877.

George Bury, Vice President, C.P.R., Winnipeg, born at Montreal, Mar. 6, 1866.

Allan Cameron, Superintendent, Land Branch, Department of Natural Resources, C.P.R., Calgary, Alta., born near Owen Sound, Ont., Mar. 14, 1864.

Frank Clark, Locomotive Foreman, Canadian Northern Ry., Radville, Sask., born at Cowes, Isle of Wight, Eng., Mar. 20, 1884.

F. G. J. Comeau, General Freight Agent, Dominion Atlantic Ry., Halifax, N.S., born at Meteghan River, N.S., Mar. 10, 1859.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, born there, Mar. 22, 1871.

A. E. Cox, General Storekeeper, Canadian Northern Ry., Winnipeg, born at Huddersfield, Eng., Mar. 12, 1863.

Hon. N. Curry, President, Canadian Car and Foundry Co., Montreal, born in King's county, N.S., Mar. 26, 1851.

C. T. Delamere, Assistant Engineer of Construction, C.P.R., Montreal, born at Brainerd, Minn., Mar. 18, 1881.

Patrick Dubee, Secretary-Treasurer, Montreal Tramways Co., Montreal, and President Canadian Electric Railway Association, born at Montreal, Mar. 4, 1876.

G. R. Fairhead, District Freight Agent, Canadian Northern Ry., Hamilton, Ont., born at Toronto, Mar. 6, 1882.

W. T. Fitzmaurice, Assistant Superintendent, Moncton and Ste. Flavie District, Intercolonial Ry., Newcastle, N.B., born at Bedford, N.S., Mar. 19, 1870.

C. Forrester, Superintendent, Stratford Division, Ontario Lines, G.T.R., Stratford, born at Wanstead, Ont., Mar. 5, 1876.

C. O. Foss, M. Can. Soc. C.E., District Engineer, National Transcontinental Ry., St. John, N.B., born at Wentworth, N.H., Mar. 20, 1852.

H. M. Gain, Trainmaster, Districts 6 and 7, Belleville Division, Eastern Lines, G.T.R., Belleville, Ont., born at Lindsay, Ont., Mar. 21, 1879.

R. A. Gamble, Assistant General Yardmaster, C.P.R., Winnipeg, born at Dublin, Ireland, Mar. 1, 1876.

H. W. Gave, General Manager, Ottawa and New York Ry., Ottawa, Ont., born at Brant, Erie Co., N.Y., Mar. 21, 1848.

E. P. Goodwin, Inspecting Engineer, National Transcontinental Ry., Ottawa, Ont., born at Baie Verte, N.B., Mar. 17, 1865.

J. Halstead, Division Freight Agent, C.P.R., Calgary, Alta., born at Bracebridge, Ont., Mar. 2, 1877.

R. M. Hannaford, M. Can. Soc. C. E., Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, Mar. 22, 1865.

C. A. Haves, General Traffic Manager, Canadian Government Railways, Moncton, N.B., born at West Springfield, Mass., Mar. 10, 1865.

H. T. Hazen, M. Can. Soc. C.E., Mackenzie, Mann & Co., Toronto, born at Truro, N.S., Mar. 14, 1870.

Joseph Hobson, M. Can. Soc. C.E., Consulting Engineer, G.T.R., Hamilton, Ont., born at Guelph, Ont., Mar. 1834.

J. I. Hobson, Treasurer, Canada Steamship Lines, Ltd., Montreal, born at Guelph, Ont., Mar. 30, 1872.

N. J. Holden, President, The Holden Co., Ltd., Montreal, born at Nobleton, Ont., Mar. 22, 1866.

A. R. Holtby, Master of Bridges and Buildings, Mountain Division, G.T.P.R., Prince Rupert, B.C., born at Rawdon, Que., Mar. 23, 1859.

Frank Lee, M. Can. Soc. C.E., Principal Assistant Engineer, C.P.R., Winnipeg, born at Chicago, Ill., Mar. 7, 1873.

R. W. Long, Division Freight Agent, G. T. R., Hamilton, Ont., born at Appin, Ont., Mar. 20, 1873.

T. W. Lowe, General Boiler Inspector, C.P.R. Western Lines, Winnipeg, born at Montreal, Mar. 30, 1858.

J. M. McKay, Superintendent, District 1, British Columbia Division, C.P.R., Revelstoke, born at Tiverton, Ont., Mar. 13, 1868.

Owen McKay, M. Can. Soc. C.E., Chief Engineer, Essex Terminal Ry., Walkerville, Ont., born in Ross tp., Renfrew co., Ont., Mar. 13, 1848.

Sir Donald D. Mann, Vice President, Mackenzie, Mann & Co., Ltd., and First Vice President Canadian Northern Ry., Toronto, born at Acton, Ont., Mar. 23, 1853.

H. H. Melanson, General Passenger Agent, Canadian Government Railways, Moncton, N.B., born at Scadou, N.B., Mar. 9, 1872.

J. V. Murphy, District Passenger Agent, C.P.R., Nelson, B.C., born at Bowmanville, Ont., Mar. 5, 1885.

C. B. Mutchler, Signal Engineer, G. T. Pacific Ry., Winnipeg, born at Pine Island, Minn., Mar. 8, 1879.

Peter Paton, Assistant Operating Superintendent, Passenger Steamers, Canada Steamship Lines, Ltd., Toronto, born at New Lowell, Ont., Mar. 13, 1869.

R. Patterson, Master Mechanic, G.T.R., Stratford, Ont., born at Brantford, Ont., Mar. 13, 1860.

F. W. Peters, General Superintendent British Columbia Division, C.P.R., Vancouver, born at St. John, N.B., Mar. 25, 1860.

E. H. Sewell, City Passenger Agent, C. P. R., Sherbrooke, Que., born at Quebec, Line, Montreal, born at Kingston, Ont., Mar. 21, 1855.

W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., Mar. 9, 1854.

E. F. L. Sturdee, Assistant District Passenger Agent, C.P.R., Toronto, born at St. John, N.B., Mar. 29, 1876.

G. W. Vaux, General Agent, Passenger Department, Union Pacific Rd., Chicago, born at Montreal, Mar. 21, 1866.

A. T. Weldon, General Freight and Passenger Agent, Black Diamond Steamship Line, Montreal, born at Dorchester, N.B., Mar. 6, 1876.

D. O. Wood, General Freight Agent for Ontario, Allan Line Steamship Co., Toronto, born at Kleinburg, Ont., Mar. 16, 1864.

The grate surface required for saturated steam locomotives is the horsepower divided by 30, and for superheated steam locomotives, the horsepower divided by 36.9.

F. Stockdill, Interlocking Inspector, C.P.R., Montreal, in remitting his renewal subscription for Canadian Railway and Marine World, writes: "Please find enclosed subscription for your valuable paper."

An evaporation of 10 lbs. of water per hour per sq. ft. of outside heating surface may be obtained from 2½ in. tubes 18 ft. long, and 55 lbs. per sq. ft. of firebox heating surface.

It is estimated that about 10% of all motive power is normally out of commission, undergoing repairs. As about 2% of these repairs can be handled with locomotive house facilities, there ought to be main shop accommodation for 8 stalls per 100 locomotives belonging to the line.

Railway Statistics for 1912-13.

Following is an abstract of the railway statistics for the year ended June 30, 1913, as prepared by J. L. Payne, Comptroller of Railway and Canal Statistics.

Operative mileage increased during the year by 2,576 miles, bringing the total up to 29,304. This was the largest increase in the history of Canadian railways. The growth of mileage by ten year periods is shown in the following table:—

1863.....2,189	1893.....15,005
1873.....3,812	1903.....18,988
1883.....9,577	1913.....29,304

The mileage in operation in 1913, with the increase for the year, was distributed by Provinces as follows:—

	Miles	Increase.
Nova Scotia	1,300	2
Prince Edward Island	279	10
New Brunswick	1,545	...
Quebec	3,986	103
Ontario	9,000	454
Manitoba	3,993	473
Saskatchewan	4,651	897
Alberta	2,212	316
British Columbia	1,951	96
Yukon	102	...
In United States	225	225
Total	29,304	2,576

There was during the year an addition of 232 miles to double track, bringing the total up to 1,984, and 786 miles to yard track and sidings. The aggregate of all tracks was 38,223 miles—an increase over 1912 of 3,594.

It was definitely ascertained that 18,647 miles of new line were under construction on June 30, 1913. On June 30, 1912, there were 8,826 miles in process of being built; so that the increase in 1913 over 1912 was 9,821. This construction work was distributed as follows:—

Alberta	4,733
Saskatchewan	4,007
Manitoba	872
British Columbia	3,884
Ontario	2,977
Quebec	1,518
New Brunswick	544
Nova Scotia	112
Total	18,647

The various stages of construction were: Surveyed, 6,560 miles; under contract, 8,651 miles; completed, 2,956 miles, and in operation, although not officially accepted, 542 miles.

During the year a careful and judicial revision was made of the capital statement. Duplication and extinguished liability had been carried along for many years. The revision led to the elimination of \$157,000, 000 of stocks and bonds, and left the total in force on June 30, at \$1,548,256,796. This was divided as follows:—Stocks, \$759,645, 016; consolidated debenture stock, \$163, 257,224; bonds, \$625,354,356. Since the process of deletion cut out more liability than was added during the year, there appears a small reduction in the total for 1913 as compared with 1912.

The cost of Government owned and operated railways, representing 2,131 miles of line, reached a total of \$126,930,887 in 1913. This is not included in capitalization.

Dividends on stocks amounted in 1913 to \$33,670,651. In 1908 the volume of dividends was \$12,955,243; so that the increase within that period was equal to 160%.

The amount of cash subsidies paid during the year was \$9,758,085, distributed as follows: By the Dominion, \$9,176,234; by the provinces, \$351,500; by municipalities, \$27,350. The additions brought the total account on June 30 up to the following:—By the Dominion, \$162,251,469, by the provinces, \$36,500,915; by municipalities, \$18, 078,224. Guarantees by Governments of principal and interest of bonds increased by \$20,890,229 during the year. The guaran-

tee account on June 30 stood as follows:—

Dominion	\$ 95,486,590
Manitoba	24,059,447
Alberta	45,489,000
Saskatchewan	33,735,000
Ontario	7,860,000
Nova Scotia	5,022,000
British Columbia	59,262,072
New Brunswick	3,654,265
Quebec	374,000

Total

In addition, and representing a form of aid heretofore unknown in railway statistics, the Dominion Government purchased in 1913 bonds of the Grand Trunk Pacific to the amount of \$8,214,934.

The statement of land grants to railways stood on June 30, as follows:—By the Dominion, 31,864,074 acres; by the provinces, 18,692,974 acres.

Passengers carried, 46,230,765; tons of freight carried, 106,992,710. There was an increase over 1912 of 5,106,584 in the number of passengers carried, and of 17,548,379 in the number of tons of freight hauled. These were the largest increments for any year on record. The growth of passenger and freight traffic, by five year periods, is shown in the following table:—

	Passengers.	Freight. Tons.
1878	6,443,024	7,883,472
1883	9,579,984	13,266,255
1888	11,416,791	17,172,759
1893	11,618,027	22,003,509
1898	18,444,049	28,785,903
1903	22,148,742	47,373,417
1908	34,044,092	61,071,167
1913	46,230,765	106,992,710

The average number of passengers per train was 62, and the average passenger journey was 71 miles. The average number of loaded cars per freight train was 18. The average train load was 342 tons, and the average carload was 19.01 tons. There has for seven years past been a steady improvement in both carload and trainload. The average freight haul was 216 miles, which is the longest in the world.

Gross earnings for 1913 aggregated \$256, 702,703, compared with \$219,403,753 in 1912. The increase of \$37,298,951 was considerably the largest of any year. In addition, \$24,588,410 was earned by Canadian railways in 1913 from outside operations, making a final total of \$281,291,113. These outside operations, however, do not constitute any part of the account except as regards net corporate income in the striking of a balance for the year. The rise of gross earnings is as follows: 1883, \$32,244,586; 1893, \$52,042,396; 1903, \$96,064,526; 1912, \$256,702,703. The increase in 1913 over 1912 was equal to 17%, and the increase for the last ten year period was 167%.

Gross earnings per mile of line for the past 30 years have been as follows: 1883, \$3,471; 1893, \$3,468; 1903, \$5,059; 1912, \$8,751.

The sources of gross earnings in 1912 and 1913 were:—

	1912.	1913.
Passenger service	\$ 65,018,187	\$ 74,431,991
Freight service	119,961,110	177,090,373
Station and train privileges	1,026,687	1,566,721
Telegraphs, rents, etc.	3,107,739	3,614,615
Total	\$219,403,753	\$256,702,703

Passenger earnings were equal to 1.976¢ per passenger per mile, and freight earnings equal to 75Se. per ton mile. Operating expenses in 1913 were \$182,011,690, against \$150,726,510 in 1912. While earnings increased 17% over 1912, operating expenses increased 20.7%. The distribution of operating expenses in 1912 and 1913 was as follows:—

	1912.	1913.
Way and structure	\$11,514,698	\$15,933,343
Equipment	29,811,510	37,289,718
Traffic expenses	5,293,210	6,113,201

Transportation	78,969,544	96,688,264
General expenses	5,137,088	5,957,184

Total

The steady increase of operating expenses per mile of line for the past thirty years is shown as follows: 1883, \$2,578; 1893, \$2,440; 1903, \$3,554; 1913, \$6,204.

The difference between gross income and operating expenses in 1913 was \$74,691,013, which is popularly regarded as net earnings. After making proper deductions, however, the actual net corporate income for the year was \$57,523,127, which included profits of \$6,698,787 from outside operations.

Following was the situation with respect to equipment on June 30, 1913:—

	Number.	Increase.
Locomotives	5,119	635
Cars in passenger service	5,696	750
Cars in freight service	182,221	41,303
Cars in company's service ...	15,526	5,060

Not only were these substantial additions made to rolling stock, but for the most part the increase consisted of larger and heavier

Accidents.

The movement of trains in 1913 resulted in the killing of 710 persons and the injury of 2,966. In addition, 32 persons were killed and 1,606 injured from other causes than the movement of trains. Of the killed from all causes, 41 were passengers, 324 were employees, and 418 were classified as "others." Of the injured, 667 were passengers, 3,407 were employees, and 498 were "others." One passenger in every 1,216,559 was killed, and one in every 71,124 was injured. This was a comparatively low record in respect of fatal accidents; but the proportion of injured passengers was high.

The number of employees increased by 22,751 in 1913, bringing the total up to 178, 652. Salaries and wages amounted to \$115, 749,825, as compared with \$87,299,639 in 1912.

The C.P.R. Staff Record Office at the general offices, Montreal, which is in charge of A. Rondeau, has a staff of 16 men. There are over 80,000 personal records of officials and employees, giving date of birth, particulars of service, etc., which are kept on cards, contained in some 350 boxes. The pension records are kept in the same office.

Canadian Transfer Co.—Following are the directors for the current year, who were re-elected at the recent annual meeting at Montreal:—C. Cassils, Hugh Paton, G. R. Starke, Sir H. Montagu Allan, and F. W. Molson. F. M. McRobie is General Manager and Secretary.

The Toronto, Hamilton and Buffalo Ry. put in operation the electric automatic block signal system between Hamilton and Welland, Ont., recently. A similar system will probably be installed between Hamilton and Brantford, Ont., during the current year.

J. E. Beatty, Division Engineer, Construction Department, C.P.R., Montreal, writes Canadian Railway and Marine World: "I attach hereto money order to cover my subscription to your satisfactory publication."

Lachine Bridge.—P. B. Motley, Engineer of Bridges, C.P.R., read a paper on the St. Lawrence Bridge at Lachine, Que., before the Canadian Society of Civil Engineers in Montreal, Feb. 5.

The Minister of Public Works stated in the House of Commons recently, in connection with the Dominion Government telegraph line between Athabasca Landing and McMurray, that the line is completed to Duncans Creek, 57 miles, beyond which point the right of way has been cleared for a further 42 miles to 20 miles south of Pelican Rapids. Construction was commenced June 5, 1912, and \$27,004.43 has been spent. No officers have yet been established along the line.

Railway Mechanical Methods and Devices.

Locomotive Tire Storage, Grand Trunk Railway Montreal Shops.

The storing of material around shops and yards in a systematic manner, so that it may be readily got at as required, with the least disturbance of other stored material, is one of the many important problems presented around every shop. The storage of the small parts is well looked after by the stores department officials, but it is not possible to always adopt their methods where materials larger than they are in the habit of handling in the usual manner are involved.

Around a locomotive shop, where repairs are handled, locomotive tires come under the list of those parts requiring most frequent renewal. In the G. T. R. Montreal

of the track. The tires are carried down the storage space, and can be dropped directly on the cars at the far end to be run into the shop to the right for machining, or to the left to the circular building shown, for tire mounting. The locomotive truck storage space is shown to the right. It communicates with a service track along the row of crane columns.

Clamp for Lifting Tires.

The accompanying illustration shows a very convenient form of clamp used in lifting locomotive tires in and out of the boring mill, on the St. Louis and San Francisco Rd. It consists of a heavy forged bar, with a cut out jaw on one end like a heavy

at the C. P. R. Angus shops, Montreal, for lifting axles in and out of the lathe so as to avoid the central driving head. It is said that this clamp makes a quick fastening.

Facing Brasses at Quebec Central Railway Shops.

A very useful jig for facing brasses is in use in the Quebec Central Ry. shops, at Sherbrooke, Que. Brasses, from the very nature of their shape, are more or less awkward to handle in the machine, and especially when held in a vise are they difficult to line up. This jig is extremely simple, consisting of a V shaped casting, with a flat base, to be bolted to the shaper table, and at the back of the V space, there is a

Locomotive Tire Storage, Served by Electric Crane.

locomotive shops, the problem of storing these tires, using a minimum of space, made necessary by the cramped condition of the shop grounds, has been effectively solved as shown in the accompanying illustration, of the tire storage yard, just outside the main shop door. Instead of standing them on their rims against a supporting wall, which requires a considerable amount of

spanner. The inner face of this cut out is square with the body of the forging, and fits up against the inner surface of the tire to be lifted. The other face of the jaw slips loosely over the tire flange, a taper pin driven in between this face and the flange and tread rigidly securing the whole. A collar fits over the arm of the bar, secured in the desired position by a set screw.

Jig for Facing Brasses.

vertical shoulder, with a lug projecting horizontally therefrom, containing a set screw, for clamping the work in place. The base of the jig has an aligning rib planed in its surface, so that all that is required to set up the job, is to set the jig on the table, bolt it down, and then place in the brass, which is secured by the upper set screw. Both sides are open and free to be operated on by the shaper tool. The Q. C. R. shops are in charge of G. M. Robins, Master Mechanic, with E. M. Green, General Foreman Machine Shop.

Tempering Long Taps at Grand Trunk Railway Montreal Locomotive Shops.

In the handling of long taps during the tempering process, it is usually necessary for the blacksmith to have the use of a lathe, in which to place the tap to ascertain whether the heating has caused it to bend slightly, in which case it is customary to bend the tap back to its correct alignment by prying up under the bent section, with the tap still retained between the lathe centres. The objection to this method is that a lathe must be taken out of useful service, which quite frequently involves the idleness of the lathe operator during this period as well.

A special system of handling this work has been evolved in the G.T.R. Montreal locomotive shops, where the care of taps is in charge of R. Pike, Foreman Toolmaker.

Clamp for Lifting Tires.

room, vertical piling has been resorted to, all tires of a size being piled in one tier. The storage area is boarded over, presenting a level surface on which to pile, so that a considerable height can be used.

Spanning the tire storage yard, there is a light electric crane, carried on old bridge columns. The crane is operated from a suspended cabin overhanging the outside

The upper face of the collar is forged with a lifting eye. This collar is made adjustable in order that it may be slipped along the bar to centre the lifting ring over the centre of the tire so that the whole tire is balanced. This information is abstracted from the Railway Age Gazette, mechanical edition. The whole principle is very similar to the lifting hook arrangement in use

In a locomotive boiler, the distance from the water level, measured at the top gauge cock to the outside of the largest course, equals the diameter of the largest course multiplied by 0.15.

Steam Railway Statistics for Year Ended June 30, 1913.

In the following table the column headed gross earnings includes passenger and freight earnings, as well as miscellaneous earnings; the latter not being shown separately; the next four columns give the operating expenses classified under their various headings, while the last gives the net earnings, which are arrived at by deducting the totals of the four columns referred to from the figures in the gross earnings column. The minus mark (—) before figures in the net earnings column shows that there was a deficit in the operations of the line to the extent of the figures given. The numbers in brackets—thus (1)—after the name of the railway refer to notes on page 116. The cents have been omitted in all cases, and the figures in the totals show the aggregate earnings, etc., including the cents, omitted from the detailed items.

Name of Railway	Mileage	Passenger Earnings	Freight Earnings	Gross Earnings	Maintenance of Way and Structures	Maintenance of Equipment	Traffic and Transportation Expenses	General Expenses	Net Earnings
Algoma Central & Hudson Bay	133.77	\$ 49,718	\$ 287,511	\$ 538,580	\$ 102,997	\$ 56,433	\$ 139,212	\$ 33,837	\$ 206,060
Algoma Eastern	30.70	3,497	118,660	128,999	8,102	24,114	14,827	27,621	55,334

Notes to Steam Railway Statistics.

1. The Crowsnest Southern gross earnings are less than the whole of the figures given in two preceding columns. The figure given is arrived at by deducting the "Dr. \$51.00" in the column in the statistics "other earnings from operation."

2. The Kingston & Pembroke passenger and freight earnings are in excess of the amount in the gross earnings column, which figure is arrived at by deducting \$3,519,

which is marked "Dr." in the column in the statistical tables giving "other earnings from operation."

3. The Wabash Rd. does not own track in Canada, but operates over the G.T.R. under a lease.

The following lines were not operated during the financial year: Bessemer and Barry's Bay; Bruce Mines and Algoma; Capillon and Grenville; Nosbonsing and Nipissing; Phillipsburg Ry. and Quarry Co.; Pontiac and Renfrew; Vancouver Copper Co.'s Ry.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have held our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not those on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

21243. Jan. 21.—Ordering C.P.R., G.T. Pacific Ry. and Midland Ry. of Manitoba to prohibit whistling by locomotives in Winnipeg, whistling to be allowed only where deemed necessary to prevent accident, and providing penalty of \$50 for every offence against this regulation.

21244. Jan. 20.—Approving Bell Telephone Co. agreement with Tay Tp., Ont., of Dec. 19, 1913, for interchange of telephone messages, etc.

21245. Jan. 23.—Authorizing G.T. Pacific Ry. to carry traffic over portion of its main line in British Columbia, between Fraser River and Prince George, mileage 1219 to 1280.5; speed of trains between mileage 1247 and 1280.5 limited to 15 miles an hour, and over temporary bridges at 3rd and 4th crossings of Fraser River to 6 miles an hour.

21246. Jan. 21.—Authorizing C.P.R. to use bridges 28, 103.9, 40.8, 124.4 and 109.1, Muskoka Subdivision, and across Keele St., West Toronto, Ont.

21247. Jan. 26.—Approving location of Cedars Rapids Mfg. and Power Co.'s transmission line between Cedar Rapids, Que., and Cornwall, Ont.

21248. Jan. 23.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across G.T.R. on Pinnacle St., Belleville, Ont.

21249. Jan. 23.—Amending order 16973, July 9, 1913, re C.N. Ontario Ry. crossing of Montreal Park and Island Ry. at Sand's at Remond, Que., and rescinding order 19956, Aug. 1, 1913, in same connection.

21250. Jan. 26.—Authorizing C.P.R. to build siding at Fraser, Ind., at Victoria, N.B.

21251. Jan. 21.—Dismissing application of P.E.R. to build across G.T.R. to connect with G.T.R. to build a new over-track about 100 ft. west of St. Catharines.

21252. Jan. 26.—Authorizing C.P.R. and Algonia Ry. to build across H.B. Ry. to operate over crossing at H.B. Ry. with no stopping trains.

21253. Jan. 21.—Relieving C.P.R. of speed limit of 15 miles an hour on main line over portion of South-Central Southern Railway Branch from Neville to Guard mile, 27.7 to 41.6, Sask.

21254. Jan. 26.—Authorizing C.P.R. to build across G.T.R. at mile 124.4, over Flodday Creek, at mile 124.4, over Flodday Creek, Kootenay Central Ry., B.C.

21255. Jan. 21.—Authorizing C.P.R. to build across G.T.R. at mile 124.4, over Flodday Creek, Kootenay Central Ry., B.C.

to Toronto Type Foundry until June 1, pending installation of half interlocking plant.

21256. Jan. 24.—Authorizing C.P.R. to build bridge over Dutch Creek, mileage 75.6, Kootenay Central Ry., B.C.

21257. Jan. 27.—Authorizing G.T.R. to build extension of siding for S. L. Lambert, Welland, Ont.

21258. Jan. 24.—Extending to May 1, time within which G.T.R. shall install gates to cover all tracks and sidings at crossing of first highway east of Clarkson, Ont.

21259. Jan. 28.—Authorizing until further order the City of Montreal to lay steel water pipe under C.P.R. Lachine Canal South Bank Branch and G.T.R.

21260. Jan. 22.—Extending to June 1, time within which Cumberland Ry. and Coal Co. shall equip its cars with automatic couplers and air brakes.

21261. Jan. 28.—Authorizing Ottawa Electric Co. to erect wires across C.P.R., on road north of Hurdman's Bridge, mileage 6.64 from Sussex St. Station, Ont.

21262. Jan. 28.—Extending to May 31, time within which C.P.R. shall complete siding for McCormick Mfg. Co., London, Ont., authorized by order 20710.

21263. Jan. 28.—Approving C.P.R. plan of bridge 91.4, Toronto Subdivision.

21264. Jan. 26.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build across Front St., Belleville, Ont., at grade.

21265. Jan. 21.—Approving C.N. Ontario Ry. revised location at Grand Lake, Nipissing District, mileage 126.3 to 129.01 from Ottawa.

21266. Jan. 28.—Relieving C.P.R. from providing further protection at crossing of first highway east of Shebo station, Sask.

21267. Jan. 28.—Authorizing Niagara, St. Catharines and Toronto Ry. and G.T.R. to operate over Welland Ave. St. Catharines, Ont., without first stopping cars or trains.

21268. Jan. 28.—Postponing effective dates of Temiscouata Ry. Special Commodity Tariff, C.R.C. 217, and Joint Freight Tariff, C.R.C. 221, increasing rates on pulpwood carloads, from Jan. 1 and 21 respectively, to Aug. 1 and rescinding order 21105, Dec. 1, 1913, in same connection.

21269. Jan. 26.—Authorizing City of Belleville, Ont., to operate over a half-mile island in the Belvidere Harbour, where Lake Erie and Northern Ry. has built embankment across old channel.

21270. Jan. 29.—Authorizing Canadian Northern Ry. to build across and divert public road between Secs. 5 and 6, Tp. 41, R. 18, 21, M.

21271. Jan. 29.—Relieving Quebec, Montreal and Southern Ry. from maintaining watchman at Chemin à Lac crossing, Boucherville, Que.

21272. Jan. 20.—Rescinding order 21145, which required C.P.R. to stop its train at, on flag daily, at Claremont, Ont., for three months from Dec. 31, 1913.

21273. Jan. 24.—Authorizing G.T. Pacific Ry. to build across Government Road at mileage 213 and 214, Cariboo District, B.C.

21274. Jan. 30.—Authorizing G.T. Pacific Branch Lines Co. and C.P.R. to operate over crossing of C.P.R. Moose Jaw-Lacombe Branch at Druid, Sask., without first stopping trains.

21275. Jan. 29.—Amending order 20937, Dec. 1, 1913, re G.T. Pacific spur for J. Latimer, Edmonton, Alta.

21276. Jan. 28.—Approving G.T. Pacific Ry. revised location from mileage 3.14 to 5.88, Alberta.

21277. Jan. 28.—Authorizing C.P.R. to build spur for Boyd Pressed Brick Syndicate, in Lot 3, Con. 7, Nassagawaya Tp., Ont.

21278. Jan. 29.—Authorizing C.P.R. to open for traffic, portion of its double track from Islington to Guelph Jct., mileage 0.08 to 39.86, Ont.

21279. Jan. 29.—Authorizing C.P.R. to change grade of its main line across road allowance between Lots 20 and 21, Con. 1, Bathurst Tp., Ont., and to change grade of crossing at mileage 15.44.

21280. Jan. 30.—Approving plan showing proposed crossings over G.T.R. adjoining Front St., Toronto.

21281. Jan. 29.—Authorizing C.P.R. to build spur for Canmore Coal Co., Canmore, Alta.

21282. Jan. 28.—Authorizing C.P.R. to build bridge to carry Campbellford, Lake Ontario and Western Ry. (C.P.R.) across Sidney St., Trenton.

21283. Jan. 29.—Relieving C.P.R. from providing further protection at crossing of Keewatin St., Winnipeg.

21284. Jan. 29.—Dismissing G.T.R. application for order amending order 14731, authorizing G.T.R. to rebuild bridge 272, mileage 55.75, Albion Tp., Ont.

21285. Jan. 29.—Approving revised location of Mount Royal Tunnel and Terminal Co. (C.N.R.) tunnel line from St. Antoine St. to junction with main line at Montreal; and rescinding order 20809, Nov. 27, 1913, in same connection.

21286. Jan. 29.—Amending order 15449, Sept. 15, 1911, to provide that Winnipeg Electric Ry. be authorized to build across C.P.R. spur to Winnipeg Industrial Exhibition alongside C.P.R. Winnipeg Beach Branch on Selkirk Ave., Winnipeg.

21287. Jan. 31.—Ordering G.T.R. and Campbellford, Lake Ontario and Western Ry. (C.P.R.) to protect Prince Edward St. at Brighton, Ont., by gates.

21288. Jan. 30.—Ordering that G.T.R. allow no car or locomotive to stand within 50 ft. of east side of crossing of William St., London, Ont.

21289. Jan. 30.—Ordering G.T.R. to provide protection at crossing of first highway east of Hastings station, Ont.; watchman to be on duty from 7:30 a.m. to 7:30 p.m. daily.

21290. Jan. 26.—Authorizing Brampton municipality, Ont., to open up Hestline Ave. across C.P.R.

21291. Jan. 26.—Authorizing C.P.R. to change grade crossing in Don Road, Lot 2, Con. 3, east of Yonge St., York Tp., Ont., and to build additional track at grade across same at mileage 93.65, Toronto Subdivision.

21292. Jan. 29.—Approving Campbellford, Lake Ontario and Western Ry. (C.P.R.) plans 55070, Dec. 15, 1913, and 55165, showing overhead highway crossing at mileage 61.7, Murray Tp., Ont.

21293. Jan. 30.—Ordering Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build crossing over its railway for A. Hendricks, in Lot 13, Con. 1, Murray Tp., Ont.

21294. Jan. 31.—Extending to May 1, time for completion of farm crossing for R. V. Dittmars by Dominion Atlantic Ry., in Annapolis County, N.S.

21295. Jan. 2.—Approving Kettle Valley Ry. location from Comihalla Summit to Hope, B.C., mileage 0 to 30.12, on condition that a 14 deg. curve at mileage 3 be changed to a 12 deg. curve.

21296. Jan. 29.—Authorizing C.P.R. to take from G.T.R. lands required for right of way in south 1/4 Lot 1, Con. 1, Hope Tp., Ont., at mileage 127.74 on C.P.R.

21297. Jan. 31.—Authorizing C.P.R. to build foot bridge over repair tracks at North Transcona, Man.

21299. Feb. 3.—Authorizing C.P.R. to rebuild bridge 91.5, Toronto Subdivision.
21300. Feb. 2.—Approving revised location of portion of C.P.R. main line, as built from mileage 29.00 to 32.49, White River Subdivision, Ont.
21301. Jan. 27.—Rescinding order 20893, Nov. 25, 1913, and order 17358, Aug. 27, 1912, in so far as it relieves C.P.R. from erecting fences along its right of way between Savona and Pennys, B.C.
21302. Jan. 30.—Authorizing C.P.R. to build siding for Northern Brick Co., Waters Tp., Ont.
21303. Jan. 30.—Authorizing Canada Southern Ry. to connect with Niagara, St. Catharines and Toronto Ry., near Welland, Ont.
- 21304, 21305. Jan. 31.—Extending to May 31, time within which G.T.R. shall complete siding for International Harvester Co., Hamilton, Ont., and amending order 20697, Oct. 30, 1913, in same connection.
- 21306 to 21308. Feb. 2.—Authorizing Ontario Hydro Electric Power Commission to erect transmission line across C.P.R. telegraph wires on West St., Goderich, Ont.
21309. Feb. 2.—Rescinding orders 4406 and 5804, Feb. 27 and Dec. 10, 1908, respectively, and authorizing G.T.R. to terminate lease relating to Hamilton, Waterloo and Guelph Ry. location in Hamilton, G.T.R. to re-take the lands and premises freed from any further recognition of right and privilege created by the lease.
21310. Feb. 4.—Authorizing C.P.R. to build its ballast pit spur at LaFleche at grade across road allowance at mileage 137.07 on its Weyburn-Stirling Branch, Sask.
21311. Feb. 2.—Authorizing C.P.R. to build spur in Medicine Hat, Alta., for Dominion Grocers, Ltd., Moose Jaw, Sask.
21312. Feb. 4.—Authorizing C.P.R. to build its ballast pit spur at Meyronne, Sask., at grade across road allowance at mileage 153.0 on its Weyburn-Stirling Branch.
21313. Feb. 5.—Ordering C.P.R. and G.T.R. to build subway under their double main line at Ste. Anne de Bellevue, Que.
21314. Feb. 4.—Authorizing Canadian Northern Ry. to reduce its daily passenger service each way, excepting Sunday, to a tri-weekly service each way, between Kindersley, Sask., and Hanna, Alta., until June 1.
21315. Feb. 4.—Declaring that land applied for by C.P.R. on French River Indian Reserve, Parry Sound District, Ont., is required for railway purposes, and is land which were it the property of private owner could be taken without consent.
21316. Feb. 5.—Extending to June 30, time within which C.P.R. shall complete branch for J. D. Abbott, Balsam Lake, Ont.
21317. Feb. 5.—Authorizing Canadian Northern Ry. to divert public road in s.e. ¼ Sec. 29, Tp. 25, R. 20, w. 3 m., Sask., and rescinding order 17042, July 16, 1912, in so far as it authorizes crossing of highway between n.e. ¼ Sec. 20 and s.e. ¼ Sec. 29.
21318. Feb. 5.—Authorizing clearances of G.T.R. sidings to Canada Forge Co., Welland, Ont., for 6 months.
21319. Jan. 28.—Authorizing Canadian Northern Ontario Ry. to divert Jane St., at station 109432, North Bay, Ont.
21320. Feb. 5.—Relieving C.P.R. from speed limitation of 10 miles an hour over the crossing of King St., Virden, Man.
- 21321, 21322. Feb. 6.—Authorizing Toronto Eastern Ry. and Oshawa Ry. to operate trains and cars, for 6 months, over crossing to carriage factory, and crossing at Simcoe St., Oshawa, Ont.
21323. Feb. 2.—Authorizing C.N. Ontario Ry. to build spur from its Montreal-Port Arthur Line, Stafford Tp., through Pembroke, with two branches in Pembroke, for the Box Factory, Steel Equipment Co., Pembroke Lumber Co., and local freight of the town and surrounding country; and to cross certain streets in Pembroke.
21324. Feb. 7.—Authorizing British Columbia Electric Ry. to operate over crossing of Esquimalt and Nanaimo Ry., near Russell, B.C.
21325. Feb. 10.—Rescinding order 21286, Jan. 29, 1914, and amending order 20899, Nov. 27, 1913, re revised location of Mount Royal Tunnel and Terminal Co.'s line.
- 21326, 21327. Feb. 10.—Suspending, pending investigation by Board, supplements 151 and 152 to G.T.R. Tariff, C.R.C. no. E. 2532, published to take effect Feb. 15 and 16 respectively, and advanced rates published in Supplements 40 and 42 to C.P.R. Tariff, C.R.C. no. E. 2550, applying on building brick from Cooksville and Weston, Ont., to Toronto; and on gravel and building sand from Cooksville to North Toronto, Parkdale and Toronto.
21328. Feb. 10.—Authorizing C.P.R. to build spur for Winnipeg Paint and Glass Co., Kildonan Parish, Man.
21329. Feb. 6.—Suspending, pending determination by the Board, increases in switching rates on sand, gravel and brick as from Feb. 15, notice of which is given in Supplements 19 and 20 to G.T.R. Tariff C.R.C. no. E. 2677.
21330. Feb. 6.—Relieving C.P.R. from speed limitation of 15 miles an hour over portions of Weyburn-Stirling Branch between mileage 0 and 52.2.
21331. Feb. 9.—Authorizing C.P.R. to build spur extension for Ontario Stone Corporation, North Orillia Tp., at Uthoff, Ont.
21332. Feb. 4.—Authorizing C.P.R. to take certain lands in Con. 3, Bathurst Tp., Ont.
21333. Feb. 6.—Authorizing C.N. Ontario Ry. to build across C.P.R., near Hurdman's Bridge, Nepean Tp.
21334. Feb. 10.—Rescinding order 17477, Sept. 12, 1912, re C.P.R. road diversion near Berkley Station, Ont.
21335. Feb. 10.—Authorizing C.P.R. to build across road allowance by a bridge between Lots 22 and 23, Con. A, Hamilton Township, mileage 121.29 from Glen Tay, Ont.
21336. Feb. 10.—Authorizing C.P.R. to change present grade crossing in road allowance between Lots 13 and 14, Con. 3, Trafalgar Tp., Ont., and to build additional track at grade across same.
21337. Jan. 29.—Authorizing C.P.R. to build St. Marys and Western Ontario Ry. at grade along Thames Ave. and across Park and Elgin Sts., St. Marys, Ont.
21338. Feb. 10.—Approving location of C.P.R. station at Parsons, B.C.
21339. Dec. 3.—Authorizing Canadian Northern Ry. to build spur for Dominion Gypsum Co., Winnipeg, Man.
21340. Feb. 11.—Relieving C.P.R. from speed limitation of 15 miles an hour over portion of Swift Current Southeasterly Branch from near Swift Current to Neville, Sask.
21341. Feb. 10.—Authorizing C.P.R. to build its Weyburn-Stirling Branch Line at grade across 22 highways, between mileage 277.78 and 298.07, Sask.
21342. Feb. 11.—Authorizing G.T.R. to rebuild bridge 240, over Bear Creek, near Powassan, Ont.
21343. Feb. 9.—Authorizing Canadian Northern Ry. to build spur for Nicholson and Blain, Edmonton, Alta.
21344. Feb. 11.—Amending order 20857, Nov. 19, 1913, to provide that G.T. Pacific Ry. build forth with a station and platform at Telkwa, B.C., not to be below standard of I.A. B.R.C. station.
21345. Feb. 11.—Authorizing C.P.R. to rebuild bridge 18.71, over Battle River, on its Coronation Northwesterly Branch, Alta.
21346. Feb. 11.—Authorizing G.T.R. to rebuild bridge 234, over McCormick's Creek, mileage 43.30, Montreal Division, Que.
21347. Feb. 10.—Approving Supplement 3 to Express Classification for Canada 3, prescribing regulations for shipping live poultry in coops.
21348. Feb. 12.—Authorizing Canadian Western Ry. to open for traffic its line from Drummheller, mileage 314.7 to 396.4, Alta.
21349. Feb. 11.—Ordering Wabash Rd. to stop its train no. 5 at Corinth, Ont., if flagged, on Tuesday, Thursday and Saturday of each week, for 60 days from date.
21350. Feb. 11.—Ordering protection at crossing of Bennett Ave., Maisonneuve, Que., by C.N. Quebec Ry., and Montreal Terminal Ry., by a pair of gates, to be operated by day and night watchmen.
21351. Feb. 12.—Extending to May 15, time within which spur for Renfrew White Granite Co., Ross Tp., Ont., is to be completed.
21352. Feb. 9.—Ordering C.P.R. to appoint permanent agent at Millet station, Alta.
21353. Feb. 12.—Extending to May 21, time within which switching lead in Toronto, be completed.
21354. Feb. 12.—Approving revised location of portion of C.P.R. Columbia and Western Line at mileage 0.45, Granby Subdivision, B.C.
21355. Feb. 12.—Authorizing G.T. Pacific Ry. to carry traffic on portion of its main line east of Prince Rupert, B.C., between mileage 301 and 337.
21356. Feb. 12.—Approving, temporarily, G.T. Pacific Ry. Standard Freight Mileage Tariff, C.R.C. 21, incorporating and superseding C.R.C. 19, by an extension of mileage, to apply between stations between Prince Rupert and Wordsworth, B.C., inclusive.
21357. Feb. 9.—Authorizing Ontario Hydro-Electric Commission to cross C.P.R. wires and track on Main St., Chesherville, Ont.
- 21358, 21359. Feb. 13, 14.—Approving plan A of G.T.R. bridge 63, at mileage 152.51, from Black Rock, over public road at Golmesville, and authorizing G.T.R. to rebuild bridge 52, at mileage 127.75, from Black Rock, Fullarton Tp., Ont.
21360. Feb. 13.—Authorizing C.P.R. to divert highway in s.e. ¼ of Sec. 26, Tp. 3, R. 20, w. 3 m., Sask.; and to build its Weyburn-Stirling Branch at grade across same between Secs. 25 and 26.
- 21361, 21362. Feb. 14.—Authorizing C.P.R. to divert highway in Secs. 1 and 9, Tp. 23, R. 2, w. 4 m., Alta.; and to build its Bassano Easterly Branch Line across same at mileage 111.3 and 114.7.
21363. Feb. 13.—Authorizing C.N. Quebec Ry. to build siding into sand pit at mileage 16.90, west of Joliette, for E. Dupuis, St. Julienne, and to cross public road to Bissonnette, at Station 66+70.
21364. Feb. 13.—Authorizing C.P.R. to build its Swift Current Northwesterly Branch, at mileage 169.89, at grade across Canadian Northern Ry., Goose Lake Branch, at mileage 210.12.
21365. Feb. 13.—Authorizing McKim Tp., Ont., to build highway crossing over Algoma Eastern Ry., in Lot 11, Con. 4.
21366. Feb. 14.—Authorizing C.P.R. to build siding, for Conger Lehigh Coal Co., Toronto, Ont.
21367. Feb. 17.—Amending order 21172, Jan. 7, re C.P.R. double track, by substituting Brandon, Man., for Broadview, Sask.
21368. Feb. 17.—Authorizing Kettle Valley Ry. to carry traffic over portion of line from Penticton Wharf, westerly for 17 miles, and northerly and northwesterly from Carmi to mileage 76.5, 30 miles, in B.C.
21369. Feb. 16.—Rescinding order of Railway Committee of Privy Council of Canada, of Sept. 1, 1890.
21370. Feb. 17.—Authorizing C.P.R. to build spur for Hope & Sons, of Canada, Peterboro, Ont., and rescinding order 2132, Jan. 19, in same connection.
21371. Feb. 17.—Ordering Canadian Northern Ry. to rebuild its station at Aberdeen, Sask., to be completed by July 1.
- 21372 to 21374. Feb. 17.—Authorizing C.P.R. to build road diversions as follows: At mileage 88.9, Bassano Easterly Branch; in Secs. 2-22, and 34-21; and to build its Bassano Easterly Branch at grade across north and south road allowances between Secs. 2 and 3, Tp. 22, and Secs. 34 and 35, Tp. 7; in Secs. 20-21-8, w. 4 m., Alta., and to build its Bassano Easterly Branch at grade across same at mileage 66.39.
21375. Feb. 17.—Authorizing C.P.R. to carry McGill University mining students at special rate of \$40 each from Montreal, to Rossland, Phoenix, and Greenwood, B.C., and return, or at \$50 from Montreal to Vancouver, B.C., and return, including side trips to Rossland, Phoenix and Greenwood, and if desired, over lines from Sudbury to Sault Ste. Marie, Ont., and back, at \$2.75; and that any other parties desiring to travel for same purpose to B.C. or any other mining district, be granted equally favorable terms, until further ordered.
21376. Feb. 19.—Authorizing C.P.R. to build bridge 62.8 over Magnetawan River, near Byng Inlet, Ont.
21377. Feb. 18.—Authorizing C.P.R. to use bridges 25-7, Laggan Subdivision, Alta.; 92-3, Boundary Subdivision, B.C., and 176-9, Calgary Subdivision, Alta.
21378. Feb. 18.—Including Montreal Warehousing Co. as party to application of Montreal Board of Trade for order directing G.T.R. to put into effect at its Montreal elevator, same charges and conditions for grain as are in force at its Georgian Bay elevators.
21379. Feb. 19.—Authorizing G.T. Pacific Branch Lines Co. to build road diversion in s.w. ¼ Sec. 24-1-3, w. 2 m., Sask., at mileage 151.5 on its Regina-Boundary Branch.
21380. Feb. 19.—Amending order 21161, Jan. 7, re location of Toronto and Niagara Power Co.'s transmission line in Huron and Wentworth Counties, Ont.
21381. Feb. 19.—Amending order 21139, Dec. 31, 1913, re construction of Canadian Northern Ry. culverts at Obelisk, Sask., by substituting Alta., for Sask.
21382. Dec. 12.—Authorizing Canadian Northern Ry. to build across 9 highways on its Alsask South-easterly Line, Sask.
21383. Feb. 19.—Approving Kettle Valley Ry. location between mileage 10.7 and 27.2, Hydraulic Summit west to Penticton, B.C.
21384. Feb. 19.—Approving C.N. Ontario Ry. revised location and land required for yards, in Ferris Tp., Nipissing District, Ont., mileage 337 to 338.15, from Montreal.
21385. Feb. 19.—Authorizing C.P.R. to use bridge over North Saskatchewan River, at Edmonton, Alta.; 33.9, Edmonton Subdivision, Alta.; over Saskatchewan Ave., and over Jasper Ave., Edmonton, Alta.; 40.4 and 88, Red Deer Subdivision, Alta.
21386. Feb. 19.—Authorizing C.P.R. to build spur for Massey-Harris Co., Yorkton, Sask.
- General Order 119. Jan. 31.—Re removing regular station agents from various stations west of Port Arthur. This order is given fully on another page.
- General Order 120. Feb. 3.—Amending special tariffs of charges for detention of refrigerator cars when used for shipments of perishable freight, by eliminating clauses relating to detention at points of loading.

The Canadian Railway Club's Annual Dinner, held in Montreal Jan. 30 was more largely attended than any previous one, over 400 being present. R. W. Burnett, General Master Car Builder C. P. R., and President of the Club, was in the chair, and the other speakers were W. McNab, Principal Assistant Engineer, G. T. R.; F. P. Gutelius, General Manager Canadian Government Railways; Cy Warman, General Advertising Superintendent, G. T. R.; L. R. Johnston, General Superintendent, Angus Shops District, C. P. R.; G. A. Post, President Standard Coupler Co., New York; F. D. Adams, Dean of Faculty of Applied Science, McGill University; M. J. Butler, Vice President Armstrong, Whitworth & Co., of Canada; G. Ham, Headquarters Staff, C. P. R.; W. W. Butler, President the W. W. Butler Co., and Vice President Canadian Car and Foundry Co.

A New Logging Railway in B. C.—The Delta Shingle Mill, Churchill, B. C., has, it is reported, arranged to build a logging railway for hauling timber from the Scott road to its mills. The Surrey County Council has granted permission for the building of the line across certain road allowances.

Canadian Northern Railway Terminals at Port Mann.

The Canadian Northern Ry. for one of its Pacific Coast terminals of its transcontinental line now nearing completion, has opened up a tract of land on the Fraser River, about 12 miles from Vancouver, where it is constructing extensive terminal facilities. The site has been named Port Mann, after Sir Donald D. Mann, Vice President. As a part of the general scheme, and as a means of financing the work, the property back from the river, along which the railway facilities will be situated, was secured by the railway as a townsite, was subdivided,

tracks, over which the made up trains may be taken from or into the yards. On the north of the east end of the easterly yard, there will be three caboose tracks, between which and the yard, will be a scale track. To the north of this, a large coal storage space has been reserved.

The centre of the projected town will be Bon Accord Square, Centre St. leading directly from the river into it. Stub tracks leading from ladder tracks east and west of this street, will form an extensive system of storage and team tracks; there will

ing of rolling stock repairs on all the company's Pacific Coast lines, has also been planned, only a small portion of which will be completed at present. Provision has been made for the addition of all the buildings required in a complete shop layout, some of which will be built in sections, and extended as required.

The general shop scheme consists of a central midway served by a 60 ft. transfer crane, at right angles to the main line tracks. The locomotive shop will be to the east of the midway, and will ultimately be 150 by 600 ft., with 24 locomotive pits. The initial section now being built, is 250 ft. long, containing 10 pits. This shop will

Canadian Northern Railway Port Mann Terminal Layout (Section 1).

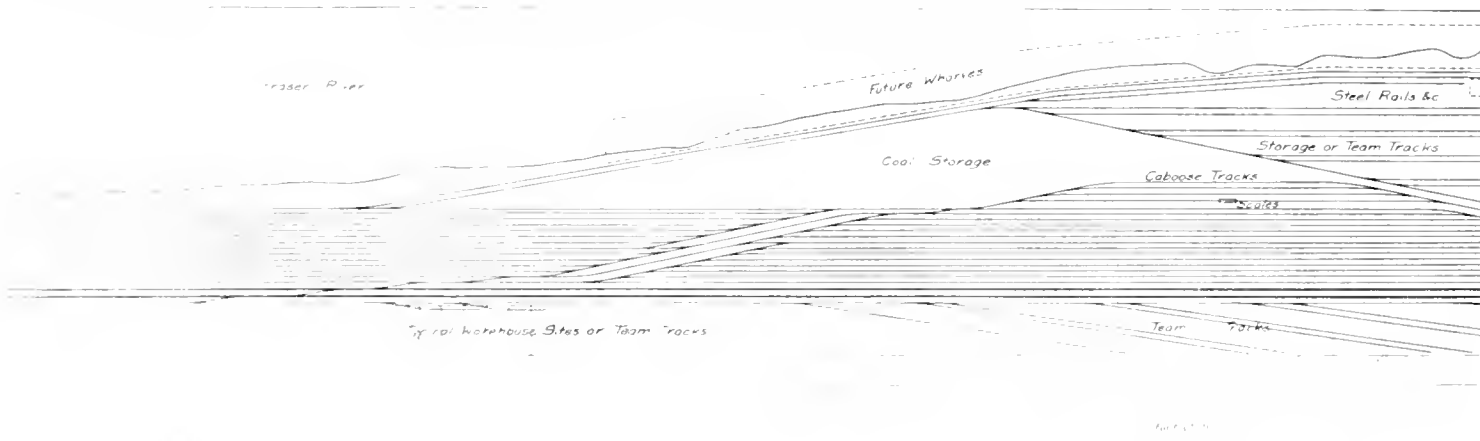

and has been on the market for some time. The town layout is of considerable extent, and it is anticipated that with the extensive railway and shipping facilities which will be provided it will become a point of considerable importance.

The Fraser River is navigable up to this point for large, ocean going vessels, and in consequence, it is expected to become a place of importance for the transshipment of freight for the Orient; a possible traffic in the transshipment of grain, etc., by way of the Panama Canal, is another phase of future development. Considering all these viewpoints, the prospect of the place developing seemed so imminent to the railway management, that a well developed

be 14 of these to the west, and 7 to the east of the street, the latter being the entry thoroughfare to the teamways. Along the south side of the yards, there will be a service track, from which stub team tracks will branch off, terminating at Railway St., 8 tracks to the west and 4 to the east of Centre St. Immediately to the west of Centre St. there will be 4 local freight tracks, with a freight shed, 40 by 200 ft., abutting on the street. Provision has been made for the extension of this shed to double its original size. The southerly two tracks of the team track layout will be spanned by a transfer crane, with a team scale in the roadway nearby.

Ample accommodation is being made for

be served by an 80 ft. transfer table along the east side, extending the full length of the shop. Only the portion corresponding to the part of the shop now being completed, is being built at present. On the east side of the transfer table, there will be a corresponding number of storage tracks, served by the transfer table. The locomotive shop, like all the buildings of the plant, will be of concrete construction, divided into two longitudinal bays by a central row of cast iron columns. It will contain two 10 ton travelling cranes, and a 200 ton electric jack for wheeling locomotives. This building will be the only part of the shop layout to be completed at present, all the other buildings being projected.

Canadian Northern Railway Port Mann Terminal Layout (Section 3).

scheme for extensive facilities has been undertaken, as shown in the accompanying plans.

The yard accommodation will consist of three yards of equal size, each containing 11 body tracks, 2,800 ft. long in the clear, giving a capacity in each of 1,900 cars, or a total capacity of 5,700 cars. These yards are on the north side of the double track main line, along the river bank. To the east end of each yard, there will be two ladder tracks, each of these serving 7 tracks. To the intermediate body tracks, there will be cross overs from the main line. From the west, the westerly ladder tracks will be approached by two 1,600 ft. switching

future warehouses on sites 50 by 100 ft., both to the east and to the west of Centre St. The station will adjoin Centre St. At the foot of Centre St., there has been built a 1,000 by 102 ft. wharf, with freight storage shed adjacent. The extension of the wharf to four times its present capacity is contemplated as traffic increases, and the freight storage shed can be increased to three times its present capacity. The water along the frontage is being deepened so that the largest vessels may dock there, and with the double track that has been laid along the rear of the wharf, will make a convenient transshipment arrangement.

A very complete shop layout for the hand-

All the remaining buildings of the plant will be situated to the west of the midway. Abutting the midway will be the pattern shop, 50 ft. square; foundry, 100 by 200 ft.; coal and iron shed, 50 by 200 ft.; blacksmith shop, 100 by 200 ft., and stores, 50 by 150 ft. The latter building will be surrounded by a platform, 75 by 350 ft., for the rough stores. To the rear of the stores will be the scrap bins, with track scales in one of the stores service tracks, and with the oil storage tank nearby. The passenger car shop, 100 by 200 ft., will be directly to the rear of the blacksmith shop. The woodworking department, consisting of the planing mill, 100 by 150 ft.,

and the lumber shed and kiln, will be directly to the rear of the coal and iron shed, with lumber storage space to the rear of the lumber shed. The freight car shop, 100 by 300 ft., will be to the rear of the foundry, and the power house, 50 by 100 ft., to the rear of the pattern shop. All these buildings will be approached from the west from a ladder track, which will leave the service track along the south of the main line tracks near the west end of the main yards. The ladder, in addition to leading into the shop service tracks, will serve a 6 track freight car repair yard, and a 5 track passenger car storage yard, to the rear of their respective shops.

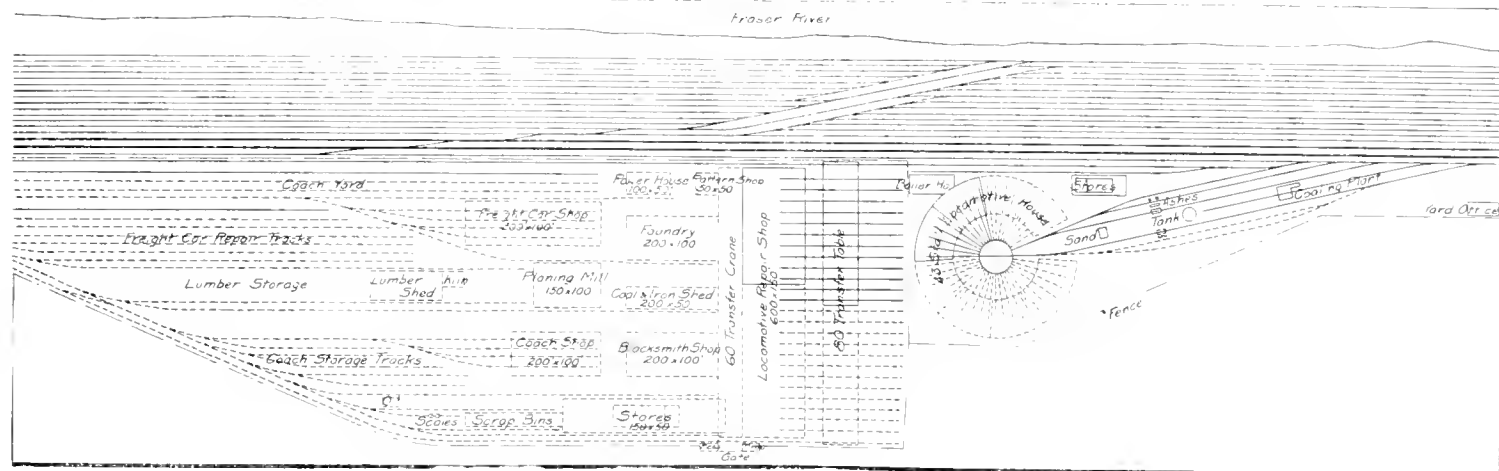

Canadian Society of Civil Engineers Annual Meeting.

The annual meeting was held in Montreal, Jan. 27 to 29. The reports of committees, and which are of interest to railway engineers, were published in Canadian Railway and Marine World for February.

The following officers were elected:—President, M. J. Butler, Montreal; Vice President, R. A. Ross, Montreal; Members of Council, J. M. R. Fairbairn, Montreal; Prof. H. M. Mackay, Montreal; R. McCall, Halifax, N.S.; A. R. Decary, Quebec; R. F. Uniacke, Ottawa; W. A. Bucke, Toronto;

Dominion Government Railway to Hudson Bay.

Replying to a question in the House of Commons, Feb. 2, the Minister of Railways said the length of this railway from Pas to Port Nelson, Man., is 418.5 miles. The whole mileage is under contract, viz.—Pas to Thicket Portage, 185.5 miles; Thicket Portage to Split Lake Jct., 68 miles; Split Lake Jct., to Port Nelson, 165 miles. The state of construction is,—Miles of steel laid, 86; miles surfaced, 56; grading fairly completed with the exception of a few cuts at miles, 110, 121 and 133 and some cross lay-

Canadian Northern Railway Port Mann Terminal Layout (Section 2).

The locomotive house at this point will be to the east of the locomotive shop, and will eventually be a 43 stall unit. Only a 15 stall section is being built now, and with it only half the mechanical yard accommodation. The locomotive house will be approached from the east. Of the mechanical yard arrangements, only the northerly half will be constructed at first, the southerly

F. Lee, Winnipeg, and G. R. G. Conway, Vancouver.

The society has 2,794 members and assets of \$108,300, including the new premises on Mansfield St., Montreal, valued at \$90,000.

The features outside the business meeting included a luncheon tendered by the Montreal members; a smoking concert and a dinner at the Engineers Club, presided

ing, 137.

In a discussion on the project in the House of Commons, Feb. 11, the Minister of Railways stated that while Port Nelson is not an ideal harbor for the seaboard terminal of the railway, it is superior to Fort Churchill. To reach the latter port it would be necessary to carry the line across 70 miles of "badlands." The misadventures of

Canadian Northern Railway Port Mann Terminal Layout (Section 4).

half awaiting the completion of the locomotive house. Adjoining the locomotive house, there will be a boiler and engine house, and to the east, a stores building.

All the buildings will be of concrete, the same as the buildings of the shop layout, and all of them have been, or are being built by the Imperial Construction Co., Toronto. We are indebted to J. Montgomery of this company for the data on which this article is based.

The Canadian Northern Ex. Co. has opened offices at Solina, Ont. and Neelin, Man., and has closed its office at Polwarth, Sask.

over by the Vice President, H. H. Vaughan, Assistant to the Vice President C.P.R., in the absence of the President, Phelps Johnson. A visit was paid to the St. Lawrence Bridge Co.'s plant at Rockfield, and also to the Canadian Northern Ry.'s Mount Royal tunnel.

Dominion Railway Subsidy Agreement.—The Dominion Government entered into an agreement, Jan. 20, under the act granting aid in the construction of railways, with the Esquimalt and Nanaimo Ry., for lines from McBride Jct., towards Sandwich, B. C., 45 miles; and from Sandwich to Campbell River, B.C., 38 miles.

vessels during the last season of navigation were due to various causes but the loss and damage had not been anything like so serious as was reported. As much progress has been made with the terminal work as could reasonably be expected. It is intended to send in a strong force of men overland, so as to make an early start on the work, and make as much progress as possible during the open season this year. (Feb., pg. 70.)

The Canadian Northern Ex. Co. has opened an office at Hafford, Sask., and has closed its offices at Berton, Ladysmith, Neelin and White Plains, Man., and Chandler and Fairlight, Sask.

New Standard Dining Cars. Canadian Pacific Railway.

A departure in dining car design has been made in the latest ones for this service built by the C. P. R. It has been realized for some time that the principal weak point in dining car service lay in the kitchen, where the cooks, through lack of space, were unable to fill orders as promptly as passengers frequently considered necessary. Before the order could be prepared, in the event of the dining car being well filled, the accumulation of orders unavoidably caused a delay in the preparation of the late order. From the company's standpoint, this involved a direct loss, as on the heavy runs the number of passengers desiring to avail themselves of dining car accommodation is enough to fill a car at several sittings. As nearly all desire their meals within a short period of time, the problem resolved itself, from the company's viewpoint, in either providing additional dining cars to handle the extra passengers quickly, or else so arranging the facilities that one car would meet all requirements in the limited meal period. As the kitchen had proved itself the weak point, it was to it that attention was concentrated in an endeavor to increase the car capacity.

A step in the right direction was made in dining cars some time ago, and has been quite generally adopted, viz., the utilization of one of the vestibule ends for interior purposes, leaving only one end with a vestibule, the body at the other end extending out to the buffer. In the C. P. R.'s latest design, a further step has been made in the elimination of the vestibule at the other end also, as it was realized that the dining car, being always used in conjunction with other cars, required no side vestibule entrance for passengers, and that for the employees, the side provision door would meet all requirements.

In the new cars, the dining room section, and the lockers at the end of the car are left as in the former standard design, the additional space available at the other end of the car by the elimination of the second vestibule, being added to the kitchen, leaving room for an additional range, with ac-

commodation for increased kitchen employees. The increased kitchen accommodation is shown in one of the accompanying illustrations, looking from the car end towards the dining section. The length of the range in the foreground has been increased by the length of the standard vestibule, the car length over buffers being as before. The

kitchen proper is now 14½ ft. long, sink section, 6 ft. 5 ins., and pantry 6¾ ft. From the diaphragm end of the kitchen, there is a low door into the passage for an emergency exit for the dining car employees. In place of the usual provision door in the blind vestibule of the usual dining car, there is a side door near the diaphragm end

Enlarged Kitchen of Canadian Pacific Railway Dining Cars.

of the kitchen, as shown in the view of the car exterior, which is very similar, only narrower, to that of a baggage car. It is entered by a metal ladder.

The main part of the car is the same as in former designs, containing 6 tables for 4 and 6 for 2, giving a seating capacity of 36. With the increased kitchen accommo-

Canadian Pacific Railway Dining Car Without Vestibules

modation for increased kitchen employees. The increased kitchen accommodation is shown in one of the accompanying illustrations, looking from the car end towards the dining section. The length of the range in the foreground has been increased by the length of the standard vestibule, the car length over buffers being as before. The

operation of the cars has already proved.

Calendars for 1914 have been received from American Steel Foundries, Chicago, and Taylor and Arnold, Ltd., railway supplies, Montreal.

Interchange of Traffic With Canadian Northern Railway at Toronto.

Announcement was made in Canadian Railway and Marine World for February that there is to be a complete interchange of passenger traffic at Toronto between the Grand Trunk and Canadian Pacific on the one hand, and the Canadian Northern Eastern Lines on the other. For a number of years there have been restrictions in this interchange at Toronto that have prevented passengers coming from points on other lines travelling by Toronto, to a number of points reached by the Canadian Northern Ontario, because tickets could not be issued through. By the arrangement now entered into, passengers will be able to obtain through tickets and the benefit of the through fares to all points reached on Canadian Northern Eastern Lines.

To the East, passengers will be able to go by Toronto through to the Rideau Lakes, Ottawa, Montreal and on to Quebec and the Lake St. John country north of Quebec. North of Toronto they may go to Sparrow Lake, and to the Muskoka Lakes, where the Canadian Northern passes through the centre of the district with wharf side stations on Bala Park Island and on the shores of Lake Joseph where they have a marine railway at Lake Joseph station for the handling of motor craft direct from the cars into the water. The line runs into Parry Sound and follows the Hinterland to the Georgian Bay, crossing Bolger Lake, the Maganotewan, Pickeral and French Rivers to Sudbury. At Capreol the line from Toronto is joined by the one from Montreal now nearing completion; the steel is laid all the way to Port Arthur. At present the line is only being operated to Rucl; but when opened through shortly, it will link the eastern and western lines of the system.

Minneapolis Railway Stations.—Several plans have been prepared for a municipal railway terminal at Minneapolis, Minn., which all railways entering the city would use. Three separate stations are now in use. Three years ago the State Legislature passed a law authorizing cities of the first class, of which Minneapolis is the only one, to build union stations and to force all railways to use it. A year ago the law was amended to cover a defect, and last November the City Council ordered the city engineer to prepare plans. By the law the city can condemn property, relocate stations, design and force railways to use the municipal terminal at a rental charge which will pay interest on the bonds and create a sinking fund. The city will submit the plan to the Railway Warehouse Commission, from which body the railways may appeal to the courts in case of disagreement. The nearly completed union station for the Chicago & Northwestern Ry. and the Hill roads may or may not be utilized in the new scheme.

The Great Railway Tunnels of the World.

The world's greatest tunnels are in Europe. The greatest is the Simplon, which is 12½ miles long. Two, the St. Gothard and Lotschberg, are over 9 1-3 miles long. The Mont Cenis is a little over 7 miles long. The Arlberg, in Austria, is 6¾ miles long. There are four tunnels between five and six miles long, five between four and five miles long, seven between three and four miles long, and 16 tunnels that are over two miles long. The longest tunnel in the United States, the Hoosac, is four and one third miles long. The C.P.R. tunnel at Rogers Pass, B.C., now under construction, will be 5 miles long, and the Canadian Northern Ry. Mount Royal tunnel will be 2 1-3 miles.

Railway Development.

Projected Lines, Surveys, Construction, Betterments, Etc.

Burrard Inlet Tunnel and Bridge Co.—The plans and profile have been officially filed for the projected railway, station 0 to station 130 + 036, on the south shore of Burrard Inlet, Vancouver. We are officially advised that there is no intention at present of going on with the construction of this line, the plans being filed with the intention of making provision for a railway from the south end of the proposed bridge across the Second Narrows of Burrard Inlet, to the Great Northern Ry. in the Hastings townsite section of Vancouver. Cleveland and Cameron, Vancouver, are engineers for the company.

The plans for the bridge were prepared in London, Eng., and were released from the Customs House at Vancouver, Feb. 5, on payment of a reduced duty of \$2,430. They are on view at the offices of Cleveland and Cameron, and contractors are figuring preparatory to putting in their tenders. At a meeting of the directors, Feb. 4, it was decided to arrange for a 100 ft. right of way at the northern end of the bridge, as an excessive price is being asked by the Indians of the reserve for the 200 ft. right of way originally planned. It was agreed that a condition shall be inserted in all contracts in connection with the erection of the bridge, that so far as possible Canadian materials shall be used. (Feb., pg. 69.)

Calgary and Fernie Ry.—The Calgary, Alta., Board of Trade, has been informed by the company's secretary that arrangements have been completed for the financing of the project, and that it is hoped to start construction early in the spring. A resolution was passed endorsing the application now before the Dominion Parliament for an extension of time for construction. (Feb., pg. 69.)

Central Canada Ry.—D. F. McArthur, who is associated with J. D. McArthur in connection with the Alberta and Great Waterways Ry., and the Edmonton, Dunvegan and British Columbia Ry., is reported to have said in an interview that construction will be started on the C. C. R. in the spring; that the surveys for the line have been completed, and that the company's bonds, which have been guaranteed by the Alberta Legislature, have been put on the market. The located line starts at Round Lake, on the E. D. and B. C. Ry., runs to Peace River Crossing and along the north bank of the Upper Peace River to Dunvegan. (Dec., 1913, pg. 573.)

Central Western Canada Ry.—Application has been made to the Dominion Parliament for the incorporation of a company to build a railway from Winnipeg in a generally northwesterly direction via Yorkton, Saskatoon and Battleford, to Edmonton, Alta. The provisional directors are:—S. Johnston, J. J. Dixon, F. C. Tisdell, C. Cronyn, A. Johnston, Toronto. The title of the company, originally Central Canada Ry., was changed, as it conflicted with a company building a line in Alberta, under a provincial act. (Dec., 1913, pg. 753.)

Chicago, Milwaukee and St. Paul Ry.—Chicago, Milwaukee and Puget Sound Ry.—The company's lines have an entry into Sumas, Wash., over the Bellingham Bay and British Columbia Ry. tracks, and it is reported that engineers are locating a route from Sumas to Huntingdon, B.C., in connection with the company's projected entry into Vancouver. The route being located is across the Sumas flats to a connection with

the Canadian Northern Pacific Ry. (Dec., 1913, pg. 573.)

Churchill Southern Ry.—The Manitoba Legislature has incorporated a company with a railway to be operated by steam, electricity or any other motive power, from Fort Churchill, southerly to Kettle Rapids, on the line which the Dominion Government is building from Pas, to Port Nelson, Man., with branch lines to any point in the Province of Manitoba. The company is given authority to develop water powers, and to distribute electric energy for all purposes. The provisional directors are:—W. Beech, W. Chambers, T. Wright, C. Atchison, Winnipeg; W. Georgson, Calgary, Alta.

Edmonton, Dunvegan and British Columbia Ry.—A train service has been put in operation between Edmonton and Smith, heretofore known as Murray Landing, 130 miles. A bi-weekly service in either direction is being given. (Feb., pg. 69.)

Flathead Valley Ry.—The Minister of Railways for British Columbia has granted a certificate under the provisions of subsec. 1, sec. 79 of the B. C. Railway Act, 1911, giving an extension of time for five years from Jan. 7, for building the lines authorized by chap. 52 of the B. C. statutes of 1909. (April, 1909, pg. 247.)

High River, Saskatchewan and Hudson Bay Ry.—The Dominion Parliament is being asked to change the point of starting of this projected railway, from tps. 25 to 29, range 1 west of the 4th meridian, to tps. 17 to 29, range 1, west of the 4th meridian, in Alberta, and to extend the time within which construction may be begun. Ballarby and Mackenzie, High River, Alta., solicitors for applicants. A meeting of shareholders for the purpose of completing the organization of the company was called to be held at High River, Alta. (Feb., pg. 69.)

Hudson Bay, Peace River and Pacific Ry.—A deputation waited on the Manitoba Government, Jan. 31, asking for a guarantee of the company's bonds, or for more direct aid in the building of the first 150 miles of the line as a colonization railway. The company's charter from the Dominion Parliament authorizes the building of a line from Winnipeg along the east side of Lake Winnipeg to Hudson Bay, and thence to the Pacific coast. The Premier replying to the deputation stated that until the navigability of Hudson Bay was assured the Government would not be justified in assuming any responsibility in connection with the construction of the line generally. So far as guaranteeing the bonds for the building of 150 miles of the line as a colonization line, the Government was prepared to give a most careful consideration, as soon as plans, etc., were submitted. (Oct., 1913, pg. 475.)

Kettle Valley Lines.—The Dominion Government has entered into a contract with the company under the act granting aid to certain railways for the building of a line from Merritt to Penticton wharf, 145 miles, and from 25 miles south of Merritt to near Hope Station, B. C., 55 miles. The present condition of construction on these lines was given in detail on pg. 80 of our last issue.

The Minister of Railways has approved of revised location for the section of the line between Hydraulic Summit and Penticton, 58.2 miles, and the Board of Railway Commissioners has approved of location of the line from Coquihalla Summit to Hope, 35.42 miles, on condition that a 14 degree

curve shown at mileage 3.2 be changed to 12 degrees.

The British Columbia Legislature is being asked to authorize the company to build a branch from Otter Summit to Aspen Grove, tapping Copper Mountain.

Construction is being proceeded with on the following sections of the line:—End of track westerly to Penticton, 50 miles; end of track westerly to Coldwater Summit, 65 miles; end of track westerly to Hope, 39 miles. Tracklaying out of Penticton was reported to have reached Narawata, Feb. 1. At Camp Creek, the exact point reached by the steel, a large wooden structure is being erected across the chasm immediately below Spray Falls. It was expected this work would be completed by Feb. 28. (Feb., pg. 80.)

Lake Erie and Northern Ry.—W. P. Kellett, General Manager, in a letter to the press, Jan. 31, explained what was being done in connection with the work in Brantford, Ont., in regard to which the city Council had expressed dissatisfaction. The work was being proceeded with as rapidly as possible. The general contractors had resumed tracklaying and it was expected to have the steel laid from Galt to Jubilee Terrace, Brantford, by Feb. 28. When that was completed the plant necessary for the deepening of the channel of the Grand River in the city would be brought in. Mr. Kellett attended a meeting of the Parks Board, Feb. 5, in connection with the matter, at which it was stated that so far as freight traffic is concerned steam will be used as a motive power, but for passenger traffic, gasoline electric or electric storage battery cars will probably be used. Mr. Kellett stated that freight will be taken to the first yards at the foot of Jarvis and Sterling streets for sorting purposes, and the trains will be made up in a second yard which will be located at Morrell St. (Feb., pg. 69.)

Northwestern Ry. of Canada.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a railway, to be operated by steam, electricity or any other motive power, starting from tp. 67, range 18, west of the 5th meridian, southwesterly to the Athabaska River, about range 7, west of the 5th meridian, thence to Edmonton and Camrose, continuing southeasterly to the South Saskatchewan River about tp. 23, range 11, west of the 3rd meridian, and on to Lake Johnson, thence easterly to Maryfield, and Virden, Man., thence northerly crossing the Assiniboine River near Penrith, and on easterly to Carberry, Winnipeg, Molson, Fort William and Port Arthur, Ont., Foster, Martin, Mann, Mackinnon and Hackett, Montreal, solicitors for applicants.

Ottawa, Brockville and St. Lawrence Ry.—The Dominion Parliament is being asked to grant an extension of time for the building of the line authorized by chap. 71, of the statutes of 1900. N. Belanger, Ottawa, is secretary. (May, 1912, pg. 239.)

Pacific and Hudson Bay Ry.—The Minister of Railways has approved of route map of this projected railway from Beila Coola to Hutnarko River, B. C., 60 miles. (Jan., pg. 22.)

Pacific Great Eastern Ry.—The total issue of 4½% bonds authorized for the building of this railway is £3,326,354 14s., 1d. The bonds are guaranteed both as to principal and interest by the Province of British Columbia. Of this amount £1,500,000 had previously been sold, and a further issue of £1,375,000 was put on the market in London, Eng., Jan. 24. The price was £95, and it is reported that the entire issue has been taken up.

It is reported that arrangements are be-

ing made for the laying out of ocean and other terminal facilities at Newport, B.C., on which it is proposed to spend \$2,000,000. The company is negotiating with the Dominion and the British Columbia Governments for securing the foreshore and other rights necessary for the proposed developments. Tracklaying out of Newport is reported to have reached a point 24 miles to the north, and it is expected that the second crossing of the Cheakamus River will be reached at an early date. The grading is reported to be well advanced right through to Lillooet, and it is hoped that track will be laid to that point by the end of the year. (Feb., pg. 70.)

Pacific, Peace River and Athabasca Ry.—The Dominion Parliament has under consideration an application for the incorporation of a company with this title to build a railway from the mouth of the Naas River, on the Pacific coast of British Columbia, easterly and northerly for about 200 miles to the height of land between the Naas and Skeena watersheds, then to the Skeena River, and along that river and the Bear River, crossing the divide to the Driftwood River, on to North Tlacla Lake, via Hozem Pass, to the Omineca River, reaching the Peace River; along that river to Vermillion rapids or chutes, Alta., thence to Point Providence, along the Athabasca River to Fort McMurray, along the Clearwater and Pembro Rivers to the height of land; thence to the Buffalo River, and continuing easterly and southerly to Prince Albert, Sask. The provisional directors are: C. F. Law, V. Quinn, Vancouver, B.C.; T. A. Burgess, Ottawa; D. A. Thomas, Cardiff, Wales; V. Lloyd-Owens, London, Eng. (Dec., 113, pg. 575.)

Pacific Trans-Canada and Hudson Bay Ry.—The Dominion Parliament is being asked to extend the time for the building of the railway authorized by chap. 134 of the statutes of 1912. Smith and Johnston, Ottawa, are solicitors for applicants. (May, 1912, pg. 239.)

Peace River Tramway and Navigation Co.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a railway with a gauge of 3 ft., to be operated by steam, electricity or other power, from Smith's Landing, on Slave River, easterly to Fort Smith, Alta.; and another from the Vermillion rapids easterly along the north bank of the Peace River, to north of Vermillion Falls. The company may carry on a general navigation business on the Peace, Slave and Mackenzie Rivers. The provisional directors are C. F. Law, W. H. Armstrong, G. Blair, Vancouver, B.C.; T. A. Burgess, L. Cote, Ottawa. (Dec., 1913, pg. 575.)

Prince Edward and Hastings County Ry.—Application is being made to the Dominion Parliament for authority to build an additional line from Brighton to Picton, thence easterly to Kingston, Ont.; and for an extension of time for building the lines previously authorized to be built. Pringle and Guthrie, Ottawa, solicitors for applicants. (June, 1912, pg. 301.)

Reid Newfoundland Ry. The Fortune Bay branch has been surveyed through to Boat Harbour, and has been completed to Black River, 15 miles of track having been laid from Goobles during 1913. The distance from Black River to Boat Harbour is 64 miles, on which the company will push construction during this year. It is also proposed to push work during this year on the 42 mile branch from Grand Lake to Bonne Bay.

Two branch lines have been completed, viz.: The Trepassey branch, from Waterford Bridge to Trepassey, the last five miles of track being laid during 1913; and the

Heart's Content branch, from Broad Cove to Heart's Content, the last mile of track being laid in 1913. (Feb., pg. 70.)

Saskatoon and Hudson Bay Ry.—Application is being made to the Dominion Parliament for an extension of time for the building of the line authorized by chap. 137 of the statutes of 1911. C. G. Locke, Saskatoon, Sask., solicitor for applicants. (June 1912, pg. 302.)

Sudbury, Kewawa and Bell River Ry.—The Dominion Parliament is considering an application for the incorporation of a company with this title, having power to build a railway from Sudbury, Ont., to Kewawa Jet., Que., thence northwesterly to a junction with the National Transcontinental Ry. at the crossing of Bell River. The provisional directors are:—J. Lumsden, A. Ellis, A. E. Hea, Ottawa; P. J. Loughrin, West Toronto; L. O'Connor, Sudbury, Ont.

Timiskaming and Northern Ontario Ry.—Speaking at Cobalt, Ont., recently, J. L. Englehart, Chairman of the T. and N. O. Ry. Commission, is reported to have said that plans for the diversion of the route of the southern part of the line, to eliminate curves, and for the electrification of the line, had been prepared, but the time for carrying them out had not arrived. It would not be many years before both works would have to be done. With regard to the proposal to extend the line from Cochrane to Hudson Bay, there was no reason at present for going on with the work. The time would come when the line would have to be built to James Bay, but the country through which the present line passed would have to be developed first.

The members of the Commission propose, at an early date, to go over the route for a proposed extension of the Elk Lake branch to Gowganda. It is reported that a new route has been found which is estimated to cost \$600,000 instead of \$1,000,000, the estimate for a previously located route. It is reported that if the new route is found satisfactory arrangements will be made for starting construction this year. (Feb., pg. 70.)

The Toronto, Hamilton and Buffalo Ry. will appeal against the decision of the Board of Railway Commissioners as to the question of the relocation of line in Hamilton, which was given in full on pg. 567 of our last issue. The Hamilton City Council has also decided to appeal against the decision, principally on the ground that the Commissioners hold that they cannot order the removal of tracks for more than a mile. (Feb., pg. 70.)

Vancouver Railway and Ocean Terminal Co.—The Dominion Parliament has been asked to incorporate a company with this title to acquire by lease or otherwise land in Vancouver and lay out thereon all necessary buildings for railway and ocean terminals, and in connection therewith to build double track line as follows: From the south side of False Creek, 500 ft. east of Main St., westerly along the south side of False Creek and English Bay, to 2,000 ft. west of Blanca Road, Point Grey. Deacon, Deacon and Wilson, Vancouver, B.C., solicitors for applicants.

Winnipeg.—An act has been passed by the Manitoba Legislature declaring that, as part of the undertaking, the Commissioners of the Greater Winnipeg Water District are authorized to build and operate a railway or tramway from Winnipeg easterly and southerly to the eastern boundary of the province. They may use steam, electricity or any other motive power in its operation.

Tenders are under consideration for the supply of all the tools and materials, except ties, rails and sundry steel, and for the building of grade and laying of track for 85

miles, more or less, of standard gauge railway, and for the building of a telephone line along the right of way. Tenders are also under consideration for the supply of 8,500 tons of 60-lb. new or relaying rails; 400 tons of angle bars, 256 tons of bolts and spikes, and 20 frogs and switch stands for this line. The estimated cost of construction is put at \$480,000; of track material at \$450,000, and of the telephone line at \$22,000, exclusive of poles. The clearing of the right of way will cost \$60,000, and the buildings for the engineers' offices are estimated to cost \$10,000. The contract for the telephone posts has been let to Bentz, Richardson Co., Winnipeg, and the contract for ties to O'Brien, Fowler and McDougall, Ottawa. (Feb., pg. 80.)

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1912-13, from July 1, 1913:—

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,028,800	\$1,414,500	\$514,300	\$19,700
Aug.	1,824,800	1,416,200	408,600	37,800
Sept.	1,904,000	1,470,000	434,000	101,400
Oct.	2,687,100	1,081,000	1,606,100	208,800
Nov.	2,673,300	1,708,500	964,800	87,000
Dec.	2,256,000	1,632,000	624,000	43,000
	\$13,364,000	\$9,324,200	\$4,039,700	\$587,700
Incr.	\$1,125,000	\$ 537,300	\$ 587,700

Average mileage under operation during 1913, 4,480, against 4,297 in the previous year. Mileage operated during Dec., 1913, 4,458.

Approximate earnings for January, \$1,570,000, against \$1,513,400 for January, 1913.

Canadian Pacific Railway, Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1912-13, from July 1, 1913:—

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$11,993,062.27	\$7,876,269.69	\$4,116,792.58	x\$31,383.72
Aug.	11,434,459.88	7,473,320.64	3,961,139.24	x756,786.42
Sept.	12,157,082.17	7,741,563.48	4,415,518.69	165,274.84

\$75,286,162.03 \$48,074,725.36 \$27,211,436.67 \$ 80,284.52
Incr. \$ 1,739,070.66 \$ 1,679,684.14 \$ 80,284.52

x Decrease

Approximate earnings for January, \$7,719,000, against \$6,510,000 for January, 1913.

The mileage under operation was increased during January to 11,884.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T.W.R., and D.C.H. & M.R., for Jan., and increases, or decreases from the figures for Jan., 1913:

	1914	1913	Increase	Decrease
G.T.R.	\$2,865,527	\$3,067,977	\$232,450
C.A.R.	158,256	176,874	18,618
G.T.W.R.	555,478	590,147	34,714
D.C.H. & M.R.	190,295	185,024	\$4,271
Totals	\$3,769,551	\$4,051,022	\$4,271	\$281,511

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch for January, were \$368,318, against \$377,844 for Jan., 1913.

Standard Rules on the Intercolonial Ry.

A circular was issued Feb. 10, stating that the standard code of General Train and Interlocking Rules will be put into effect at midnight, May 30. The rule books are being distributed under the direction of the Superintendent of Stations, Trains and Train Dispatching. Three instructors have been appointed in each of the four districts to explain the rules, and to give instructions therein at different points in their districts, which employes are to attend.

Canadian Pacific Railway Construction, Betterments, Etc.

Ontario Division.—Press reports state that surveys have recently been made which will give the C.P.R. a new line into Kingston, Ont. The route said to have been followed is from Kingston westerly to a junction with the newly completed Campbellford, Lake Ontario and Western Ry. at Brighton, about 72 miles. A charter is being asked from the Dominion Parliament for the Prince Edward and Hastings Ry. to build such a line.

The second tracking of the C.P.R. line west from Toronto, between Islington and Guelph Jct., 29.88 miles, has been finally completed, although trains have been running over it for some time. The authorization to open it for traffic was given by the Board of Railway Commissioners, Jan. 29. Nothing definite had been decided to Feb. 20, regarding the building of a second track further west of Guelph Jct. this year, but it is said that it was contemplated to build a second track as far west as Ayr or Galt, this year. The plans have all been prepared for the second tracking to London. Local press reports in that city state that considerable developments are to be made there, in preparation for the coming of the second track, and for the probable construction of a line to Sarnia, for which the company holds a charter.

The Minister of Railways has approved of route maps of a line from the C.P.R. at Guelph Jct. to Cedar Mills, Ont., 35 miles.

Lake Superior Division.—The Board of Railway Commissioners has approved of revised location plans for a portion of the line as built, mileage 29 to 32.69 old line mileage, and mileage 29 to 32.49 new line mileage, on the White River Subdivision. This is a revision of location, in connection with the second tracking of the line from Sudbury to Port Arthur, which is now in progress.

Saskatchewan Division.—The Dominion Government entered into a contract with the C.P.R., Jan. 8, for the building of a railway bridge over the Saskatchewan River at Outlook, Sask. The bridge has already been built.

Alberta Division.—The extension of the line from Weyburn, Sask., westerly, is now in operation as far as Shaunavon, Alta., 250 miles from Weyburn, the last stretch of 137 miles having been opened for traffic Feb. 1. West of Shaunavon about 75 miles of grading are ready for track laying, and there are only a few miles of grading to be done to complete the line to a junction with the branch running easterly from Stirling. This is one of the lines to be completed this year. On the completion of this line there will be a new line with low gradients between Lethbridge and Weyburn, 435 miles.

The line westerly from Suffield has been opened for traffic to Retlaw, Alta. It is 56.7 miles long.

The Minister of Railways has approved route map for a branch line from Caron to a junction with the line from Bassano, Alta., easterly, 152.24 miles.

Alberta Central Ry.—It is reported that the 20 miles of this line from Red Deer, Alta., in the direction of Rocky Mountain House, will not be opened for traffic before July 1. In connection with the extension of this line press reports state that negotiations are in progress with a Canadian Northern Ry. subsidiary, for the joint use of a certain mileage of route.

Kootenay Central Ry.—An agreement has been entered into between the Dominion Government and the company under the act granting aid to certain railways for the building of a line from Golden, via

Windermere and Fort Steele, to the British Columbia Southern Ry. near Jukeson, B.C., 175 miles. Construction has been going on between the two points named for about three years. Details of the work already completed show that track laying has been completed southerly to Edgewater, and northerly to Wasa. The grading on the 72.9 miles between these points is completed. Track will be laid on this grade during the year, and the line opened right through from the Crows Nest Pass line at Colvalli to the Transcontinental line at Golden, B.C., in the fall. The only part of the line now being operated is from Golden southerly to Spillimacheen.

Kaslo and Slocan Ry.—The line known by this title and formerly part of the Great Northern Ry. lines in Canada, has been rebuilt as a part of the Pacific Division of the C.P.R. F. C. Cambie, of the Department of Railways, inspected the reconstruction work, Feb. 5, and it is said that the line will be put in operation early in March. The cost of rebuilding and standardizing the line is said to have been \$300,000, towards which the British Columbia Legislature voted \$100,000.

Rogers Pass Tunnel.—An order in council was signed Feb. 3, authorizing the boring of a tunnel and approaches in Glacier Park near Rogers Pass, between Beaver Mouth and Ross Creek, mileage 74.6 to 88.56, subject to the execution of an agreement calculated to protect park interests.

A full contract has been let by Foley, Welch and Stewart, the general contractors, for the boring of the pioneer tunnel, to Mellwee and Sons, Denver, Colo.

Pacific Division.—The appropriations for the division for the current year cover the laying of 30 miles of steel on spurs and other tracks; the construction of a section of 20 miles of second tracking at Revelstoke; the building of 10 new steel bridges; and the relaying of a number of miles of track with new 85 lb. rails. At Vancouver in addition to the work already in progress, the appropriations provide for filling in behind the seawall along the centre waterfront owned by the company. (Feb., pg. 74.)

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Removal of Regular Station Agents.

General order 119, Jan. 31. Re various complaints received by the Board stating that the Canadian Pacific Railway, Canadian Northern, and Grand Trunk Pacific Railway Companies are removing regular station agents from various specified stations west of Fort William and Port Arthur, such complaints further alleging that such removal on inadequate notice works to the detriment of the applicants and the communities wherein they reside. It is ordered that, whenever a railway company intends to remove a regular station agent, it shall first notify the local municipality or board of trade of its intention to apply to the Board for an order permitting such removal. Such application and notice shall state the grounds on which such removal is sought to be justified, and shall, in each instance, show the gross earnings at the station in question from passenger as well as freight traffic and express business during the previous year. It is further ordered that no regular station agent shall be re-

moved until such removal be first authorized by the Board.

Detention of Refrigerator Cars.

General order 120. Re special tariffs filed by railway companies establishing certain charges for the detention, by shippers and consignees, of refrigerator cars, when loaded with perishable freight, over and above the car service toll prescribed by order 906, Jan. 25, 1906. It is ordered that the special tariff of charges for detention of refrigerator cars when used for shipments of perishable freight, published and filed by railway companies be amended by eliminating the clauses therein relating to detention at the points of loading of the said cars. And it is further ordered that on the publication and filing of tariffs so amended, general order 115, Dec. 19, 1913, and orders 21,127 and 21,128, Dec. 29 and 27, 1913, respectively, be rescinded in so far as they affect the several railway companies filing the said amended tariffs.

Import Rate On Pulp Wood.

21148, Jan. 2. Re application, as amended, of the Howell Co., Toronto, for an order directing a reduction in the import rate on wood pulp from Montreal to Windsor Mills, Que. It is ordered that the G. T. R. Co. be directed to establish, and put into force a rate of 8c. per 100 lbs. on imported wood pulp, in carloads, from Montreal Harbor to Windsor Mills, Que., the said rate to include those terminal charges at the Port of Montreal which are included in the rates of the G. T. R. Co.'s general tariff on import merchandise, as published and filed.

Esquimalt and Nanaimo Ry. Tariff.

21238, Jan. 21. Re application of Esquimalt and Nanaimo Ry. Co., for an order further extending the time within which it may be permitted to file a revised standard freight tariff for approval. It is ordered that the time within which the company was required to file the said tariff of maximum freight tolls for approval be further extended for six months from the date of this order.

Pulpwood Rates Temiscouata Railway.

21269, Jan. 28. Re the Temiscouata Ry. Co.'s Special Commodity Tariff, C. R. C. 217, and Joint Freight Tariff, C. R. C. 221, increasing rates on pulpwood, in carloads, from points on its railway to Riviere du Loup, Que., for local delivery and to points in Canada and the United States, respectively. It is ordered that the effective dates of the said tariffs published to become effective on Jan. 1 and 24, respectively, be postponed until Aug., 1914, and it is further ordered that order 21105, Dec. 22, 1913, be rescinded.

Grand Trunk Tariffs Suspended.

21326, Feb. 10. Re supplements 151 and 153 to the G. T. R. Co.'s Tariff, C. R. C. no. E. 2552. Upon the complaint of the Canadian Manufacturers' Association. It is ordered that these supplements published to take effect Feb. 15 and 16, respectively, be suspended, pending investigation by the Board.

Canadian Pacific Railway Tariffs Suspended.

21327, Feb. 10. Re supplements 40 and 42 to C. P. R. Co.'s tariff C. R. C. no. E. 2559. Upon the complaint of the Canadian Manufacturers' Association. It is ordered that the advanced rates published in the said supplements applying on building brick from Cooksville and Weston, Ont., to Toronto, and on gravel and building sand from Cooksville, Ont., to North Toronto, Parkdale and Toronto, be, and they are hereby, suspended pending investigation by the Board.

Proposed Increase in Switching Charges.

21329, Feb. 5. Re supplements 19 and 20 to the G. T. R. Co.'s tariff, C. R. C. no. E.

2677, increasing as from Feb. 15, 1914, switching charges within Toronto terminals. Upon reading the applications of the Canadian Manufacturers' Association, the Toronto Board of Trade, the York Sandstone Brick Co., and the York Sand & Gravel Co., protesting against the proposed increase. It is ordered that they be suspended, pending the hearing and determination of the matter by the Board.

National Transcontinental Railway Construction.

The ninth annual report of the Commissioners of the N. T. R. shows that the expenditure for the year ended Mar. 31, 1913, was \$13,729,461.44, making a total of \$130,247,152.95 since construction was started. The total grading done was 1,739 miles, on which 1,720.36 miles of main line track had been laid, and 384.73 miles of sidings, yard tracks, and second track. Since that date the grading on the line has been completed and track laid on the entire 1,804 miles between Moncton and Winnipeg.

An interim report of the commissioners presented to the House of Commons, Feb. 18, shows that the total expenditure on the line to Dec. 31, 1913, was \$140,562,147, of which \$10,314,944 was expended since Mar. 31, 1913. Track laying had been completed over the entire line, and the bridges were 95.3% completed. At the date of the report trains were being operated on 1,160 miles of the total 1,804 miles between Moncton and Winnipeg, and the report stated that trains could be run on the remaining mileage if there was any immediate necessity therefor.

The line from Moncton to Edmundston, N. B., 230 miles, was put in operation Nov. 20, 1912, and the result of the operation shows, a revenue of \$13,557.76, with operating expenses of \$36,146.97, and expenditure on equipment of \$7,009.38, and \$3,006.95 net on stores. The deficit is \$32,605.54, against which is placed \$3,577.37 of uncollected earnings, and \$10,016.32, value of equipment and stores on hand. In addition to this section there is a considerable mileage east and west of Cochrane, Ont., being operated by the contractors, and the section from Winnipeg, east to Superior, etc., is being operated by the G. T. Pacific Ry.

It was reported Feb. 6, that the entire line from Moncton to Winnipeg will be ready for operation by Sept. 1. (Feb., pg. 72.)

Grand Trunk Pacific Railway Construction.

The Commissioners of the National Transcontinental Ry. are asking the Dominion Parliament for an extension of time for the completion of the prairie section of the Western Division of the line, from Winnipeg to Prince Rupert—which is being built by the Grand Trunk Pacific Ry. The extension asked is for one year from Dec. 1, 1913. A similar extension is being asked for by the G. T. Pacific Ry.

The Board of Railway Commissioners has authorized the opening for traffic of the section of the main line between Fraser River, mileage 1,189 westerly of Winnipeg, and Fort George, B.C., mileage 1,280.5, the speed of trains being limited to six miles an hour at the Fraser River bridge and to 15 miles an hour on the last 35 miles into Fort George. A tri-weekly train service was put in operation Feb. 1, over the section. The line is completed and in operation easterly from Prince Rupert, to mileage 324. This leaves 124 miles of grading and

tracklaying to be completed. The grading on this section is well advanced and it is expected to have tracklaying completed during next summer.

The question of the location of the station at Fort George, B.C., has been finally decided on an appeal to the Governor in Council, judgment being given Feb. 8. The Board of Railway Commissioners after two hearings directed in May, 1913, that the company should build its station within 3,000 ft. of the eastern boundary of Fort George. The company appealed, and it has now been decided that the station must be built as ordered by the Board.

Considerable progress has been made with the wharves, dry dock and other facilities which are being constructed at Prince Rupert for use on the opening of the line right across the continent.

The annual report of the Minister of Railways for Alberta shows that to Dec. 31, 1913, the Province had guaranteed the company's bonds at the rate of \$15,000 a mile for the building of 201.5 miles of line from Tofteld to Calgary, and at the rate of \$20,000 a mile for 58 miles from Bickerdike southwesterly. These lines are now practically completed. Guarantees of bonds were voted for some other lines, but up to the end of 1913, the construction of them had not been arranged for.

The arbitrator appointed to fix the value of the R. N. W. M. Police barracks site at Calgary, Alta., which the G. T. P. Ry. had required for terminal purposes, decided on \$210,000. The Dominion Government in reviewing the proceedings increased the price to \$250,000, which the company has agreed to pay. An order in council was signed Jan. 27 granting the site to the company at that figure subject to the company donating a right of way 25 ft. wide on the south and west sides of the property so as to widen 9th Ave. and 6th St. East, and to erecting on the site a station having the same character and accommodation as that to be erected at Regina. (Feb., pg. 72.)

Exclusive Use of Drawing Rooms and Compartments.

Central, New England, Trunk Lines and Southwestern Passenger Association railways recently filed with the Interstate Commerce Commission, U.S.A., tariffs as to the number of tickets required for the exclusive use of drawing rooms and compartments on sleeping cars, to be effective March 1. The Trans-Continental and Western Passenger Associations also adopted similar rules, effective March 15. This has been followed by Canadian railways adopting the following rule, effective March 15:—

"A minimum of two adult first class one way or round trip passage tickets will be required for the exclusive occupancy of a drawing room, and a minimum of one and a half first class one way or round trip passage tickets will be required for the exclusive occupancy of a compartment."

The C. P. R. Hotel at Calgary, now under construction, is to be called the Palliser, Sir Thos. Shaughnessy having chosen that name in honor of the late Captain Palliser, who in 1847 led a government expedition to explore the country between Lake Superior and the Rocky Mountains. Capt. Palliser, with a staff of scientific men, continued his investigations until 1859, and reports of considerable value were published as the result.

W. Toby, M. Can. Soc. C. E., read a paper before the Canadian Society of Civil Engineers in Montreal, Feb. 19, on bridge substructures built by the pneumatic method.

Railway Rolling Stock Notes.

The Duluth, Winnipeg and Pacific Ry. has received 100 flat cars from the Mount Vernon Car Co.

The Canadian Northern Ry. has ordered 8 baggage cars, 60 ft. long, and 3 commissary cars, 60 ft. long, from the Preston Car and Coach Co.

The Timiskaming and Northern Ontario Ry. Commission, operating the Nipissing Central Ry., expects to place an order shortly, for two interurban motor cars.

The G.T.R. has received the following additions to rolling stock:—300 box cars from Eastern Car Co.; 864 box cars from Western Steel Car and Foundry Co., and 191 gondola cars, from Pressed Steel Car Co.

The Confederation Construction Co., Thorold, Ont., which has a contract on the construction of the Welland Ship Canal, has received two saddle tank locomotives from Canadian Locomotive Co.

The Canadian Northern Ry., between Jan. 14 and Feb. 14, received the following additions to rolling stock:—75 box cars from Canadian Car and Foundry Co.; 153 box cars from National Steel Car Co.

The C.P.R., between Jan. 1 and Feb. 15, ordered the following additions to rolling stock from its Angus Shops:—142 steel frame box cars, 8 vans, 19 freight refrigerator cars, 1 ballast spreader, and 16 stock cars.

The Intercolonial Ry. has ordered 25 refrigerator passenger cars from its Moncton Shops; 180 box cars, 80,000 lbs. capacity, from Nova Scotia Car Works, and 180 box cars, 80,000 lbs. capacity from Eastern Car Co.

The C.P.R., between Jan. 1 and Feb. 15, received the following additions to rolling stock:—189 steel frame box cars, 2 vans and 5 class D4 locomotives, from its Angus Shops; and 2 class N3 locomotives from Canadian Allis-Chalmers, Ltd.

The Intercolonial Ry. has received 5 colonist cars, 4 first class and baggage cars, and 132 box cars, 60,000 lbs. capacity, from Canadian Car and Foundry Co.; 9 box baggage cars, from its Moncton Shops; 4 consolidation and 3 switching locomotives from Canadian Locomotive Co., and 2 first class cars from Preston Car and Coach Co.

The Reid Newfoundland Co., during 1913, added the following rolling stock to its equipment, all of which was built at its shops at St. John's:—3 ten wheel passenger locomotives, 2 consolidation freight locomotives, 25 box cars, 40,000 capacity; 20 flat cars, 40,000 lbs. capacity; 2 first class cars, 2 second class cars, and 2 mail and baggage cars. Considerable additions will be made during the current year, and will also be built in the company's shops. W. E. Ladley is Superintendent of Motive Power.

The National Steel Car Co. reports having orders in hand for rolling stock, as follows:—593 wooden box cars, 30 tons capacity, for Canadian Northern Ry.; 100 flat cars, 40 tons capacity, 150 hopper cars, 50 tons capacity, and 3 eight wheel cabooses, for Toronto, Hamilton and Buffalo Ity.; 300 underframes for Michigan Central Rd.; 30 logging cars, 30 tons capacity, for St. Lawrence Pulp and Paper Co.; 8 interurban passenger cars and 2 interurban express cars, for Montreal and Southern Counties Ry.; 67 flat cars, 40 tons capacity, and 44 composite box cars, 40 tons capacity, for Pacific Great Eastern Ity.; 10 standard steel underframe baggage cars, and 500 stock cars, for Grand Trunk Ry., and 100 wooden box cars, 30 tons capacity, for J. D. McArthur Co.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Express, Telegraph, and Railway and
Canal Contractors' Interests.
Official Organ of the various Canadian
Transportation Associations.
Published on the first of each month.

A. FENTON WALKER, 143 Liberty Street, New York, N.Y.
J. MEREDITH McKIM, 3 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for Canada,
for transmission as second class matter.

Entered as second class matter, July 25, 1913, at
the Postoffice at Buffalo, N.Y., under the Act of
Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage any-
where, \$2 a year.

SINGLE COPIES, 20 cents each, including post-
age.

The best and safest way to remit is by express
money order. Where one cannot be obtained, a
post office money order, or bank draft, payable at
par in Toronto, may be sent. Cheques or drafts not
payable at par in Toronto cannot be accepted. Rem-
ittances should be made payable to Canadian
Railway and Marine World.

Index to Canadian Railway and Marine World for 1913.

At the end of this issue is a very com-
plete index to the contents of the volume
for 1913, which, as in former years, will
doubtless be fully appreciated by the large
number of subscribers who bind Canadian
Railway and Marine World for reference
purposes.

Even a casual glance over the six pages
of closely printed matter will show the tre-
mendous range of subjects covered and the
thorough manner in which this paper repre-
sents the entire transportation interests
of the whole Dominion, steam railway, elec-
tric railway and marine, as well as the sub-
sidiary express and telegraph interests and
railway and canal contracting work.

Each succeeding year sees an increase in
the quantity of matter published, an im-
provement in its quality, and a rigid ad-
herence to the policy of accuracy which
the publishers consider as one of their
most valuable assets.

We are thankful to be able to repeat what
we said last year in regard to the state of
business, which was most satisfactory with
us during 1913. The receipts from adver-
tising steadily increased and there was a
marked advance in circulation. During the
past three years the average increase in
circulation each year has been larger than
in any previous year in the paper's history,
except the year of its establishment, 1898;
the number of discontinuances was again
very small indeed, and the present condi-
tion of the subscription list justifies the
statement, after most careful enquiry as to
the circulation of other publications, that
there is no other transportation paper, pub-
lished in any country, which has so large
a circulation as Canadian Railway and
Marine World, in proportion to the popu-
lation of the country of publication. The
evidence in support of this statement is at
the disposal of our advertising customers.

Our circulation embraces all classes of
transportation officials and reaches over
90% of all the officials who have any buy-
ing power, being especially strong among
the mechanical, engineering, operating and
maintenance of ways officials. Advertisers
who use our columns therefore know that
they are covering the entire field and that
no other advertising is necessary to reach
any portion of it.

Our subscription lists are open for in-
spection by present and prospective ad-
vertisers at any time.

Report on Enquiry Into National Trans- continental Railway Construction.

The report of the commissioners ap-
pointed to enquire into matters connected
with the construction of the N.T.R., G.
Lynch Staunton, K.C., of Hamilton, Ont.,
and F. P. Gutelius, M. Can. Soc. C.E., now
General Manager Canadian Government
Railways, was submitted in the House of
Commons, Feb. 12, but has not yet been
printed and distributed. The report is very
voluminous and concludes as follows:—

"We find that the N.T.R. Commission, the
Grand Trunk Pacific Railway, and those
having charge of the construction of the
railway, did not consider it desirable or
necessary to practise or encourage economy
in the construction of this road. We find
that, without including the money which
was unnecessarily expended in building the
railway east of the St. Lawrence River,
\$40,000,000 at least was needlessly expended
in the building of this road."

S. N. Parent, ex-chairman of the Com-
mission, has issued a reply to the report,

which will doubtless be fully discussed in
Parliament, as it already has been in the
political press.

The Minister of Railways stated, Feb. 18,
that the total cost of the investigation was
\$63,388. Of this Mr. Gutelius received \$27-
465, and Mr. Lynch Staunton \$24,038. Other
official services, expenses and reporting cost
\$11,885.

Safety First on Canadian Government Railways.

F. P. Gutelius, General Manager, has is-
sued the following circular: "It has been
decided to introduce the safety first move-
ment on the Canadian Government Railways.
This movement, now in effect on many im-
portant systems, presents a practical plan
for the cooperation of officers and employes
in the discovery and correction of unsafe
conditions and practices which might cause
injury. J. E. Long, Safety Engineer, has
been engaged to install the necessary organ-
ization. His headquarters will be at Mon-
ton, and he will report to the General Man-
ager. In order that all concerned may
understand the nature and purpose of this
movement and be prepared to work together
to the best advantage, Mr. Long will hold
safety meetings at important centres, at
which he will explain the plan of procedure
in detail and also deliver addresses, illus-
trated by stereopticon views, from original
photographs, showing unsafe conditions and
practices. Notice of the time and place of
these meetings will be given, and we hope
that every employe, in every branch of the
service, will avail himself of the opportunity
to attend. The address and illustrations
will be highly interesting and at the same
time most practical and instructive. At
a later date Mr. Long will organize on all
divisions and at principal shops safety com-
mittees composed of officers and employes.
He will also make inspection of the shops,
yards and terminals and confer with, advise
and assist officers of the various depart-
ments in matters pertaining to safety. The
safety movement has for its sole purpose the
prevention of injuries, in which everyone
should feel a personal interest, and we trust
that every officer and employe of this system
will give to this movement his hearty sup-
port and cooperation.

National Transcontinental Railway Coal- ing Stations.

A contract has been let by the N.T.R.
Commission for 200-ton mechanical coaling
plants at Monk, Quebec, Fitzpatrick, Parent,
Doucet and O'Brien, to the Roberts and
Schaefer Co., Chicago, Ill. A condition of
the contract is that all the structural work
possible must be fabricated in Canada.

The first standard coaling plants on the
N.T.R. were of the inclined dock type, that
at Cochrane, Ont., being described in Cana-
dian Railway and Marine World for March,
1913. Since then, the standard has been
changed to the mechanical type, the plants
just contracted for being of this type, which
consists of an elevated concrete box struc-
ture, 22 ft. square, supported on 6 columns,
the box being divided into two sections. The
bottom of the box structure slopes towards
the track side, with two coaling tracks, one
along that side and the other underneath,
with a chute to each. To the rear, there is
a pit, over which the coal car is run, coal
being elevated from the pit into the con-
crete hopper above by an elevator system.
A corrugated iron sand box is attached to
the side of the coal box.

Canadian Northern Railway Construction. Betterments. Etc.

Mount Royal Tunnel and Terminal Ry.—The Board of Railway Commissioners has approved revised location of the tunnel line from St. Antoine St. to its main line at Montreal and rescinded order made Nov. 27, 1913.

Preliminary plans for the passenger terminals in Montreal have been prepared. They will be located between Catcart and Lagauchetiere, St. Monique and Mansfield streets, and it is said they will comprise a group of buildings of considerable architectural attractiveness; that the platforms will be 1,200 ft. long, and will be 45 ft. below the upper level at Dorchester St., and 20 ft. above the general level of the city. Press reports, Feb. 13, stated that excavation has been started for the station and terminal buildings, and that the erection of a temporary station will be undertaken as soon as the weather permits. It is expected that passenger trains will be running through the tunnel early in the autumn.

Toronto-Hamilton Line.—A bylaw, submitted to the ratepayers of St. Catharines, Ont., to give a bonus of \$100,000 towards the building of the projected railway from Toronto to the Niagara River, was defeated by a vote of 744 to 324, Jan. 31.

Canadian Northern Ontario Ry.—It has been announced that the branch on the Toronto-Sudbury line from Ulthoff into Orillia, will be opened for traffic, Mar. 1.

Montreal-Ottawa-Port Arthur line.—The Board of Railway Commissioners has approved of revised location plans of the line at Grand Lake, in Nipissing District, mileage 126.37 to 129.94 from Ottawa.

We have been officially supplied with the following information with regard to the work done on this line during 1913:—Average force employed for every working day in the year, 6,880 men, and 808 horses; largest force employed in any month, 8,736 men and 1,195 horses; smallest force employed in any month, 3,838 men and 298 horses; outlay in wages, \$720,000, equal to about \$20,000 each working day; yardage moved, about 11,000,000 cubic yards, equal to 366 miles of completed grade, allowing 30,000 cubic yards a mile, or 1.9 miles of grade for each working day. There were 15¼ million feet of timber built in trestles; 4¼ million feet in culverts; 43,399 cubic yards of concrete were put in culverts and bridge foundations; and 2,900 tons of steel were put into the superstructures of bridges. Track was connected upon the Sudbury-Port Arthur section of the line, 550 miles, on Dec. 31, 1913, just 29 months after the grading was commenced.

Canadian Northern Ry.—In a recent interview at Winnipeg, Sir Donald Mann, Vice President, is reported to have said, that the company, before undertaking any new construction, would complete its main line and branches now under construction.

Press reports state that contracts will shortly be let for the construction of a number of large steel bridges on western lines, at a total estimated cost of \$4,000,000. These include bridges at Snarling River, Minette, and at Athabasca.

The Manitoba Legislature has passed an act incorporating the Canadian Northern Manitoba Ry. Co. to build the following lines:—From the Oak Point branch of the C.N.R., in tp. 27 or 28, westerly to the eastern shore of Lake Manitoba; from the Oak Point branch near Gypsumville, northerly to the authorized line of the C.N. Ry., between Skevin and Grandview on the C.N. Ry., southeasterly to Portage la Prairie; from Portage la Prairie southerly and southeasterly to the C.N.R. between Emerson and Sprague, and such other lines as may

be approved from time to time by the Lieutenant-Governor-in-Council. The provisional directors are:—H. Sutherland, P. C. Andrews, E. Langham, O. G. Clark, K.C., C. W. Jackson, Winnipeg.

Sir William Mackenzie, President, is reported to have stated at Winnipeg, Feb. 12, that construction will be proceeded with at once on the new line from Grand Marais to Victoria Beach, and the line from Deerfield to Lake Manitoba. The Manitoba Legislature has passed an act guaranteeing the company's bonds for \$13,000 a mile for the building of these two lines, 15 and 12½ miles long, respectively.

Plans have been deposited in the Land Titles office at Moose Jaw, Sask., showing revised location of the Maryfield branch through tps. 5 and 6, ranges 25-29, west of the 2nd meridian. In connection with this line, Sir Donald Mann is reported to have recently said:—"Our present entrance to Moose Jaw is by the Maryfield branch—a round about route. It is likely that we shall come to some arrangement with the G.T. Pacific Ry. in order to secure a more direct entrance, but it will not be yet."

It was understood that the line into Calgary, which, from near Drumheller, Alta., carried traffic coming off the line through from Saskatoon, and the traffic from the line south from Vegreville, would have been opened for traffic Feb. 1. The Board of Railway Commissioners, however, refused to sanction its opening until the temporary bridges east of the city are strengthened. It is expected that operation will be started early in March.

The company has secured, D. B. Hanna, Third Vice President, is reported to have recently said, a site in Calgary for its station, and is going ahead with the preparation of plans for building it.

In connection with the building of a line into Macleod, Alta., press reports, Feb. 9, stated that engineers have been going over the route, on which some grading has been done, between the C.P.R. tracks and the Old Man River, and have been locating a site for the construction of a bridge there.

The proceeds of the bond issue recently placed on the London, Eng., market will be used in the construction of the following lines under agreement between the C.N.R.'s subsidiary, the Canadian Northern Western Ry., and the Alberta government:—From Oliver northeasterly to St. Paul de Metis; from Bruderheim via Vermillion, Wainwright and Medicine Hat to the International boundary, with a branch northeast of Vermillion to the eastern boundary of the province; from Camrose to Alsask; from Calgary northwest to the Brazeau line; from Strathcona southwest via Cochrane to Pincher Creek, and from Athabasca north of Lesser Slave Lake to Peace River Crossing.

The annual report of the Minister of Railways for Alberta for the calendar year 1913, shows that during the year the company built 249 miles of railway in the province. There had been built, or were in process of completion under provincial guarantee the following lines:—

	Guaran- tee	Mileage per mile built.
CANADIAN NORTHERN RAILWAY—		
Strathcona via Camrose and Calgary to Lebbridge	\$15,000	355
Camrose to Vegreville	15,000	45
Crossing of second above line and Little Bow River, south via Macleod to the International boundary	15,000	110
Near Macleod to the Western Boundary	15,000	65
Morinville to Athabasca Landing	15,000	72.3
Mile 175 of the Goose Lake line to Moose	15,000	127.5

CANADIAN NORTHERN WESTERN RY.—

Onway northwest to Pine River		
Pass	\$20,000	100
Oliver northeast to St. Paul de Metis	13,000	100
Bruderheim via Vermillion, Wainwright and Medicine Hat to International boundary, with a branch northwest of Vermillion to Eastern Boundary	13,000	30
Calgary northeast to Brazeau line	13,000	100
Camrose to Alsask	13,000	80
Strathcona via Cochrane to Pincher Creek	15,000	20
Blackfalds to Goose Lake line	13,000	118.5
Total		1,323.3

Steel is reported to have been laid on the Brazeau line to about 45 miles west of Rocky Mountain House, and grading is said to be in progress right through to the Brazeau coal fields. The bridge across the Saskatchewan River on this line, it is reported, will be built jointly with the C.P.R., whose Alberta Central Line parallels the C.N.R. line for a considerable distance.

Canadian Northern Pacific Ry.—The British Columbia Legislature passed an act, Feb. 13, affecting the guarantee of bonds of the company. The Premier stated that it had not been found a workable plan to rank the 4½% securities as provided by the act of 1912, with the 4% securities which were provided for under the original act. The amendment now carried provides that the 4½% securities shall be applied only for the construction of the lines specially mentioned in the act of 1912, viz.:—From the 100-Mile post on the Vancouver Island line to Duncan; from Kamloops to Kelowna, in the Okanagan, with a spur line to Lumby; the branch from New Westminster to Stevenson; the line from Patricia Bay to Victoria; the line from New Westminster to Vancouver.

It is reported that there are only about five miles of grading south of the Albretha Summit, B.C., on which no work has yet been done, along the whole line. At this point several routes have been laid out, but a definite decision has not been arrived at as to which will be followed. The remaining portions of the grading, on which track had not been laid up to Dec. 31, 1913, is well advanced to completion. It is expected to have the track laid through early in the fall. (Feb., pg. 73.)

A Victoria, B.C., dispatch of Feb. 21, said that the Premier had introduced a bill in miles, principal and interest at 4½% until 1950, the total amount being \$12,360,200 the Legislative Assembly providing that the Province guarantee Canadian Northern Pacific Ry. bonds for \$10,000 a mile for 511. The time for the completion of the line is to be extended to 1916.

Government Grain Elevators.—The Minister of Trade and Commerce in response to a letter from the Member of Parliament for North Grey, stated recently, that the Government has no present intention of building elevators at any point on Georgian Bay; the Government's policy, apart from the elevators already built by it, or through commissioners, at Halifax, St. John, Port Colborne, Port William, Saskatoon, Moose Jaw, Quebec, Montreal, and the erection of another elevator at Calgary, two transfer elevators, one in British Columbia and the other on Hudson Bay, being to leave such construction to private parties or corporations.

The Intercolonial Ry. and Branch Lines.—Replying to a question in the House of Commons, Feb. 2, the Minister of Railways said: "In view of the action of the Senate last session" in throwing out the bill providing for the purchase, under certain conditions, of branch lines, "it is not considered that the introduction of such legislation during the present session would be of any use."

Mainly About Transportation People.

SIR THOMAS TAIT addressed the Canadian Club in Toronto, Feb. 23, on Australia.

JOHN HANNA, Superintendent of Restaurants, Canada Railway News Co., died in Toronto, Feb. 16, aged 58.

W. H. BRODIE, General Passenger Agent, C.P.R., Vancouver, B.C., has returned from a three weeks vacation in California.

C. R. HOSMER, Director, C. P. R., has been re-elected President of the Ritz-Carlton Hotel, Montreal, for the current year.

R. McBeth, who died at Kildonan, Man., recently, was father of R. J. McBETH, City Freight Agent, Canadian Northern Ry., Winnipeg.

SIR RODOLPHE FORGET, President, Quebec Ry. Light, Heat and Power Co., who was recently under treatment for appendicitis, is convalescing.

E. E. BRYDONE-JACK, Professor of Civil Engineering at the University of Manitoba, has been elected a member of the Institution of Civil Engineers.

D. C. COLEMAN, General Superintendent, Alberta Division, C.P.R., Calgary, has presented a silver cup as a trophy to the Mercantile Hockey League there.

The HON. N. CURRY, President, Canadian Car and Foundry Co., and Mrs. Curry, left Montreal Feb. 8 for Bermuda, expecting to return early in March.

ROBERT PICKFORD, who died at Nice, France, in the early part of February, was a few years ago a member of the shipping firm of Pickford and Black, Halifax, N.S.

T. P. PHELAN, President, Canada Railway News Co., and Mrs. Phelan left Toronto, February 15, for Bermuda, intending to return about the middle of March.

H. S. GREENWOOD, M. Can. Soc. C.E., Assistant Chief Engineer of Construction, Mackenzie, Mann & Co., Toronto, and Mrs. Greenwood, are on a trip to Trinidad.

DANIEL PARKER, of the Chicago, Milwaukee and St. Paul Ry.'s passenger department in Winnipeg, dropped dead there, Jan. 27, aged 60. He was born at St. Andrews, Que.

MRS. D. B. HANNA, wife of the Third Vice President, Canadian Northern Ry., slipped on an icy sidewalk in Toronto, Feb. 6, while going to her automobile, and broke her left wrist.

D. POTTINGER, I. S. O., ex-Assistant Chairman, Canadian Government Railways Managing Board, and Mrs. Pottinger, of Moncton, N. B., have been spending part of the winter in Toronto.

V. J. BORLAND, chief clerk to Chief Engineer, Canadian Northern Pacific Ry., Vancouver, B.C., who was slightly injured recently by being thrown from his horse, has recovered and returned to duty.

J. ALEXANDER HUTCHISON, M. D., who resigned his position as Chief Medical Officer, G. T. R., and G. T. Pacific Ry., recently, has been appointed Senior Surgeon of the Montreal General Hospital.

C. W. HUNTINGTON has resigned as General Superintendent of the Central Rd. of New Jersey, to become Vice President and General Manager of the Minneapolis & St. Louis Rd., at St. Louis, Mo.

MORRIS McDONALD, who was elected President of the Boston and Maine Rd., in July 1913, has resigned to devote his whole time to the Maine Central Rd., of which he is President and General Manager.

F. N. HALL, Superintendent, Moncton and Buctouche Ry., Moncton, N.B., was killed with the three members of a snow plough crew, Feb. 20, when a snow plough

and locomotive broke through a small bridge at Scotch Settlement, near Moncton.

SIR WM. VAN HORNE, who was confined to his house in Montreal for several weeks by inflammatory rheumatism, had sufficiently recovered to be able to attend the C. P. R. directors' meeting early in February.

HON. FRANK COCHRANE, Minister of Railways and Canals, who has not been in good health for some time, sailed from Halifax, Feb. 28 on the Allan s. s. Alsation for Liverpool, intending to remain in Europe about two months.

A. P. DANE, Secretary-Treasurer, Master Car and Locomotive Painters Association of the United States and Canada, Reading, Mass., celebrated his golden wedding recently, when a presentation was made by the association at a public reception.

W. G. ROSS, Chairman, Montreal Harbor Commission, with Mrs. Ross and family ar-

J. W. Norcross,
Managing Director, Canada Steamship Lines, Ltd.

rived in London, Eng., during February, and later went on to Nice, France. He will inspect a number of the principal harbors in Europe and will probably return to Montreal in May.

A. LEADLEY, Canadian Agent, Delaware, Lackawanna and Western Rd., Toronto, accompanied by his wife, left on Feb. 18 for a two months' trip to California, travelling by way of Chicago, New Orleans, Los Angeles, San Francisco, Vancouver, and thence back to Toronto by one of the Canadian routes.

A. C. STONEGRAVE, who died at St. Albans, Vt., Feb. 7, aged 71, entered Central Vermont Ry. service in 1843 and, for many years he has been Canadian Freight and Passenger Agent at Montreal. The funeral was attended by the chief G.T.R. officials, as well as a number of other transportation officials.

JAMES B. MACPHERSON, who has been appointed Chief of Tariff Bureau, G.T.R. lines east of Detroit and St. Clair Rivers,

with office at Montreal, was born at Montreal, Jan. 31, 1867, and entered G.T.R. service in Apr., 1881, since when he has occupied various positions in the General Freight Department, until Feb. 16, the date of his present appointment.

V. A. HARSHAW, whose appointment as Superintendent, District 1, Atlantic Division, C. P. R., Brownville Jct., Me., was announced in our last issue, entered C. P. R. service Oct. 21, 1884, and was for two years, Superintendent, District 1, Ontario Division, Toronto, and for three years prior to Jan. 5, 1914, Superintendent, District 2, Atlantic Division, Woodstock, N. B.

GEORGE ARTHUR STAPLES, who has been appointed Travelling Freight Agent, C.P.R., Vancouver, B.C., was born at Durham, Ont., Feb. 28, 1882, and entered C.P.R. service, Mar. 1, 1901, since when he has been, to Aug., 1902, clerk, North Bay, Ont.; Aug. to Dec., 1902, agent and operator, Chapeau, Ont.; Dec., 1902, to Mar., 1903, operator, Winnipeg; Mar., 1903, to Aug., 1907, Freight Agent, Cranbrook, B.C.; Nov., 1907, to Aug., 1911, cashier and chief clerk, Nelson, B.C.; Aug., 1911, to Jan. 31, 1914, Travelling Freight Agent, Nelson, B.C.

JAMES PLAYFAIR, of Midland, Ont., who retired recently from the Managing Directorship of the Richelieu & Ontario Navigation Co., was presented in Toronto with a solid silver centre table piece and rose bowl, with the following inscription: "Presented to James Playfair by the officials, staff, captains, and engineers of the Inland Lines, Ltd., and Northern Navigation Co., Ltd., as a token of the high esteem in which he is held by one and all." An old English chime clock was also presented to Mrs. Playfair.

ALBERT WHITEMAN, who has been appointed General Air Brake Inspector, G. T. Pacific Ry., Transcona, Man., was born at Bruce, Ont., in 1884, and entered railway service in 1903, since when he has been, to Mar., 1907, in C.P.R. service on air brakes, Fort William, Ont.; 1907 to Sept., 1908, in charge of air brake work, Canadian Northern Ry., Winnipeg; Sept., 1908, to Oct., 1913, on air brake work, Motive Power and Car Department, G.T.P.R., Edmonton, Alta., and since then he has been attached to the Car Department at Transcona, Man.

F. W. STERLING, who has been appointed District Freight Agent, C.P.R., Nelson, B.C., was born at Thornbury, Ont., Sept. 14, 1881, and entered C.P.R. service in 1895, in the Local Freight office, Vancouver, B.C., where he occupied various positions, from messenger to chief cashier, until 1902; 1902 to 1904, claims clerk, General Freight office, Vancouver, B.C.; 1904 to 1906, chief clerk, General Freight office, Vancouver, B.C.; 1906 to 1909, Contracting Freight Agent, Seattle, Wash.; 1909 to Jan., 1914, Travelling Freight Agent, Vancouver, B.C.

G. G. OMMANNEY, who has been appointed Special Engineer to the President, C.P.R., Montreal, entered C.P.R. service in 1907, making preliminary reports and surveys regarding the development of the company's lake terminal at Port McNicoll, Ont., and subsequently was in charge of construction there until 1911, when he was placed in charge of exploration and reconnaissance work in connection with harbor developments on the Pacific coast. Since 1912 he has occupied the position of Special Engineer, which appointment has now been officially made.

JOHN GORDON, who has been appointed Foreman Electrical Engineer, Car Department, G. T. Pacific Ry., Transcona, Man., was born at Forres, Scotland, Jan., 1884, and after serving an apprenticeship to the electrical and mechanical engineering, served some time in the Electrical Engin-

engineering Department, North Eastern Ry., Newcastle, Eng. He entered C.P.R. service in the Motive Power Department, Winnipeg, Man., Sept., 1909, and from Jan., 1910, has been in G. T. Pacific Ry. service, in the Motive Power Department, at Rivers, Man., and Transcona.

REGINALD EGERTON PERRY, who has been appointed Assistant General Freight Agent, Canadian Government Railways, Moncton, N.B., was born at Drayton, Ont., July 5, 1876, and entered railway service Oct. 2, 1891, since when he has been, to Feb. 28, 1898, clerk in various positions, General Freight Department, C.P.R., Toronto; Mar. 1, 1898, to June 30, 1907, in similar capacity, Intercolonial Ry., Montreal; July 1, 1907, to July 31, 1909, Chief of Tariff Bureau, I.R.C., Montreal; Aug. 1, 1909, to Feb. 1, 1914, Assistant General Freight Agent, I.R.C., Montreal.

WILLIAM NOONAN, who has been appointed Chief Engineer, Canada Steamship Lines, Ltd., Toronto, was born at Westport, Ont., Feb. 17, 1864, and entered steamboat service in 1882, since when he has been, to 1887, tug engineer, Graham, Horne and Co., Fort William, Ont.; 1888 to 1889, second engineer, s.s. Sir S. L. Tilley, St. Catharines, Ont.; 1890 to 1894, chief engineer, s.s. Macassa, Hamilton Steamboat Co., Hamilton, Ont.; 1895 to 1911, chief engineer, Hamilton Steamboat Co., Hamilton, Ont.; 1912 to 1913, chief engineer, s.s. Turbinia, Richelieu and Ontario Navigation Co., Toronto.

LEON GEORGE ROGERS, whose appointment as Assistant Superintendent, District 1, Ontario Division, Havelock, was announced in our last issue, was born at Richford, Vt., June 18, 1874, and entered railway service, July 31, 1893, since when he has been, to Aug. 1, 1898, terminal operator, C.P.R., Newport, Vt.; Aug. 1, 1896, to July 13, 1899, terminal operator, C.P.R., Farnham, Que.; July 13, 1899, to Dec. 1, 1910, dispatcher, C.P.R., Farnham, Que.; during the winter of 1902-03, he was dispatcher at Moose Jaw, Sask., and Calgary, Alta.; Dec. 1, 1910, to Jan. 1, 1914, Chief Dispatcher and Trainmaster, District 1, Eastern Division, Farnham, Que.

A. C. DOUGLAS, whose appointment as Purchasing Agent, C. P. R., Vancouver, B. C., was announced in our last issue, was born at Montreal, Nov. 10, 1881, and entered C. P. R. service, Nov. 1, 1897, and was, to Oct. 31, 1906, junior clerk in General Storekeeper's office, Montreal, and in various positions in the Stores Department, Eastern Lines, and relieving Storekeeper, Eastern Lines; Nov. 1, 1906 to May 31, 1908, senior clerk, General Purchasing Agent's office, Montreal; June 1, 1908 to Mar. 31, 1911, chief clerk, Purchasing Agent's office, Winnipeg; Apr. 7, 1911 to Jan. 31, 1912, chief clerk, Purchasing Agent's office, Vancouver, B. C.; Feb. 1, 1912 to Dec. 31, 1913, Assistant Purchasing Agent, Vancouver, B. C.

ANDREW WILLIAMS, who has been appointed Superintendent, District 2, Atlantic Division C. P. R., Woodstock, N. B., was born at Mono Road, Ont., Feb. 22, 1872, and entered C. P. R. service, Jan. 1889, since when he has been, to 1892, telegrapher; 1892 to 1893, relieving agent; 1893 to 1894, assistant to car distributor and fuel agent; all Atlantic Division; 1895 to 1896, relieving dispatcher, St. John, N.B.; 1896 to 1898, trick dispatcher, St. John, N. B.; 1898 to 1904, Chief Dispatcher, Woodstock, N. B.; 1904 to 1904, rule instructor, Atlantic Division; 1905 to 1909, Trainmaster, Atlantic Division; 1909 to 1911, Assistant Superintendent, Atlantic Division; 1911 to Jan. 5, 1914, Assistant Superintendent, District 1, Lake Superior Division, North Bay and Sudbury, Ont.

MICHAEL MAGIFFE, who has been appointed Superintendent Telegraphs and Superintendent Car Service, Central Vermont Ry., St. Albans, Vt., was born at Verplanks Point, N.Y., Mar. 24, 1852, and entered C.V.R. service in May, 1868, since when he has been, to May, 1871, operator at Essex Jct. and Montpelier, Vt.; May, 1871, to Jan., 1874, dispatcher, St. Albans, Vt.; Jan., 1874, to Dec., 1875, chief operator, St. Albans, Vt.; Dec., 1875, to Jan., 1880, Chief Dispatcher, St. Albans, Vt.; Jan. 1, 1880, to Jan., 1890, Superintendent Telegraphs and General Train Dispatcher, St. Albans, Vt.; Jan., 1890, to Jan., 1899, Superintendent Telegraphs and General Car Agent, St. Albans, Vt.; Jan., 1899, to Feb. 1, 1914, Superintendent Telegraphs and Car Accountant, St. Albans, Vt.

W. J. PICKRELL, who was recently appointed Assistant and Superintendent, District 2, Atlantic Division, Aroostook, N.B., was born at London, Ont., Sept. 15, 1880, and entered C.P.R. service Jan. 1899, since when he has been, to July 1, 1901, in West Toronto shops; July 1, 1901, to Nov. 1, 1904,

W. E. Burke,
Assistant Manager, Canada Steamship Lines, Ltd.

Foreman, West Toronto; Nov. 1, 1904, to July 7, 1905, travelling fireman; July 7, 1905, to Aug. 1, 1907, locomotive driver; Aug. 1, 1907, to Apr. 15, 1908, assistant road foreman of locomotives; Apr. 15, 1908, to May 10, 1910, locomotive driver; May 10 to Dec. 16, 1910, rule instructor; Dec. 16, 1910, to Apr. 9, 1912, locomotive driver; Apr. 9 to May 15, 1912, Assistant District Master Mechanic, District 3, Ontario Division; May 15, 1912, to Nov. 1, 1913, District Master Mechanic, District 1, Ontario Division, West Toronto.

ROBERT KELLOCK GEMMEL, who has been appointed Local Freight Agent, Midland Ry. of Manitoba, Winnipeg, was born at Perth, Ont., Mar. 10, 1886, and entered railway service, Feb. 11, 1907, since when he has been, to Dec. 1908, stenographer and clerk, Superintendent's office, Minnesota and International Ry., Brainerd, Minn.; Dec. 1908 to July 1910, stenographer and clerk, Tie and Treating Department, Northern Pacific Ry., Brainerd, Minn., and Purchase, Mont.; July 1910 to Mar. 1911, steno-

grapher and material clerk, Superintendent's office, Northern Pacific Ry., Duluth, Minn.; Mar. 1911 to May 1912, chief clerk, Duluth Union Depot and Transfer Co. Duluth, Minn.; May 1912 to Jan. 31, 1914 Auditor and chief clerk to General Superintendent, Midland Ry. of Manitoba, Winnipeg, Man.

W. E. BURKE, whose appointment as Assistant Manager, Canada Steamship Lines, Montreal, was announced in our last issue, and whose portrait appears in this issue, was born at Belleville, Ont., Sept. 23, 1881, and entered transportation service May 1, 1905, since when he has been, to Dec. 1, 1905, purser on s.s. Picton, Richelieu and Ontario Navigation Co., Montreal and Toronto; Dec. 1, 1905, to Dec. 31, 1906, Soliciting Freight Agent, R. & O. N. Co., Toronto; Dec. 31, 1906, to Dec. 31, 1907, Travelling Freight Agent, same company, Toronto; Dec. 31, 1907, to Apr. 19, 1909, Travelling Freight Agent, Mutual Steamship Co., Toronto; Apr. 19, 1909, to Apr. 1, 1910, General Freight Agent, Merchants Mutual Line, Toronto; Apr. 1, 1910, to Jan. 1, 1914, Traffic Manager, Merchants Mutual Line, Toronto.

R. W. DREW, who has been appointed Division Freight Agent, Saskatchewan Division, C.P.R., Regina, was born at Kingston, Ont., Feb. 17, 1874, and entered railway service May, 1894, since when he has been, to May, 1896, clerk general office, operator and agent at various points, Kingston and Pembroke Ry.; June, 1896, to Sept., 1898, clerk, C.P.R., Arrowhead, B.C.; Sept., 1898, to Apr., 1903, Local Agent, C.P.R., Nelson, B.C.; Apr., 1903, to Apr., 1908, chief clerk, General Freight Agent's office, Nelson, B.C.; Apr. to June, 1908, acting General Freight Agent, Kootenay and Boundary Divisions, C.P.R., Nelson, B.C.; June, 1908, to May 30, 1911, District and Travelling Freight Agent, C.P.R., Saskatoon, Sask.; May 30, 1911, to Jan., 1914, Division Freight Agent, Kootenay and Boundary Divisions, C.P.R., Nelson, B.C.

Capt WILLIAM RICHARDS, for many years President, Charlottetown Steam Navigation Co., Charlottetown, P.E.I., who died in Montreal, Feb. 16, was born at Swansea, Wales, May 15, 1819, and was educated there and in Ireland. His early life was spent at sea, and he commanded a square rigged ship at the age of 23. He went to Prince Edward Island in 1844 and commenced a shipbuilding business at Bideford, in conjunction with the late Hon. Jas. Yeo, whose daughter he married. In the course of that business he launched about 100 vessels, varying from 500 to 1,500 tons, at a time when wooden sailing vessels constituted the greater proportion of the mercantile service of British North America. He was elected to the Legislature in 1870, and was a supporter of Confederation. He paid frequent visits to Great Britain up to 1912. The funeral took place in Prince Edward Island.

W. P. HINTON, who has been appointed Assistant Passenger Traffic Manager, G.T. Pacific Ry., Winnipeg, and whose portrait appears in this issue, was born at Hintonburg, Ont., Aug. 30, 1871, and entered railway service, May, 1887, since when he has been, to Aug., 1891, clerk, freight, passenger and car accounts, and travelling auditor, Canada Atlantic Ry.; Aug., 1891, to Mar., 1898, rate clerk, General Freight and Passenger departments, same road, and accountant, Canada Atlantic East Freight Line; Mar., 1898, to June 30, 1901, Assistant General Freight Agent, same road, and Canada Atlantic Transit Co.; June 30, 1901, to Jan. 30, 1903, General Freight Agent, same road; Jan. 30, 1903, to Oct., 1905, General Passenger and Freight Agent, same road; Oct., 1905, to Jan., 1907, General

Agent, Passenger Department, G.T.R., Ottawa; Jan., 1907, to Apr., 1909, Assistant General Passenger and Ticket Agent, same road, Montreal; Apr., 1909, to Feb., 1914, General Passenger Agent, G.T. Pacific Ry., Winnipeg.

L. C. RUSSELL, Travelling Passenger Agent, G.T.R., Chicago, Ill., died there, Feb. 5.

J. A. Timmerman, who died at Kingston, Ont., Feb. 15, aged 64, was a brother of H. P. TIMMERMAN, Industrial Commissioner, C.P.R., Montreal.

GIDEON SWAIN, who was in C.P.R. service for about 30 years, during the latter part of which he was station agent at Winnipeg, died at Montreal, Feb. 4, aged 87.

HON. J. A. REID, Minister of Customs, is acting as Minister of Railways and Canals during the absence in Europe of the Hon. F. Cochrane.

C. E. HORNING, District Passenger Agent, G.T.R., Toronto, was entertained to dinner by a number of friends, Feb. 9, on the 36th anniversary of his entering the company's service.

SIR THOMAS SKINNER, director, C.P.R., London, Eng., has been elected Governor of the Hudson's Bay Co., in place of the late Lord Strathcona; and A. M. NANTON, Chairman of the Advisory Committee in Winnipeg, and formerly Managing Director Alberta Railway and Coal Co., has been elected a director.

J. W. STEWART, of Foley, Welch and Stewart, railway contractors, Vancouver, B.C., is said to have purchased an estate in Sutherlandshire from the Duke of Sutherland for about \$300,000. The matter is now in the Scottish law courts, as, on account of the property being entailed, legal proceedings are necessary before it can be sold.

FREDERICK H. CLENDENNING, who has been appointed Division Freight Agent, British Columbia Coast Steamship Service, and Ocean Steamship Lines, C.P.R., Vancouver, B.C., was born at Montreal, Nov. 9, 1881, and entered C.P.R. service, Aug. 1, 1898, since when he has been, to June 30, 1902, junior clerk, Fourth Vice President's office, register clerk, and stenographer, Montreal; July 1, 1902, to Mar. 31, 1903, stenographer and freight clerk, Commercial Agent's office, New York Central and Hudson River Rd., Montreal; Apr. 1, 1903, to Jan. 31, 1904, stenographer, rate and tracing clerk, General Freight Department, C.P.R., Vancouver, B.C.; Feb. 1, 1904, to June 30, 1905, chief clerk, City Freight office, C.P.R., Victoria, B.C.; July 1, 1905, to Aug. 31, 1908, chief clerk, District Freight Agent, C.P.R., and Esquimalt and Nanaimo Ry., Victoria, B.C.; Sept. 1, 1908, to Aug. 16, 1909, City Freight Agent, C.P.R., and District Freight Agent, Esquimalt and Nanaimo Ry., Victoria, B.C.; Aug. 17, 1909, to Mar. 31, 1911, Assistant General Freight Agent, C.P.R., Vancouver, B.C.; Apr. 1, 1911, to Jan. 31, 1914, District Freight Agent, C.P.R., Vancouver, B.C.

D. C. MACDONALD, whose appointment as Assistant General Claims Agent, C.P.R., Winnipeg, was announced in our last issue, was born at Elmsdale, N. S., Feb. 9, 1874, and entered railway service, Sept. 17, 1890, since when he has been, to Sept. 1891, operator at various points, Intercolonial Ry.; Sept. 1891 to Nov. 1893, assistant agent, I. R. C., Sackville, N. B.; Nov. 1893 to June 1894, clerk in Freight Department, I. R. C., Halifax, N. S.; June to Oct. 1894, freight clerk, I. R. C., St. John, N. B.; Oct. 1894 to June 1896, freight clerk and wharf ticket agent, I. R. C., Halifax, N. S.; Jan. 1896 to Mar. 1897, agent, I. R. C., Dartmouth, N. S.; Mar. 1897 to Apr. 1898, freight clerk, I. R. C., Halifax, N. S.; Apr. to Dec. 1898, City Ticket Agent, I. R. C., Halifax,

N. S.; Dec. 1898 to Oct. 1899, chief clerk, Freight Department, I. R. C., Halifax, N. S.; Dec. 1900 to Nov. 1901, Freight Agent, I. R. C., Sydney, N. S.; Nov. 1901 to July 1905, Freight Agent, I. R. C., Halifax, N. S.; July 1905 to Jan. 1906, clerk, General Freight Department, C. P. R., Winnipeg; Jan. to Dec. 1906, Travelling Freight Agent, C. P. R., Winnipeg; Dec. 1906 to Apr. 1907, chief clerk, General Freight Department, C. P. R., Winnipeg; Apr. 1907 to June 1911, City Freight Agent, C. P. R., Winnipeg; June 1911 to Jan. 1914, Division Freight Agent, C. P. R., Regina, Sask.

GEORGE BAZZARD, who died at Hamilton, Ont., Feb. 13, was born at Westhild Court, Herefordshire, Eng., Jan. 3, 1838, and until his retirement at the end of 1903, had been continuously engaged in railway service in Great Britain and Canada, since 1856. He commenced service with the South Wales Ry., now part of the Midland Ry., at Swansea, Wales, as General Agent, Sept., 1856, transferring in the following year, to the Newport, Abergavenny and Hereford Ry., in a similar capacity, and remained for six years, during which period he had charge of the traffic over the Crumlin viaduct. In 1863 he entered the service of the Monmouthshire Ry. and Canal Co., and subsequently was appointed Joint Agent of the Brecon and Merthyr Ry., Hereford, Hay and Brecon Ry., and Mid Wales Ry., at Brecon, Wales; later he joined the North Staffordshire Ry. at Burslem and Tunstall, Staffs., and came to Canada in 1876. He was appointed agent, Great Western Ry., with office in Yonge St., Toronto, and remained with the G.T.R., when it absorbed the G.W.R., in 1882, subsequently spending four years in Toronto as Freight and Passenger Agent, Chicago, Rock Island and Pacific Ry., and from 1886 he was Freight and Passenger Agent, Delaware, Lackawanna and Western Rd., Toronto, from which position he retired in Dec., 1903.

Grand Trunk Railway Betterments, Construction, Etc.

Lachine, Jacques Carter and Maisonneuve Ry.—An extension of time for the building of this railway in Montreal is being asked for from the Dominion Parliament. The surveys have been completed and the main portion of the route approved of, but certain negotiations are still in progress. There has been a lengthened fight in connection with the acquisition of some of the properties required for the right of way. The Quebec Supreme Court gave judgment in one of these cases, Feb. 5, holding that when the company complied with certain formalities under the expropriation act it acquired right and title to the property sought to be secured. The action was therefore dismissed.

Hamilton, Yards, etc.—It was reported in Hamilton, Ont., Feb. 3, that the G.T.R. had given instructions that certain lands on Ferguson Ave., were to be taken over, at the figures fixed on at a recent arbitration. The owners of the properties objected to the noises arising from the shunting, etc., in the yards, and arbitration proceedings were instituted to fix a value. The price fixed is said to be \$96,378. One of the owners did not object to the noise, and another owner is appealing to the Board of Railway Commissioners against his exclusion.

London, Ont.—We are officially advised that nothing definite has been decided with regard to a projected extension of the line to the Harris farm, London, Ont. Press reports stated that a line of about two miles was to be built at once to the farm, where

a racing track was to be laid out.

Press reports state that H. E. Whittenberger, Superintendent, while in London, Feb. 13, stated that the company will confer shortly with the London St. Ry. on the question of building subways at Richmond, Talbot or Ridout streets, and that tests of the ground will be made in the spring, and later on definite proposals will be made.

The Erie, London and Tillsonburg Ry. Co. was originally chartered in 1906, and the route from Port Burwell to London surveyed. The charter was subsequently acquired by the G.T.R., and extensions of time for construction were obtained in 1908, 1910 and 1912. A further extension is now being asked from the Dominion Parliament.

Owen Sound Station.—Plans which have been approved for the erection of a new station at Owen Sound show a two story building 175 by 40 ft., of pressed brick with slate roof. It is expected that construction will be started in May, and the new station opened within the year. (Jan., pg. 23.)

Great Northern Railway Lines in Canada.

Midland Ry. of Manitoba.—Manitoba Great Northern Ry.—The Winnipeg Board of Works has refused to allow the building of an elevated sidewalk on Ross St., alongside a fruit warehouse in course of erection on the terminals used by these companies in Winnipeg.

New Westminster to Blaine.—Press reports state that arrangements are being made for the building of a second track from New Westminster, B.C., to Blaine, Wash.

Vancouver Terminals.—Construction has been started on the viaducts over the Grandview cutting at Broadway and Victoria drives, Vancouver. The steel work is being erected by the Canadian Northwest Steel Co.

The company's new dock at the foot of Campbell Ave., Vancouver, has been completed, and was put into use, Feb. 5. There are two piers, each 450 by 127 ft., on which are warehouses, each 400 by 100 ft. Between the piers are three sets of tracks, and there is another set, along the water front of each warehouse. There is a driveway from the water front to each warehouse. The dock is constructed on wooden piers, concrete cylinders, with concrete and wood facings, while the buildings are of iron and wood, with a flat roof and skylights. The new dock gives accommodation for three steamers of the largest size, one at each side, and one across the end. (Feb., pg. 74.)

Steam Railway track laid in 1913.—We have received the final revised statement showing the track laid during 1913 on the Kettle Valley Lines under construction in British Columbia. This shows:—Between Midway and Penticton, 37 miles; between Penticton and Merritt, 32 miles; Coldwater Jet., towards Hope, 11 miles; total 80 miles. The estimated mileage last used in our table was 75 miles. This revision adds five miles to the total figures in the table given in our February issue, making a total of 3,218.67 miles of new single track laid in Canada in 1913.

Proposed Electrification of C.P.R. Tunnel through the Selkirks.—G. Bury, Vice President, C.P.R., who was in Montreal, Feb. 20, left on that day for New York, where, it is reported, he was to consult with experts in regard to the electrification of the Rogers Pass tunnel, now under construction.

The C.P.R. Engineering Department held its annual dinner at the Place Viger Hotel, Montreal, Feb. 15.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—GEORGE SPENCER, who has recently been acting as Assistant Chief Operating Officer, Winnipeg, has been appointed Chief Operating officer, vice A. J. Nixon, deceased. Office, Ottawa.

Canada Steamship Lines, Ltd.—J. W. HAZLETT has been appointed Chief Engineer, Lines East of Kingston. Office, Montreal. W. NOONAN has been appointed Chief Engineer, Hamilton, Niagara and Toronto-Preseott Lines. Office, Toronto.

Canadian Government Railways.—J. E. LONG has been appointed Safety Engineer, in charge of the Safety First movement, to organize committees and direct meetings in connection therewith. Office, Moncton, N.B.

A. J. GRAY has been appointed Division Freight Agent, St. John, N.B., vice S. G. Tiffin, transferred to Montreal.

R. E. PERRY, heretofore Assistant General Freight Agent, Intercolonial Ry., Montreal, has had his office moved to Moncton, N.B., and has had his jurisdiction extended over the Prince Edward Island Ry.

S. G. TIFFIN, heretofore Division Freight Agent, St. John, N.B., has been appointed Division Freight Agent in charge of territory in Quebec and in Ontario west to Kingston and Sharbot Lake, inclusive. Office, Montreal.

See also Intercolonial Ry.

Canadian Northern Ry.—Press reports from Winnipeg, state that it is reported locally that R. J. MACKENZIE, son of the President, will shortly be appointed Second Vice President, with office at Winnipeg.

W. F. BARRY, heretofore Commercial Agent, St. Louis, Mo., has been appointed City Freight Agent, Montreal.

H. M. POTTICARY, heretofore Soliciting Freight Agent, Toronto, has been appointed Soliciting Freight Agent, Montreal, vice W. H. Thompson, resigned.

The position of District Freight Agent, Montreal, formerly held by F. A. SHAW, whose appointment as Division Freight Agent, Toronto, was announced in our last issue, has been abolished.

R. F. CLARK, heretofore Travelling Agent, Chicago, Ill., has been appointed General Agent at Pittsburgh, Pa., vice A. E. Hodgins, resigned.

F. G. WOOD, heretofore Commercial Agent at Pittsburgh, Pa., has been appointed Commercial Agent at St. Louis, Mo.

Canadian Pacific Ry.—W. J. PICKRELL, heretofore District Master Mechanic, District 1, Ontario Division, West Toronto, has been appointed Assistant Superintendent, District 2, Atlantic Division, and the position of Trainmaster for that district, heretofore held by B. A. Craig, has been abolished. Office, Argoosook, N.B. This appointment was made Nov. 1, 1913, but owing to an oversight, the circular covering it did not reach this office.

J. H. GUTHRIE has been appointed Roadmaster, Division 5, District 2, Atlantic Division, vice W. Hacking. Office, Argoosook, N.B.

J. J. MORGAN, heretofore dispatcher, has been appointed Chief Dispatcher, Farnham, Que., vice L. G. Roger, promoted.

G. G. OMMANNEY, who has, since 1912, been acting as a special engineer for the company, has been appointed Special Engineer to the President, performing such duties as may be assigned to him from time to time. Office, Montreal.

W. E. WOODHOUSE, heretofore Assist-

ant Superintendent of Motive Power, Western Lines, Winnipeg, has been appointed Superintendent of Motive Power, Eastern Lines. Office, Montreal.

H. OSBORNE, heretofore Assistant Superintendent of Motive Power, Eastern Lines, has been appointed Assistant Mechanical Superintendent, Eastern Lines, and his former position has been abolished. Office, Montreal.

G. McBRIDE has been appointed Night Foreman at North Bay, Ont.

J. A. MOORE has been appointed Car Foreman at White River, Ont., vice F. Guy, assigned to other duties.

R. PRESTON, heretofore Master Mechanic, Manitoba Division, Winnipeg, has been appointed Assistant Superintendent of Motive Power, Western Lines, vice W. E. Woodhouse, promoted. Office, Winnipeg.

F. R. PENNEFATHER, heretofore District Master Mechanic, Cranbrook, B.C., has been appointed Master Mechanic, Manitoba

V. A. Harshaw,
Superintendent, District 1, Atlantic Division, Canadian Pacific Railway.

Division, vice R. Preston, promoted. Office, Winnipeg.

W. B. LANIGAN, Assistant Freight Traffic Manager, Western Lines, Winnipeg, has announced that, from Feb. 1, the British Columbia Division will include rail, lake and river lines, Ottertrail to Vancouver, Passburg to Midway, inclusive, and all intervening territory. The western limit of the Alberta Division has been extended to include Field, B.C.

R. W. DREW, heretofore District Freight Agent, Kootenay and Boundary District, Nelson, B.C., has been appointed Division Freight Agent, Saskatchewan Division, vice D. C. Macdonald, transferred. Office, Regina.

J. H. INGRAM has been appointed Travelling Freight Agent, Saskatchewan Division. Headquarters, Regina.

J. ROBERTSON, heretofore Assistant Division Engineer, Alberta Division, Calgary, has been appointed Assistant Division Engineer, Saskatchewan Division, vice H. B. Sims, transferred. Office, Moose Jaw.

T. LEES, heretofore Assistant Engineer, Vancouver, B.C., has been appointed Assistant Division Engineer, Alberta Division, vice J. Robertson, transferred. Office, Calgary.

H. B. WALKEM, M. Can. Soc. C.E., heretofore Assistant Division Engineer, British Columbia Division, Vancouver, has been appointed Resident Engineer, Kootenay and Boundary Division. Office, Nelson, B.C.

F. W. STERLING, heretofore Travelling Freight Agent, Vancouver, B.C., has been appointed District Freight Agent, Kootenay and Boundary District, vice R. W. Drew, promoted. Office, Nelson, B.C.

The position of General Roadmaster, District 3, British Columbia Division, Nelson, heretofore held by A. Larsen, has been discontinued for the present. The roadmasters on this district, with their territory, are as follows:—Farron to Midway, including Phoenix and Motherlode Branches, E. B. HALL, Roadmaster, Grand Forks; Rossland Branch and Boundary from Castlegar to Farron, Assistant Roadmaster, K. MARLANC, Smelter; Columbia and Kootenay Branch, Slocan Lake Branch, Nakusp and Slocan Branch, Proctor Branch and Lardo Branch, Roadmaster, H. BECK, Slocan City.

H. B. SIMS, heretofore Assistant Division Engineer, Saskatchewan Division, Moose Jaw, has been appointed Assistant Division Engineer, British Columbia Division, vice H. B. Walkem, transferred. Office, Vancouver. In our last issue the name was inadvertently given as C. J. Simms.

W. J. RENIX, heretofore General Foreman, Sutherland, B.C., has been appointed District Master Mechanic, Cranbrook, B.C., vice F. R. Pennefather, promoted.

C. PERRY, heretofore Shop Foreman, Brandon, Man., has been appointed General Foreman, Sutherland, B.C., vice W. J. Renix, promoted.

F. H. CLENDENNING, heretofore District Freight Agent, B.C. Coast Service and Trans-Pacific Steamships, Vancouver, B.C., has been appointed Division Freight Agent, in charge of B.C. Coast and Transpacific traffic. Office, Vancouver, B.C.

G. A. STAPLES has been appointed Travelling Freight Agent, British Columbia Division, Vancouver, vice F. W. Sterling, promoted.

Capt. BEETHAM, heretofore in command of the company's s.s. Empress of Russia, has been appointed Marine Superintendent, Vancouver, B.C.

Central Vermont Ry.—S. S. RUSSELL, heretofore General Superintendent of Transportation, has been appointed Superintendent, Northern Division, vice J. F. Keefe. Office, St. Albans, Vt.

J. F. KEEFE, heretofore Superintendent, Northern Division, has been appointed Assistant Superintendent, Northern Division. Office, St. Albans, Vt.

M. MAGIFF, heretofore Superintendent of Telegraphs and Car Accountant, has been appointed Superintendent of Car Service and Telegraphs. In addition to the superintendency of telegraph matters, he will have charge of car service and car accounting. Office, St. Albans, Vt.

S. E. McKENNEY, heretofore Trainmaster, Palmer, Mass., has been appointed Terminal Trainmaster, vice F. J. McNany, promoted. Office, St. Albans, Vt.

F. J. McNANY, heretofore Terminal Trainmaster, St. Albans, Vt., has been appointed General Agent in charge of local freight and customs work. Office, St. Albans, Vt.

The positions of Trainmaster, Southern Division, and of Districts 3 and 4, Northern Division, and of Customs Agent at St. Albans, have been abolished.

MARCUS ALEXE is reported to have been appointed Canadian Freight and Pas-

senger Agent, vice A. C. Stonegrave, deceased. Office, Montreal.

Dr. ALAN DAVIDSON has been appointed Chief Surgeon, vice Dr. Alex. Hutchison, resigned. Office, St. Albans, Vt.

Dr. ARTHUR O. MORTON has been appointed Chief Oculist, vice Dr. G. Carleton Berkeley, resigned. Office, St. Albans, Vt.

Grand Trunk Pacific Ry.—R. W. MOORE, heretofore Foreman at Rivers, Man., has been appointed Car Foreman, Westfort, Ont., vice W. Cash, resigned.

W. P. HINTON, heretofore General Passenger Agent, Winnipeg, has been appointed Assistant Passenger Traffic Manager. Office, Winnipeg.

V. P. CUMBERLAND has been appointed Resident Engineer at Rivers, Man., vice J. N. de Stein, transferred.

H. EVANS, heretofore Assistant Foreman, has been appointed Foreman at Rivers, Man., vice R. W. Moore, transferred.

D. W. HAY, heretofore Locomotive Foreman, Redditt, Ont., has been appointed Locomotive Foreman, Jasper, B.C., vice P. Lozo, transferred.

F. LOZO, heretofore Locomotive Foreman, Jasper, B.C., has been appointed Locomotive Foreman, McBride, B.C., vice A. H. Mahan, transferred.

A. H. MAHAN, heretofore Locomotive Foreman, McBride, B.C., has been appointed Locomotive Foreman, Prince George, B.C.

H. SAUNDERS, heretofore Car Foreman, McBride, B.C., has been appointed Car Foreman, Fort George, B.C.

H. DARLING, heretofore acting Locomotive Foreman, Pacific, B.C., has been appointed Locomotive Foreman, Smithers, B.C.

G. McNEIL has been appointed acting Locomotive Foreman, Pacific, B.C., vice H. Darling, transferred.

A. K. LEIGHS has been appointed Car Foreman, McBride, B.C., vice H. Saunders, transferred.

Grand Trunk Ry.—C. W. JOHNSTON, heretofore chief clerk to Passenger Traffic Manager, has been appointed Assistant to Passenger Traffic Manager. Office, Montreal.

J. B. MACPHERSON, heretofore chief rate clerk, Freight Department, has been appointed Chief of Tariff Bureau for lines east of Detroit and St. Clair Rivers. Office, Montreal. This is a new position.

S. E. DEWEY, heretofore Commercial Agent, Pittsburgh, Pa., has been appointed Commercial Agent, All Rail Lines, operating via the Niagara Frontier, New York. Office, 290 Broadway. This is a new position.

D. M. CRAWFORD has been appointed Commercial Agent, Pittsburgh, Pa., vice S. E. Dewey, transferred to New York.

R. McC. SMITH is reported to have been appointed City Passenger and Ticket Agent, Detroit, Mich., vice C. M. Harwood, retired.

Great Northern Ry.—A press dispatch from New York, Feb. 4, stated that CARL R. GRAY, President, had resigned. The Secretary, in answer to an enquiry, wrote us, Feb. 18, that he was still President.

Intercolonial Ry.—JASPER DAVIDSON has been appointed Standard Rule Instructor, District 2, St. Flavie, Que., to Moncton, N.B., with headquarters at Campbellton, N.B.

R. G. GAGE, heretofore Signal and Chief Engineer, General Railway Signal Co. of Canada, Lachine, Que., has been appointed Signal and Electrical Engineer, I.R.C. Office, Moncton, N.B.

See Canadian Government Railways.

Midland Ry. of Manitoba.—R. K. GEMMELL, heretofore Auditor and chief clerk to General Superintendent, has been appointed Local Freight Agent, Winnipeg, vice C. H. Booth, resigned to enter private

business. The report that A. Campbell had been appointed to this position, mentioned in our last issue, was incorrect.

R. G. THACKRAY has been appointed chief clerk and Auditor, vice R. K. Gemmell, appointed Local Freight Agent. Office, Winnipeg.

Pere Marquette Rd.—W. C. ATHERTON, Purchasing Agent, has also been appointed General Storekeeper, vice J. H. Hollub. Office, Detroit, Mich.

Prince Edward Island Ry.—See Canadian Government Railways.

Reid Newfoundland Co.—W. E. LADLEY, Superintendent of Motive Power, has had his jurisdiction extended to cover the superintendence of the company's dry dock at St. John's.

Toronto, Hamilton and Buffalo Ry.—H. T. MALCOLMSON, whose appointment as Superintendent of Car Service, Hamilton, Ont., was announced in our last issue, will continue to have charge of car accounting work, as hitherto, and no appointment will be made to succeed him as Car Accountant.

W. P. Hinton,
Assistant Passenger Traffic Manager, Grand Trunk
Pacific Railway.

Railway Finance, Meetings, Etc.

Atlantic, Quebec and Western Ry.—The Joint Trustees for the liquidation of the Charing Cross Bank, London, Eng., in declaring a second dividend of 8d. in the £, state that the principal remaining asset of the bank is the interest on the A. Q. and proximate expenditure, £815,652. Other W. Ry., valued at the amount of the assets in Canada consist of £7,000 of 1st mortgage gold bonds of the Quebec Oriental Ry., and freehold plots with water rights on the Gaspé foreshore. The A. Q. and W. Ry. showed a loss of approximately \$50,000 for the financial year ended June 30, but it was anticipated that the loss would be less during this year. The selling of the line at a satisfactory price at the earliest possible moment was a matter to which the closest attention was being given by the trustees. Since the beginning of the liquidation, the trustees had received £39,215 14s 2d. interest on the bonds of the A. Q. and W. Ry., and interest on these bonds is provided for until 1915 out of cash subsidies in the hands of trustees for the debenture bondholders.

The trustees had provided out of the funds of the estate, £44,665 for the completion and equipment of the line. Further sums for betterment and equipment would probably be required unless an early sale of the line were made.

Canadian Northern Ry.—There was deposited with the Secretary of State at Ottawa, Feb. 4, a trust deed, dated Nov. 19, 1913, made between the C. N. R. Co., Mackenzie, Mann & Co., the British Empire Trust Co., and the National Trust Co., securing an issue of £3,500,000 of 5% land mortgage debentures.

An issue of £1,320,000 of 4½% guaranteed first mortgage debenture stock was placed on the London, Eng., market, Feb. 7, at 93, by Lazard Bros. & Co. The proceeds of the issue are to be used by certain of the company's Alberta lines building under the title of the Canadian Northern Western Ry.

The company is applying to the Dominion Parliament for an act "defining the manner of execution of the company's securities and the denomination of issue," of its stock.

Canadian Pacific Ry.—The first instalment of 32% of the issue of \$25,000,000 of notes, at 80, amounting to \$16,640,000, was due Feb. 2. It was reported that approximately \$35,000,000 was paid in, shareholders taking advantage of the company's offer to pay 6% on prepaid instalment. The balance is due Mar. 2.

Canadian Pacific Ry.—The following dividends have been declared:—On the preference stock, 2% for the half year ended Dec. 31, and on the common stock, 2½%, for the quarter ended Dec. 31, being at the rate of 7% per annum from revenue, and 3% per annum from special income account. The dividends are payable Apr. 1, to shareholders of record on Feb. 28.

Grand Trunk Ry.—The Dominion Parliament is being asked to authorize the doing away of the present system of half yearly meetings in favor of an annual meeting of shareholders to be held in March or April, for the payment of interim dividends, for the issue of additional consolidated debenture stock the interest charge on which at 4% shall not exceed £100,000 a year. The act shall not come into force until it has been approved by a majority of shareholders present personally or by proxy at a meeting specially convened.

Grand Trunk Ry.—The full dividend for the half year ended Dec. 31, 1913, has been declared on the 4% guaranteed stock, and on the first and second preference stock, and 2½% for the year on the third preference stock. After payment of these dividends, \$83,000 is carried forward to the current half year. The gross receipts for the half year were \$23,844,500, and the expenses \$17,800,000; the total net receipts, including income from rentals, etc., being \$6,097,250.

Montreal Elevator Rates.—The Montreal Board of Trade Transportation Bureau and the Montreal Corn Exchange Association have applied to the Board of Railway Commissioners for an order to reduce the rates at the Montreal Warehousing Co.'s elevator at Montreal, to the same scale, on ex-water grain shipped by car, as charged at the G.T.R. elevators on Georgian Bay. As it is claimed that the G.T.R. controls the Montreal Warehousing Co., it has been made a party to the hearing, which is set down for Mar. 10 at Ottawa.

An order has been placed in Oregon for 10,000,000 ft. of creosoted ties for India and it is said further large orders will be placed. Two tank steamships are on the way from Amsterdam with creosote destined for St. Helens, Ore.

Electric Railway Department

Motor and Trailer Cars for Montreal Tramways Company.

As previously mentioned in these columns, the Montreal Tramways Co., a short time ago, ordered 25 motor cars, and 25 trailers, which have been delivered, and are illustrated herewith. The operating conditions on the Montreal streets have on several occasions been discussed in this paper. On St. Catherine St., the main thoroughfare across the city, there is a heavy traffic at all hours of the day, to serve which, there has up to the present been a 1½ minute headway, with single car operation. In view of the nearly constant volume of traffic handled on the line at all hours, consideration of the problem of how to meet increasing traffic on that thoroughfare counselled the use of trailer cars, as with the conditions as they exist, it would be possible to send out the motor and trailer as a unit in the morning, leaving it in service all day, instead of having to attach and remove the trailer at different periods of the day as is the usual practice. This latter has been one of the principal objections to the use of the trailer system. Another advantage in the use of trailers for this service arises from the fact that the volume of traffic being such as to make practicable the use of trailers, the operating cost per passenger is materially decreased.

the principal changes covering the vestibules and fittings. One of the most apparent changes is the substitution of the monitor for the clerestory roof, which was made in an order delivered about a year ago. The seating capacity of the car, while the same as in the initial design, has been altered. Originally, the cross seats were located in the centre of the car, but as this had a tendency to cramp the standing passengers in the rush hours, to the rear of the cross seats in the longitudinal seat section at the back, leaving the longitudinal seat section at the front practically empty of standing passengers, recent designs have had the cross seats moved forward, with a very short longitudinal seat at the front, the rear one extending half the length of the car. The front vestibule arrangement on the original cars, wherein the motorman was separated from the main part of the platform by a glass and frame partition, was shortly afterwards superseded by a pipe frame and chain arrangement.

The framing of both the motor and trailer cars is identical and corresponds to that of the original design, being composed entirely of plates and structural shapes. Both motor and trailer cars have side sills formed of a depth of 18 in. of ¼ in. plate, rein-

forcing the belt rail and vertical posts by a strip of steel along the recessed sides, where the vertical and horizontal members dovetail each other. A considerably thinner wall construction than normal is thus made possible, with the result that this added room may be given to the central aisle. The corner and side posts are of ash, and the plain arch roof is supported on steel rafters at each post, with wooden carlines between. The side panels are of very thin sheet steel, and extend from the side sill to the belt rail. These are made in small sections, the width of the windows, and may be sprung into place, and secured by small screws, so that they may be readily replaced in the event of a minor accident, without the necessity of shopping. All platforms are enclosed in round end vestibules, sheathed outside below the window sills in sheet steel.

The front platforms have three single drop sashes in front, that in the centre of the motor car front vestibule being adjustable. Aside from the vestibule windows, all windows are of the double sash type, the upper sashes being stationary, with the lower ones arranged to drop into pockets. All the side windows are provided with wire

Motor Trailer Unit, Montreal Tramways Co.

The motor and trailer cars are almost identical in general design, and are of the same type as the last batch of cars recently built for the company. The original of this type was described in considerable detail in Canadian Railway and Marine World for March, 1912. The type of semi steel cars in use in Montreal up to that time had followed conventional lines, corresponding for the most part to the existing practice in all wood construction. As at that time it was expected that a large number of new cars would be added to the equipment, as has since been done in the last two years, a completely new design of car was developed by D. E. Blair, Superintendent of Rolling Stock, in which former practice was largely discarded, and a new car developed, which was not only stronger, but lighter. Another very important factor considered, and which in the design of the car was developed to a high degree, was the making of the car easy of repair in the event of accident. As completed at that time, and described in the article referred to, the car was a considerable advance on the company's previous practice.

Cars subsequently built to the same fundamental design have had changes introduced as the initial design developed points of weakness, or places where they could be improved upon. The design of the body frame of the car has been left unaltered,

forced at the bottom by a heavy 6 in. channel, and at the top by a special 3 by ½ in. bar, the side sill being 32¼ ft. long. The centre stringers consist of 4 in. channels, and the end sills of the motor car and front sill of the trailer are formed of 9 in. channels. In order to reduce the weight, and in consequence of the rear end of the trailer being subject to no extraordinary strain, a 7 in. channel forms the sill at that end. In the construction of the motor car underframe, 12 crossings are employed, six of which are formed of 4 in. channels, while the remainder are light angles. The trailer framing crossings consist of six 4 in. crossings. The platforms of the motor car, and the front platform of the trailer, are on outside knees of 6 in. channels, and centre knees of 4 in. channels, but the rear platform of the trailer, being subjected to a constant weight of seated and standing passengers, is supported on outside knees of 8 in. channels, with 5 in. channels for centre supports.

The side framing of the car body is one of the features of the original design followed out in this latest order. In the earlier cars on the Montreal lines it had been found that the central aisle was rather crowded with the overall body width that could be operated on the streets. This hampered central aisle width was widened in the initial car of this design by reducing

mesh screen guards, and have storm sashes which can be applied in the winter by means of the clips used for the screens. When in place the inner windows are not opened.

All the vestibules are enclosed by doors, the arrangement of these latter being of interest, especially as the use of doors on the rear vestibule of Montreal cars is a new departure, whereby both the rear as well as the front bulkheads are removed. Towards the front end of the front vestibule there is a two leaf folding door, operated from the motorman's position, acting as the main exit from the car. This is panelled with wire glass in the lower panel, in conformity with the latest practice, and with plain glass above. The rear platform of the motor car and the front vestibule of the trailer have two sets of two leaf folding doors, which can be operated independently or in unison by the conductor from his stand on the rear vestibule. The end doors of each pair serve as the entrance doors, and the inner ones, in the motor car, as an auxiliary exit, while in the trailer it is the main exit. The rear end of the trailer has a single two leaf folding door for use only in emergency. All these doors have folding steps, which operate in conjunction with the doors. By this arrangement all the loading, and a good portion of the unloading is attended to at the centre of the

train unit, thereby avoiding the delays when the entrances and exits are a considerable distance apart. All doors are wired in series, the closing of the last door giving the motorman the clear signal.

The motor cars are mounted on Brill 27-GE2 trucks, and the trailers on Brill 67-F trailer trucks. The motor car is equipped with four Westinghouse 101 motors. Westinghouse straight air braking is used. These cars were supplied by the J. G. Brill Co., Philadelphia, Pa.

Ottawa Electric Railway Company's Annual Report.

Following are extracts from the company's annual report of the calendar year 1913, presented at the annual meeting, Feb. 2.

Gross earnings	\$1,641,282.23
Operating expenses and maintenance ..	629,122.14
Net earnings	\$412,160.09
Net earnings, 1912	400,059.07
Increase, 1913	\$12,101.02

The net earnings have been disposed of as follows:—

Four quarterly dividends of 3% and a bonus of 3%	\$281,535.00
Interest on bonds and loans	20,772.18
Mileage payments	13,737.26
Taxes	12,221.81
Placed to credit of contingent account to be applied to reduction of track renewals, car equipment, and other accounts	55,000.00
Transferred to credit of profit and loss ..	28,893.84
	\$412,160.09

Percentage of operating expenses to receipts: 1899, 57%; 1900, 57%; 1901, 63%; 1902, 60%; 1903, 61 4-5%; 1904, 62%; 1905, 59 2-5%; 1906, 57 4-5%; 1907, 59 4-5%; 1908, 60 2-5%; 1909, 63 1-2%; 1910, 63%; 1911, 57 2-5%; 1912, 57 1-5%; 1913, 60 2-5%.

23,987,883 passengers were carried, compared with 21,815,798 in 1912. The balance at credit of profit and loss account is now \$167,158.67, and of rest account \$200,000.

The new work carried out and completed during the year was as follows:—1,000 h.p. Substation on Centre St.; 1,000 h.p. Substation on Nelson St. Extension of tracks to Ottawa South from Wilton Crescent, forming a loop on Sunnyside, Seneca and Glen Ave. Preston St. extension from Somerset St. southerly and re-arrangement of tracks on Broad St. Double tracks on Queen St. from Bank to Elgin St. An additional track on Crichton St. from Beechwood Ave. to Charles St. and a loop by way of John St. The 4,200 h.p. steam turbo generator referred to in last report is expected to be ready for operation early in the spring. A large amount has been spent in improving the tracks and rolling stock as well as other properties, and the company is now in a better position than ever to handle any business that may offer.

The records show an increase in gross receipts from \$71,000 in 1892 to over \$1,000,000 in 1913. Your directors look forward to still greater increases during the remaining years of the franchise.

PROFIT AND LOSS ACCOUNT.

Balance at credit, Dec. 31, 1912	\$138,264.83
Net earnings, 1913	412,160.00
	\$550,424.92
Dividends and bonus	\$281,535.00
Taxes	12,221.81
Mileage payments	13,737.26
Interest on bonds and loans	20,772.18
Contingent account	55,000.00
Balance at credit	167,158.67
	\$550,424.02

The directors for the current year, who were re-elected, are as follows:—President, T. Ahearn; Vice President, W. Y. Soper; Secretary-Treasurer, J. D. Fraser; other directors, T. Workman, R. Quain, T. F. Ahearn, E. N. Soper.

Toronto Railway Company's Annual Report.

Following are extracts from the report of the calendar year 1913, presented at the annual meeting, Feb. 4:—

Gross earnings	\$6,400,000.00
Charges for operating, maintenance, etc. ..	3,123,308.55
Net earnings	\$2,925,710.37

From which net earnings there was deducted \$2,158,472.78, distributed as follows:—

Dividends	\$879,958.00
Bond interest, etc.	188,806.72
	\$1,068,764.72

Payments to City:—

Percentage on earnings	\$930,900.03
Pavement charges	91,460.20
General taxes	58,500.94
	1,080,861.17
	\$2,158,472.78

The gross passenger earnings were \$5,980,695.88 compared with \$5,367,502.48 for 1912, an increase of \$613,193.40. The various charges against these earnings for operating, maintenance, etc., amounted to \$3,123,308.55 or 52.2% of passenger earnings.

The payments made to the city amounted to \$1,089,708.06, an increase of \$147,659.10

disposed of \$100,000 of bonds of the sterling issue held in the treasury. The maintenance of the plant, rolling stock equipment and other properties have received careful attention throughout the year.

Your directors declared out of the accumulated surplus earnings, four quarterly dividends of 2%.

The Toronto and York Radial Ry. Co. reports very satisfactory increases, the gross earnings amounting to \$584,190.93, compared with \$492,922.86 for the previous year, an increase of 18.5%.

Gross earnings	\$6,400,000.00
Operating, maintenance, etc.	\$3,123,308.55
Interest on bonds, etc.	193,806.72
Percentage on earnings ..	930,900.03
Pavements, taxes	150,100.50
	1,413,207.25

PROFIT AND LOSS ACCOUNT

Balance from 1912	\$3,694,747.00
Surplus earnings	\$1,633,812.22
expenses, interest, taxes, etc.	1,633,812.22
	\$5,328,569.22
Dividends, four of 2% each, on paid up capital	\$879,958.00
Balance from 1912	\$3,694,757.00
Surplus carried forward ..	753,854.22
	\$5,328,569.22

Interior of Motor Car, Montreal Tramways Co.

over the previous year.

The third drawing of sterling bonds, under the terms of the mortgage deed dated Sept., 1892, took place June 27, 1913. The company draws annually 5% of the amount of bonds issued, same to be redeemed on August 31 following the date of drawing, and from which date no interest is payable on bonds so drawn. There has been drawn to date a total of \$562,512.55.

The expenditure on capital account throughout the year amounted to \$1,064,857.73. In addition to various extensions and improvements to certain of the shops, car houses, etc., the following buildings were erected: A storage battery building was completed in connection with the Harrison St. sub-station, a sub-station (no. 4) was erected in Queen St. East, opposite Logan Ave., and a paint shop was built on Queen St. East on property running from Queen St. to Eastern Ave. Large expenditure was made in the installation of a storage battery plant in the Harrison St. building, in the construction of additional rolling stock and the purchase of electrical equipment for same, and in the extension of the track and overhead system in different sections of the city. To meet heavy expenditure on capital account your directors

COMPARATIVE STATEMENT.

	1913.	1912.	Increase.
Gross income	\$6,400,000.00	\$5,448,050.36	\$951,949.64
Operating, Maintenance, Charges, etc. ..	3,123,308.55	2,866,550.12	256,758.43
Net earnings	2,925,710.37	2,581,500.24	344,210.13
Passenger earnings ..	5,980,695.88	5,367,502.48	613,193.40
Transfers	63,083.118	56,176.985	6,906.133
Percentage of charges, etc. to passenger earnings ..	52.2	53.4	1.2

*Decrease

The percentage of charges and to passenger earnings for 11 years has been as follows:—1903, 55.3%; 1904, 58.2%; 1905, 56.8%; 1906, 52.9%; 1907, 53.9%; 1908, 52.9%; 1909, 51.4%; 1910, 51.4%; 1911, 51.6%; 1912, 53.4%; 1913, 52.2%.

The directors for the current year, who were re-elected, are:—President, Sir W. Mackenzie; Vice-President, F. Nicholls; other directors, Sir Henry M. Pellatt, Sir Rodolphe Forget, W. D. Matthews and Jas. Gunn. The vacancy caused by Hon. G. A. Cox's death has not been filled.

The Guelph Radial Ry. has ordered two double truck, double end city cars from Preston Car and Coach Co.

Electric Railway Statistics for Year Ended June 30, 1913

The following abbreviations are used in the names of railways:—E., electric; E.R., electric railway; E.S.R., electric street railway; S.R., street railway. The minus mark (—) in the column for net income or deficit, shows that there was a deficit in the operation of the line to the extent of the figures given. The numbers following the names of the railways, refer to the notes following the table on this page.

	First Main Track Mileage	Gross earnings from Operation	Miscellaneous Earnings	Operating Expenses	Taxes, Funded Debt, etc.	Net Income or Deficit	Total Car Mileage	Fare Passengers Carried

Notes to Electric Railway Statistics.

(1) The figures relating to the Montreal Tramways Co. include the Montreal St. Ry., the Montreal Park and Island Ry., and the Montreal Terminal Ry. They are taken from the Montreal Tramways Co.'s last annual report, as that company does not make returns to the Railways Department.

(2 and 3) The Nelson St. Ry. and the St. John Ry. did not make returns, and the figures given are those of the previous year.

Berlin and Northern Railway Report.

The statement for 1913, recently submitted to the Berlin, Ont., Light Commissioners, operating the Berlin and Northern Ry. on behalf of the city, shows gross profits after paying debenture interest, etc., of \$9,977.91. From this is deducted \$5,816.77 for depreciation, being 10% on machinery, 5% on rolling stock, and 3% on track. After deducting depreciation there is a net profit

of \$4,169.24. During the year, 1,192,886 passengers were carried, an increase of 21.4%; and the car mileage was 261,328, an increase of about 80%; the operating expenses per car mile were 14.5c., against 22.4c. for the previous year.

The receipts of the street railway department were \$55,236.79, and the total expenses \$45,259.78. The amounts received from cash fares and tickets were \$22,661.01 and \$25,338.70 respectively. V. S. McIntyre is Secretary Treasurer of the Commission.

Electric Railway Projects, Construction, Betterments, Etc.

Alberta Metropolitan Ry.—We are officially advised that this railway, when completed, will be operated by the company, and not, as has been reported, by the Calgary Municipal Ry. No order has been placed for cars, but it is said that individual gasoline electric cars will be used. The Manager is W. J. C. Madden, Calgary, Alta. (Feb., pg. 69.)

Berlin, Waterloo, Wellesley and Lake Huron Ry.—Application is being made to the Dominion Parliament to change the name of the company to the Grand River Ry. H. C. Oswald, Assistant Secretary, C.P.R., Montreal, is Secretary. (See C.P.R. Betterments, etc., July, 1909, pg. 491.)

Cape Breton Electric Co.—Press reports state that plans are in preparation for the extension of the company's line from Sydney to New Waterford, N.S. (Dec., 1913, pg. 592.)

Cedar Rapids Manufacturing and Power Co.—The Minister of Railways has approved of location plans for a transmission line from Cedar Rapids to the transformer station near Cornwall, Ont., 44 miles.

Dominion Power and Transmission Co.—At the annual meeting in Hamilton, Ont., Feb. 16, it was announced that the projected extension from the company's Hamilton and Brantford Ry. from Langford to Galt, Ont., will be built in the near future. (Dec., 1913, pg. 592.)

Edmonton Interurban Ry.—We have been furnished with the following official information:—The first portion of the line from St. Albert to Edmonton, Alta., was put in operation Sept. 30, 1913, there being a gap of about 2 miles in a direct line between the company's southern terminus and the Edmonton Radial Ry.'s line, which is owned by the city of Edmonton. Pursuant to an agreement between the city and the E. I. R. Co., the city extended its line one mile north and the E. I. R. Co. extended its line 1½ miles south, and on Dec. 29, 1913, the E. I. R. Co.'s cars commenced connecting with the city cars, both lines issuing and honoring transfers. The E. I. R. Co.'s line from the connecting point at 24th St. and Alberta Ave., to the village of Calder is 1½ miles long, from Calder to the city limits on the north 1 mile, and from the city limits to St. Albert 9½ miles. Five trips a day each way are made between Edmonton and St. Albert by a self propelled gasoline electric car, built in the United States. The company possesses, among other properties, an entire block, situated near the northerly boundary of Edmonton, where are erected a car barn, machine shop, stores, warehouse and an oil warehouse, also a boarding house, pump house, etc., and rails, ties and material are stored there. The directors are: President, G. Barbey, Paris, France; Vice President, J. H. Picard, Edmonton; General Manager, Felix Santallier, Edmonton; other directors, J. H. Gariepy, M. Kimpe, L. Bureau, Edmonton. The greater portion of the stock is owned by the Franco-Canadian Trust Co., of Vancouver, B. C., and Paris, France. (Jan., pg. 38.)

Edmonton Radial Ry.—The Edmonton, Alta., City Council has ordered the preparation of a report specifically dealing with an extension of the street railway system, so as to serve the Riverdale district, north of the Saskatchewan River; and for a continuation of such extension so as to serve Forest Heights, Mount Pleasant, East Edmonton Gardens and other districts, finally connecting up with the line at present terminating between Bonnie Doon and Highland Park addition. It is expected that

construction will be started on the Riverdale extension, at any rate, during this year. (Feb., pg. 87.)

Forest Hill Electric Ry.—Press reports state that construction will be started early in the summer on the first section from the northerly limit of Toronto, along Forest Hill Road to Eglinton Ave., and along that avenue westerly. (Feb., pg. 87.)

Fort William Electric Ry.—The Fort William, Ont., City Council decided, Feb. 10, to take into consideration the application of the Mount McKay and Kakabeka Falls Ry. for running rights over certain portions of the city electric railway. (Feb., pg. 87.)

Galt, Preston and Hespeler St. Ry.—A press report states that new transformer and a new rotary converter are being installed in the power house at Galt, doubling its present capacity. The by-law passed by the town of Preston confirms an agreement granting the company a franchise for 25 years, from Mar. 27, 1913, for a double track electric railway, on certain streets, in the town, and a single track line, on certain other streets, with the right to cross Duke and Lawrence streets with industrial switches. The agreement permits the company to carry freight over certain portions of the line at a speed not exceeding five miles an hour. The company agrees that its cars shall make connection with all trains on the C.P.R. at Galt, and that it shall maintain a passenger station, freight shed and power house in Preston. (Feb., pg. 87.)

Guelph Radial Ry.—Press reports state that it is expected that construction on the extension of one or more of the existing lines will be put in hand during this year. (Feb., pg. 87.)

Kingston, Portsmouth and Cataraqui Electric Ry.—Press reports state that a contract has been let to a U.S. firm for the supply of steel rails to be used in relaying the lines on King and Princess Streets, Kingston, Ont. (Dec., 1913, pg. 593.)

Lacombe and Elindman Valley Electric Ry.—A special meeting of shareholders was called to be held at Lacombe, Alta., Feb. 21, for the purpose of entering into a new contract with the Middle West Construction Co. for the building of the projected line, in substitution for the contracts entered into Nov. 17 and 24, 1913; to authorize the issue of bonds for \$30,000 a mile; of which \$7,000 a mile is to be secured by a first mortgage; and an additional \$7,000 a mile by a second mortgage, and the balance under first or second mortgage as may be expedient; to enter into an agreement with the Alberta Government under the Light Railways Assistance Act, and for other purposes.

Press reports state that eight miles of grading have been completed and that contracts for ties and rails have been let. The section of line under construction extends from Lacombe to Gull Lake, 10 miles, but the contract provides for a further 20 miles from Gull Lake to Rimby. J. B. McBride, Lacombe, Alta., is Secretary. (Jan., pg. 38.)

Lethbridge Municipal Ry.—Commissioner Reid submitted plans to his colleagues on the Lethbridge, Alta., Municipal Commission recently, for the building of four miles of additional single track on the city electric lines during this year, at an estimated cost of \$60,000. The work will probably be done provided the city can find the money. (June, 1913, pg. 286.)

London and Lake Erie Ry. and Transportation Co.—A conference took place at Aylmer, Ont., recently, between G. B. Woods, Vice President of the company, and representatives of the municipalities, as to

the proposed construction of a line from St. Thomas to Aylmer and Port Burwell. Mr. Woods is reported to have stated that the company is prepared to go on with the work at once, if the municipalities will get together and decide as to the amount of bonds each will guarantee. The company is asking for a bond guarantee of \$20,000 a mile, but the municipalities before coming to a decision desire to know what are the prospects for the building of a line under the Hydro-Electric Commission. (Feb., pg. 87.)

Moncton Tramways, Electricity and Gas Co.—Press reports state that arrangements are being made for the building, during this year, of about six miles of additional track between Moncton, Sunnybrae and Louisville, N.B., (Dec., 1913, pg. 593.)

The Montreal East Boulevard Co. is asking an extension of its powers from the Quebec Legislature. Among the powers obtained in 1910, when the company was incorporated, was the right to build an electric railway along a boulevard which it was to construct in Montreal East. (May, 1910, pg. 399.)

Morrisburg and Ottawa Ry.—At a conference between representatives of the company and of the Town council of Morrisburg, the question of a right of way in the town was discussed. The company was informed that the council could not promise anything until after Oct. 1, on which date the franchise for the building of a line in the town granted to the St. Lawrence and Ottawa Electric Ry. will expire unless active construction work is started meanwhile. (Feb., pg. 88.)

Niagara, Welland and Lake Erie Ry.—Press reports state that the company has completed its financial arrangements and will proceed with the construction of its projected line from Welland to Port Colborne and Fort Erie, Ont., this year. The company has power to build lines to various points throughout the Niagara peninsula. Following are the directors for this year:—President, H. C. Schofield, M.P., Guelph, Ont.; Vice President and Managing Director, C. J. Laughlin, Welland, Ont.; Secretary and Treasurer, H. Rook, Toronto. Other directors:—H. B. Bulles, W. W. Near, Toronto. (Feb., pg. 88.)

Ontario Hydro Electric Power Commission Lines.—Conferences have been held at Berlin, Hamilton, London, Sarnia, Owen Sound and Penetanguishene, Ont., in connection with projects for the building of electric railways under the plans suggested by the O. H. E. P. Commission. At each place resolutions favorable to the general plans and a desire for the building of a line to connect up their particular town with the line, were passed. The Commission has a number of engineers in the field looking over suggested routes. (Feb., pg. 86.)

Ottawa, Rideau Lakes and Kingston Ry.—The Ontario Legislature is being asked for an extension of time for the building of this projected railway from Ottawa to Kingston, Ont. G. L. Dickinson, Ottawa, is Secretary. (Oct., 1912, pg. 521.)

Quebec Extension Rd.—In connection with the proposed extensions of the line now under construction along the St. John River Valley in New Brunswick, we are officially advised that the interests building the line also own the Aroostook Valley Rd., an electric line extending from the C.P.R. at Presque Isle to Washburn, Me. The Quebec Extension Rd., for which the same interests have secured a charter in the State of Maine, will extend westward from Washburn to tp. 12, range 17, at the International Boundary between Maine and Quebec, where connection will first be made with an extension of the Quebec Central Ry.,

projected and under construction northward from St. Sabine, Que. It is ultimately intended to continue the line through Quebec to the Quebec Bridge, where connection will be made with the different transcontinental railways converging there from the west.

At the eastern end of the Q. E. Rd., Washburn, Me., connection will be made over the Aroostook Valley Rd. with the C.P.R. at Presque Isle, Me., and thence over that company's tracks, via Aroostook Jct., to St. John, and to other points in New Brunswick by way of Plaster Rock and the National Transcontinental Ry. Connection will also be made at Portage Lake and Washburn by the Bangor and Aroostook Rd. for points in the State of Maine. It is not likely, owing to the change in the proposed route of the St. J. and Q. Ry. between Centreville and Andover, that direct connection will be made with that line. The proposed line will have a length of 110 miles in the State of Maine, and of 64 miles in Quebec. It will be operated throughout by electricity. The object of the railway is to provide the shortest possible line between Quebec Bridge and the Maritime Provinces.

The surveys have been completed and the location in the U.S. has been approved by the Maine Railroad Commissioners. The gradient will not exceed 1% compensated for curvature, and the maximum curvature will be 10 degrees. The principal bridges will be those across the St. John River, 600 ft.; Allagash River, 600 ft.; and Beaver Brook, 80 ft. It is probable that construction will be started this year. S. B. Wass, Presque Isle, Me., is Chief Engineer, and the Canadian Eastern Construction Co. will have charge of construction. (See St. John and Quebec Ry., Feb., pg. 70.)

Rainy River Radial Ry.—Application is being made to the Dominion Parliament for an extension of time for the building of the lines authorized by chap. 152 of the statutes of 1910. Lewis and Smellie, Ottawa, solicitors for applicants. (Mar., 1910, pg. 233.)

Sarnia, Ont.—A press report states that a number of local men are interested in a scheme to build an electric railway from Sarnia to Wallaceburg, and to operate steamboats, etc. It is said that the proposal is backed by New York capital, and that probably an existing charter covering the territory named, will be acquired.

Saskatoon Municipal Ry.—The Saskatoon, Sask., City Council had under consideration, Feb. 9, the question of laying track under the 19th St. subway, to connect the tracks on 20th St. West with those on 2nd Ave. The estimated cost by the Stone and Webster Co., who laid out the lines for the city, was \$61,350. The City Engineer has submitted a revised estimate for the work at \$79,142. No decision has been reached as to whether the work will be undertaken or not during this year.

The general estimates for this year provide for the expenditure of \$25,000 on some small extensions, improvements of overhead work, and a new rotary converter for the power house. (Feb. pg. 88.)

Sudbury-Copper Cliff Suburban Electric Ry.—The Ontario Legislature is being asked to extend the time for the building of this projected electric railway, and to confirm a bylaw passed by the Sudbury Town Council, Aug. 25, 1913, granting the company a franchise for its proposed line. A. D. Meldrum, Sudbury, Ont., is solicitor for the company. (Dec., 1913, pg. 592.)

Toronto, Barrie and Collingwood Ry.—The Barrie, Ont., Town Council has finally approved of the bylaw approving the agreement giving a franchise to the company for a line in the town.

The Ontario Legislature is being asked to authorize the company to increase its bond issue, to give the right to operate cars on

Sundays, and to extend the time for construction. (Feb., pg. 88.)

Valleyfield Waterpower Company, which has been incorporated under the Quebec Companies Act, is applying to the Dominion Parliament for authority to build the following railways, to be operated by electricity:—From Salaberry to Valleyfield southwesterly across the counties of Beauharnois and Huntingdon, along Lake St. Francis to the provincial boundary; from the same starting point southwesterly across the counties of Beauharnois, Chateaugay and Huntingdon to the International Boundary, and from the same starting point northeasterly, crossing the St. Lawrence River and across the counties of Soulanges and Vaudreuil to the Lake of Two Mountains. The company may not build its railway along any street or highway without having first obtained the consent of the municipality interested, and in connection with its undertaking may operate steam or other vessels carrying passengers and freight. It may issue bonds for \$30,000 a mile, and other securities in connection with its other objects.

Winnipeg Electric Ry.—Application is being made to the Manitoba Legislature for authority to build a power line through Fort Garry municipality. The municipality asks that it have the joint use of the poles, to offset the use of the streets by the company.

The City Engineer is investigating the cost of a proposed extension of the car line to Brookside Cemetery. (Feb., pg. 88.)

Sale of Grand Valley Railway and Brantford Street Railway.

At a meeting of bondholders of the G. V. R., held in Toronto, Feb. 13, offers for the purchase of the company's property were considered. E. R. Stockdale, the Receiver, presided, and J. A. Worrell, K. C., reported that the Special Committee had received two offers for the property. One was from W. P. Kellett, General Manager of the Lake Erie and Northern Ry., at a total price of \$82,600, and one from the city of Brantford at a total price of \$96,000. The committee recommended the acceptance of the latter offer, and the bondholders decided to accept it and agreed to apply to the courts to ratify the sale, which includes the Brantford St. Ry., and the Grand Valley Ry. from Brantford to Galt, via Paris. The purchaser undertakes to redeem the bonds on the B. S. Ry., held by the Canadian General Electric Co., amounting to \$125,000. When the G. V. Ry. took over the B. S. Ry. it issued \$59,000 of 1st mortgage bonds, and \$1,700,000 of 2nd mortgage bonds. These will now rank for dividend.

The matter came before the court at Toronto, Feb. 19, when it was ordered that the terms of the agreement, with the consent of the parties concerned, be submitted at an early date, when, probably the court's consent will be given to the transfer.

The contract will have to be ratified by the ratepayers of Brantford. It is expected that the city council will at once put the city lines in good shape, and will operate them, as well as the section of the G. V. Ry. as far as Paris, abandoning the line from Paris to Galt, which has been a source of loss ever since it was built.

The adjourned cases brought by the city against the company came before the Court of Appeal, Feb. 16, but under the circumstances were adjourned. If the sale is ratified by Brantford ratepayers and the courts, all the actions will be abandoned with the exception of one by the second mortgage bondholders against the directors of the G. V. Ry.

Sandwich, Windsor and Amherstburg Railway.

The Detroit United Railway's report for the year 1913 contains the following particulars in regard to the Sandwich, Windsor and Amherstburg Ry., which is one of its subsidiaries:—

On Jan. 1, 1913, the mileage was 38,284, and there was added in 1913 1,647 miles.

Passenger statistics:—Revenue passengers, 4,758,504; transfer passengers, 691,490; employe passengers, 13,841; total, 5,463,835. Receipts revenue passenger, .0523; receipts per passenger, .0456.

Mileage statistics:—Car mileage, 1,015,747; earnings, car mile, .2542; expenses, car mile, .1535; net earnings, car mile, .1007.

During the year, \$150,782.10 was spent on extension of lighting plant, building of new track and addition to power plant.

BALANCE SHEET, S.W. & A. RY.

Capital stock	297,000.00
Mortgage bonds	600,000.00
Accrued interest on bonds	4,987.50
Detroit United Railway	464,359.94
Vouchers payable	2,712.13
Injuries and damages reserve	2,406.52
Insurance reserve	923.30
Unredeemed tickets	7,627.20
Profit and loss	18,096.56
Investment	\$1,255,604.01

BALANCE SHEET, WINDSOR & TECUMSEH ELECTRIC RY. CO.

Capital stock	100,000.00
Mortgage bonds	180,000.00
Sandwich, Windsor & Amherstburg Ry.	18,821.29
Investment	\$307,821.29
	\$307,821.29 \$307,821.29

The earnings and expenses of the Windsor & Tecumseh Electric Ry. are included in the operations of the Sandwich, Windsor & Amherstburg Ry., which latter company owns all of the capital stock of the W. & T.E.R. Co.

Personal Paragraphs.

H. DOUGHTY, Superintendent Regina Municipal Ry., Regina, Sask., is reported to have resigned, the resignation, as accepted by the city council to take effect May 1.

F. R. GLOVER, General Executive Assistant, British Columbia Electric Ry., gave an address on the history of the company to a large audience in the draughting room of the company's offices, Vancouver, Feb. 11.

E. F. SEIXAS, General Manager, Niagara, St. Catharines and Toronto Ry., St. Catharines, Ont., was married at Atlanta, Georgia, Feb. 21, to Miss Dorothy G. Almon, daughter of Rev. H. L. Almon, rector of Merrilton, Ont.

J. H. TRIMMINGHAM, who was Assistant to the Chief Engineer of the Electrical Commission of the City of Montreal, was recently appointed Superintendent of Power, Sherbrooke Railway and Power Co., Sherbrooke, Que., succeeding J. W. Woodyatt, who is now engaged with the Southern Canada Power Co., which has been organized by C. J. McCuaig, President of the Sher-

Fare Box Difficulties in Fort William. The Fort William, Ont., Herald, in a report of a recent meeting of the City Council's street railway committee said:—"A report to the effect that the fare boxes on the new pay-as-you-enter cars are unsatisfactory, as the tickets do not get into the lower part of the box and this prevents correct accounting between the two cities, was taken up, and it was stated that a man from the factory was now on the ground fixing them."

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and Allied Companies.—Gross earnings for December, \$793,219; operating expenses, maintenance, etc., \$548,535; net income \$244,684, against \$773,741 gross earnings; \$538,901 operating expenses, maintenance, etc.; \$234,840 net income for Dec. 1912. Aggregate gross earnings for six months ended Dec. 31, \$4,653,726; net earnings \$1,221,405, against \$4,250,824 aggregate gross earnings; \$1,251,853 net earnings for same period 1912.

Brandon Municipal Ry.—The Mayor of Brandon, Man., is reported to have stated in a speech Feb. 9, that the city's electric railway system was losing at the rate of about \$100 a day. The council, after a most careful consideration of the whole situation, decided with but one dissenting voice to reduce the operating staff by one half. J. J. Antonisen, Superintendent, has resigned.

Cape Breton Electric Co.—Gross earnings for Dec., \$36,169.26; operating expenses and taxes, \$17,632.45; net earnings, \$18,536.81; interest charges, \$5,176.78; balance, \$13,360.03; bond sinking and improvement funds, \$1,190; balance for reserves, etc., \$12,170.03, against \$34,387.35 gross earnings; \$16,123.65 operating expenses and taxes; \$18,263.70 net earnings; \$4,475 interest charges; \$13,788.70 balance; \$1,206.66 bond sinking and improvement funds; \$12,582.04 balance for reserves, etc., for Dec., 1912. Aggregate gross earnings for 1913, \$380,951.86; net earnings, \$170,998.54; interest charges and bond, sinking and improvement funds, \$72,912.89; net balance for reserves, dividends, etc., \$98,085.65, against \$360,176.54 aggregate gross earnings; \$165,296.10 net earnings, \$68,105 interest charges and bond sinking and improvement funds; \$97,191.10 net balance for reserves, dividends, etc., for 1912.

Dominion Power and Transmission Co.—The report for 1913 shows gross earnings of \$2,737,806, an increase of \$174,435 over the previous year. After the deduction of operating expenses, the net earnings showed an increase of \$77,901 over 1913.

Fort William Electric Ry.—Net receipts for January, \$11,004.25.

Hamilton St. Ry.—The city's financial statement for 1913 shows that the percentage received from the street railway during the year was \$59,290.56.

Port Arthur Electric Ry.—Net earnings for December \$7,418.97, and for January, \$10,129.06. The City Treasurer reported to the Council, Jan. 27, that the total amount of debentures issued on account of the electric railway at Dec. 31, 1913, was \$909,184.

Quebec Ry., Light, Heat & Power Co.—A press report states that the company commenced on Feb. 17 paying the delayed bond interest due Dec. 1, and the time limit for which expired Feb. 28.

St. John Ry., (N. B.) A press report says that F. A. Sayre has sold his shares to F. R. Taylor, and that H. H. McLean, M. P., Vice President of the company, and Mr. Taylor now control a majority of the stock.

St. Thomas Electric Ry.—January statistics:—Passengers, 42,756; cash fares, \$779.24; ticket sales, \$1,054, against 42,600 passengers; \$446.19 for cash fares and \$1,000 for tickets, during Jan. 1913.

Toronto Ry.—Receipts for January, \$501,843.70; percentage due the city, \$75,276.56, against \$472,461.20 receipts, and \$68,432.03 percentage due to city, for Jan. 1913.

Winnipeg Electric Ry.—Gross earnings for December, \$379,863; operating expenses \$211,969; net earnings \$167,894, against \$361,700 gross earnings; \$196,220 operating expenses; \$165,480 net earnings, for Dec.

1912. Aggregate gross earnings for 12 months ended Dec. 31, \$4,078,694; net earnings \$1,826,087, against \$3,765,384 aggregate gross earnings; \$1,761,236 net earnings for same period 1912.

The Ottawa Traction Company, Limited.

A company with this title was incorporated in October, 1913, with the following directorate:—T. Ahearn, President; W. J. Soper, Vice President; J. D. Fraser, Secretary-Treasurer; T. Workman, R. Quain, T. F. Ahearn, E. N. Soper, Travers Lewis and J. H. Smellie. All of these, with the exception of T. Lewis and J. F. Smellie, are directors of the Ottawa Electric Ry., and Messrs. Lewis and Smellie are that company's solicitors. This is a holding company, which will take over the Ottawa Electric Ry. Co.'s stock, giving three shares of Ottawa Traction Co.'s stock for one share of Ottawa Electric Ry. Co.'s stock. The stock of the latter company has changed hands recently at from 265 to 270 a share. It pays a dividend of 12%, which together with a bonus of 3%, has made it practically a 15% stock for the past two years. It is proposed that a dividend of at least 5% per annum will be paid on the Ottawa Traction Co.'s shares, and possibly 6%. This rate of dividend naturally will determine the market price of the stock, which from present expectations will be quoted on the exchanges at 90. It will therefore be apparent that the holders of Ottawa Electric Ry. stock will benefit by the exchange into Ottawa Traction Co. stock (although it will not be compulsory to make the exchange)—inasmuch as they will receive a fixed dividend of 5% equivalent to 15% on their former holdings. If, however, the dividend is 6% then their return will be equal to 18% on stock of the Ottawa Electric Ry.

The Street Railway Situation in Toronto.

The negotiations relative to the proposed acquirement of the Toronto Ry. interests in the city, are still dragging their slow length along. The draft agreement which had been prepared by the City Counsel, was presented to the Board of Control early in February, when exception was taken to a clause dealing with the operation of the Toronto and York Radial Ry. cars over portions of that company's lines within the city boundaries, which it is proposed to take over. The City Counsel was instructed to eliminate the clause allowing such running rights, but declined to do so, on the ground that the general instructions given him for the preparation of the draft agreement, by the City Council, stipulated the condition that the radial cars should have the privilege of running over such of the T. & Y. R. R. lines as were acquired by the city, and within the city boundaries as at present fixed, or as extended in the future; and any change in the instructions would have to be passed upon by the City Council. After an explanation by the Mayor, who has conducted all the negotiations on the city's behalf, that it was not his intention that such running rights should be granted, the City Council, Feb. 9, decided that the city's negotiators be instructed to incorporate any conditions in the draft agreement which they believe would be in the city's interests, and that counsel in the case consult and agree with the Mayor and Board of Control in relation to the same, full details concerning the matter to be reported to the Council for final ratification.

In connection with a recent application of the City Council to the Ontario Railway and Municipal Board, respecting new routes and the rerouting of cars with a view to relieving

ing congestion of traffic, the Board has appointed C. R. Barnes, of the Public Service Commission, New York, to report upon the system and submit a plan on which the Board may consider the issuing of an order.

London Street Railway Company's Annual Report.

Following are extracts from the report for the calendar year, 1913, presented at the annual meeting in London, Ont., Feb. 4:

EARNINGS:—		1912.	1913
Passengers		\$301,066.62	\$127,075.64
Miscellaneous		5,934.49	4,866.92
Gross earnings		\$306,231.02	\$131,966.56
EXPENSES:			
Maintenance way and structures	\$23,743.37	\$20,539.70	
Maintenance equipment	8,516.53	10,916.91	
Power plant	40,015.09	15,092.81	
Car service	86,467.60	99,817.08	
General	11,635.38	12,460.13	
Total operating expenses	\$210,278.19	\$244,916.53	
NET EARNINGS		95,952.83	97,049.97
Interest on bonds	\$28,911.00	\$28,848.00	
Interest on overdraft	—	268.79	
Total deductions	\$28,911.00	\$29,116.79	
NET INCOME		\$67,041.83	\$67,933.18

During the year \$91,439.88 was expended in improvements, extensions, betterments. The extensions agreed upon with the city the previous year were completed within the required time, July 1, by building the Adelaide St. line from Oxford to Central Ave. Commencing with July some of the routes were changed in order to properly operate over the new lines. As was to be expected such changes were objectionable to the citizens of some localities with the result that the City Council required further changes Dec. 1 last. Even these are not wholly satisfactory so that the subject of routes and schedules is still unsettled but will undoubtedly be worked out early in the year. The usual necessary amount of track maintenance was carried on during the open season.

Six new cars of the p.a.y.e. type, with enclosed vestibules, folding doors and steps were received late in the year. These cars have all the latest equipment, and have given great satisfaction. A 500 k. w. Corliss compound engine set which was installed early in the season gave good service for the increased summer's business. Other power house improvements in the way of increased boiler capacity were becoming absolutely necessary so that arrangements were being made to this end when further negotiations were opened by the Hydro-Electric Power Commission for supplying the company with power. As this proposition provided for their furnishing direct current at reasonable rates, the commission installing at their own plant and at their own expense the necessary converting machinery, it was deemed to be the best interests of all to obtain power from this source rather than add to the present power plant and a contract was therefore entered into with the Commission for the company's power requirements until the end of the franchise, with a provision for an extension of the power contract if the company's franchise is extended as provided for in the franchise. With additional transmission lines and other improvements being made by the Commission, it is hoped that continuous service will be given by them; however, for the immediate future the present power house will be kept in condition for emergency purposes and to carry the peak load on heavy days.

As anticipated in last year's report, the Ontario Government in accordance with the statute regarding Sunday car service, has

clared the city to have a population in excess of 50,000 and a vote of the citizens was taken at the municipal election, Jan. 1, resulting in approximately a three-quarter majority in favor of the Sunday car service. It is expected the city council will take the remaining necessary steps early in the season so that the Sunday service may commence at an early date. Previous to the vote on Sunday cars it was agreed with the city council that only a limited service on Sundays should be required, the rates of fare to be the same as on week days, excepting that the limited or workingmen's tickets are not to be accepted.

An issue of \$50,000.00 bonds was authorized during the year to provide for improvements but owing to the unsatisfactory bond market, temporary loans were made instead of disposing of the bonds.

The gross earnings and surplus during the year have been very good and as prospects of general business conditions in this city seem good, it is anticipated that the coming year will continue to show good increase. Your directors are pleased to state that our relations with the public continue to be satisfactory and no litigation of any consequence appears against the company.

PROFIT AND LOSS ACCOUNT.

Surplus, Jan. 1, 1913	\$92,418.14
Net income for year	67,936.18
Amortment and depletion charges	621.51
	\$161,275.81
Dividends	\$13,360.00
Directors' fees	1,000.00
Interest on loan	1,607.82
Provisions from accounts receivable	14.27
Surplus	125,203.74
	\$161,275.81

MISCELLANEOUS STATISTICS—Passengers carried, 9,078,489; car earnings per revenue passenger, 3.64c.; transfers, 1,462,562; total passengers, 10,541,051; car earnings per passenger 3.12c.; car mileage, 1,583,810; gross earnings per car mile 20.96c.; operating expenses per car mile, 14.82c.; net earnings per car mile, 6.13c.; miles of track, 31.97; gross earnings per mile of track, 9,492.89.

The directors for the current year are:—President, H. A. Everett, Cleveland, Ohio; Vice-President, T. H. Smallman; other directors, E. W. Moore, P. W. D. Broderick, H. S. Holt, W. M. Spencer, C. H. Ivey.

The Montreal Tramways Situation.

The report of G. R. MacLeod, Railways and Tramways Engineer for the city, on the question of improved facilities for the transportation of passengers, was submitted to the Board of Control, Feb. 14, endorsed by City Engineer Janin.

The report is a most comprehensive document, but had not yet been made public when this was written. When its preparation was decided upon, the City Council had before it two propositions, one from the Montreal Tramways Co., and the other from the Canadian Autobus Co. Both companies made offers in the direction of the construction of subways, in order to relieve the congestion in the centre of the city. It is said that the report recommends the building of three subways or tube lines, having a total length of eight miles; ten subways under steam railways to replace level crossings, and the laying of a surface line along Vitre St. and sundry alterations on existing lines. The principal subway or tube line would run from Place Viger to Dominion Square, and would probably be the first to be built. The second main line would probably be along Burnside and Ontario streets, and the third would probably run from Craig St. to near the C.P.R. tracks. These

tubes would be built so as to allow for extensions, and for connections being made with existing lines. The estimated cost, including land damages and the necessary equipment, is given at \$30,000,000. The construction of subways under the steam railway tracks is considered independently of the proposition to elevate the G.T.R. tracks from Bonaventure station to St. Henri. It is estimated that if the construction of the various works mentioned is undertaken, it will require about eight years to carry them through. The report does not deal with the question of the Montreal Tramways Co.'s franchise, for the extension of which application has been made.

The report, it is said, favors the operation of autobus lines on Sherbrooke St., and similar streets where, for various reasons, electric railway tracks cannot be laid.

Nothing was done with the report at the meeting of the City Council, Feb. 17, but it is generally understood that the Council will submit a question at the municipal elections in April, asking the ratepayers whether or not they are in favor of granting the company an extension of franchise for 40 years. The answer to this question will influence the settlement of the whole question. The present franchise expires in 1922, so that a new 40 years franchise would really be an extension for 32 years. (Feb., pg. 87.)

Electric Railway Notes.

The London St. Ry. started its Sunday service Feb. 22.

The Electric Railways Construction Co. has been struck off the register of companies entitled to do business in British Columbia.

E. Lauzon, conductor, Montreal Tramways Co., who recently pleaded guilty to charges of theft of tickets from the farebox in his charge, was sentenced to one month in jail.

It is reported that a motor bus service is to be established in Guelph, Ont., early in the spring, covering territory not at present served by the local street railway.

The Niagara, St. Catharines and Toronto Ry. has ordered six interurban cars, three with smoking compartments, and three with baggage compartments, from Preston Car and Coach Co.

The London St. Ry. is reported to be considering the purchase of six additional cars, similar in type to those recently received from the Preston Car and Coach Co., and which were fully described in our January issue.

It is announced that the cars which the British Columbia Electric Ry. is displacing with new ones from the Preston Car and Coach Co. will be sent to the B.C.E.R. shops at New Westminster and rebuilt for general service.

A joint committee of the railway committee of the City Council and of the Board of Trade of Stratford, Ont., is taking up the question of the construction of radial railways under the Ontario Hydro Electric Commission's scheme.

The cars which the British Columbia Electric Ry. is receiving from the Preston Car and Coach Co., 21 of which were delivered between Dec. 12 and Jan. 12, are of the single ended, double truck type, with Westinghouse 161 B 2 equipment, and Westinghouse straight air brakes.

The Moose Jaw Electric Ry., which was originally incorporated under the British Columbia Companies Act, has been struck off the register of companies in that province. This incorporation was simply a preliminary step to the formation of the company under the laws of Saskatchewan, under which the company is now operating.

The Brandon, Man., City Council decided, Feb. 10, to do away with conductors on the municipal electric railway, and to close the rear door on all cars, so that passengers will have to enter and leave by the front. The passengers will put their tickets or cash fare into the farebox, and the entire car will be in charge of the motorman.

The Public Utilities Commission for Nova Scotia issued a decision, Feb. 8, on the application of the motormen and conductors of the Halifax Electric Tramways Co. for certain alterations in the conditions of their employment. The Commission declined to direct that 14 days instruction be given to motormen before they are regularly employed, and to order a 10 hour day with one day for rest in seven, on the ground that it was advisable to include the employees of other electric railways in the province under the one order, and before this could be made the Commissioners desired to hear representatives regarding other companies. The Commissioners also declined to order the equipment of the company's p.a.y.e. cars with air brakes, on the ground that the cars were not large enough to warrant the expenditure. In regard to the only other point brought forward, the Commissioners directed the company, before any new cars are put into service, to report fully as to the equipment of the same. The Commission promised to look into the question of hand brakes used on cars.

Halifax Electric Tramway Co.'s Annual Report.

An increase of \$15,531 in net earnings for 1913 was reported at the annual meeting of the Halifax Electric Tramway Co. in Halifax, N. S., Feb. 9.

Gross earnings were \$605,933, against \$539,953 in 1912. Operating expenses were \$337,008, an increase of \$50,448. Dividends paid amounted to \$112,000. Receipts from passengers totalled \$301,771 against \$250,263 in 1912. Electric light, power and sundry earnings totalled \$242,085, as against \$228,654 in 1912. Percentage of operating expenses to income increased from 54.06 in 1912, to 56.36 in 1913.

The directors were re-elected with the addition of Senator N. Curry, of Montreal, increasing the board to 12. E. A. Robert, Montreal, was elected President, and O. E. Smith, Halifax, Vice President.

Winnipeg Electric Railway Company's Annual Report.

The report presented at the annual meeting in Winnipeg Feb. 11 is given in full on immediately following page 118 of this issue.

The directors were re-elected for the current year as follows: President, Sir Wm. Mackenzie; Vice President, Sir Wm. Whyte; Secretary-Treasurer, F. Morton Morse; other directors, Sir Wm. VanHorne, Sir Donald Mann, D. B. Hanna, A. M. Nanton, Hugh Sutherland, R. J. Mackenzie.

Winnipeg River Power Co.—Following the meeting of shareholders of the Winnipeg Electric Ry., Feb. 11, a meeting of the shareholders of the W. R. P. Co. was held. A preliminary report from a U. S. engineering firm was referred to, in which it was estimated that the Great Bonnet Falls are capable of producing 150,000 h.p. of electrical energy at a very low cost. It was decided to begin explorations and preliminary development work at once. J. G. White and Co., New York, have been engaged to do the necessary work, and it is expected that within two years the first units of the plant will be completed.

Marine Department

Canadian Lake Protective Association's Annual Meeting.

The following report, signed by L. Henderson, President, and F. King, Counsel, was presented at the annual meeting at Ottawa, Feb. 11.

The year just past, while it presents a record marred by the terrible disaster towards its close, shows a distinct step in advance in the work of the Association. Heretofore the Association has been unable to compile any accurate statement of premiums and losses from which to compute the loss ratio and determine any improvement which may have taken place from year to year. The need of accurate records of these figures has been quite apparent from the outset and painstaking attempts were at first made to secure them annually direct from members of the Association, but experience soon proved that this idea of compiling information from voluntary returns sent in by members would never produce statistics that could be relied upon as complete or accurate in any respect.

The scheme which has now been adopted did not propose itself until recently, and time was lost in consideration of a more complex arrangements designed to serve the double purpose of imposing part of the insurance risk on each member of the Association as well as providing a means of recording premiums and losses. Opinions wavered between proposals that the Association should, with legislative sanction, carry part of the insurance of the Canadian fleet of lake freighters, and alternative proposals that a company should be formed by members of the Association to carry a proportion of the risk and provide the desired records. Probably hesitation to embark in any such insurance scheme was fostered by a feeling, concurred in by leading underwriters, that the carriage of even a substantial part of the risk would not afford any greater incentive to owners to navigate their boats with caution than that which is found at present in the embarrassment and minor losses incident to every casualty and repair undertaking. It was just when this was generally agreed and when a full realization of the difficulties of any mutual insurance plan was reached, that Dale & Co., Ltd., of Montreal, suggested a simple plan which would provide the necessary record system and nothing more. In effect it was merely that the company named should write 5% of every risk enrolled in the Association. At the last annual meeting in Ottawa the matter received brief consideration but it was taken up again by your committee and after negotiations extending over a considerable period arrangements were completed with Dale & Co. The contract made with them provides that 5% of the risks on all steel hulls belonging to members of your Association shall be placed with the company named, who shall keep special records of the business and have them available at all times.

Unfortunately the year was so far advanced when the arrangement was completed that certain companies found themselves unable conveniently to place the necessary proportion of their risks, with the result that the plan is not yet in complete working order. Every member is bound, however, to comply with the arrangement this year and 5% of the insurable value of each hull risk will this year be written through the company named, so

that commencing with this season complete records will be available. Every member of the Association is advised of the obligation to comply with the arrangement in accordance with the articles of agreement constituting the Association.

A lengthy correspondence took place early in the year with reference to the rate for 1913. Representations were made by letter and telegram from this Association and by its individual members through their respective brokers. Ultimately a rate substantially reduced below that of 1912 was announced by underwriters, and members of this Association were again accorded the same advantages as members of the Great Lakes Protective Association of the United States. Certain named fleets of the U. S. were accorded a special rate based upon their exceptionally good records, but for all other approved fleets a basis rate of 4¼% was fixed, applicable on the

L. Henderson,
President, Dominion Marine Association.

Upper Lakes including Lake Erie, with a rate of 5¼% to Ogdensburg and 6¼% to Montreal.

A peculiar development arose later in the year with reference to the question of membership in the C. L. P. Association as a qualification for enjoyment of these rates in Canada. On July 31, F. Herrmann & Co. wrote asking whether the brokers for the steamships therein named correctly represented the views of your Association in insisting that the warranty of membership in your Association be removed from the policies. Copies of this letter were forwarded to the owners of the vessels named and by them to the brokers in question. The brokers' views were repudiated by counsel for your Association and the whole question was considered by your committee at its first meeting thereafter. It was then unanimously resolved that policies certainly ought to contain the warranty of membership, and that it was never suggested

or intended by the Association or by your committee or its officers that the warranty should be omitted. Instructions were given to advise underwriters accordingly, repudiating the letter written to them by the brokers mentioned and asking that hereafter the warranty should appear. In accordance with the suggestion made by these underwriters in their reply letters to the same effect have been sent to other underwriters as well.

In connection with casualty reports relating to collisions in the ice at the opening of navigation in 1913 your committee has had occasion to consider the risk attendant upon an early departure of vessels from port while ice is still to be encountered. The conditions last spring were of course considered somewhat exceptional and therefore no action was taken by way of protest against an early opening of navigation; and at the same time inasmuch as the circumstances did not warrant condemnation of any master for having permitted his vessel to join the large fleet in Lake Superior in April, your committee refrained from censuring those whose vessels had encountered difficulties in the fields of ice. Nevertheless it is desirable that the risks of last spring should be avoided and your committee lay the question before you for consideration, suggesting that it receive some attention at the annual meeting. Favorable weather conditions and the hard work of the ice breakers alone prevented serious disasters in the blockade at the foot of Lake Superior. Your committee was in touch with the Marine Department with reference to the opening of the St. Mary's River and Whitefish Bay and held communication with the department by wire until the fleet was released.

Towards the close of the season the question of ice breaking at the close of navigation arose and your committee asked the Marine Department to take steps to keep the St. Mary's River and all upper lake terminal harbors open so long as necessary to permit the last steamer out to make her port of destination. In reply the department intimated that the contract for ice breaking at Port Arthur and Fort William in force during 1912 would remain in force during 1913 up to Dec. 17, but that no arrangement had been made for ice breaking after that date and that weather conditions were such at the time of writing that it scarcely appeared necessary to anticipate any need of ice breaking operations. The Minister also expressed his opinion that your Association should join with the Government in discouraging an extremely late closing of navigation. The letter called attention to the disasters of the autumn as indicating what might be expected when cold weather and heavy gales were encountered simultaneously. Fortunately the weather conditions continued favorable and obviated the necessity for any further action in the matter. The customary extensions of insurance were granted by underwriters and navigation closed in 1913 in due course without any special incident of note.

Any consideration of the casualties of 1913 and of the work of your committee in connection therewith is overshadowed by the calamity which overtook so many staunch craft in November last. In a storm of unusual severity which occurred

on Nov. 8, 9 and 10 a number of vessels of Canada and the U. S. ran ashore and suffered severe damage, and a surprising number, of which four were enrolled in your Association, foundered and left no survivors of their crews. Three of these, the James Carruthers, Regina and Wexford sank in Lake Huron, and the fourth, the Leafield, went down in Lake Superior. At this date, and in the absence of any information as to the exact causes which led any one of these vessels to succumb to the seas, it is idle to speculate as to the reasons which contributed to their failure to ride out the storm. Official investigations are pending, and information of value may be developed as enquiry proceeds. Your committee can only deplore the regrettable loss of life and property and suggest that the Association may well accept and support any reasonable and well founded recommendations which may be made for safeguards or regulations designed to prevent so far as possible the chance of any repetition of this appalling disaster.

Only one wreck investigation in connection with this storm has been held in Canada up to the date of preparation of this report. This occurred in connection with the stranding of the Turret Chief, and as the finding of the Court in that case has been the subject of special consideration by your committee at the instance of the Marine Department which asked for an opinion upon the recommendations made in the finding, a letter was submitted to the Minister relating to this and to the larger question of the constitution of the court.

Your committee has met from time to time throughout the year at Toronto for the purpose of dealing with casualty reports and other regular business. Special attention has been given to conditions which appeared to contribute unduly to the dangers of navigation. A number of casualties occurred in the Lachine cut of Lake St. Louis, and in the Stone cut in the Welland Canal. The groundings in the Lachine cut have been largely due to inability to keep the Lachine ranges in view, and the addition of a range at the outer end of the channel has appeared desirable. A recommendation which has the approval of the local authorities has now been made for improvement of the lighting system with this end in view and its adoption is expected. As to the Welland Canal some consideration has been given to a proposal for regulations to prevent vessels from meeting in the Stone cut mentioned, or for the placing of booms or floats to prevent the contact of vessels with the walls. Correspondence is pending on this subject. A recommendation has also been renewed for the erection of some protecting device of a similar nature at lock entrances. Representations have also been made regarding the troubles engendered by currents at lock entrances, and casualties at the Canadian lock at Sault Ste. Marie have led to a suggestion for the extension of the pier at the upper entrance. The improvement of the upper entrance of the Morrisburg Canal has again been recommended, as well as the building of a guard lock at the head of the Lachine Canal. Your committee also concurred with a committee of the Dominion Marine Association in reiterating a complaint against the use of flashing lights in the Livingstone channel of the Detroit River and in the West Neebish channel of the St. Mary's River as neither of these channels require a distinctive class of lights and masters complain of inability to keep a course properly with lights of this flashing character.

The higher water which has prevailed during the past season has rendered the question of the load draught in the various

waters of less importance than in some preceding years. No complaints of overloading were filed with the Association by any of the canal superintendents during 1913. A record has been kept of the recommended draught in the various canals and prompt notice has been sent out of each change which has occurred.

Correspondence has been carried on as heretofore with masters regarding casualties requiring discussion, and in certain cases with parties able to throw light on the circumstances in question. The usual notes of casualties and of your committee's action in each case have been recorded. In the case of one fleet your committee found it necessary to report to the owners a statement that the vessels they owned were said to be running without regard to the Association's rules. An emphatic denial of the statement was made and was accepted by your committee.

Referring particularly to the casualties of the year an analysis of the accidents reported is appended. The outstanding feature is of course the complete loss of four vessels and the two serious strandings in the storm of November last. The claims upon underwriters in respect of these disasters will be heavy and will make the loss ratio for 1913 very high. Apart, however, from the unfortunate effects of this one storm it is noticeable that the remaining casualties do not include any one heavy loss, and their number rather than the total amount of damage done is to be regretted. Of the groundings noted, two or three involved substantial repairs, and these might have been classed as strandings save that they were not due to any stress of weather and the vessels were in all cases quickly released. The collisions exceed any other class of casualty in number, and might be expected to cause a large loss, especially as 14 out of the 31 recorded affected two vessels both belonging to your Association. But the fact is that in the great majority of cases the damage done was very light, 15 of the cases being due to movements of vessels in harbors and many of the others being light contacts of vessels in the canals.

In the case of five of the reported casualties the masters of the vessels were censured by your committee. One of these votes of censure was recorded for running in narrow waters in a fog, one for canalling in a heavy wind and three for going ashore by reason of failure to use the lead and to exercise ordinary caution. In one of these last named the master was dismissed and a wreck investigation applied for, and in another the master was put back as mate on another vessel. In six other cases masters were advised that your committee considered they had made errors of judgment or failed to handle their vessels as they should. Engineers were found at fault and censured in four instances, the vote being recorded in three instances for failure to answer the reverse signal properly. In the fourth case where steam was shut off the reverse gears, the second engineer, who was on watch, as well as the chief who was responsible, were both censured. In two other cases the vote of censure fell upon pilots of the upper St. Lawrence who were navigating the vessels. The action of your committee in regard to every casualty is reported as heretofore in a bulletin which is issued and circulated among all members of your Association and all masters after each meeting.

During the year your committee accepted the application for enrolment of two vessels of U. S. register owned in Canada and also decided to recommend that the privileges of membership in the Association should be extended in the same way whenever Canadian owners apply and the ton-

nage offered proves acceptable. A recommendation is hereby made accordingly.

You are asked to approve particularly the action of your committee in seeking to have all policies require a warranty of membership in your Association as a condition of enjoyment of any special rate, and your committee closes this report with an urgent reminder to every member of the Association that insurance must now be arranged so that 5% of the risk in each vessel shall be placed with Dale & Co. Strict compliance with this requirement is essential.

The report was considered clause by clause and unanimously adopted.

At present membership in the Association is confined to steel built bulk and package freighters. A resolution was adopted that an associate class should be formed for the enrolment of wooden tonnage at a special rate of assessment, which would be fixed by the executive committee. On this understanding the meeting endorsed the action of the executive committee in insisting upon the insertion in all policies of a warranty of membership in the Association.

The following were elected as the executive committee: L. Henderson, W. E. Burke, Montreal; Capt. S. Crangle, H. W. Cowan, J. T. Mathews, Toronto; Capt. Fraser, H. W. Richardson, Kingston; J. Playfair, Midland; L. Henderson was subsequently re-elected President.

Dominion Marine Association's Annual Meeting.

At the annual meeting in Ottawa, Feb. 10, the executive committee presented a comprehensive report over the signatures of L. Henderson, President, and F. King, Counsel. The report showed that the tonnage enrolled in the Association steadily increases, at least in the way of vessels navigated by steam. Naturally the figures for barge and sailing vessels are slowly becoming less. The total tonnage exceeds that of 1912, and is approximately 180,000 net registered tons of steam and 33,500 of barge and sailing vessels, making a total of 213,500 net registered tons. The report dealt in full detail with the past year's work, including the following subjects:—Pilotage Commission; establishment of pilotage district, Montreal to Kingston; wireles telegraphy; rules of the road; proposed dam at head of Livingstone channel, Detroit River; Chicago Drainage Canal; the Grain Commission; Lake Shippers Clearance Association; dispatch at loading and unloading ports; shortages in outturns of grain cargoes; trimming of grain cargoes; coasting laws; the disaster of Nov. 8, 9 and 10, 1913; Seamen's Union bill, United States; life saving appliances, rules, sec. 578, Canada Shipping Act; London conference on safety of life at sea; Customs reports of entry into Lake Michigan; wages of engineers; ice breaking; patrol service, St. Mary's River, Sault Ste. Marie to Point aux Pins; canals, Sault Ste. Marie, Welland and St. Lawrence; harbor and channel improvements; Niagara River; aids to navigation; legislation; Lake Carriers' Association; Association of Passenger Steamboat Lines of the U.S.

The report was considered clause by clause and unanimously adopted.

The financial statement showed receipts, including balance from previous year, of \$4,596.59, and disbursements \$3,624.42, leaving a balance of \$972.17, against \$1,437.92 at the beginning of the year.

A petition from Midland (Ont.) Council 12, National Association of Marine Engineers of Canada, was read, asking for an advance in pay, but no action was taken, it being considered that the question is one to be dealt with by individual owners.

A petition to the Marine Department from masters of vessels navigating through the Dominion canals, in regard to the failure of bridge tenders to respond promptly to whistle signals blown by vessels requiring the opening of bridges, was endorsed.

A petition to the Minister of Marine from owners and masters of steamboats and launches on the Rideau River and Canal, asking for improvements in the lighting, was endorsed.

A committee on aids to navigation was elected as follows:—Robt. Fraser, Kingston, Chairman; Jno. Donnelly, J. F. Sowards, W. H. Featherstonhaugh, Gilbert Johnston, Frank Hall, H. W. Cowan, H. M. Norris, and Capt. Jno. Ewart.

E. E. Horsey, J. Playfair, S. V. McLeod, and F. Plummer retired from the executive committee by effluxion of time, and H. W. Cowan, C. B. Harris, A. A. Wright, Toronto, and S. V. McLeod, Sault Ste. Marie, were elected to succeed them for a three year term. The other members of the committee whose terms expire in 1915 and 1916 are L. Henderson, Montreal; A. E. Mathews, J. W. Norcross, Toronto; H. W. Richardson, Kingston; G. E. Fair, Collingwood; H. H. Gildersleeve, Sarnia; D. Murphy, Ottawa; F. S. Wiley, Port Arthur.

The executive committee reelected the officers as follows:—President, L. Henderson; 1st Vice President, A. E. Mathews; 2nd Vice President, H. W. Richardson.

On the morning of Feb. 11, a large deputation of members of the Association waited on the Minister of Railways and the Minister of Marine and Fisheries in the former's office, being introduced by W. F. Nickle, M. P., for Kingston. The Association's Counsel, F. King, addressed the Ministers, thanking them for the cordial relations which had existed between their departments and the Association throughout the past year, and expressing the Association's recognition of the great difficulties with which the Ministers had to contend in directing operations over the immense fields which came under their jurisdiction and in trying to satisfy the needs of all parties interested, and assured the ministers of the Association's intention to endeavor to continue to deserve the consideration which it had received in the past. The opportunity was also taken to lay before the Minister of Railways and Canals requests which have been under consideration for some time for the improvement of lock entrances, by the erection of spring piling or floats, to prevent collisions with wing walls, and for a system of signals by whistles or semaphores on the various bridges crossing the canals for the purpose of answering whistle signals from approaching vessels. H. W. Richardson of Kingston, also spoke on behalf of the Association. The deputation was very cordially received and the ministers expressed deep appreciation of the unusual character of the representations made. Very favorable consideration was promised for the two special requests above mentioned.

The Association's annual dinner at the Ottawa Golf Club in the evening was a most enjoyable affair. The speakers were the President, L. Henderson; and Vice Presidents, A. E. Mathews and H. W. Richardson; Hon. J. D. Hazen, Minister of Marine; Col. the Hon. S. Hughes, Minister of Militia; Lt.-Col. Currie, M.P.; Dr. Edwards, M.P.; W. F. Nickle, M.P.; A. Johnston, Deputy Minister of Marine; J. A. McGean, Cleveland, Ohio; A. Pissanault, Detroit, Mich.; F. S. Wylie, Port Arthur; H. W. Cowan, Toronto, and Acton Barrows, Managing Director, Canadian Railway and Marine World.

Farrar Transportation Company's Annual Report.

The Farrar Transportation Co., Ltd., held its annual meeting at Collingwood, Ont., Jan. 27. Following are extracts from the annual report. A dividend of 10% and a bonus of 5% were paid for 1913. The dividends that shareholders have now received aggregate 101%, hence the amount invested by the original shareholders has been returned to them in full. The bonded indebtedness on the s.s. Collingwood has been reduced from \$94,000 to \$81,000, \$13,000 having been paid on the principal maturing 1913, and \$4,375 interest on bond issue. These two items, aggregating \$17,375, were provided for out of earnings and equal approximately 7% on the capital stock. After deducting the amount required to pay 15% dividend on 1913 business, \$37,500, there is approximately enough left on hand to take care of s.s. Collingwood's bond interest and principal for the three succeeding years 1914-15-16, which shows the company is in a strong financial condition. The assets and liabilities account now shows that the assets over liabilities amount to \$163,976.63, which makes the intrinsic value of the stock \$165.55 a share. The s.s. Collingwood went into service April 16, 1913, and was kept steadily engaged until early in December, carrying during that time 23,000 tons of iron ore, 3,000 tons

of pig iron, 31,000 tons of coal and 5,300,000 bush. of grain. The s.s. Meaford started on April 19 and was kept steadily engaged during the entire season, carrying 6,000 cords of pulpwood, 10,000 tons of coal and 1,500,000 bush. of grain.

The board was re-elected as follows:—President, T. I. Thomson, Owen Sound, Ont.; Vice President, E. R. Wayland, Fort William, Ont.; Secretary-Treasurer and Managing Director, G. E. Fair, Collingwood, Ont.; other directors, E. Stubbs, Sault Ste. Marie, Ont.; D. D. Lewis, Lorain, Ohio; W. E. Allen, Toronto; M. Suetsinger, Thornbury, Ont.; G. P. Pearsall, Collingwood, Ont.; Jno. Shultis, Port Colborne, Ont.; C. I. De Sola, Montreal; the latter succeeding W. T. Toner, of Collingwood, deceased. It has been decided to move the head office from Collingwood to Toronto in the near future.

Pilotage on the St. Lawrence.

In the recent annual report of the Liverpool, Eng., Underwriters Association, reference was made to pilotage on the St. Lawrence, as follows:—"The committee is glad to be able to state that in consequence of reiterated complaints the whole question of St. Lawrence pilotage has been under investigation by a Royal Commission. It is earnestly hoped that in the interest of the increasing number and size of vessels frequenting the river, the recommendations of the commission for the better organizing and administering of the pilotage will bring about material reduction of the risks of navigation in this important waterway." The attention of the Minister of Marine having been called to this matter, he stated in the House of Commons, Feb. 16, that in so far as the department was competent, all the recommendations submitted by the Royal Commission material to the administration of the service, had been approved and put into force. Certain of the recommendations cannot be put into force without amending the Canada Shipping Act. The necessary amendments will be considered in the Bill for the revision and consolidation of that act, which will be submitted to Parliament at an early date.

Largest Marine Diesel Engine.—The recent arrival of the ship Wotan in New York is of interest because she is propelled by a single screw, six cylinder, 2,000 Carrels-Diesel marine engine. Other motor ships that have gone to New York were driven by two engines of 6 or 8 cylinders, whose gross capacity was about 2,000 h.p. and in each case they were supplied with injection air by additional engines. The motor of the Wotan is a six cylinder engine, with an injection air compressor on the engine. This is the largest marine Diesel engine in service, and the good record of the ship on her maiden voyage is claimed to be a proof of the reliability of this type of drive.

Large Freight Steamship Building at Port Arthur.

What is claimed to be the largest bulk freight steamship in the world is being built at Port Arthur, Ont., for Canada Steamships Lines, Ltd., and at the end of February was about 60% completed. It is expected that she will be launched at the end of March, and that she will be delivered at the opening of navigation. She will have room for 585,000 bush. of oats, or approximately 20 trains of 30 cars each. She will be 625 ft. long, 59 ft. beam and 32 ft. deep, with a water bottom and side tank 5½ ft., extending from the keel up to the main deck, and from the collision bulkhead back to the engine bulkhead, and divided by a centre keelson, side bulkhead and solid floors into 15 watertight compartments, which may be flooded or pumped out individually, as conditions may require. The construction is on the Isherwood system, consisting of longitudinal frames, with transverse sections of plate and angle, spaced every 12 ft. The cargo hold, extending 436 ft., will be divided into six compartments by five solid steel bulkheads, entrance to which will be gained by 38 steel hatches opening from the spar deck and spaced 12 ft. centres. These hatches will be 9 ft. wide by 41½ ft. long, and will be covered with sectional steel plate folding covers, operating by steel cables from two deck winches and clamped down with a patent hatch fastener, especially designed for this type of cover.

The power plant will consist of one vertical, triple expansion engine, with cylinders 24, 39, 65 by 12 in. stroke, with h.p. cylinder in the centre, and indicated horse power of 2,000 at 85 r.p.m. Steam will be furnished by two Scotch boilers 16 ft. dia. by 11½ ft. long with induced draught working under a pressure of 170 lbs. per square inch. The steering engine will be of the direct acting type, with 9 by 9 in. cylinders, operated with telescopic gear; also steam gear so arranged that the change can be made in a very short time. The electric lighting plant will consist of two 15 k.w. generating sets installed in engine room, with separate circuits fitted for the different parts of the ship, and including electric mast head, stern and side lights so arranged that should any of these lights go out the fact will be instantly noticed in pilot house by pilot lights installed therein, which will become lighted. One of the two 10 by 36 in. whistles will also be electrically controlled. A feature very seldom found in the freighters will be the installation of an ice machine large enough for refrigerator coils and ice tank of two tons capacity.

The spar deck forward will be fitted up for passengers and will be finished in full panel of mahogany, containing four state-rooms and bath, opening off of a large reception room which will communicate by stairs to an observation room on the fore-castle deck, directly overhead. The captain's quarters will be in the texas and will be finished in quartered oak, and include office, bedroom and bath, with a stairway leading directly overhead into the pilot house. The forward crew's quarters will be located on main deck and will be finished in oak with white pine ceilings, each room containing berth for two people with exception of mate, who will have separate room. These quarters will include bathroom, shower bath and large reading room. The after deck house will contain private dining room for passengers, finished in quartered oak, with white pine ceiling, and dining room for officers and mess room for crew. The chief

engineer's quarters will consist of office and bedroom and bath, and forward of him will be the assistant engineers', oilers', and firemen's rooms in separate quarters on star-board side, and the port side will contain quarters for deck hands, stewards, galley and ice box. The Western Dry Dock and Ship Building Co. are the builders.

Canada Shipping Act Amendments.

With reference to the recent extension of the time for the participation in the coasting trade of Canada, by certain foreign vessels, an amendment to the Canada Shipping Act is before the House of Commons repealing the section defining the meaning of what constitutes a coasting voyage, and substituting a new section as follows:

"(f) 'Coasting voyage' means a voyage between any port or place on the eastern coast of Canada, and any other port or place on such coast, or in Newfoundland, Labrador, or St. Pierre or Miquelon, or any port or place on the eastern coast of the United States of America or Mexico or Central America or in the West Indies, or on the eastern coast of South America not further south than 40 degrees south latitude; and also means a voyage between any port or place on such coast, or on the western coast of the Territory of Alaska, or of the United States of America or of the western coast of Mexico or Central America or South America not further south than 40 degrees south latitude."

The Hon. J. D. Hazen, Minister of Marine, speaking at the Dominion Marine Association's annual dinner at Ottawa, Feb. 11, said:—An important piece of legislation on the subject of merchant shipping will be submitted to Parliament within the next few weeks. As you are aware, the present act is merely a collection of the various acts, with amendments that have been passed during the last 40 years. So many changes and improvements have taken place in that time in shipping matters that it has become necessary, practically, to rewrite the whole act so as to meet the requirements of the present day. The changes in the proposed bill are not of a very radical character. The idea has been rather to provide a code for our merchant shipping that will be worthy of the important place Canada holds in the maritime world. I propose, on the second reading of the bill, to move that it be referred to the special committee on Marine and Fisheries for consideration. This will enable the shipping interests of the Dominion to examine the details of the measure and to be heard in regard to any changes they deem necessary. And I think that I could have no more fitting opportunity than now of asking the hearty co-operation of all those who sit round this table, and whose interests are so deeply identified with this great branch of Canadian industry and enterprise, to make the new Canada Shipping Act a valuable addition to our legislation as well as a real and helpful measure to all branches of the business.

Debenture Issue by Canada Steamship Lines, Limited.

The Canada Steamship Lines, Ltd., offered in England and in Canada, from Feb. 11 to 11, £1,300,000 5% consolidated 1st mortgage debenture stock at 92, repayable Aug. 15, 1913, at 105. The subscriptions are payable 10% on application, 25% on allotment, 25% on Mar. 16, and the balance on Apr. 15. The debenture stock is constituted by a trust deed under which is secured by a conveyance to the trustees, or by special mortgage in their favor, the freehold and leasehold

lands, buildings and steamships, and shares of other companies owned or hereafter to be acquired, and a general charge upon its property, assets and undertaking. The deed provides for an accumulative sinking fund of 1½% per annum, commencing in 1915, to be applied in the purchase of stock at any price less than 105% and accrued interest, or invested in the manner prescribed in the deed. The company reserves the right to redeem the stock on any interest date after Aug. 15, 1923, at 105%, or earlier at the company's option, at 110% on six months notice. Full details of the valuation of the properties and past earnings, etc., have been given in previous issues of Canadian Railway and Marine World. London cablegrams state that about 15% of the stock was subscribed for by the public, the balance being left with the underwriters.

Improvements in Aids to Navigation on the Great Lakes.

The Hon. J. D. Hazen, Minister of Marine, made an important announcement at the Dominion Marine Association's annual dinner at Ottawa, Feb. 11, in regard to works to be carried on this year. He said:—"I am anxious that the very large and rapidly growing shipping interests on the Great Lakes should receive the greatest possible assistance that improved aids to navigation can afford. To this end I directed that the officers of my department who are members of the Lighthouse Board should, during the last season, make an inspection of the several locations represented as requiring additional aids. In addition, I have endeavored to familiarize myself personally with conditions on the lakes. I hope that, as a result of these inspections, the officers and myself have a proper appreciation of what is required, and our aim will be to carry them out. To that end, the following aids will be established during next season:—

"Main Duck Island. First rate light and fog alarm station, \$41,500.

"Battle Island. Fog alarm, \$10,800.

"Port Burwell. Gas lit concrete beacon on breakwater head, \$3,100.

"Slate Islands. Fog alarm and improvement of the light, \$12,300.

"The lights at the following stations are to be improved:—Brebeuf range, \$1,200; Giant's Tomb, \$1,400; Long Point west light, \$1,275; Long Point east light, \$1,900; Loyal Island, \$1,250; Mississagi Island, \$1,275; Nine Mile Point, \$1,000; Nottawasaga Island, \$7,675; Otter Head, \$1,275; Peninsula Harbor, \$1,300; Hope Island, \$1,275; Killarney West, Mohawk Island.

"Bay Point, Sarnia, gas lighted beacon. Brebeuf back range lighthouse to be rebuilt, much higher, in steel.

"Goderich. Improvement of main light and establishment of an electric fog horn at outer breakwater beacon, \$2,050.

"Limekiln Crossing. Pair of permanent range lights to replace three pairs of temporary lights, \$4,000.

"Livingstone Channel. Light at upper entrance, \$40,000.

"Martin Island, south end of Chenail Ecarte. Range of lights, \$300.

"Wingfield basin. Lighting of existing day beacons, \$50."

Imperial Service Medals have been awarded to the following Government employes for long service in connection with navigation:—J. Collins, lock master, Welland Canal; J. J. Gordon, lock master, Rideau Canal; and C. H. Collier, lock master, Welland Canal.

The name of the Government dredge Ontario has been changed to P. W. D. no. 114.

National Transcontinental Railway Car Ferry for St. Lawrence River.

The ice breaking car ferry steamboat, which is under construction at Birkenhead, Eng., for the transportation of N.T.R. trains across the St. Lawrence River pending the completion of the Quebec Bridge, was launched at Birkenhead, Jan. 31, and delivery at Quebec is expected in May or June. A preliminary description was published in Canadian Railway and Marine World for May, 1913, and the following fuller information is now available.

Principal dimensions are:—Length overall, 326 ft.; beam, 55 ft.; with a mean draught of about 15 ft. The propelling machinery will consist of two sets of triple expansion condensing engines, steam being supplied by 8 single ended cylindrical boilers working under natural draught. An ice propeller will be fitted at the forward end, driven by a compound condensing engine. The vessel will be built to Lloyds' special survey and will be arranged for the carriage of passenger and freight trains at all seasons.

The trains will be carried on a tidal deck arranged above the main deck of the vessel, on three lengths of track, the length of each

the tidal deck, a promenade will be arranged all round the vessel, with a bridge platform forward, from which all the operations of steering and manoeuvring will be directed.

The boiler rooms will be arranged in wing compartments amidships, with the coal bunkers and the tidal deck engine room between them. The main propelling engines will be situated abaft the boiler rooms and the engine for the ice propeller will be placed in the hold just abaft the fore peak bulkhead. The vessel will be fitted with electric light throughout and electric gear will be provided for raising and lowering the end gangways and for hauling the cars on or off. Special arrangements will be made for heating the passenger cars during transit. Double windlasses will be fitted, one on each side, with slip drum for mooring. Accommodation will be arranged on flats below the main deck forward on both sides of ship for officers and crew.

The propelling machinery will consist of two sets of triple expansion surface condensing engines, the size of cylinders being 23, 35, and 55 dia. by 33 in. stroke. They are designed to run at 120 revolutions a minute; and a special feature of the en-

a loose forged steel sleeve and sliding key arrangement fitted into the box of wheel; the screws will be fitted with heavy gun-metal nuts, screwed with buttress threads, and will be supported from the upper structure of the vessel by ball bearings of special design. A complete installation of auxiliary machinery will be fitted, and the whole made to Lloyds' requirements. It is said that she will be named Leonard, after the Chairman of the N.T.R. Commission.

We are indebted to W. J. Press, Mechanical Engineer, N.T.R. Commission, for the foregoing information.

The Recent Great Lakes Disaster.

The Minister of Marine stated in the House of Commons recently, in connection with the suggested appointment of a commission to investigate the wrecks caused on the Great Lakes in the storm of Nov. 9, 1913, that soon after the disaster steps were taken to ascertain if it was the intention of the United States, whose shipping had sustained greater loss and damage than the Dominion's, to appoint any commission of investigation, and it was learned that

National Transcontinental Railway Car Ferry for St. Lawrence River.

track being about 272 ft., which will accommodate a standard passenger train of 1 locomotive, 3 express and baggage cars, 3 passenger cars, and 3 sleeping cars; or a standard freight train of 18 loaded freight cars. The tidal deck will rest on large gunmetal nuts working up and down on 10 vertical lifting screws on each side, supported on columns, the columns being stayed by lattice buttresses against longitudinal and transverse thrusts. The lifting screws will be hung on ball bearings from the top and will be manipulated by means of worm wheels driven from horizontal shafting which will run the length of the vessel on each side. The horizontal shafting will be worked by bevel gearing from a four cylinder high pressure engine of special design situated below the main deck. The gearing will be arranged to lift the tidal deck fully loaded at a rate of 1 ft. a minute, through a distance of 18 ft., which will enable the ferry to be loaded or unloaded at any state of tide. At each end of the tidal deck an adjustable hinged gangway will be suspended, which will allow for any change of trim or heel of ship due to unequal distribution of weights while taking the cars, etc., on or off the vessel. Above the highest position of carriages on

gines is the shafting, which is made much stronger than usual, to stand the shock it will receive when the propellers strike ice during the winter trips. The propellers themselves will be specially strong for the same reason, being made of nickel steel. The engines will be supplied with steam by eight single ended boilers, under natural draught at a pressure of 165 lbs. per sq. in.

The forward end of the vessel will be fitted with an ice breaking propeller, driven by a set of compound surface condensing engines, the size of cylinders being 15, 32 by 21 in. stroke. This propeller, which will also be of nickel steel, will run idly during the summer. The engine will be of the four cylinder, high pressure type of massive design, driving through double helical spur wheels, a second motion shaft running athwartship: at both ends of this shaft will be arranged a pair of mitre wheels, driving the fore and aft main line shafting, on both port and starboard sides. At equal distances along this shaft will be arranged the worm and wheel gearing for turning the screws, 10 on each side of vessel, that is 20 for the whole ship. The worms will be of forged steel and the wheels of cast iron. The screws will be driven through

there was no such intention. His department believed that any inquiry, to be effective, should be international in character, and in view of this, and of the further fact that it was the announced intention of a member of Parliament to move for the appointment of a parliamentary committee of inquiry, it was decided that the appointment of a commission was not desirable, nor necessary.

The following Canadian vessels which were stranded during the storm have been the subjects of investigation by the Dominion Wreck Commissioner:—Turret Chief, owned by Canadian Lake and Ocean Navigation Co.; Acadian, owned by Canada Inter-lake Line; results, masters censured.

National Council Marine Engineers of Canada.—The following officers were elected at a meeting in Kingston, Ont., recently:—Grand President, L. B. Cronk, Windsor, Ont.; Grand Vice President, A. F. Hamelin, Montreal; Grand Secretary Treasurer, N. J. Morrison, St. John, N.B.; Grand Conductor, E. Reid, Vancouver; Grand Door-keeper, A. J. Ross, Halifax, N.S.; Grand Auditors, J. Gillie and A. E. Kennedy, Kingston, Ont.

Atlantic and Pacific Ocean Marine.

The C.P.R. s.s. Tyrolean, which has been withdrawn from the Austrian service, will, it is reported, be placed on a route between St. John, N.B., and Avonmouth, Eng. The first sailing was scheduled for Feb. 28, from St. John.

With reference to the report that Furness, Withy and Co. have ordered four additional steamships for its North Atlantic service, as mentioned in our last issue, we are officially advised that no intimation to this effect has been received at the Montreal office.

The Royal Mail Steam Packet Co.'s s.s. Cobequid, which was wrecked recently in the Bay of Fundy, was insured for £30,000.

The maiden voyage of the Allan Line s.s. Calgarian, has been postponed from Feb. 28 to Mar. 28, when she will sail from Liverpool for Halifax, N. S., returning from the latter port, Apr. 11.

Capt. A. W. Davison, of the C.P.R. s.s. Empress of India, has been promoted to the command of the s.s. Empress of Russia, vice Capt. Beetham, who has been appointed Marine Superintendent at Vancouver, B. C. On Capt. Beetham giving up the command of the vessel, the officers and crew presented him with a silver flower stand suitably engraved.

The Canadian Northern Steamships Ltd., it is reported, will make its summer terminus at Quebec this year instead of Montreal, as formerly. D. B. Hanna, Second Vice President, when questioned on the matter in Toronto, recently, is reported to have stated that though such a change was under consideration, no decision in the matter had been arrived at.

The Isthmian Steamship Co.'s s.s. San Francisco, which was recently launched at Londonderry, Ireland, is to be used for the New York-British Columbia steel carrying trade. She was scheduled to sail from New York, for Victoria, B.C., on Mar. 10, but it was not expected that she would be completed in time. She has about 9,000 tons carrying capacity.

The Bermuda Legislative Council has passed a bill to subsidize Canada Steamship Lines to the extent of \$80,000 a year for a weekly steamship service between Bermuda and New York, commencing Jan., 1915. A 10,000 tons passenger steamship is to be provided, having a speed of 18 knots an hour and capable of developing 21 knots. A second similar vessel is to be provided later on payment of a similar subsidy.

The Reid Donald Steamship Co., Ltd., the incorporation of which was announced in a recent issue, has purchased the s.s. Bellona, formerly owned by the Thomson Line, and which stranded below Quebec towards the end of 1912. She has been thoroughly overhauled and repaired and will be used in the fruit trade between the West Indies and New York ports. C. I. de Sola, T. Muirhead and G. Farrill, Montreal, are interested in the company.

Capt. F. Inch, commander of the Uranium Steamship Co.'s s.s. Volturmo, which was burnt at sea, Oct. 11, 1913, when a number of the passengers and crew lost their lives, was presented, Feb. 4, with the freedom of the City of London, Eng. The parchment was enclosed in a silver casket, and accompanied by a gold medal, a gold watch and chain, a purse of gold, and Lloyd's silver medal, and also a diamond and sapphire pendant and silver tea service for Mrs. Inch. The Lord Mayor made the presentation, and stated that the tokens were in recognition of heroism and staunch allegiance to duty.

Press reports state that the Hamburg-American Line will put six steamships on

the Canadian route during the forthcoming season, the first sailing from Hamburg being scheduled for Apr. 14. Third class passengers only will be carried. It is stated that berthing accommodation has been assigned to the company by the Montreal Harbor Commissioners at the Tarte pier. H. F. Dorgeloh is reported to have been appointed Canadian Manager. Since the foregoing statement has appeared, it has been reported that instructions given for remodeling a number of vessels for the sole accommodation of third class traffic have been cancelled.

As an outcome of the discontinuance of the agreement hitherto in force among the member companies of the North Atlantic Conference, by which the European Continental emigration business was pooled and apportioned to various companies on a percentage basis, there appears to be the possibility of a severe rate war among the companies immediately concerned. It is said that the C.P.R. has played the chief part in the break up of the agreement, owing to the firm stand it took when it commenced its Austrian service and withdrew from the conference. This action was followed by the arrest of its Austrian agent, and the closing of its offices in Austria, but these have been reopened and certain restrictions have been placed on the business done. The intention of the foreign lines seems to be to drive the C.P.R. out of the continental trade, and it is reported that a reserve fund of a considerable amount is to be used to conduct a rate war against that company. It was announced early in February that the C.P.R. had issued new rate cards to its shipping agents, fixing the steerage rates at \$22 eastbound, or westbound, except to and from Japan, Russia, where the rate is \$24. Press reports of recent date state that the agreement is to be renewed with the C. P. R. as a party.

Maritime Provinces and Newfoundland.

We are officially advised that the Reid Newfoundland Co. has not ordered the building of an additional steamship in Scotland, as reported in the daily press.

Dominion Public Works Department surveyors were sent to Halifax, N. S., early in February, to view a proposed site for the establishment of a Government dry dock, and to report thereon. It is reported that the site which will probably be chosen is situated at Tufts Cove on the Dartmouth side of the harbor, and that a dock of the first class, similar to those to be built at Lauzon, Que., and Esquimalt, B.C., but somewhat larger, has been decided on by the Government.

The Dominion Public Works Department has been dredging the northern entrance to Little Bras d'Or, to obtain a channel 120 ft. wide, 20 ft. deep at low water over the bar at the entrance for about 2,400 ft. long, and a channel 80 ft. wide, 18 ft. deep at low water inside the bar, for a further 2,100 ft. In about the middle of the outside channel the 20 ft. depth at low water is at present available in a width of about 60 ft. only, and a depth of 18 ft. is available in a width of about 80 ft. In the inner channel a depth of not less than 17 ft. at low water is available throughout its entire length.

Province of Quebec Marine.

The Minister of Marine has given notice in the House of Commons of two resolutions providing for loans of \$15,000,000 and \$2,000,000 to the Montreal and Quebec Harbor Commissioners respectively.

By an order of the Superior Court, Larue

and Trudel, Quebec, have been appointed liquidators of the National Navigation Co. Ltd., Quebec, with P. Desforages, Montreal, and A. Gingras and P. Gauvin, Quebec, as inspectors.

The press reports to the effect that Canada Steamship Lines, Ltd., intended taking the s.s. Quebec off the Montreal-Quebec run, are premature. The matter has not been under consideration officially, but it is possible that some change in the route of the vessel may be made by the time navigation reopens.

The Quebec and Lotbiniere Navigation Co. Ltd., the incorporation of which has been mentioned in a previous issue, will, it is stated, operate the steamboats St. Croix and L'Etoile during the forthcoming season between Quebec, Deschailions, St. Antoine and St. Croix, on a tri-weekly service. The company owns wharf accommodation at Deschailions, St. Antoine and St. Croix. The President is Capt. F. Boisvert, and the Manager, D. Boisvert, with head office at St. Croix, Que.

Ontario and the Great Lakes.

A. W. McMaugh, who died at St. Catharines, Feb. 18, aged 60, was for many years a captain of vessels on the Great Lakes on the Montreal-Chicago route.

The Ontario Transportation and Pulp Co. Ltd., the incorporation of which was mentioned in our last issue, is closely allied with the Ontario Paper Co., Thorold, Ont.

The Canadian Dredging Co., Ltd., has been granted supplementary letters patent under the Ontario Companies' Act, to increase its capital from \$175,000 to \$1,000,000.

The Canada Steamship Lines s.s. Stadacona, while anchored at Port Huron, prior to unloading, Feb. 3, grounded. Her cargo had to be lightered before she floated. The damage was slight.

Capt. N. Campbell, of Owen Sound, is reported to have been given the command of the large freight steamship which is under construction at Port Arthur for Canada Steamship Lines Ltd.

Capt. John Boyd, a well known lake mariner, and for many years with the Montreal Transportation Co., died at Kingston, Feb. 10. He retired from active service a few years ago.

The Silver Islet Navigation Co., owning the steamboat Forest City, has leased the vessel to J. T. Reid and Co., Fort William, for operation during the summer season to the Silver Islet summer resort.

C. D. George, heretofore Travelling Freight and Passenger Agent, Northern Navigation Co., Montreal, has had his headquarters moved to Sarnia, Ont., where W. R. Burgin, Travelling Freight and Passenger Agent, also has his headquarters.

The Hamilton Board of Control has recommended to the City Council the granting of \$5,000 to the Harbor Commission, in accordance with the commission's promise that should the city make such a grant the harbor would be freed from tolls.

The Public Works Department has recently completed dredging in the channel between the piers, in the turning basin and the coal slip, at Rondeau. The coal slip has been dredged to a depth of 17 ft., and the remainder to 20 ft.

On the New York State Canals during 1913 2,602,035 tons were carried. The tonnage eastbound was 1,980,517, and westbound 621,518. The tonnage per canal was as follows: Erie, 1,788,453; Champlain, 554,892; Oswego, 61,554; Cayuga and Seneca, 119,874; Black River, 47,262.

The Ogdensburg, N.Y., Shipmasters' Association has sent a resolution to Washington; to be laid before Congress, recommending that the St. Lawrence River be deepened between Cape Vincent and Ogdensburg, so as to make it navigable for the largest lake vessels.

The Northern Navigation Co.'s coal chutes at Point Edward, which were destroyed by fire recently, are to be rebuilt so as to be ready for the reopening of navigation. The structure will be about 14 ft. higher than the old one, so that there will be no difficulty in handling the s.s. Noronic, or any other of the larger vessels.

The Prescott and Ogdensburg Ferry Co.'s steamboat City of Belleville was burned to the water's edge at her dock in Prescott, Feb. 17. She was built at St. Catharines, Ont., in 1878, and was screw driven by engine of 50 n.h.p. Her dimensions were, length 89.7 ft., breadth 15.4 ft., depth 7 ft., tonnage 101 gross, 69 register.

We are officially advised that the Northern Navigation Co.'s s.s. Saronic will, in all probability, be transferred from its previous route to the head of the Great Lakes, to the Hamilton-Montreal or Toronto-Montreal route. This latter route is under the direct control of Canada Steamship Lines, Ltd., of which the Northern Navigation Co. is one of the constituents.

The Department of Marine has under consideration the placing of a special fog alarm at the outer end of the north breakwater pier at Goderich. It is probable that a 3 in. diaphone alarm operated by electricity will be installed, but on account of the position being so exposed to attack by surf, it is a difficult matter to get either a wave proof structure, or the necessary electrical connection.

The Rainy River Navigation Co.'s officers and directors for the current year, as elected at the recent annual meeting, are as follows:—President and Manager, G. A. Graham, Fort William; Vice President, D. C. Graham, California; Secretary-Treasurer, J. T. Horne, Fort William; other directors, F. Babe, Fort William, and A. R. Bartlett, Windsor, Ont. A. McKenzie is General Passenger Agent.

A press dispatch, dated Feb. 4, from London, Eng., credits the London Daily Mail with stating that another Canadian steamship combination, in which the G. T. R. and Canadian Northern Ry., are stated to be interested, is being launched. The "news" is somewhat belated, as from the details given, the item refers to Canada Steamship Lines, Ltd., a combination which is already an accomplished fact.

A second lodge of the Ship Masters Association was inaugurated at Port Arthur recently. The association is composed of members holding masters' certificates issued by either Canadian or U. S. authorities, and of associate members who are interested in the business. The officers for the current year are,—President, G. Stitt; Vice Presidents, A. Morrison and J. Friday; Treasurer, A. Fader; Secretary, O. Marin.

The annual meeting of Canada Steamship Lines, Ltd., was held at Montreal, Feb. 11. The business was purely formal to complete the details in connection with the organization, and to elect directors for the current year. The board, as given in a recent issue, were re-elected. Another meeting of shareholders will be called in about a month, when full reports of the earnings of the different constituent companies, for the past year, will be presented.

During the 1913 season the Public Works Department carried out considerable dredging at Port Stanley. At the extreme outer entrance to the channel, eastward and

southward of the outer end of the west breakwater, an area 530 by 300 ft. has been dredged to 22 ft. depth, and a small area immediately south of the east pier, and the channel between the east and west piers, have been dredged to a depth of 20 ft., while the inner harbor has been dredged to 19 ft.

In connection with the projected harbor works at Toronto, the Minister of Public Works, in answer to questions in the House of Commons recently, stated that the contractors, with the approximate unit prices of their respective contracts as awarded by order in council, Sept. 15, 1913, are as follows:—Canadian Stewart Co., \$5,371,372.17; Quinlan and Robertson, \$5,735,567.17; Laurin, Leitch and Co., \$5,998,459.28; Anglo-Canadian Contractors Ltd., \$7,895,121.66.

The Nicholas Transportation Co.'s s.s. 1 W. Nicolas, which was wrecked near Alpena, Mich., during the storm on Nov. 9, and which was eventually salvaged and towed to Sarnia, has, after an examination by the underwriters, been condemned as a total wreck. The examination showed damage to over 190 plates, and the estimated cost for necessary repairs is \$90,000, which is additional to the \$50,000 spent in salvaging operations. Cargo to the value of \$70,000 has been saved from the wreck.

The U. S. Lake Survey reports the levels of the Great Lakes, in feet above tidewater, for January, as follows:—Superior 602.38; Michigan and Huron 580.09; Erie 572.06; Ontario 245.60. Compared with the average January levels for the past ten years, Superior was 0.34 ft. above; Michigan and Huron 0.03 ft. above; Erie 0.32 ft. above, and Ontario 0.01 ft. above. It was anticipated that during February, Superior would fall 0.2 ft.; Michigan and Huron would remain stationary; Erie would fall 0.1 ft., and Ontario rise 0.1 ft.

Sir Robert Perks, one of the contractors interested in the proposed Georgian Bay Canal to connect the Georgian Bay with the St. Lawrence at Montreal, read a paper before the Royal Society of Arts, London, Eng., Feb. 3. He is reported to have stated that the traffic would be at least 18,000,000 tons annually, yielding \$9,000,000 net, a return of 4½ per cent. on the capital, to which must be added £1 profit on every h.p. of electric current sold. He estimated the cost of construction to be within \$150,000,000.

The Lakes Disaster Fund, which was created with a view to assisting those who were dependent on the crews who lost their lives in the Great Lakes disaster of Nov. 9, 1913, has been closed and amounts appropriated to those to be benefited. The total of the fund was \$110,834, and the scheme provides that \$77,640 is to be divided amongst 45 persons in monthly instalments over five years; \$2,300 is to be distributed amongst 10 persons immediately, and 10 cases are held for further investigation.

The dredging of the channel through the Telegraph Narrows in the Bay of Quinte, which was recently undertaken by the Public Works Department, has been completed to a depth of 14 ft. below the zero of the Toronto Harbor Master's gauge. The dredged channel is 165 ft. wide, and extends from a quarter of a mile eastward of Telegraph Island, for 2,350 ft. The minimum depth is 13.7 ft. at the west end and on the south side of the channel. The channel is marked by three black spar buoys on the south edge and three red ones on the north edge.

Following on the comments made by witnesses and others, in the recent inquests on the bodies of some of the victims of the

Great Lakes disaster of Nov. 9, as to the lack of facilities at, and exposed condition of, Goderich harbor, representatives of the various councils and municipalities having connection with Goderich, waited upon the Dominion Government recently to urge that something be done to equip Goderich as a harbor of refuge for vessels during a storm, and that the necessary work be carried out as quickly as possible.

The Great Waterways Union of Canada, an organization having for its main object the improvement and full utilization of the Welland Canal route from the Great Lakes to the St. Lawrence, at a meeting in Berlin, Ont., Feb. 13, discussed the proposed international negotiations for the development of a deep waterway from the head of the lakes to the sea, and decided to send a deputation to the Government early in April, to express appreciation for the action taken in regard to the projected Welland Ship Canal, and to urge the necessity of a corresponding increase in the capacity of the St. Lawrence and other canals.

Manitoba, Saskatchewan and Alberta.

Press reports from Prince Albert, Sask., state that a proposition will be placed before the local Board of Trade for the building of an up to date passenger steamboat by an Edmonton firm, to ply between Edmonton and Prince Albert. The intention is to build the vessel in Prince Albert, and the Prince Albert Board of Trade is to be asked to purchase 200 round trip tickets at \$28.50 each, to help the venture.

British Columbia and Pacific Coast Marine.

The British steam yacht Santa Maria has been purchased by Vancouver parties, and was announced to sail from England in February for service on a local route.

Newport, which it is reported has been selected as the Pacific terminal of the Pacific Great Eastern Ry., is to have its name changed to Squamish.

The Minister of Public Works stated in the House of Commons, Feb. 16, that no site had been acquired for the projected dry dock to be built at Esquimalt.

R. H. Nicholson, of Esquimalt, is reported to have been appointed assistant fog alarm engineer, a new position, under the Marine Department, reporting to the chief engineer, W. H. Peters.

The Pacific Steamship Co.'s s.s. Tiverton commenced a regular service between Tacoma, Wash., and Vancouver, B.C., Feb. 14, calling at Seattle, Anacortes, Bellingham, Everett and Victoria.

The Dominion Marine Department is calling for tenders for the construction of a creosoted pile wharf at Victoria, on the Songhees Indian Reserve, where the new departmental depot is to be established.

The G.T. Pacific Coast Steamship Co.'s s.s. Prince George, which has been overhauled and repaired at Esquimalt, was replaced on her route Feb. 1, when the s.s. Prince Rupert was taken out of service for similar overhaul and repair.

The Dominion Government light and buoy steamship Estevan, which has been in continuous service since she arrived on the coast from Collingwood, Ont., last year, is to have a thorough overhauling, as also is the lighthouse tender Quadra.

The Union Steamship Co. is reported to have placed contracts in Great Britain, or Ireland, for the building of two additional steamships for its Pacific coast service, and it is said they will be ready for service

at the end of the year, or early in 1915.

A quantity of structural steel, lumber and machinery has been assembled at Prince Rupert, in preparation for the construction of the Grand Trunk Pacific Dry Dock Co.'s dry dock and ship repair plant there, which, it is stated, will commence immediately.

The Islands Transport and Trading Co., Ltd., has been incorporated under the British Columbia Companies Act, with \$100,000 capital and office at Victoria, to take over the business of the East Coast Transport Co., and to carry on a general trading and transportation business.

The C.P.R. s.s. *Princess Mary*, on which considerable overhauling and repair work is being done at Esquimalt, is also being lengthened 40 ft., thus making her 240 ft. long. She was built at Paisley, Scotland, in 1910. It is anticipated that she will be ready for service during March.

The master of a schooner, which recently arrived at Vancouver, from Japan, has been fined \$450 and costs for a breach of the immigration regulations, in allowing three of his Japanese crew to land and escape. The steward was fined \$150 for aiding and abetting. It was claimed in the evidence that the three men were not entered in the ship's articles.

The contract for the harbor improvement works at Victoria is reported to have been awarded to Hon. Angus McDonnell, who has been conducting a contracting business on the Pacific coast for some time. He carried out some railway contracts in British Columbia in conjunction with Grant Smith and Co., under the name of Grant Smith and McDonnell.

On instructions from the U. S. Attorney General, charges were laid at Juneau, Alaska, Feb. 5, against a number of steamship companies operating on the Pacific coast, including the C.P.R., and the White Pass and Yukon Route, for alleged violation of the anti-trust law in discriminating against the Humboldt Steamship Co. in connection with business at Skagway.

The first vessel intended for the ocean going trade, to be built on the Fraser or Pitt Rivers, was launched at Coquitlam, Jan. 31. She is a three masted schooner, with auxiliary engines burning oil, and is intended for trade between British Columbia ports and the West Indies by way of the Panama Canal. She is 215 ft. long by 40 ft. beam, and has been named *City of Coquitlam*.

The British Columbia Minister of Works promised a deputation recently that he would take up the question of providing a suitable ferry steamboat to take the place of the existing one, at the crossing of the Fraser River between Slough and Ladner. The present vessel is inadequate for the service, and a larger one with capacity for about 20 cars will probably be built in the near future.

The British Columbia Marine Railway Co.'s plant at Esquimalt has been acquired by A. E. Yarrow and Son, of Scotland, and will, it is anticipated, be operated under the name of Yarrow's Limited. The plant comprises a series of land marine railway docks, a building and repairing plant, etc., and it is expected that considerable extensions are being planned for the near future, in view of the possibility of the construction of naval vessels under the Dominion Government.

The C.P.R. s.s. *Princess Sophia*, which ran aground in Blenheim Bay near Port Harvey, at the end of January, on her way down from Alaska ports, is being repaired at Victoria. The work covers the removing and replacing of from 15 to 18 plates on the starboard bow, and the straightening

of a number of frames. It is expected that she will be ready to resume her service early in March. In the meantime her place has been taken by the s.s. *Princess Maquinna*.

The Vancouver Shipmasters' Association has called the Marine Department's attention to the fact that so called fishing vessels are being used for other than fishing work, such as for towing purposes, and for carrying passengers and cargo. This complaint applies to Vancouver and Prince Rupert, and is attributed to lack of inspectors on the coast. It was pointed out that there is only one inspector of hulls for the province, which is not sufficient for the proper carrying out of the work.

The Union Steamship Co.'s s.s. *Vadso* struck a rock near Stewart, during a snow storm, Feb. 3, and became a total loss. The vessel was built at Gothenburg, Sweden, in 1881, and was acquired by the Union Steamship Co., when it took over the Boscowitz Steamship Co., about two years ago. She was screw driven by engine of 110 n.h.p. Her dimensions were—length 191.2 ft., breadth 28.7 ft., depth 21.7 ft.; tonnage, 908 gross, 698 register. It is stated that the company has practically decided to replace the *Vadso* with a larger and more up to date vessel.

The names of the following navigation companies registered in British Columbia have been struck off the companies register:—Burrard Steamship Co., Comet Transportation Co., Horsey Trading and Transportation Co., Malahat Tug Co., Michigan Towing Co., Progressive Steamboat Co., Sechart Steamship Co., Sidney and Nanaimo Transportation Co., Terminal Steamship Co., Torpedo Freighting and Tug Co., Vancouver Steamship Co., Victoria and Vancouver Stevedoring and Contracting Co., Victoria Dock Co., Canadian Arctic Whaling Co., Fort George Timber and Transportation Co., Imperial Fisheries, Kyax Navigation Co., Pacific Towing and Contracting Co., Vancouver Quesnell Navigation Co.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

24. Jan. 26. Quebec, River St. Lawrence, Lake St. Francis, change in position of gas buoys.
25. Jan. 26. Quebec, River St. Lawrence, Lake St. Francis, McKie Point, light discontinued.
26. Jan. 26. Ontario, Lake Erie, Port Stanley, dredging.
27. Jan. 26. Ontario, Lake Erie, Rondeau, dredging.
28. Jan. 26. Ontario, Lake Huron, Goderich, intended change in character of main light.
29. Jan. 28. Prince Edward Island, northwest coast, North Point, change in character of light.
30. Jan. 28. Quebec, Chaleur Bay, Cascadia Bay, New Richmond, Duthie Point, light discontinued.
31. Jan. 28. Quebec, River St. Lawrence below Quebec, Longue Pointe, conical buoy replaced by gas buoy.
32. Jan. 28. England, south coast, Plymouth Sound, sunken obstruction to be placed.
33. Jan. 29. New Brunswick, Miramichi River, southwest branch, Clouston Bar range lights established.
34. Jan. 29. Nova Scotia, Margareville, Wedgeport, Barrington, Pearl Island, Country Island, names.
35. Jan. 29. Nova Scotia, d'Escluse, Port Morlan, Port Hood Island, Havre, Bouche, names.
36. Jan. 31. Ontario, Bay of Quinte,

Telegraph Narrows, dredging, buoyage.

37. Jan. 31. United States of America, Lake Ontario, east end, Charity Shoal buoy to be moved and changed.

38. Jan. 31. Nova Scotia, Cape Breton Island, Little Bras d'Or, northern entrance, dredging.

39. Feb. 3. Nova Scotia, Bay of Fundy, entrance to Digby Gut, Point Prim, intended change in character of light.

40. Feb. 3. Nova Scotia, Bay of Fundy, Ile Haute, intended change in character of light.

41. Feb. 3. Nova Scotia, south coast, West Ironbound Island, intended change in character of light.

42. Feb. 3. Nova Scotia, Cape Breton Island, south coast, Gunion Island, intended change in character of light.

43. Feb. 5. British Columbia, Vancouver Island, southeast coast, Esquimalt harbor entrance, Scroggs rocks, buoy established.

44. Feb. 5. British Columbia, Vancouver Island, southeast coast, Victoria harbor, westward of Shoal Point, buoy to be moved as work of widening harbor progresses.

45. Feb. 5. British Columbia, Strait of Georgia, Ballenas Islands, intended change in character of light.

46. Feb. 5. British Columbia, Malaspina Strait, Thormanby Islands, Tattenham Ledge, change in character of buoy.

47. Feb. 5. British Columbia, Chatham Sound, Port Simpson, off Alexander Point, buoy established.

48. Feb. 9. British Columbia, Queen Charlotte Islands, St. James Island, Cape St. James, lighthouse established.

49. Feb. 10. New Brunswick, south coast, Bay of Fundy, Dipper harbor, McLennan reef, buoy established.

50. Feb. 10. New Brunswick, south coast, Bay of Fundy, Chignecto channel, off Matthews Head, whistling buoy to be established.

51. Feb. 10. New Brunswick, east coast, Northumberland Strait, Richibucto Head, intended change in character of light.

52. Feb. 10. Quebec, River St. Lawrence, Channel patch, position of gas and bell buoy, correction.

53. Feb. 12. New Brunswick, south coast, Bay of Fundy, Barn Island ledge, spindle erected.

54. Feb. 12. New Brunswick, south coast, Bay of Fundy, Letite Passage, east of Parker Island, Splitting Knife ledge, spindle erected.

55. Feb. 12. Quebec, River St. Lawrence, Pointe des Monts, intended change in character of light.

56. Quebec, River St. Lawrence, Three Rivers, dredging.

57. Feb. 14. Nova Scotia, off Blonde Rock, and off Egg Island, submarine bell buoys to be established, off Cape Fourchu, northward of Chebucto Head, and Harbor Shoal, Louisburg harbor, electrically operated submarine fog bells to be replaced by submarine bell buoys.

58. Feb. 14. Quebec, River St. Lawrence, off Little Metis, submarine bell buoy to be established.

59. Feb. 18. Manitoba, Lake Winnipeg, Red River mouth, new channel, range lights established, old range lights discontinued.

60. Feb. 19. Ontario, Georgian Bay, Waukegan, buoys, Matchedash Bay, Waukegan to Fesserton, changes in buoyage.

61. Feb. 19. Ontario, Lake Superior, Cloud Bay, dredging, buoys.

62. Feb. 19. British Columbia, off Cape Beale, Gossip shoals and Spanish bank, submarine bell buoys to be established.

63. Feb. 19. British Columbia, Vancouver Island, southeast coast, Victoria harbor entrance, Ogden Point, breakwater under construction, change in position of lights.

Recommendations as to Investigations into Casualties on the Great Lakes.

The following letter was sent to the Minister of Marine recently by L. Henderson, President of the Dominion Marine Association and Canadian Lake Protective Association, and A. E. Mathews and H. W. Richardson, First and Second Vice Presidents respectively, of the Dominion Marine Association:

The executive committees of the Dominion Marine Association and the Canadian Lake Protective Association, at a joint meeting in Toronto on Dec. 20, 1913, gave consideration to the Department's request for an expression of opinion regarding the finding of the Wreck Commissioner in the recent Turret Chief investigation, and at the same time revived a discussion which resulted some time ago in a recommendation for the appointment of a wreck commissioner with exclusive jurisdiction on the Great Lakes and other inland waters.

Dealing first with the larger question the meeting unanimously confirmed the opinion expressed in the previous recommendation to the effect that it is very desirable that the commissioner charged with the duty of investigating inland disasters should have from actual experience an intimate knowledge of the conditions on the Great Lakes, which differ so materially from those affecting ocean navigation, and as the office of commissioner has now been filled by a gentleman whose experience and training relate exclusively to ocean navigation, the committees mentioned unanimously resolved that the interests of all parties demand in all inland investigations at least the appointment of one or more assessors qualified by years of training to deal with questions quite beyond the experience of the court.

On behalf of the two associations named the undersigned accordingly ask that a capable master mariner of standing and having extensive knowledge of lake conditions and practice should sit as assessor in all investigations relating to navigation of the waters with which these associations are concerned. The committees recommend the appointment of Capt. J. B. Foote, of Toronto, as an assessor who should prove thoroughly qualified and acceptable to all parties.

The committees named considered Capt. Batten (who represented the inland point of view in the Turret Chief investigation) in all respects a most estimable man and skilled within the sphere of his activity, but they respectfully point out that his duties have for a long time confined his attention to the navigation of passenger steamers and for many years exclusively in the confined waters of the St. Lawrence between Prescott and Montreal.

Dealing particularly with the finding of the court in the Turret Chief investigation, the committees desired especially to point out that there does not appear to have been any evidence in support of the conclusion that the failure of the boat to head up into the sea was due to her being short handed in the stokehold. The uncontradicted evidence showed a good head of steam and that the oilers filled the place of the missing firemen satisfactorily. Attention is also called to the fact that one reason oilers are carried is to provide fully for just such contingencies as arose in this case. A vessel is frequently short of firemen, through no fault of the master, and the conditions and exigencies of the trade on the Great Lakes are such that any criticisms of a master for leaving port short handed in the stokehold do not appeal to the committee mentioned as quite justified or fair.

The committees are of the opinion that the storm in question in this case was of a most exceptional character and that as so many vessels were completely lost in it, and the master of the Turret Chief left port with no warning of its coming, a lenient view might well be taken of his conduct in circumstances which must have been extremely trying.

As to the specific recommendations at the conclusion of the finding, the committees concur that modern sounding devices are desirable, but do not approve of the suggestion for "an officially fixed light load line," for various reasons, chief among which are the following, namely, that it is better and safer to trust the discretion of the master of a lake freighter to take water ballast at the proper time, that in still weather the requirement proposed might unnecessarily hamper the movements and speed of the ship, that the prevailing custom of taking on ballast as required after leaving port or discharging ballast on

regards hull and machinery, the accommodation, etc., as well as the propelling equipment, being practically complete. She was in fact almost ready for trial when floated. The keel was laid just early in Jan., 1913, and the ship has been built throughout under the inspection of F. L. Warren, M.I. N.A., M.I. Mech. E., of London.

The principal dimensions are as follows: Length overall, 200 ft.; length between perpendiculars, 185 ft.; breadth moulded, 32 ft.; depth moulded, 16 ft. The draught is limited to 10½ ft. when carrying a load of 175 tons. A ram stem and cruiser stern add to the appearance of the boat, which is a fine looking craft. A double bottom is fitted under the engines and the hold forward, and the hull is stiffened to resist ice, the propeller shafting being also housed in the hull for the whole of its length to prevent damage by ice. Watertight bulkheads divide the various compartments, and the bunkers are watertight also. Sliding watertight doors of the quick closing type are

Dominion Government Customs Cruiser Margaret.

approaching port—while carried out with good judgment—facilitates the progress of the vessel a very great deal, and that masters express an opinion against having water ballast in their ships unnecessarily or in still water. It is in fact claimed to be dangerous to retain water ballast in the hold in still waters, on account of its shifting nature. For these reasons the committees ask that this latter recommendation of the Wreck Commissioner be not adopted.

Launching of the Canadian Customs Cruiser Margaret.

The Canadian Customs cruiser Margaret, for patrol service on the Atlantic coast, was launched at Southampton, Eng., Jan. 11, the naming ceremony being performed by a granddaughter of the late Lord Strathcona, Mrs. J. B. Kitson, wife of Lieut. J. B. Kitson, R.N. The vessel took the water in an unusually advanced condition, both as

fitted to be worked from the upper deck. The bunkers have a capacity of 200 tons, giving a radius of action of nearly 2,000 miles at full speed, and about 4,000 miles at economical speed. The vessel is rigged as a fore and aft schooner, and has an outfit of boats consisting of a 30 ft. motor launch, a 26 ft. lifeboat, a 22 ft. captain's cutter, and a 16 ft. dinghy. For armament she will carry mounted on the forecabin deck two 6 in. quick firing guns of the latest improved type, with telescopic sights. She is fitted in a most up to date manner, carries a wireless telegraphy outfit, is electrically lighted, and has a 24 in. projector searchlight of 25,000 c.p. fitted in the crow's nest on the foremast. A refrigerating plant is installed, and a complete cold storage hold contains separate rooms for meat, vegetables and other provisions. She is heated by steam throughout.

The propelling machinery consists of two sets of vertical reciprocating engines running at 180 revolutions a minute, and having a combined i.h.p. of 2,600. The l.p.

condensers exhaust each into a separate condenser, to which the circulating water is delivered by independent centrifugal pumps. A 15-ton evaporator is installed. Steam is supplied by two boilers of the watertube type. She has been built by John I. Thornycroft & Co., Ltd.

Express Companies' Statistics for 1913.

The annual summary of the business of the nine express companies operating in the Dominion, which has been laid before Parliament, shows that the operating mileage for 1913 was 32,557, compared with 30,445 in 1912, and a total capitalization of distinctly Canadian companies of \$4,805,000.

Gross receipts from operation were \$12,827,478, compared with \$10,994,418 in 1912. Express privileges were returned at \$5,708,108. This was the sum paid by express companies to railways and other carriers for the right to carry on business over their lines. Operating expenses were \$5,743,544, against \$4,880,120 in 1912. Net earnings of the following Canadian companies: Dominion, 38.8%; Canadian Northern, 21.3%; Canadian, 18.4%; and British American, 16.1%. The Dominion Ex. Co. paid a dividend of 10% on \$7,000,000 common stock, and the Canadian Northern paid a dividend of \$954,356.

Telegraph, Telephone and Cable Matters.

The Canadian Northern Telegraph Co. has opened an office at Neelin, Man., and has closed its office at Polwarth, Sask.

The Marconi Telegraph Co. has paid an interim dividend of 10% for 1913, on the 750,000 ordinary shares.

A. E. Reoch, of the Marconi Wireless Telegraph Co. of Canada, addressed the Montreal Electrical Society on wireless telegraphy, Feb. 2.

The Great North Western Telegraph Co. has opened offices at Fonthill and Lyn, Ont., and Waterloo station Que., and has closed its office at Phillipsburg, Que.

The Canadian Northern Telegraph Co. has opened an office at Hafford, Sask., and has closed its offices at Barton, Ladysmith, Neelin, White Plains, Man., and Chandler and Fairlight, Sask.

The reports that W. Marconi's experiments in wireless telephony had reached such a stage that a full equipment was being installed on the Cunard Line's s.s. Aquitania, are officially stated to be incorrect.

The Great North Western Telegraph Co. has recently adopted the use of automatic machines in place of Morse operators for movement of business on the heavy trunk lines. On Jan. 14, a new type of Morkrum tape automatic printer was installed between Montreal and Toronto and has since been handling the volume of business between those points. The machine is operated by means of paper tape, which is prepared by girls working on an electrical perforator, the keyboard of which is similar to that of a typewriter. Instead, however, of a written message the perforator delivers a strip of paper in which has been punched a number of holes. The tape is fed into the distributor at the sending office and the combination of holes causes levers to be operated, which in turn cause impulses to go over the line. These operate a special typewriter at the receiving point which writes out the message automatically. The machine is worked duplexed and is capable of handling as many as 120 messages in each direction per hour, or over 240 messages per hour on one wire. Better service in every respect is expected from the

new system and it is the intention to extend its use to several other circuits in the near future.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

American Locomotive Co., New York, has issued bulletin 1,017 on locomotive ratios, by F. J. Cole, Chief Consulting Engineer.

The Brown Hoisting Machinery Co., Cleveland, Ohio, has issued pamphlet C. 1914, on Brownhoist safety crabs and winches.

Standard Underground Cable Co. of Canada, Ltd., Hamilton, Ont., has issued bulletin 710 'C' on indoor cable terminals, 32 pgs. with illustrations.

The Ohio Brass Co., Mansfield, Ohio, has issued an illustrated bulletin of 26 pgs., dealing with electric railway transmission and mine haulage materials.

The Hart-Otis Car Co., Ltd., Montreal, has issued pamphlet 17 describing and illustrating the H. O. ratchet hand brake for passenger and freight cars.

E. H. Hopkins & Co., railway and contractors' supplies, Montreal, have built a warehouse and opened an office in St. Catharines, Ont., in charge of C. V. Osborne, so as to be in the best possible position to handle the contractors' trade on the new Welland Ship Canal.

The Locomotive Superheater Co., 30 Church St., New York, N.Y., has issued the following: "Pyrometers for superheated steam locomotives," a circular, and "Instructions for installing, operating and maintaining pyrometers for superheater locomotives," also a pamphlet, "The use of highly superheated steam in marine practice."

The Orenstein-Arthur Koppel Company, of Koppel, Pa., has made Erich Joseph, General Manager, succeeding A. Reiche. Mr. Joseph was formerly New York manager. Mr. Reiche has severed his connection with the company to take up work with a German locomotive company.

National Steel Car Co.—G. Condon, Montreal representative, National Steel Car Co., Ltd., Hamilton, Ont., returned recently from England, where he arranged for the opening of offices for the company at 2 Norfolk St., Strand, London, with a view to handling export trade.

The Titanium Alloy Manufacturing Co., Niagara Falls, N. Y., has issued Rail Reports, Bulletin 1, Open Hearth, 32 pgs., 8½ by 11 ins., illustrated, among the most important features of which are tables summarizing the chemical and physical results of standard open hearth A. rails and Titanium treated open hearth A. rails.

H. J. Fuller, President, Canadian Fairbanks-Morse Co., Ltd., has been elected Vice President of Fairbanks-Morse Co., which has its headquarters in Chicago, and is now located in New York in charge of the eastern territory. He retains the Presidency of Canadian Fairbanks-Morse Co. and will be in Montreal frequently in connection with its business.

The Chicago Car Heating Company has opened a branch office and factory at 61 Dalhousie St., Montreal, to take care of its rapidly increasing business in the Do-

minion. A. D. Bruce, formerly its Purchasing Agent at Chicago, who is in charge, is a native of Guelph, Ont., and has been connected with the company for the past five years.

A. O. Norton Limited, has been incorporated under the Dominion Companies Act, with an authorized capital of \$250,000 and office at Coaticook, Que., to manufacture jacks. It will take over the Canadian business heretofore carried on under the name of A. O. Norton Incorporated. The officers are the same as in the old company, viz.—A. O. Norton, President; Harry A. Norton, Vice President and Treasurer; J. O. St. Pierre, Manager. There will be no change in the company's personnel or policy. Machinery to replace that destroyed by fire recently is being installed in the new plant and shipments of jacks are being made promptly.

Transportation Conventions in 1914.

March 17-20, American Railway Engineering Association, Chicago, Ill.
 April 21, American Association of Freight Agents, Houston, Tex.
 May, American Railway Claim Agents, St. Paul, Minn.
 May 18-22, International Railway Fuel Association, Chicago, Ill.
 May 29, American Association of Demurrage Officers, St. Louis, Mo.
 May 20-22, Freight Claim Association, Galveston, Texas.
 May 20-23, Association of Railway Telegraph Superintendents, New Orleans, La.
 May 21-22, American Association of Railroad Superintendents, St. Louis, Mo.
 May 26-29, Master Boiler Makers' Association, Philadelphia, Pa.
 May 28, Association of American Railway Accounting Officers, Atlantic City, N.J.
 June 10-12, Master Car Builders' Association, Atlantic City, N.J.
 June 15-17, American Railway Master Mechanics' Association, Atlantic City, N.J.
 June 16, Train Despatchers' Association of America, Jacksonville, Fla.
 June 21, Association of American Railway Accounting Officers, Minneapolis, Minn.
 July, International Railway General Foremen's Association, Chicago, Ill.
 Sept. 8-10, Roadmasters and Maintenance of Way Association, Chicago, Ill.
 Oct. 20-22, American Railway Bridge and Building Association, Los Angeles, Cal.
 Nov. 17-19, Maintenance of Way and Master Painters' Association of the United States and Canada, Detroit, Mich.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries.

Canadian Car Service Bureau, J. Reilly (acting), 401 St. Nicholas Building, Montreal.
 Canadian Electric Railway Association, Acton Burrows, 70 Bond Street, Toronto.
 Canadian Freight Association (Eastern Lines), G. C. Ransom, Canadian Express Building, Montreal.
 Canadian Freight Association (Western Lines), W. E. Campbell, 502 Canada Building, Winnipeg.
 Canadian Railway Club, J. Powell, St. Lambert, Que.
 Meetings at Montreal, 2nd Tuesday each month, 8.30 p.m., except June, July and August.
 Canadian Society of Civil Engineers, C. H. McLeod, 126 Mansfield St., Montreal.
 Canadian Ticket Agents' Association, E. de la Hooke, London, Ont.
 Central Railway and Engineering Club of Canada, C. L. Worth, 409 Union Station, Toronto. Meetings at Toronto 3rd Tuesday each month, except June, July and August.
 Dominion Marine Association, Counsel, F. King, Kingston, Ont.
 Eastern Canadian Passenger Association, G. H. Webster, 54 Beaver Hall Hill, Montreal.
 Engineers' Club of Montreal, R. W. H. Smith, 9 Beaver Hall Square, Montreal.
 Engineers' Club of Toronto, R. B. Wolsey, 94 King St. West, Toronto.
 Great Lakes and St. Lawrence River Rate Committee, Jas. Morrison, Montreal.
 International Water Lines Passenger Association, M. R. Nelson, New York.
 Niagara Frontier Summer Rate Committee, Jas. Morrison, Montreal.
 Nova Scotia Society of Engineers, A. R. McCleave, Halifax, N.S.

April, 1914.

Double Tracking of the Canadian Pacific Railway's St. Lawrence River Bridge.

By P. B. Motley, M. Can. Soc. C.E., Engineer of Bridges, C.P.R.

The C. P. R. crosses the St. Lawrence River about seven miles above Montreal, near the Indian village of Caughnawaga. This crossing is on the best of several trial lines which were located and estimated on, in the years 1883-1885. Amongst the more important were the Nuns' Island line and the Heron Island line, besides the Caughnawaga line which was eventually chosen. These trial lines are located between the G. T. R. Victoria Bridge and Lachine, the object in all cases being to obtain an outlet from Montreal towards the east and south with the least possible expenditure when the crossing of the river, as well as mileage, were taken into account. The Victoria Bridge is approximately 2 miles long, and

flow in the river.

The decision as to the crossing having been made, the substructure of the bridge was begun, with the late P. A. Peterson, M. Can. Soc. C. E., as Chief Engineer, in the spring of 1885, and the erection of the steelwork was carried out during the winter of 1886-7. The contractors for the substructure were R. G. Reid & Co. (the late Sir Robert Reid), and the engineer in charge for the company was the late G. H. Massy, M. Can. Soc. C. E. The steel work was designed by the late C. Shaler Smith and the Dominion Bridge Co. was given the contract for its manufacture and erection. The steel was especially designed with a view to quick and simple erection, as it was im-

but, considering that the pier supports were founded on rock and, in addition, had adjusting screws, so that the ideal conditions upon which the calculations had been made, could be at all times maintained (if necessary), the design was considered justifiable. The engines, for which the old structure was designed, were equal approximately to Coopers E35 loading, followed by a trainload of 2,500 lbs. per lineal foot, and the material in the structure was steel, except stringers, counters and windbracing where it was iron. The design lent itself admirably to rapid erection, which was borne out by the fact that the steel took only twelve months to erect ready for traffic. By 1910, the requirements of traffic had necessitat-

Lachine Bridge, C.P.R. Old and New Bridges from Caughnawaga Side, Looking Down Stream.

the engineers sought, if possible, to obtain a considerably less expensive crossing.

The Nuns' Island line gave a long crossing of the river in comparatively deep water. The Heron Island line gave a shorter bridge, located for the most part in shallow but very swift water composing the Lachine Rapids. In both these crossings the question of navigation had to be considered and difficulties connected with it weighed considerably in the discussions. The Caughnawaga crossing was finally adopted as being the most economical and as suiting best the requirements of navigation. The bridge is approximately five-eighths of a mile long, and navigation was taken care of by using two through spans of 408 ft. each over the deepest portion of the river to allow for waterway, and a headway of 60 ft. above highwater. This avoided the use of a swing or other movable span which, in this part of the swift flowing St. Lawrence River, would constitute a serious menace to navigation. The span lengths in the balance of the bridge were generally 270 ft. and 240 ft., and were dictated by the judgment of the engineers with respect to ice

possible to place falsework in the deeper portions of the river where the 408 ft. spans are located. For these reasons the designers decided upon a peculiar type of construction. This consisted of a set of 4 spans (2 deck and 2 through) continuous over five supports, which enabled the steelwork of the side or flanking spans to be erected first on falsework, and the main channel spans to be erected by the cantilever method, the flanking spans being used as anchors,—some steelwork was also cantilevered both ways from pier 13 located in the centre of the channel. When these several spans were connected, they formed, as aforesaid, a continuous span over five supports, fixed at the centre on pier 13 and expanding both ways therefrom. The channel spans, as noted above, were made of through design to allow steamers to pass under at full speed, and Mr. Shaler Smith solved the problem of combining deck and through spans by a very beautiful and interesting method, that of curving the ends of the spans, as shown in the photographs and plans. This procedure is open to criticism from a mathematical point of view,

ed the use of much heavier locomotives than were considered in the original design and, in addition, the increasing volume of traffic made it advisable to double track the line from Montreal eastward. Bids were, accordingly, called for on designs prepared by the C. P. R. engineers, and a contract was subsequently entered into with the Dominion Bridge Co. for the removal of the old spans and the erection of the new. A contract was also made with The Foundation Co. for the extension of the substructure to accommodate the extra steelwork. In the old structure there was no traffic to be taken care of, but in the new it was not allowable to interfere with the regularity of passing trains. This considerably complicated the problem, and, under the circumstances, it was decided that the only possible way of ensuring all the requirements was to build two independent single track bridges, and remove the old bridge in sections, transferring traffic from side to side, as will be described later.

SUBSTRUCTURE.—From observations during the life of the old bridge, it was noted that the ice of Lake St. Louis generally

grounded on the Lachine side of the river in shallow water, and, after breaking up, floated under the Lachine end of the bridge in small pieces in a manner which did not

of course, would result in serious cracks in the bonding above the water line. The work at piers 8 to 14 was carried out in still water, which was obtained by the use of

which it was built up by the C. P. R.'s forces. The pneumatic plant used on piers 9 to 13 was of the type designed and operated by the Foundation Co.

Plan 1.—Lachine Bridge, C.P.R. General Elevation and Plan. (See opposite page.)

seem to justify the existence of four 240 ft. spans between piers 3 and 7. It was, therefore, decided to bisect these spans by the building of new intermediate piers 3a, 4a, 5a and 6a, and using eight 120 foot spans instead of four 240 ft. This resulted in considerable economy in cost. Between piers 7 and 11, it was not considered advisable to make a change. With these exceptions, the structure was renewed in span lengths similar to those which originally existed, but, instead of the continuous spans between piers 11 and 15, it was decided to use simple spans of ordinary deck and through types, as shown on the plates. The new second track was placed on the downstream side of the existing bridge. The added masonry was bonded into the old above water line, while below the water line open caissons were sunk generally to the same hard bottom to which the original masonry was carried, except in the case of piers 9 to 13, where pneumatic caissons were found necessary. Caisson 13 was square ended where it butted against the old masonry, and pointed at the down-

Skidways on Down Stream Span 13-14.

SUPERSTRUCTURE.—The 80 ft. deck plate girders at the Lachine end of the bridge are the C. P. R. standard design, and are single track spans placed alongside each other. The 120 ft. spans are deck Warren truss spans with rivetted connections, their ties resting upon the top chords. These spans are also simple single track spans laid abreast of each other. The 240 ft. spans are also Warren trusses with rivetted connections, and have the usual floor system of stringers and floor beams (2 stringers per track) rivetted against the vertical posts immediately under the top chord. The upper laterals are also rivetted immediately below the top chord, and connected with the top flanges of the stringers, where they intersect with same. The 270 ft. flanking spans are Warren trusses, and, while longer in the panel lengths than the 240 ft. spans, are the same in general description. Typical details are shown on plan 4, from which it will be seen that all the web members, except the diagonals near the centre of the span, have solid web plates down the centre of the same, and,

Plan 2.—Lachine Bridge, C.P.R. Diagrams Showing Maintenance of Traffic During Reconstruction, and Method of Erection. (See opposite page.)

stream end. It was carried about 7 ft. lower than the bottom of the old pier, because it was found that the shale immediately under the same was of such a description as to make it advisable to go deeper in order to make sure that there would be absolutely no settlement, which,

wing dams composed of rock-filled cribs sunk immediately upstream at an angle of about 45 degrees so as to deflect the current. Masonry was started in June 1910 and was finished in Nov. 1911, except the upstream end of pier 13, which was left till the removal of the old steelwork, after

where necessary, double lattice on the flanges. For the deck spans the Warren type of truss was found to be more economical than any other. The general dimensions and typical details of the 408 foot spans are shown on plan 3. These spans are of the subpanelled Pratt truss

type, and the top chords are curved, as far as possible, to an approximate parabola. In the web members, solid web plates have been largely used instead of lattice bars.

work. There were on an average 10 trains between 8 a.m. and 12 noon, and sometimes an average of eight in the afternoon during the usual working hours. In order to carry

bodily into the location of the old 240 ft. span, and the latter moved upstream upon timber towers prepared for it. The downstream new spans between piers 6 and 7

Plan 1.—Lachine Bridge, C.P.R. General Elevation and Plan. (See opposite page.)

In addition to this, the vertical posts are all of I sections, composed in most cases of bulb angles and web plates, and, where necessary, there are stiffeners on the webs especially of the longer vertical posts. The top and bottom chords are of very stiff cross section, partly to allow them to be cantilevered out during erection. The 408 ft. spans were also calculated for the stresses caused by the special method of cantilevering and launching, which will be described later. The portal and other subsidiary bracing is generally of a stiff design, consistent with the main trusses, to which it is attached. The 270 ft. spans were also calculated for the concentrated weight of one end of the 408 ft. spans, which was to be carried upon them during the process of launching.

The alignment on the bridge is ruled by the overall width of the 408 ft. spans. At pier 11, and the south abutment, the two single track bridges are 27 ft., centre to centre, and from pier 11 to the north abutment the spans grow closer together till they are 16 ft. 4 ins. at the north abutment. This slight kink in the alignment is quite im-

Bird's Eye View from Top of Up Stream Span 12-13, Looking South.

were then erected. Traffic was now diverted over the four new spans between piers 6 and 7 by means of a cross-over laid on suitable wooden ties spanning from span to span, so that all old spans between pier 7 and the north abutment were thus released. These were taken down, and new spans erected. Next, the new spans on the downstream side between piers 7 and 11 were erected.

In order to release some more upstream spans, it was simply necessary to slew over the 240 ft. span between piers 10 and 11, as shown on diagram B, plan 2, all new spans between the north abutment and pier 11 now being under traffic and all old spans between these points being released. After the new spans on the upstream side between the north abutment and pier 10 had been erected, it was simply necessary to pull span 10-11 into alignment, as shown on diagram C, plan 2, and thereby put the traffic on all new spans between the north abutment and pier 11, the old spans between pier 11 and the south abutment being still under traffic. Then spans were erected between piers 10 and 11, 11 and 12, 14 and

Plan 2.—Lachine Bridge, C.P.R. Diagrams Showing Maintenance of Traffic During Reconstruction, and Method of Erection. (See opposite page.)

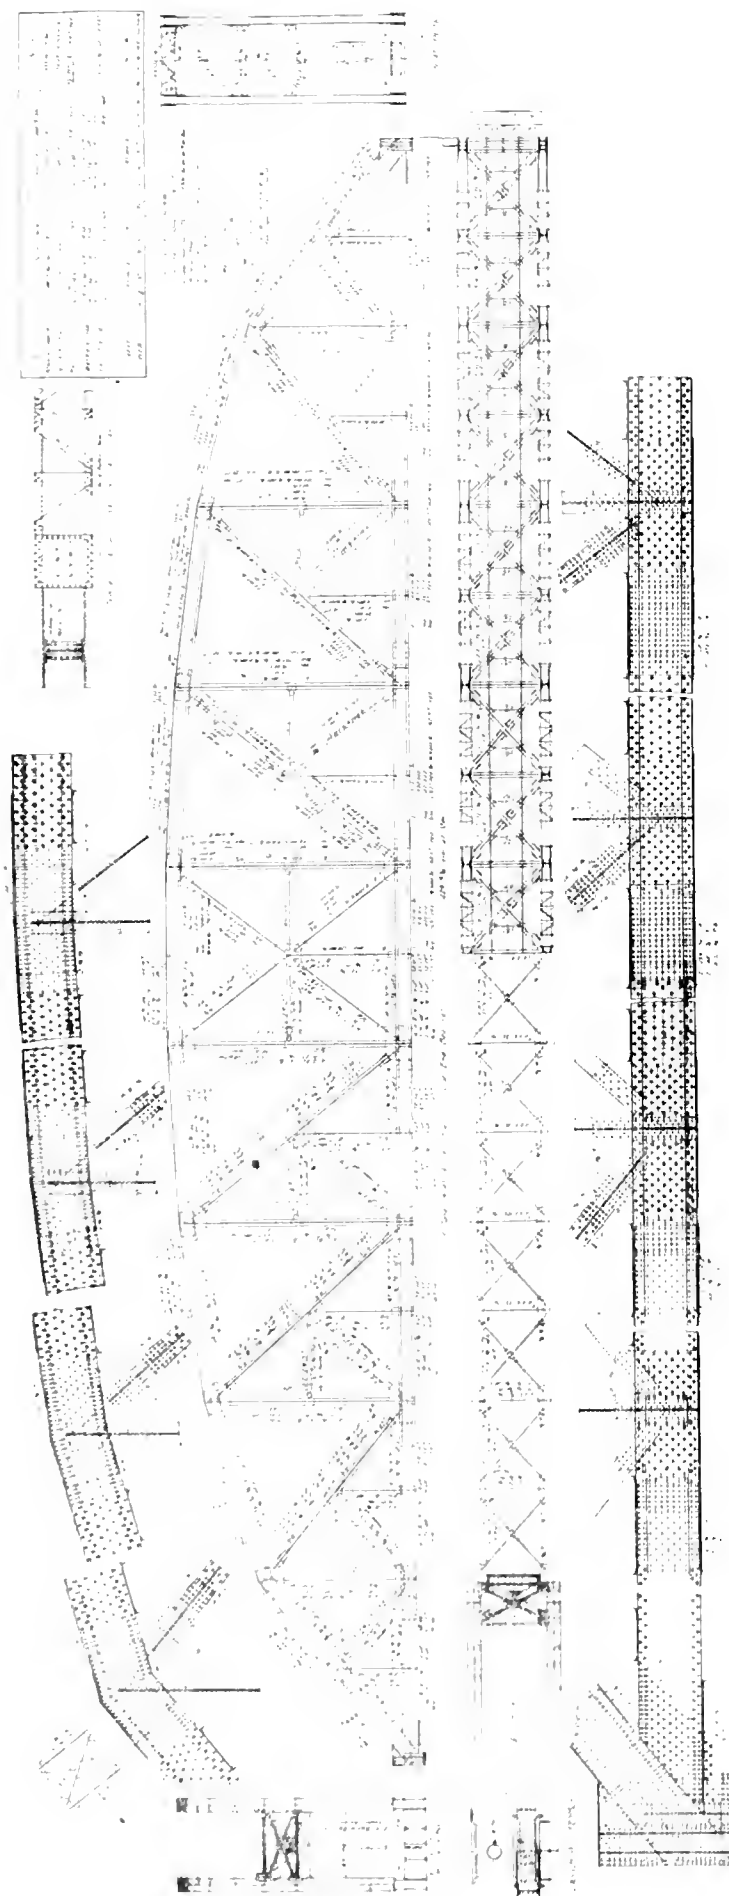

material from an operating point of view, and allowed a valuable saving in masonry from pier 11 northwards.

ERECTION.—One of the most important problems in the work was the maintenance of traffic during the erection of the steel-

out the work without interference with traffic, it was decided to erect first, all spans on the downstream side from the north abutment to pier 7 (See diagram A, plan 2.) When this was done the two new 120 ft. spans between piers 6 and 7 were moved

15, and 15 and south abutment. After these were finished, the 408 ft. downstream spans were erected on top of the 270 ft. spans, as shown in the photographs and in diagram E, at the lower portion of plan 2.

The modus operandi in connection with

Plan 3—Lachine Bridge, C.P.R. Diagram of Stresses and Material of 400 ft. Span.

these 408 ft. spans constitutes one of the most interesting portions of the work. The scheme was to launch the span endwise with its rear end supported upon an ingenious truck or buggy, while the forward end was supported on a large scow of special design. In order to avoid overstraining the adjacent 270 ft. span by the concentrated loads of the sliding gear, an ingenious framed structure was devised by which it was possible to so distribute the end reaction over the floor system of the carrying span, that no part would be strained over allowable limits. A diagram of this truck or buggy is shown on plan 5, from which it will be noted that the secret of the construction lies in the fact that there is no vertical tie inside the triangulation but, in its place there is an exterior strut, which by reason of the proportions of the members, carries a reaction which is equal to the reaction at each of the outer ends of the triangulation. Thus, there is a three point bearing with equal reactions. The skidways consisted of 8-100 lb. greased rails (2 sets of 4), on which cast steel skids or slippers were imposed. The scheme was to move the span forward until it came to the last panel of the 270 ft. span, where, of course, the front bearing of the three would naturally tend to pass overboard. In order to satisfy all conditions, the two outer bearings were here abandoned, and the span

wedged up on the centre bearing only. The whole reaction being thus concentrated on one point required the end panel of stringers in the 270 ft. spans to be reinforced. Details of this floating operation will be referred to later. The 120 ft. spans were erected by means of a temporary span, as shown on general diagram E, on plan 2. The 240 ft. spans were erected by the same 120 ft. temporary trusses supported upon a wooden pier in the centre, as shown, between piers 7 and 8, and in the photographs. The 270 ft. spans were erected by these same 120 ft. temporary trusses supported on a temporary tower about 30 ft. wide, as shown on diagram between piers 11 and 12. The only falsework at any time in the river being the towers as shown, and at no time was railway traffic placed upon the temporary falsework. This was required by the railway company from the beginning of the work.

The four 408 ft. spans were alike in weight and general characteristics, but two methods differing somewhat in detail were used in launching them. The two downstream spans were launched on the same set of carrying scows, but with a pilot scow upstream to take up the slack in the cables and to otherwise control the movement of the spans during launching. The experience gained in launching the two downstream 408 ft. spans led to the abandon-

ment of the pilot scow for the placing of the upstream spans. Under this arrangement the new spans were allowed, while travelling, to rub along a specially prepared vertical skidway bolted to the lower chords of the downstream spans already in place. Details of the actual operation of launching are clearly shown in the plates and in the photographs.

The carrying scow was really composed of two independent scows with two 100 ft. deck plate girder spans (4 girders) placed on them, to equalise the load over the two scows. On these equalising girder spans was erected a stiff timber tower on which the span itself was carried. Anchors, each composed of concrete blocks securely strung together, weighing approximately 76 tons out of water or 52 under water, were placed about 1,500 ft. upstream from the bridge, and generally respectively in line with piers 12 and 13, but on the land above pier 14 a "dead man" was used composed of an I beam embedded in the rock. On the main carrying scow a dynamometer was inserted in the reaving of a 14 roped tackle which was attached to the main anchor line, in order to record the pull on the anchor ropes. The readings taken from this dynamometer fully corroborated experiments which had previously been made regarding the resistance of floating bodies to the current in the river. They also agreed generally with

Proudes formula $R = \frac{V^2}{g}$ see plan 6. The current in the river varied between 5 and 8 miles an hour, according to the location where the meter was used.

DETAILS OF LAUNCHING OPERATIONS.—When all was ready, an ordinary Lidgerwood unloader, such as is used on railway work, was located and struttled in a position where a direct pull could be made from the drum of the engine. Communication was at all times maintained between the man in charge of the Lidgerwood engine, those in charge of the scows and the man in full charge of the operations, by means of a system of flag signals. The span was started by a number of jacks, after which the Lidgerwood engine controlled the whole of the movement and at no time was there any unexpected trouble. While the span moved forward the anchor cables allowed the anchor scow to float across the current with a radial motion. This necessitated the cable connecting the anchor scow with the main scows to be constantly shortened in order to maintain the true alignment of the span. As has already been stated, this anchor scow was used only in connection with the floating of the two downstream 408 ft. spans. It was omitted when floating the upstream 408 ft. spans, which were allowed to rub against the neighboring spans already in position.

The adjustment of the anchor cables was made as required. The time occupied in the floating operations is extremely interesting:—

ACTUAL WEIGHTS See Plan 1.

350 ft. d. p.g. Spans for Double Track	613,672 lbs.
8-120 " d. truss spans "	3,914,781 lbs.
4-240 " " " " "	7,710,077 lbs.
2-270 " " " " "	5,414,681 lbs.

2-400 " thro. truss spans "	10,201,135 lbs.
2-122 " d. truss spans for "	518,585 lbs.
Total weight of superstructure	25,467,931 lbs.

The total weight of each 408 foot span

Plan 4.—Lachine Bridge, C.P.R. Stresses, Material and Typical Details, 270 ft. Deck Truss Span.

while launching was 1,300 tons. During each of the operations, all the regular trains were allowed to pass on the adjoining spans, which necessitated stopping the floating operations, because the work of signalling and superintendence was interfered with. The difference between the net time and the gross, was occupied in overhauling cables, taking up slack, and in dismantling some of the steelwork connected with the special truck or buggy when it reached the last panel of the 270 ft. span. At this point, it was necessary to remove certain steelwork which became no longer necessary on account of the load being shifted, from a 3 point to a 1 point bearing. A diagram of this buggy is shown on plan 5. The perfection of the control under which the span was at all times, is exemplified by an incident which occurred during one of the floating operations. The span had reached a point 3 ins. short of its correct

location, and after the necessary signalling over the intervening distance of nearly 800 ft. the Lidgerwood engine driver made exactly the 3 ins. movement called for, no more and no less. This is remarkable considering the tonnage being handled. As has already been stated, the 408 ft. spans were skidded upon the deck of the adjacent 270 ft. deck spans, and after each pair of the large spans (on one track) were floated into correct location they were at an elevation approximately 12 ft. higher than their permanent levels. This required that they be jacked down to their correct bridge seat levels, which was done by means of 150 ton jacks and blocking, the end floor beams having been designed for this purpose as were also the end cross beams of the 270 ft. spans. The 240 ft. spans were also provided with special end bracing to enable them to be jacked up on the piers, if necessary, during erection. The

time occupied in erecting the steel was as follows:—
 March, 1911.—Erection started at north end.
 May 28, 1911.—New 120 ft. spans moved into upstream alignment replacing old 210 ft. span between piers 6 and 7.
 July 6, 1911.—Traffic diverted to downstream track between piers 6 and 7.
 Nov. 12, 1911.—New downstream span between piers 10 and 11 slewed over, thereby releasing old spans between piers 7 and 11.

Mar. 31, 1912.—Span 10-11 moved into upstream alignment allowing erection to proceed on downstream spans 10-11.
 June 18, 1912.—Span 14-15, and 15-south abutment erected.
 July 13, 1912.—Downstream spans 10-11 and 11-12 erected.
 Nov. 4, 1912.—Downstream 408 ft. span 13-14 floated.

Nov. 22, 1912.—Downstream 408 ft. span 12-13 floated.

April, 1913.—Started taking down old spans between pier 11 and south abutment.
 June 10, 1913.—All old steel dismantled.
 Sept. 18, 1913.—Upstream 408 ft. span 1-2 floated.

Oct. 6, 1913.—Upstream 408 ft. span 13-14 floated.

Nov. 4, 1913.—All new steel erected and double track put into service.

The total weight of metal work in the old bridge was about 4,100 tons, in the new it was 11,231 tons. The total quantity of masonry and concrete in the original piers and abutments was approximately 12,400 cubic yards. In the additions to old piers and in new piers there were 13,300 cubic yards. The total length of the bridge and height above watermarks were not changed, and are indicated on the plates. The number of rivets in the new bridge is ap-

Plan 5.—Lachine Bridge, C.P.R. Scheme for Launching 400 ft Span

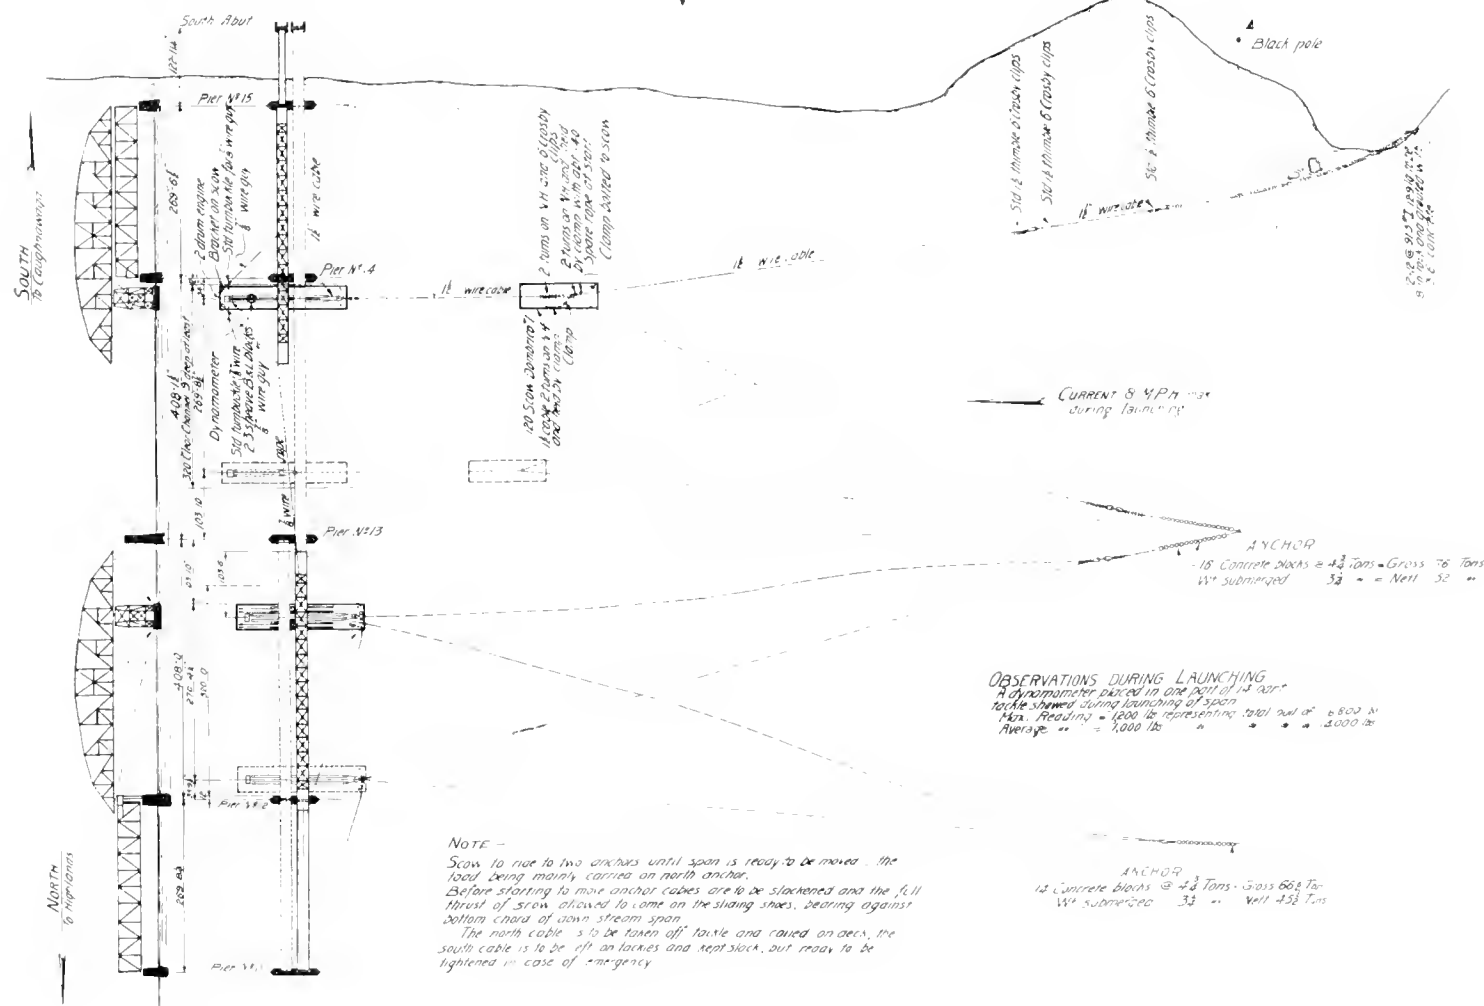

SCOW RESISTANCE
FROUDE'S FORMULA $R = f \cdot s \cdot \left(\frac{V}{69}\right)^2$

R = resistance in lbs
 S = wetted surface sq ft
 V = current vel in mph
 f = constant (by experiment .725)

For erection barges in Lachine current
 $S = 10800$ for 46' draft
 $V = 9.5$ mph (7.5 actual)
 $R = .925 \cdot 10800 \cdot (.75)^2 = 13000$ lbs

Wind force on Scow
Area of 4 Trusses = 3000 sq ft
Area resisted by scow = 13000 - 8700 sq ft
Wind at 25 mph = 25 lbs per sq ft gives force on scow = 21900 lbs
35 = 43,500 lbs
50 = 67,500 lbs

The design of all anchor equipment is based on scow resistance of 100,000 lbs

Plan 6.—Lachine Bridge, C.P.R. Location of Anchors, Scows, Etc.

proximately 3,500,000. As far as can be ascertained from the records, about 3,500 cars were used in transporting stone and steel to the bridge. These cars would, if placed in a single train, extend over a distance of 21 miles.

One of the noteworthy performances during erection was the speed with which the 5 old spans between pier 11 and the south abutment were dismantled and the new spans erected. This was done between

was responsible, as Engineer of Bridges for the C. P. R. Company.

This record of the rebuilding of this work should not be concluded without referring to the place it occupies among the world's more important bridges. At the time of the erection of the first bridge, recently removed, the work was considered a remarkable example of the creative skill of the engineer. Today the old structure, in view of the experience of the last 20

National Transcontinental Railway Car Shops at Transcona.

In the first and second instalments of this article, which appeared in the February and March issues, respectively, there were described the following shops and buildings at Transcona, Man.: freight car, passenger car, passenger car paint, paint stores, planing mill, lumber shed, dry kiln, upholstering and nickel plating shops, and the car department offices.

The Wheel and Machine Shop is a standard building, 70 by 160 ft., with concrete lower wall, superimposed by an upper brick wall, and spanned by steel trusses, at 20 ft. centres, which divide the shop crosswise into sections of that width. The lower chord of the steel spans clears the floor by 24 ft. 8 ins. The depth of the roof span at the centre is 7 ft., dropping to 5 ft. at the wall. A 23 ft. wide skylight extends down the centre of the shop, surmounted by a 24 in. copper ventilator over each section, in the peak of the skylight. There are four doors to the building, all 12¾ ft. wide, one in each

of speed, power hub facing attachment, and power crane. Equipped with expansion boring bar. Motor driven.

W4 and W5 Double axle lathe, to turn 8 ft. 4 ins. between centres. Hole in revolving head 12 ins. Variable automatic feeds. Equipped with overhead crane. Motor driven.

W6 200 ton hydraulic wheel press. Maximum distance between tie bars, 66 ins. 9 in. ram. Distance between ram and resistance post, 8 ft. Equipped with hoist. Motor driven.

W7 and W8 42 in. steel tire coach wheel lathe. Designed for turning steel tire car wheels from 28 to 42 ins. diameter. Maximum centre, 7½ ft. Equipped with heavy self centring chucks for gripping journals, and 4 jawed chucks to grip tires. Fitted with four sets of bushings, 3¾ by 7 ins., 4¼ by 8 ins., 5 by 9 ins., 5½ by 10 ins., for M.C.B. standard journals. Equipped with automatic gap piece, opened and closed by

pump. Motor driven.

W16 30 in. heavy standard engine lathe. Maximum 7½ ft. between centres. Motor driven.

W17 18 in. heavy duty engine lathe. Maximum 4 ft. between centres. Taper attachment. Independent 4 jaw chuck. Motor driven.

W18 6 ft. triple geared universal drilling and tapping machine. Drill head of the full swing type, mounted on base that can be revolved from a vertical to horizontal position. Motor driven.

W19 6 ft. strong and powerful radial drilling, boring, tapping and studding machine. High carbon, high tensile strength spindle, accurately ground, truly cylindrical in dead centres, and carried in a large sleeve in which it is firmly supported when out at maximum traverse. Gearing cut from solid. Motor driven.

W20 72 by 72 in. by 16 ft. open side planer. Two heads on cross rail, and one on column. Motor driven.

W21 6 spindle automatic cock grinding machine. Capacity from ½ to 3 in. valves.

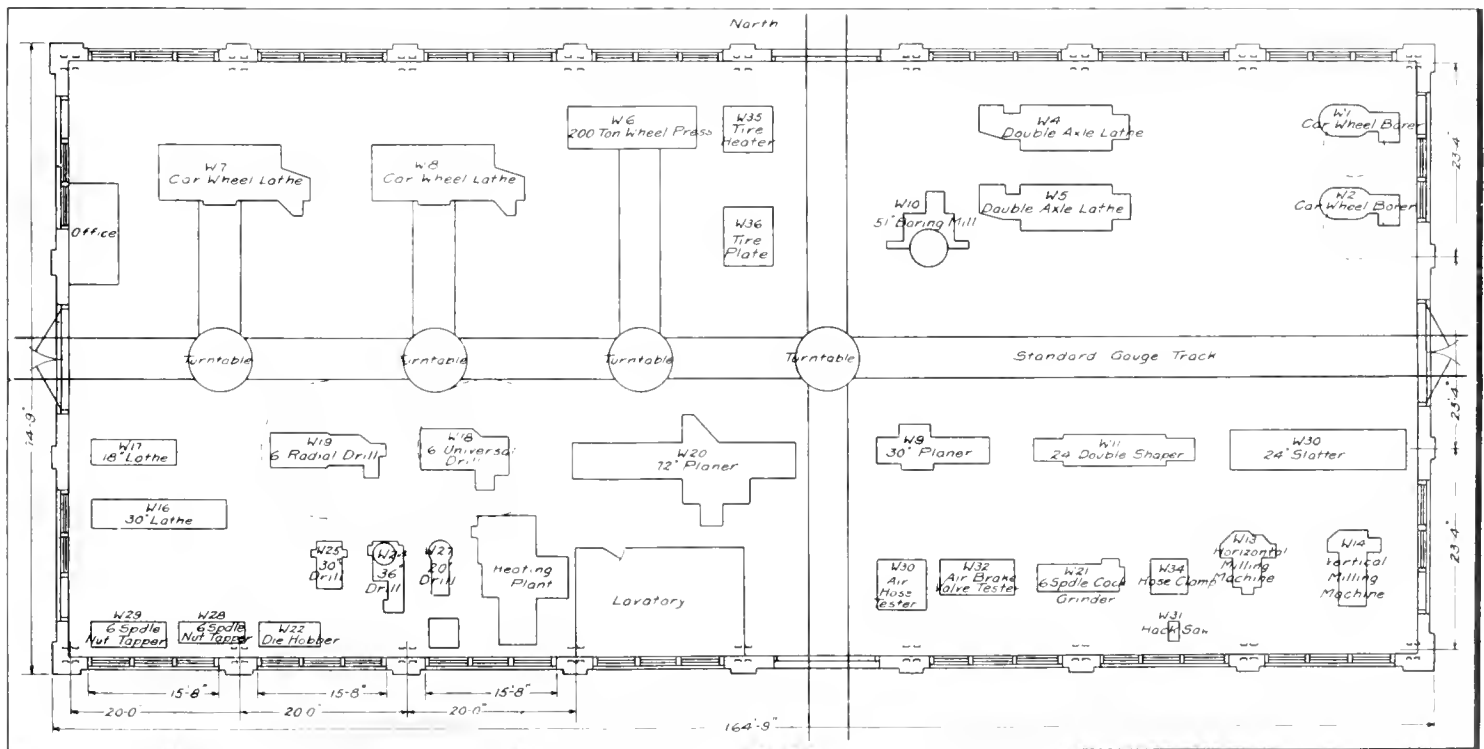

Fig. 10.—Plan and Machinery Location of Wheel and Machine Shop.

end and side. The end doors, for the standard gauge entry tracks, on which the raw material is brought into the shop, are double swinging doors. The side doors are of the same size, but slide upward inside the building in balanced ways. The shop is spanned by a 10 ton crane, that runs the length of the shop on crane girders, the rails of which are 17 ft. above the floor level.

Along the south wall, inside the building, is a low structure, 13 by 20 ft., containing the foreman's office, and lavatory facilities. Adjoining this structure on the west is a 9 ft. heating fan, connecting with a concrete heating duct running along that side of the shop, with a line running directly across the shop, and along the other wall. Under each window, midway in each section, there is an 18 in. square grid for heating.

The machinery equipment of the shop is as follows:—

W1 and W2 Car wheel boring machine. To bore wheels up to 42 ins., with 48 in. swing. Table has 5 chuck jaws, 6 changes

the movement of the axle in and out of position. Pneumatic tailstock and tool clamping attachments. Wheel lifting device operated by separate motor. Motor driven.

W9 Planer. 8 ft. table. Distance between housings and height under cross rail, 30 ins. Motor driven.

W10 Boring and turning mill. 53 in. swing and 51 in. table. Greatest height under tool holder, 36 ins. Bar travel, 24 ins. Motor driven.

W11 Double traverse head shaper. 12 ft. bed, 36 ins. deep. Motor driven.

W12 Double emery grinder. Wheels, 12 by 2 ins. Motor driven.

W13 Horizontal milling machine. Working table surface, 60 by 18 ins. Longitudinal feed, 40 ins. Cross feed, 14 ins. Greatest height of spindle, 20 ins. Equipped with full set of cutters, and pump. Motor driven.

W14 Vertical milling machine. Working table surface, 60 by 20 ins. Longitudinal feed, 50 ins. Traverse feed, 20 ins. 24 in. circular table, with automatic and cross feeds. Complete set of cutters and lubricant

Spindles independently operated. Handles angle cocks, plug valves, or valves with disc sides. Motor driven.

W22 Die hobbing machine. Equipped with right and left hand die taps from ⅜ to 2 ins. Motor driven.

W23 New Yankee drill grinder. Capacity up to 3½ ins. Complete equipment, including point thinning attachment. Motor driven.

W24 36 in. back geared high duty drill. Capacity for high speed drills up to 2½ ins. in solid steel to their full capacity. Equipped with pump, etc. Motor driven.

W25 30 in. high duty drill. Drive in base of column, and transmitted to spindle by vertical shaft and bevel gears. Working surfaces of compound table, 20 by 36 ins. Motor driven.

W27 20 in. back geared drill. Power and hand feeds. Motor driven.

W28 6 spindle semi-automatic nut tapper. Capacity from ⅜ to 1 in. square or hexagon nuts. Equipped with pump and set of taps. Motor driven.

W29 6 spindle semi-automatic nut tapper. Capacity from $\frac{3}{4}$ to $1\frac{1}{2}$ in., square or hexagon nuts. Equipped with pump and set of taps. Motor driven.

W30 Geared slotting machine 36 in. circular table. Motor driven.

W31 Universal power hack saw. Capacity up to 6 in. round bars. Quick return and automatic lifting device. Circulating pump.

W32 Improved triple valve testing machine.

W33 Air hose press machine.

W34 Hose clamping machine.

W35 Tire heater. Capacity up to 36 in. tires.

W36 Tire plate.

W37 Car axle grinding machine. Especially designed for grinding new car axles to standard specifications, and for the repairing of standard car axles. Weight about 23,000 lbs. Motor driven. This machine has not been definitely decided on as yet, owing largely to its cost. All of the foregoing list of machinery is on order, the contracts having been signed some time ago.

A standard gauge track runs the length of the shop, connecting through the front of the shop with the southerly track into the freight car shop, across the midway, over

extension by the addition of a third unit to each group.

The Forge Shop is 100 by 260 ft., of the usual concrete subwall, brick upper wall, and spanned by steel trusses at 20 ft. centres. It is centrally situated on the east side of the midway between the locomotive and car departments, the locomotive department occupying the greater portion, as reference to the previous article on that department will show. The car department equipment is contained in the north side of the building, principally toward the west end. The 100 ft. truss spans have a clearance above the cinder floor of 24 ft. 8 ins. The central depth of the span is 10 ft., sloping off to a 7 ft. depth at the side walls. Down the centre of the roof, there is a monitor roof, 20 ft. wide, and 10 ft. deep, with a 36 in. cast iron ventilator over each section. With spacious windows in the side and end walls, and the windows along the sides of the roof monitors, the shop is well lighted.

The shop interior is well served by a 2 ft. service track. Through the centre, running lengthwise of the shop, there is a track, with a connection through the centre of the north wall to the outside through that side

F5 100 lb. rubber cushioned hammer. Average blows per minute, 275. Motor driven.

F6 Double end punch and shear. 15 in. throat. To shear 8 by $1\frac{1}{4}$ in., punch $2\frac{1}{2}$ in. hole in $1\frac{1}{2}$ in. plate. Complete with shears and 12 punches and dies from $\frac{5}{8}$ to 2 ins. Motor driven.

F7 Quick acting guillotine frame bar shears. 30 ins. wide. Shears for cutting round bars from $\frac{1}{2}$ to $2\frac{1}{2}$ ins. 3 sets of shears. Motor driven.

F8 Special spring stock shear. Guillotine type, with capacity to shear 6 by $\frac{5}{8}$ in. block. Motor driven.

F9 $2\frac{1}{2}$ in. double bolt cutter. For tapping and threading from $\frac{5}{8}$ to $2\frac{1}{2}$ in., right or left. Complete with pump and two sets of right hand and one set of left hand dies from $\frac{5}{8}$ to $2\frac{1}{2}$ ins., and one set of each of right and left nut taps. Motor driven.

F10 $1\frac{1}{2}$ in. triple bolt cutter. For tapping and threading from $\frac{3}{8}$ to $1\frac{1}{2}$ ins., right or left. Complete with pump and two sets of right and one set of left hand dies from $\frac{3}{8}$ to $1\frac{1}{2}$ ins., and one set of attachments and four dies for threading coach screws $\frac{3}{8}$, $\frac{1}{2}$, $\frac{5}{8}$ and $\frac{3}{4}$ in. Motor driven.

F11 1 in. double bolt cutter. For tapping and threading $\frac{1}{4}$ to 1 in., right or left. Complete with pump and two sets of right hand dies from $\frac{1}{4}$ to 1 in. Motor driven.

F12 2 in. bolt pointing machine. For pointing bolts and studs from $\frac{1}{2}$ to 2 ins. Complete with pump and cutting tools from $\frac{1}{2}$ to 2 ins. by 8ths. Motor driven.

F13 $1\frac{1}{2}$ in. bolt pointing machine. For pointing bolts and studs from $\frac{1}{2}$ to $1\frac{1}{2}$ in. Complete with pump and tools for bolts from $\frac{1}{2}$ to $1\frac{1}{2}$ in. by 8ths. Motor driven.

F14 1 in. bolt pointing machine. For pointing bolts and studs from $\frac{1}{4}$ to 1 in. Complete with set of tools from $\frac{1}{4}$ to 1 in. Motor driven.

In conjunction with the foregoing machines, there are the following forges:

Continuous rivet furnace. 2 ft. 7 ins. by 16 ft. long, chargeable from either end.

Furnace for bulldozer. 5 by 8 ft. inside.

Furnace for $2\frac{1}{2}$ in. forging machine. 4 by 2 ft. inside.

Furnace for 1 in. forging machine. 4 by 2 ft. inside.

Furnace for rubber cushioned hammer. 4 by 2 ft. inside.

The Nickel Plating and Brass Finishing Shop is situated in the gallery of the locomotive and machine shop, away from the car department buildings. It contains the following equipment:

Nickel plating.

Buffing machine. Driven from line shaft.

Buffing machine. For scratch buffing.

Driven from line shaft.

Sand blast machine.

Plating dynamo. 338 amperes. Driven from line shaft.

Brass finishing.

Turret lathe. 1 by 10 in. with 6 ft. bed.

Driven from line shaft.

Fox lathe. 6 in. swing, 8 ft. bed. Driven from line shaft.

Turret lathe. 1 7-16 in., with 6 ft. bed.

Driven from line shaft.

14 in. shaper. Driven from line shaft.

16 in. vertical drill. Driven from line shaft.

Two buffing wheels. Driven from line shaft.

Lacquer oven. Suitable size for drying general run of small work.

The Car Department Office is a building similar in size and design to that of the motive power office building, and is situated to the south of the planing mill, back some distance from the midway, a location necessitated by the rearrangement of car department buildings which W. J. Press, Mechanical Engineer, made shortly after

Fig. 11—Cross Section of Wheel and Machine Shop

which the mounted wheels can be removed from the shop without trucking. There is no connection from the shop to the rear. At right angles to this through track, there is a track crossing the shop, in one of the central sections, passing through side doors, to the local storage space outside. A central turntable connects the cross tracks. Leading from the lengthwise track, and connecting with it through turntables, there are tracks leading into each of the wheel lathes, and also into the wheel press, making it very convenient for handling the mounted wheels in and out of the machines.

Most of the machinery, it will be observed, is well grouped according to continuity of handling, and so as to minimize the amount of handling between operations. This is especially emphasized by the arrangement along the north side of the shop. At the west end are the wheel lathes for the steel wheel turning. At the other end, are the car wheel bidders for the cast iron wheels, with the axle lathes adjoining. Nearly midway in the shop length, is the wheel press for assembling the wheels and axles. The arrangement of the car wheel bidders and axle lathes at the east end is capable of

door. Another service track runs midway down the shop in the section north of the central shop track. This track crosses the north and south track, and also has two other north and south connections as shown, these cross connections passing through the car department forge shop principally, as the work to be handled for the car shop is of a small nature principally, and can be carried away in lots on service track lorries.

The equipment of the forge shop for car department use is as follows:

F1 Automatic feed continuous motion loading machine. Capacity up to 1 in. rivets. Set of dies from $\frac{1}{2}$ to 1 in. Motor driven.

F2 Improved $2\frac{1}{2}$ in. bolt heading, upset and forging machine. Dies for bolts from 1 to $2\frac{1}{2}$ ins. by 8ths. To be used for making rivets, hexagon and square head bolts. Motor driven.

F3 1 in. bolt heading, upsetting and forging machine. Capacity for heading up to 1 in. bolts at one blow. Set of dies for $\frac{3}{4}$ to 1 in. by 16ths, for square and hexagon head bolts. Steel gear, motor driven.

F4 Bulldozer. Crosshead face, 12 by 63 ins. 20 in. stroke. Motor driven.

taking hold of the work. In the initial layout, the office faced on the midway, but the present arrangement of shop buildings was considered to be preferable to the former, even at the cost of moving the office back from the midway.

It is a brick structure with steel interior frame, 60 by 68 ft., consisting of two stories and basement. The basement contains the storage and lavatory accommodation. The ground floor has offices for the department's officials and clerks, and on the first floor is the draughting room, file room and blue-

tion of the necessary equipment and the Intercolonial to undertake, without charge, such deadhead movements as may be necessary to properly care for the traffic; it being agreed that the C.P.R. will not be asked to hold its cars in Halifax more than seven days at any one time. The I.R.C. will assume the cost to transfer of baggage between cars and shed floor. The I.R.C. will pay the same rental and other charges on cars in this service as at present paid on C.P.R. equipment handled over the line between St. John and Halifax. The C.P.R.

Fuel Consumption on Steam Railways in 1912-1913.

The statistics of fuel consumed on the steam railways for the year ended June 30, 1913, are given in a little more detail than in former years, and show some interesting developments.

The total weight of fuel consumed was 9,263,984 tons, the cost of the same being \$28,426,355, against 7,783,736 tons, costing \$24,180,823 in the previous year. Distributed among the different classes of locomotives the consumption was:

	1912-13, Tons.	1911-12, Tons.
Freight	5,361,839	4,480,042
Passenger	2,249,320	1,984,128
Mixed trains	502,631	407,011
Switching	1,138,531	890,650
Construction	11,663	21,150

Total

The cost of fuel for road locomotives was \$25,089,415, and for yard locomotives, \$3, 336,910. The average cost of fuel was \$3.07 a ton, against \$3.15 a ton in 1911-12. This calculation, however, is subject to qualification. In 1912-13 there were 31,078,252 gallons of oil used, against 1,729,577 gallons in 1911-12. The coal equivalent for oil has not been definitely determined, and there is a slight confusion in the returns for that reason. The bringing of oil into use as a fuel on a relatively large scale within recent years will inevitably lead to an early re-casting of the fuel accounts. The following table gives the quantities of each class of fuel used by the different classes of locomotives, and the mileage run:

	Consumption, Tons.	Per 100 Miles, Cost \$ c.
Freight	8.31	25 51
Passenger	4.80	15 01
Mixed trains	5.59	17 16
Switching	4.47	13 72
Construction	5.46	16 76

The average weight of fuel used by each class of locomotive, and the cost of the same per 100 miles run are given in the following table:

Class of Locomotives	COAL.		WOOD.		OTHER FUEL		Total.	Miles Run
	Anthracite.	Bituminous.	Hard.	Soft.	Oil.	Charcoal.		
	Tons.	Tons.	Cords.	Cords.	Gallons.	Bushels.		
Freight	1,208	5,223,973	463	21,057	20,153,877	70,562	5,361,839	64,541,731
Passenger	754	2,156,069	470	10,758	9,103,495	55,120	2,249,320	4,926,357
Mixed train	1,465	494,547	68	3,238	489,720	4,597	502,631	8,981,130
Switching	1,235	1,124,857	5,591	1,320,382	27,070	1,138,531	25,456,533
Special	11,517	33	19,778	179	11,663	213,770
Total	4,662	9,040,963	1,001	40,647	31,078,252	157,528	9,263,984	145,119,721

NOTE: One and one half cords hard wood equal one ton. Two cords soft wood equal one ton.

through the Halifax elevator shall pay the usual elevator charge current at other points. The C.P.R. will assume the clerical work, the checking, waybilling and accounting. The I.R.C. will pay the usual per diem, or other charge on freight car equipment engaged in this business and also all loss or damage which may occur to the freight while in transit between Halifax and St. John.

The I.R.C. will provide the necessary berthing accommodation for the C.P.R. and Allan Line ships and will make no greater charge for wharfage and dockage dues than is charged other steamship lines. This arrangement will remain in effect from Nov. 15, 1913, to May 15, 1914.

To drill chilled cast iron, a contemporary states that the piece should be laid on a forge, the spot to be drilled covered with sulphur and the blast applied slowly until the sulphur is burned off. The chill will then be drawn and the piece can be drilled.

The American Railway Engineering Association's annual convention was held at Chicago, Ill., Mar. 17-20. The committee reports dealt with included those on rules and organization, signals and interlocking, yards and terminals, roadway, wooden bridges and trestles, iron and steel structures, masonry, track, electricity, wood preservation, grading of lumber, water service, buildings, rail, ties, signs, fences and crossings, conservation of natural resources, economics of railway location, uniform general contract forms, records and accounts, and ballast.

Viaducts Over Great Northern Ry. at Vancouver.—The Vancouver, B.C., City Council has let the contract to the Union Contracting Co. for the erection of what is known as the east end viaducts over the G. N. Ry., at a cost of \$304,936. Four viaducts are to be built, viz., at Hastings, Pender, Keefer and Harris Streets, and the company is to lower its tracks so as to permit of the elimination of the level crossings at these points.

printing room. Vanlts are carried up from the basement, with one on each floor.

The floors are of maple on spruce joists, carried on the walls and steel work. The interior is plastered throughout, and the halls and stairs have a wood wainscoting. The building is heated by direct radiation coils and has incandescent electric lighting fixtures.

The C. T. Pacific Ry. has been using the locomotive department buildings for a year, and some of the car department buildings have also been taken over. J. L. Hodgson is Master Car Builder, Grand Trunk Pacific Ry.

The Intercolonial and Canadian Pacific Traffic Agreement.

The agreement in reference to the transportation of C.P.R. passengers and freight over the I.R.C. between Halifax and St. John, in connection with the four C.P.R. and Allan Line steamships carrying British mails and making Halifax the winter port, about which there has been some discussion in Parliament, was entered into Sept. 30, 1913, between F. P. Gutelius, General Manager, Canadian Government Railways, and G. M. Bosworth, Vice President, C.P.R. We are officially advised that it is for the present winter season of navigation only and has to do with one steamship each week. It does not supersede the traffic agreement which has been in force between the I.R.C. and the C.P.R. for some years in regard to traffic between Halifax and St. John. Following is the text of the agreement:—

The following rates will govern the transportation of passengers:—Passengers and their baggage between Halifax and St. John in either direction on special or regular trains, \$2 first class and \$1.50 second class for each adult passenger, with a maximum earning on this traffic on any one train of \$300. When special trains are run they shall handle, if necessary, up to 12 cars, making same time as regular through trains. The C.P.R. to supply a reasonable propor-

Steam Railway Statistics for Year Ended June 30, 1913.

The table given in our last issue showed the financial results of the operations of steam railways for the year ended June 30, 1913. The following table gives the percentages and the principal statistical information compiled by the companies. The table published last issue and the one given below contain all the information given prior to 1910 in our compilation of these statistics, but the columns have been rearranged so as to combine in the first table the financial and in the second the statistical information:—

Name of Railway	Proportion of total passenger service from revenue to total earnings	Proportion of freight revenue plus switching revenue, &c., to total earnings	Revenue Train Mileage	Mileage of Non-Revenue Trains	Earnings per Train Mile	Passengers Carried	Passengers Carried One Mile	Passenger Earnings per Train Mile	Tons of Freight Carried	Tons of Freight Carried One Mile	Freight Earnings per Train Mile
Algoma Central & Hudson Bay	9.23	53.38	143,384	13,823	\$3.75	35,355	1,609,520	\$0.63	395,537	16,451,300	\$4.02

Birthdays of Transportation Men in April.

Many happy returns of the day to:—

F. G. Adams, Division Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., born at St. John's, Nfld., Apr. 6, 1878.

W. H. Ardley, General Auditor, G. T. R., Montreal, born at London, Eng., Apr. 24, 1858.

Jas. Black, Freight Claim Agent, C. P. R., Vancouver, B. C., born near Seaford, Ont., Apr. 19, 1858.

C. G. Bowker, General Superintendent, Eastern Lines, G. T. R., Montreal, born at Medford, N. J., Apr. 21, 1871.

S. P. Brown, M. Am. Soc. C. E., M. Am. Soc. M. E., Chief Engineer, Mount Royal Tunnel and Terminal Co., Montreal, born at Dover, Me., Apr. 29, 1877.

W. J. Camp, Assistant Manager Telegraphs, C. P. R., Montreal, born at Oakville, Ont., Apr. 22, 1855.

G. Cobb, Superintendent, Reid Newfoundland Co., St. John's, Nfld., born at Coupar Angus, Scotland, Apr. 21, 1885.

A. V. Collins, Canada Steamship Lines, Ltd., Toronto, born at Island Pond, Vt., Apr. 21, 1868.

J. E. Crossley, Travelling Passenger Agent, G. T. R., Montreal, born at Keighley, Eng., Apr. 14, 1879.

W. A. Duff, A. M. Can. Soc. C. E., Engineer of Bridges, Intercolonial Ry., Moncton, N. B., born at Hamilton, Ont., Apr. 20, 1877.

A. E. Edmonds, District Passenger Agent, C. P. R., Detroit, Mich., born at Woodstock, Ont., Apr. 8, 1866.

B. C. Gesner, Moncton, N. B., formerly Air Brake Inspector, I. R. C., now Eastern Sales Agent, Galena Signal Oil Co., born at Cornwallis, N. S., Apr. 23, 1850.

J. Murray Gibbon, General Publicity Agent, C. P. R., Montreal, born at Udewella, Ceylon, Apr. 12, 1875.

V. A. Harshaw, Superintendent, District 1, Atlantic Division, C. P. R., Brownville, Me., born at Mono, Ont., Apr. 26, 1865.

A. Hutton, Superintendent of Car Service, Western Lines, C. P. R., Winnipeg, born at London, Eng., Apr. 12, 1869.

J. M. Horn, District Freight Agent, Canadian Northern Ry., Edmonton, Alta., born at Allanton Mills, Lanarkshire, Scotland, Apr. 12, 1880.

B. S. Jenkins, ex General Superintendent, C. P. R. Telegraphs, Winnipeg, born Apr. 8, 1859.

J. H. Johnston, Superintendent of Bridges and Buildings, Eastern Lines, G. T. R., Mont-

real, born at Uxbridge, Ont., Apr. 22, 1860.

J. Kyle, Master Mechanic, Western Division, Canadian Northern Ry., Edmonton, Alta., born at Toronto, Apr. 11, 1877.

D. McNicoll, Vice President, C. P. R., Montreal, born at Arbroath, Scotland, Apr. 7, 1852.

P. Mooney, General Freight and Passenger Agent, Halifax and South Western Ry., Halifax, N. S., born at St. Catherines, Que., April 19, 1871.

J. O. Norrie, Travelling Passenger Agent, Cunard Steamship Co., Winnipeg, born at Belfast, Ireland, Apr. 20, 1879.

G. D. Perry, General Manager, Great North Western Telegraph Co., Toronto, born at Whitby, Ont., April 19, 1858.

R. A. Pyne, Superintendent of Shops, C. P. R., Winnipeg, born at Toronto, April 10, 1874.

R. S. Richardson, Assistant Superintendent, Intercolonial Ry., Moncton, N. B., born at Napanee, Ont., April 9, 1865.

F. Rioux, Assistant to President, Reid Newfoundland Co., St. John's, Nfld., born at Trois Pistoles, Que., Apr. 18, 1867.

W. A. Ritchie, District Superintendent, Pullman Co., Montreal, born at Edinburgh, Scotland, Apr. 13, 1854.

E. W. Smith, Superintendent, Dining and Parlor Car Service, G. T. R., Toronto, born at North Bridge, Mass., Apr. 21, 1869.

W. S. Tilston, Chief of Montreal Board of Trade Transportation Bureau, born at Manchester, Eng., Apr. 14, 1877.

W. Wainwright, Vice President, G. T. R., and G. T. P. R., Montreal, born at Manchester, Eng., Apr. 30, 1840.

W. Woollatt, Walkerville, Ont., ex-General Superintendent, Buffalo Division, Pere Marquette Rd., born at Weedon, Hertfordshire, Eng., Apr. 2, 1855.

H. J. White, General Car Foreman, Canadian Northern Quebec Ry., and Quebec and Lake St. John Ry., Joliette, Que., born at Brownington, Vt., Apr. 1, 1871.

For gas coal, a smaller grate than normal may be used, but it is better practice a sufficient volume of forebox for proper portion of the front end in order to obtain combustion because nearly all large modern locomotives are deficient in firebox volume.

The most desirable proportion of boiler capacity to aim for is 100%, but if it is to use the larger grate, and brick off a in excess of this, it is optional whether the cylinder proportions should not be increased and the factor of adhesion reduced, provided there is sufficient weight on the drivers.

Regulations Regarding Conduct of Government Railway Employees.

An order in council has been passed respecting the general conduct of those engaged on the Canadian Government Railways, as follows:—

To enter or remain in the service is an assurance of willingness to obey the rules; Obedience to the rules is essential to the safety of passengers and employees, and to the protection of property;

The service demands the faithful, intelligent and courteous discharge of duty;

To obtain promotion, capacity must be shown for greater responsibility;

Employees in accepting employment assume its risks;

The use of intoxicants by employees while on duty is prohibited; the use or the frequenting of places where intoxicants are sold is sufficient cause for dismissal;

The use of tobacco by employees while on duty in or about passenger stations, or on passenger cars, is prohibited;

Employees must always be vigilant to protect, and must promptly report anything detrimental to, the railways' interest.

Railways in Alaska.—The United States Senate has passed an act authorizing the President to arrange for the building of 1,000 miles of railway in Alaska at a cost not exceeding \$40,000,000. The railway is to be from tidewater to the interior of Alaska. In deciding upon the route the President may arrange for the purchase of any existing line, or of any line partially constructed, and is authorized to utilize in the building of the line any of the plant recently used on the Panama Canal. The suggestion is that a line be built from Seward or other point right across Alaska to the Yukon River near Dawson, and that the partially constructed line of the Alaska Central Ry., which the Sovereign Bank, Toronto, now in liquidation, was interested in as the principal bondholder, should be acquired as part of the line.

Railway Lands Patented.—Letters patent were issued during January, covering railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

Acres	
Alberta Central Ry.	3,43
Calgary and Edmonton Ry.	2,211,27
Canadian Northern Ry.	2,103,43

Railway Mechanical Methods and Devices.

Shop Kinks Used on the Canadian Northern Railway.

The accompanying illustrations show several shop kinks used at different points on the Canadian Northern Ry., which have been compiled by H. Ashton, Chief Inspector of New Equipment.

A machine shop crane for serving 90 in. driving wheel lathes in locomotive house machine shops, is shown in fig. 1. It is

feature of difference between it and the usual type of oil heater, lies in the fact that it is so made up that it is practically integral from the oil and air connections to the heater tip, precluding any difficulty from the parts being accidentally parted while in use. The body of the heater comprises a short length of $\frac{3}{8}$ in. pipe inside a slightly longer length of $1\frac{1}{4}$ in. pipe, both tapering to a fine nozzle at the same point. The inner pipe has a $\frac{3}{8}$ in. oil connection, and the outer one, a $\frac{5}{8}$ in. air connection,

in fig. 4. It comprises a copper cylinder, 7 ins. diameter and $7\frac{1}{2}$ ins. long, with a filler hole in top, and a $\frac{3}{8}$ in. discharge pipe connection running down inside the cylinder to near the bottom, connecting at the top with a nozzle, which partakes of the nature of an injector, the compressed air passing up through a pipe handle, spraying the paint through the nozzle on the work. It connects to the regular 90 lb. shop air line.

A novel design for a combination gauge for checking the contour of bearing wedges

Fig. 1.—C.N.R. Locomotive House Machine Shop Crane for Wheel Lathe.

built up of structural steel, the columns being composed of two 10 in., 15 lb. channels, covered with two $\frac{3}{8}$ by 10 in. plates, carried on concrete piers. It is tied together laterally by a 4 in. I beam at each end, and longitudinally, by two 7 in., 15 lb. I beams, on each side, covered top and bottom with a $\frac{3}{8}$ by 10 in. plate, these beams each carrying a 60 lb. rail for the crane runway. Each corner is braced longitudinally by a 5 by $\frac{3}{4}$ in. steel brace. The crane span is 13 ft., and the run 22½ ft. The crane is a 10 in. 40 lb. I beam, carried on four wheels, and is moved the length of the runway by

with its own control valve, close to the body of the heater. A sheet iron hood is attached to the tip end, to concentrate the blast. The joint between the pipe and the casing of the boiler is tightly packed with asbestos.

and brasses, is shown in fig. 5. All the inspectors on the C.N.R. are supplied with these, and have found them most useful. The gauge to the left is for the wedges, and that to the right for the brasses, the lower face for determining the wedge fit, and the upper face, the journal fit.

Mounting Air Hose.—A large number of different machines are in use for mounting air hose, several of which have been described from time to time in Canadian Railway and Marine World. A slightly different scheme is used in the C.N.R. shops, shown in fig. 6, and which, like most hose

FIG. 2.—C N P. Oil Heater for Firebox Patches.

a hand chain. A cross carriage on the crane girder carries a 6 ton air hoist. The span is sufficient to include the narrow gauge track from the locomotive house. It is also used for handling running gear, locomotive trucks and tender trucks. The vertical lift is 5 ft.

An oil heater for small work, such as fitting mudring corners and heating firebox corners, is shown in fig. 2. The principal

Fig. 3.—C N R. Wheel Tongs.

The wheel tongs, shown in fig. 3, are in somewhat general use, several wheel and foundry companies using them in addition to the C.N.R. They are plain tongs, with the added feature of the locking device on the handle, which consists of two links, one of which is a bell crank, pinned to the handle, the pressing of the bell crank to the other handle causing the links to slip past centre, locking the tongs closed.

A paint sprayer of useful design is shown

Fig. 4 —C.N.R. Car Paint Sprayer.

machines, is an improvised device. This model was finally decided on after the different types had been carefully considered. It has the advantage of requiring but small space, and needs but little material that cannot be found around any railway shop. The device consists of a four cylinder arrangement, two vertical and two horizontal, the upper vertical one for clamping the hose, the lower vertical one for squeezing the end clamp rings, and the horizontal cylinders for forcing in the end connecting pieces. On the supporting bench there are two formed blocks attached, in which the

hose to be fitted is placed, the latter being clamped securely in place by similar blocks attached to the end of an equal arm lever suspended from the piston of the upper air cylinder, as shown in the detail view. The operation of this upper cylinder clamps the hose in place. The centre of the hose clamp blocks and the end cylinders are concentric, and in the heads of the piston rods there are receptacles for receiving the hose fittings. The inward movement of the pistons of these end cylinders forces the fittings into the stationary hose. Prior to this operation the clamping bands are slipped over the ends of the hose. The vertical cylinder beneath the table has another equal arm lever attached to the end of the piston rod, and to the outer end of the lever there are attached the lower ends of a pincer arrangement at each end of the hose. These pincers are fulcrumed at the level of the upper surface of the table, and fit over the hose clamps, the depression of the lower cylinder causing the pincers to close, tightening up on the hose clamps, the holding

rising, this has been an expensive undertaking, and has been one of the greatest causes for the introduction in wooden equipment of steel centre sills, and the tendency toward an all steel construction. The recent policy of the C.P.R., when centre sills have been damaged to such an extent as not to be readily repaired by splicing, has

Fig. 5.—C.N.R. Journal Bearing and Wedge Gauges.

been to remove them entirely, and replace with steel centre sills, which can be slipped in place under the damaged car with but little more work than is required in renewing with wooden members.

The C.P.R. has long maintained that sills

sill useless. Quite frequently, however, these cracks do not develop beyond the incipient stage, and it would consequently be a needless expense to replace the whole sill or splice the end. To overcome this trouble, and at the same time place the cars in such a state of repair that they will not be refused at interchange points, this reinforcing member was devised.

As the illustration shows, this member is in the form of an angle iron, formed in the bulldozer from a piece of 5-16 in. plate, 4 ft. 4 ins. by 13 ins., with the flange, 8½ ins. from one end, bent back at a right angle. After the removal of the draft gear this member is fitted to the centre sill, one angle to the lower side, and the other to the outer side of the sill, the right angle bend bearing against the end sill, the truss rod passing through a 2 in. clearance hole in this bent lug. Through the vertical flange there are five ¾ in. bolts, which pass through the sill, binding the latter together laterally. The vertical holes in the sill for the attachment of the draft gear are laid out on

Fig. 6.—C.N.R. Hose Mounting Machine, with Detail of Clamping Heads.

bolts for which can then be applied and tightened up before the release of the cylinders. This arrangement is very flexible, as varying lengths of hose may be handled in the same machine, taking up the difference in length by varying the piston travel of the horizontal cylinders, or shifting their location on the table. As the C.N.R. uses only 22 in. hose, this is unnecessary. A set of 1, 1½ and 1½ in. blocks for these sizes of hose is necessary with the machine. The principal feature of merit in this device lies in the operation developed by the lower cylinder, which is an old 8 in. air brake cylinder. This has a maximum travel of 3 ins., brought about by reducing the regular spring by 8 ins. This article has been compiled from one in the Railway Master Mechanic.

Centre Sill End Reinforcing Member for C.P.R. Freight Cars.

Centre sills of freight cars have always been a subject for study for all car departments, as the expense of maintaining these members has been one of the most vital questions in freight car maintenance, more especially in recent years, when the motive power has been increased beyond the point for which the cars were designed. The starting and bumping strains in a train of freight cars all come through the two centre sills, and this has been the cause of their being frequently broken or split to such a degree as to necessitate renewal, either by introducing an entirely new sill, or else by splicing the sill. With the present high cost of these members, and the cost of labor

that are only slightly split at the ends are still useful, and do not need to be renewed. This opinion is not held by many roads, and difficulty has been experienced at interchange points by the inspectors of other lines refusing to accept these cars, which the C.P.R. claims are quite serviceable. To overcome this trouble, the reinforcing mem

ber shown in the accompanying illustration was devised in the C.P.R. Car Department, the first application being made in Montreal in January. Those who are familiar with car repair work know that the ends of the centre sills have a tendency to develop slight cracks, which, in themselves, are generally negligible, but which sometimes develop to such a degree as to render the

C.P.R. End Reinforcing Member for Slightly Damaged Centre Sills.

ber shown in the accompanying illustration was devised in the C.P.R. Car Department, the first application being made in Montreal in January. Those who are familiar with car repair work know that the ends of the centre sills have a tendency to develop slight cracks, which, in themselves, are generally negligible, but which sometimes develop to such a degree as to render the

of the end sill takes any thrust from the latter into the centre sill without in any way straining the end of the centre sill, and distributes the thrust through a considerable length of the end.

The key block construction of the centre sill is not required in this arrangement, as the vertical bolts from the draft gear, passing through the reinforcing plate, transmit

Railway Development.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alaska Railways.—The bill authorizing the construction by the U.S. Government of railway lines in Alaska, which has been passed by Congress, empowers the President to do practically anything he pleases in order to build railways in Alaska not more than 1,000 miles in extent and at a cost not to exceed \$35,000,000. While one purpose of the railway is stated to be the connection of one or more of the Pacific harbors on the southern coast of Alaska with the navigable waters of the Yukon and with the Alaska coal fields, other clauses give the President discretion to build railways in Alaska wherever he deems their construction is justifiable. While the bill authorizes the President to operate as well as construct the railway through any agency he may select, he is also authorized to lease the railways after completion for terms not longer than 20 years.

The President signed the bill authorizing the expenditure of \$35,000,000 upon the line, Mar. 12. He is reported to have said that an attempt would be made to gather the working force this year, and to have maps prepared showing the various routes proposed and the conditions prevailing along each.

Alberta and Great Waterways Ry.—J. D. McArthur, who is building this railway, is reported to have said in Winnipeg, Mar. 13, that the location of the line has been finally completed to Lac la Biche, a considerable distance from the point of junction with the Edmonton, Dunvegan and British Columbia Ry., and that construction work will be pushed forward as rapidly as possible. There is considerable settlement in the country through which the line will run for about 70 miles from Edmonton, but beyond that it is virgin territory. The region is specially adapted for dairying. (Feb., pg. 69.)

All Red Line Ry.—In connection with the building of this projected railway in Canada, a steamship line is suggested to run from some point on the Atlantic coast to Black Sod Bay in Ireland. Mr. Worthington, the Dublin, Ireland, man who is promoting the project in Ireland, recently made an application to the Midland Great Western Ry. for £15,000 to aid in the building of a line from Black Sod Bay to a junction with the M.G.W. Ry. The shareholders refused to have anything to do with the project. (Dec., 1913, pg. 579.)

Atlin Ry.—The Dominion Parliament has under consideration a bill to incorporate a company with this title to build a railway from the southern end of Atlin Lake, generally southerly to the Taku River, where it intersects the International boundary line between British Columbia and what is called the panhandle of Alaska. The provisional directors are:—Y. Kavanagh, G. W. Mitchell, Ottawa; P. Duryee, Vancouver, B. C.; R. E. Gosnell, Victoria, B.C.; C. W. Baker, Boston, Mass.

Bruce Peninsula Ry.—The Dominion Parliament has under consideration a bill to incorporate a company with this title to build a railway from Wiarton, or from the G.T.R. in Keppel tp., northerly to Tobermory, Ont. The provisional directors are:—J. J. Brown, D. Brown, R. Brown, Owen Sound, Ont.; S. C. Cooper, A. I. Cooper, Lions Head, Ont. (Feb., pg. 69.)

Calgary and Fernie Ry.—Fernie, B.C., press reports state that a start will be made with the construction of this projected railway as soon as the plans have been ap-

proved by the Board of Railway Commissioners. (Mar., pg. 121.)

Calumet and Northern Ry.—The Quebec Legislature has granted an extension of time for the building of this projected railway. (Dec., 1913, pg. 573.)

Canadian Alberta Ry.—The Dominion Parliament has under consideration a bill to incorporate a company with this title to build a railway from Blairmore, Alta., on the C.P.R., northerly and westerly, 14 miles, through townships 8 and 9, range four, west of the 5th meridian, to the section of section 20, tp. 9. The provisional directors are:—G. H. Salmon, C. A. Hancock, R. P. Stockton, R. Smith, J. A. Harvey.

Edmonton, Dunvegan and British Columbia Ry.—It was reported in Edmonton, Alta., Mar. 7, that it was expected that track would be laid to Lesser Slave Lake before the end of March. The putting in of the concrete piers and abutments for the bridge across the Athabasca River is well advanced and it is expected to have the superstructure completed by June 30. The first divisional point will be on the south bank of the Athabasca River, mileage 131. A station building and water tank have been erected, and arrangements are being made for the erection of other divisional buildings. It is also reported that track has been laid for several miles north of the Athabasca River, and that it was expected to have it laid to beyond Sawridge, Mar. 31. (Mar., pg. 121.)

Erie and Ontario Ry.—The route of this projected railway, for the building of which the Dominion Parliament is being asked to grant an act of incorporation, is from Port Maitland, on Lake Erie, to Smithville, Ont., and from Port Maitland to Port Colborne, Ont. The provisional directors are:—W. J. Aikeus, Dunnville, Ont.; J. S. Hamilton, W. T. Henderson, K.C., A. J. Wilkes, K.C., Brantford, Ont. (Feb., pg. 69.)

Farnham and Granby Ry.—Application is being made to the Dominion Parliament for the incorporation of a company with this title to build a railway from the C.P.R. at Farnham, Que., easterly to Granby, thence northwesterly to Windsor Mills or Shefford, connecting either with the C.P.R. or the Central Vermont Ry. Pringle, Thompson, Burgess and Cote, Ottawa, solicitors for applicants.

Esquimalt and Nanaimo Ry.—It was reported in Victoria, B.C., Mar. 10, that track had been laid to Baynes Sound, about 15 miles from the proposed terminal at Courtenay. It is expected that the bridge over Table River will be completed early in April, when it will be possible to complete the track laying into Courtenay. A contract for the erection of the passenger station, freight shed and locomotive house at Courtenay is reported to have been let to Shields and Newham, Victoria. It is expected that everything will be in readiness for the opening of the line to Courtenay early in June. (Dec., 1913, pg. 573.)

Fredericton and Grand Lake Coal and Ry. Co.—We are officially advised that there is no intention to add to the length of the company's railway lines, the only work in contemplation being the usual sidings in connection with the extension of its mining operations. (Dec., 1913, pg. 574.)

Intercolonial Ry.—Press reports state that a rearrangement of the route of the projected line from Sydney to Leitch's Creek is under consideration, that plans are being prepared for the laying out of new deep

water terminals at Sydney and for the rearrangement of the terminal facilities at Sydney and North Sydney, N.S.

It is also reported that surveys are in progress for the completion of a second track between Halifax, N.S., and Moncton, N.B. An Ottawa dispatch Mar. 12, stated that F. P. Gutelius, in a memorandum to the Department of Railways had shown that by reducing the gradient on the Halifax-Moncton section, and on the Point Tupper-Sydney section, and by the strengthening of the bridges, much heavier loads could be drawn, and the cost of transportation considerably reduced. The dispatch adds that the General Manager has been given authority to have the necessary surveys for this work made on the two sections mentioned.

Another press report states that certain interests are trying to get the Department of Railways to have a survey made for a line which would connect Fredericton with the Maine Central Rd. at Vanceboro, Me.

A resolution was passed in the House of Commons Mar. 16 expressing the opinion that the time had arrived for the extension of the I. R. C. into the non-railway sections of the Maritime Provinces within reasonable range of the railway. (Feb., pg. 69.)

Kettle Valley Lines.—Referring to the map showing the K.V.L. constructed and under construction in our Feb. issue, pg. 80, it appears that section D to E Osprey Creek to Otter Creek Summit, 65.5, has not been put under contract. The reason for this is that negotiations have been in progress for some time with a view of a change in location so as to reach the Hope Mountains by way of Princeton rather than via Aspen Grove. The British Columbia Legislature has authorized this change of route, and the applying of the subsidy granted for the construction of the previously located line to be applied to the new route. The new route will save the construction of 40 miles of line, from which there was very little prospect of traffic, and by building into Princeton would enable connection to be made with the Vancouver, Victoria and Eastern Ry. there. From Princeton the K.V. Lines will be given running rights over the V.V. and E. Ry. for 40 miles. The act also provides for the building of a branch line from near Princeton to Aspen Grove and to the Copper Mountain mining camps. The Premier, in explaining the new proposals to the Legislature, said the railway company is required to build only from Penticton to Princeton, 75 miles, and from Merritt to Otter Summit, about 30 miles, thus relieving the Kettle Valley company from constructing its own line between Princeton and Otter Summit and allowing it to use the tracks of the Great Northern Ry. The subsidy agreement will be varied so that in lieu of the amounts formerly granted the province will pay \$5,000 a mile for the line from Penticton wharf to a junction with the V., V. & E. at or near Princeton, not exceeding 75 miles, and from a junction with the Nicola, Kamloops and Similkameen Ry. at Merritt to Otter Summit not exceeding 30 miles. The branch lines to Aspen Grove and to Copper Mountain will be built when required.

The Minister of Railways, on Feb. 24, approved of a route map for the line from Siwash Creek to Otter Creek Summit, 63.5 miles.

A U.S. press dispatch states that a contract has been let for the construction of the line from Osprey Lake to Coldwater Summit, to Guthrie McDougall & Co., Portland, Ore. (Mar., pg. 121.)

Kettle Valley Ry.—An ice jam sweeping down the Fraser River, on Feb. 12, carried away 250 ft. of falsework which had been erected for the K.V.R. bridge at Hope. Work on the substructure was begun about two

months previously and the falsework had been extended 750 ft. from the south shore. Above Hope the river has been tightly packed with icefloes which had drifted down from the upper reaches of the Fraser, and when the temperature dropped suddenly the whole mass commenced to move. The contractors, Armstrong and Morrison, of Vancouver, had foreseen this occurrence, and one of the costly open caissons which was ready for launching was saved by being secured behind a breakwater. All the men on the work were warned in time to escape, but part of the falsework went out, and in so doing precipitated into the river two hoisting engines, a derrick and a concrete mixer. After some difficulty all this equipment was salvaged and is reported not seriously damaged. The contractors still hope to complete the substructure before high water, which is due about May 1. The bridge is to be a double deck structure supported on four 238 ft. spans.

Lake Erie and Northern Ry.—We are officially advised that no statement has been made by W. P. Kellett, General Manager, to the effect that the line when completed will be operated both as a steam and electric railway, as stated in press reports. It is, however, persistently reported that the line will in the main be operated by electricity, either by an electric locomotive, or by individual gasoline motor cars.

The bridge work at Paris on the Brantford-Galt section of the line was completed Mar. 12, and it was expected that track would be laid into Brantford, Mar. 24. (Mar., pg. 126.)

Lake Huron and Northern Ontario.—The Minister of Lands stated in the Ontario Legislature, Mar. 4, that the Government had been informed that the company had started construction work, but had no official information as to the nature of the operations, or of the progress made. No lands had been sold to the company for settlement under the provisions of the act passed in 1913. (July, 1913, pg. 331.)

Minneapolis, St. Paul and Sault Ste. Marie Ry.—It is reported that the company will put its new Chicago freight terminal in operation April 1. It has been under construction since 1912, and is estimated to have cost \$6,000,000. It covers an area of 18½ acres, of which 17.7 acres are under roof. In its construction, 108,000 cubic yards of concrete were used, and 6,500 tons of steel. All trackage is elevated and the part of the building on the street level constitutes one of the largest storage warehouses in the world. The terminal was constructed by the Central Terminal Co., a subsidiary company of the M.S.P. & S.M.R. line. The existing leased freight terminals at South Water and Lake Streets will be abandoned. Starting the same day, the company's passenger trains will be run into the Grand Central station, instead of the Illinois Central Rd., a contract for 99 years having been made with the Baltimore and Ohio Rd. (Aug., 1913, pg. 276.)

Norfolk and Elgin Ry.—The Dominion Parliament has under consideration a bill to incorporate a company with this title to build a railway from Simcoe to 1.5 miles northwest of Langton, thence to Port Burwell, Ont., and to operate steam and other vessels and car ferries in connection with its line. The provisional directors are: S. F. Adair, W. H. Price, C. M. Garvey, F. L. Somerville, J. Harris, Toronto. (Feb., pg. 76.)

Northwestern Ry. of Canada.—The provisional directors named in the application to the Dominion Parliament for the incorporation of a company with this title are: C. W. MacLean, Pointe Claire, Que.; H. B. Stewart, Beebe Plain, Que.; F. G. Gillespie,

G. B. Holme, F. D. Ames, J. P. Vincent, W. C. Thomson, New York. (Mar., pg. 121.)

Pacific Great Eastern Ry.—The British Columbia Legislature has granted a guarantee of bonds at the rate of \$35,000 a mile for 30 miles of line in addition to the 459 miles specified in par. 4 of the agreement forming schedule A of the original act; and an additional \$7,000 a mile in respect of the line from Vancouver to Fort George, 480 miles, as a second charge on the line, ranking next after the charge created by the deed of July 10, 1912. The 30 miles mentioned is the difference between the original estimate of distance between Vancouver and Fort George, and the actual mileage of the located route. The necessity for the increase of the guarantee of bonds of \$7,000 a mile was stated by the Premier to be the fact that the estimated cost of construction was found on final surveys to be \$58,000 a mile instead of the \$45,000 originally estimated.

The company has authority to extend the line to Peace River, 330 miles, and the Premier explained that this line will form part of a through line from Vancouver to the Yukon, and Alaska. The act aiding the construction of this line provides for the guarantee by the Province of the company's bonds for \$35,000 a mile at the rate of 4½% for 330 miles, more or less. An agreement for the construction of this line, in terms similar to that for the building of the Vancouver-Fort George line, is to be entered into between the Government and Foley, Welch and Stewart.

It was reported, Mar. 10, that it was expected to have track laid to Horseshoe Bay, 13 miles out of Vancouver, by June 30. From that point to Squamish, the terminal at Newport, the line will have to be built through solid rock, and is not to be finished until June 30, 1915. Track has been laid from Squamish to Swift Creek, 14 miles, which includes the seven miles of track laid by the old Howe Sound and Northern Ry. Grading is practically completed to the Pemberton Meadows, 60 miles from Squamish, and to the north east end of Anderson Lake, 30 miles beyond. For 12 miles beyond Anderson Lake there is some heavy rock cutting yet to be done, while beyond to the crossing of the Fraser River, near Lillooet, the grading is finished. The piers and abutments for this bridge are expected to be completed in June. Some grading has been done from the Fraser River crossing to Kelly Lake, mileage 200 from Vancouver. The work on the section from Kelly Lake to Fort George, 280 miles, is comparatively light, and will be gone on with during the summer.

Survey parties are to be sent out early in April from Fort George to locate the projected line to the Peace River, 330 miles. A reconnaissance party, in charge of L. C. Gunn, is now on the field. It is expected that a start will be made on construction in May. (Mar., pg. 121.)

Peace River Tramway and Navigation Co.—In passing through the House of Commons recently, the act of incorporation was changed to authorize the building of a standard gauge railway instead of the narrow gauge one originally contemplated. The total length of the projected line is about 16 miles, which will connect up breaks in the navigation on the Slave and Peace rivers. The principal break is at the Vermillion rapids. (Mar., pg. 122.)

Quebec Central Ry.—An extension of the Q.C. Ry. from St. Sabine, Dorchester County, to English Lake, also called Lac La Frontière, a distance of 25 miles, has been surveyed and located. Plans, profiles, etc., have been deposited with the Railway Department at Quebec, and the location approved of. Ten miles of the line from St.

Sabine to five miles east of St. Camille is under construction, a portion of which was actually built during last year, and the balance of the 10 miles will be completed during this year. It is expected that the other 15 miles will be constructed in 1915, so that the line to English Lake will probably be in operation by the end of 1915. The work is being done under the direction of J. T. Morkill, Chief Engineer, assisted by J. M. Hibbard. The route follows the water shed of the St. John River and is close to the boundary line between the Province of Quebec and State of Maine. At English Lake the line will be within 1,000 ft. of the International Boundary line. It is through a thickly wooded country with rich clay and loamy soil, and well adapted for cultivation when the land is cleared. (Feb., pg. 70.)

Rimouski International Ry.—The Dominion Parliament is being asked to authorize the company to change its name to the Interprovincial Ry. to build a railway from St. Germain de Rimouski, Que., in as direct a line as possible to Edmundston, N. B., and to extend the time for the building of the lines authorized by chap. 129 of the statutes of 1909. Asselin and Asselin, Rimouski, Que., solicitors for applicants. (May, 1909, pg. 173.)

Shefford, Bagot and Missisquoi Ry.—The Quebec Legislature has incorporated a company with this title to build a railway from St. George, on the International Boundary between Quebec and Vermont, to a junction with the Intercolonial Ry. between Bagot and St. Eugene, Que. The provisional directors are:—W. H. Robinson, Granby, Que.; A. R. McMaster, Montreal; J. G. Gibson, Dunham, Que.; A. W. Runnells, Springfield, Mass.; J. E. Runnells, Worcester, Mass. (Jan., pg. 22.)

St. John and Quebec Ry.—The plans of the proposed bridges across the River du Chute and Lake Otanabog, N.B., have been deposited with the registrar of deeds for the counties of Victoria, Carleton and Queens.

At the opening of the New Brunswick Legislature, recently, the Lieutenant Governor said it is hoped that the three sections of the line from Centreville to Gagetown will be ready for operating by June 30. (Feb., pg. 70.)

Taber Transit Co.—J. F. Kramer is reported to have stated in Taber, Alta., Mar. 6, that he is prepared to start construction on the proposed railway from Taber to the coal mines. (Sept., 1913, pg. 433.)

Toronto Union Station.—At a meeting of shareholders of the Toronto Terminals Ry. Co. held in Toronto, Mar. 6, the following directors were elected:—

E. J. Chamberlin, W. Wainwright, H. G. Kelley, representing the G.T.R., and Sir Thomas G. Shaughnessy, D. McNicoll and J. W. Leonard representing the C.P.R. This company has been organized to construct the new union station and terminals at Toronto, in which the C.P.R. and G.T.R. each owns one half interest. All other railways entering Toronto, however, will have the privilege of using the station and terminals upon terms to be arranged. It is officially announced that construction will commence as soon as the preliminary arrangements can be concluded, and the work will be carried to completion as early as the conditions will permit. The company has an authorized capital of \$2,000,000 and bonding powers of \$10,000,000. It is said that the company will take over from the G.T.R. the areas on the waterfront expropriated by that company at the price it paid for them. From the C.P.R. it will take over the lease of the Don tracks. The companies will share equally in the interest charges on capital expenditure. That is, if \$15,000,000

is spent, the C.P.R. will pay 2½% on that amount each year, and the Grand Trunk will also pay 2½%. For operation and maintenance within the limits of the Terminal Co.'s territory, each road will pay on a wheelage basis.

The officers of the company are as follows: President, Wm. Wainwright; Vice-President, D. McNicoll; Secretary, H. Phillips; Treasurer, H. E. Suckling; General Auditor, W. H. Ardley; Chief Engineer, J. R. W. Ambrose.

Vancouver Railway and Ocean Terminal Co.—The Vancouver, B.C., City Council is preparing to oppose the bill which came before the Dominion Parliament, Mar. 21, asking for the incorporation of a company with this title. The provisional directors are said to be five Vancouver financial men. (Mar., pg. 122.)

Western Dominion Ry.—Application is being made to the Dominion Parliament to extend the time within which the company may build the railway authorized by chap. 168 of the statutes of 1912; to ratify an agreement whereby the Alberta Pacific Ry. and the W.D. Ry. were amalgamated, and to authorize the construction of the following branch, lines:—From section 15, tp. 10, range 2, west of the 5th meridian, westerly and northwesterly along the north fork of the Old Man River, to the boundary between Alberta and British Columbia; from section 19, tp. 18, range 2, west of the 5th meridian, westerly along the Highwood River to the boundary between Alberta and British Columbia; from section 35, tp. 19, range 3, west 5th meridian, westerly along the south branch of Sheep River to the boundary between Alberta and British Columbia. O. E. Culbert, Ottawa, is Secretary of the company. (Oct., 1913, pg. 476.)

Winnipeg.—We are officially advised that the contract for building the construction railway from Winnipeg to Shoal Lake has been let to the Northern Construction Co. It was let sooner than was expected, because the Commission realized that it was necessary it should be finished during this year. If this is to be accomplished the contractors must have the work in hand early enough to get their supplies in and camps established before the winter breaks up.

Other contracts for supplies, etc., for the railway construction have been let as follows:—Steel rails, Algoma Steel Corporation; steel splice bars, Steel Corporation of Canada; clearing right of way, E. J. Bawlf, residences for division engineer, J. F. McInnes.

The Commissioners received tenders to Mar. 23 for the supply and delivery of a locomotive with tender, and a snow plough. (Mar., pg. 122.)

Traffic Orders by the Board of Railway Commissioners.

The dates given for orders are those on which the hearings took place, and not those on which the orders were issued:—

Carload Mileage Rates on Grain.

General order 121. Feb. 26. Re complaint of Dominion Millers' Association and Campbell Milling Co. against proposed increase in less than carload mileage rates on grain and grain products, published in tariffs of the railway companies, to take effect Sept. 1, 1913; and General Order 109, Aug. 27, 1913, suspending the increased rates until further order. Upon its appearing that an agreement has been reached between the millers and carriers' representatives for a basis of less than carload mileage rates to apply on grain and grain products in lieu of the rates suspended under order 109, the agreed rates to become effective Mar. 2, 1914. It is ordered

that general order 109 be rescinded from Mar. 1, 1914.

Suspension of Freight Tariffs Removed.

General order 122. Mar. 4. Re general order 116, Dec. 24, 1913, suspending, for the present and pending investigation, tariffs filed by railway companies, increasing the minimum carload weights on buckwheat, oats, bran (in bulk), dried beet pulp, oat hulls (in bulk), pea hulls (in bulk), shorts, beets (except sugar), onions, turnips and potato. Upon the return of the notice calling upon the railway companies to justify the proposed increase in the minimum weights on the commodities referred to, the C.P.R., the Toronto Board of Trade, the G.T.R., and the Canadian Manufacturers Association being represented at the hearing, and upon the report of the Board's Traffic Officer it is ordered that general order 116 be rescinded.

G.T.P.R. Standard Freight Mileage Tariff. 21356. Feb. 12. Re application of Grand Trunk Pacific Ry., under sec. 327 of the Railway Act, for approval of its Standard Freight Mileage Tariff, C.R.C. 21, incorporating and superseding C.R.C. 19, approved by order 20441, Sept. 27, 1913, by an extension of the mileage thereof, to apply between the company's stations in British Columbia between Prince Rupert and Wordsworth, inclusive. Upon the report and recommendation of the Board's Chief Traffic Officer it is ordered that the company's said tariff be temporarily approved, pending judgment in the inquiry into the rates charged generally by railway companies in British Columbia.

Building Papers and Pulpwood Rates.

21402. Feb. 21. Re supplement 40 to C.P.R. tariff, C.R.C. no. E-2353, and supplement 28 to G.T.R. tariff, C.R.C. no. E-2513, increasing minimum on building papers and pulpwood from 24,000 to 40,000 lbs., effective Feb. 23, 1914. Upon the application of the Canadian Manufacturers Association, complaining against the said increases, it is ordered that, for the present and pending investigation by the Board, the said increased minima on building papers and pulpwood be suspended.

Exclusive Use of Drawing Rooms, Etc.

21413. Feb. 24. Re tariffs filed by certain railway companies, requiring additional railway tickets for the exclusive use of drawing rooms or compartments in sleeping or parlor cars. It is ordered that the following schedules, in so far as they affect tolls between points, both of which are in Canada, be suspended, pending investigation by the Board: G.T.R. Tariff, C.R.C. No. E-1989; Wabash Tariff, C.R.C. 818; Wabash Supplement 1 to C.R.C. 818; Central Vermont Tariff, C.R.C. 378; Rutland Tariff, C.R.C. 514; Michigan Central Tariff, C.R.C. 1887; Toronto, Hamilton & Buffalo Tariff, C.R.C. 935; C.P.R. Tariff, C.R.C. no. E-2410; C.P.R. Tariff, C.R.C. no. W-1592; Quebec Central Tariff, C.R.C. 76.

Paper and Woodpulp Rates.

21434. Mar. 3. Re application of Canadian Manufacturers Association complaining against the advanced minimum weights per car on paper, woodpulp, and woodpulp board published in C.P.R. Supplement 40 to its Tariff, C.R.C. no. E-2353, and G.T.R. Supplement 28 to its Tariff, C.R.C. no. E-2513, and order 21402, Feb. 24, 1914, suspending the increased minimum, as provided in the said supplements, for the present and pending investigation by the Board. Upon hearing the matter at the sittings of the Board held in Ottawa this date, the Canadian Manufacturers Association and the C.P.R. being represented at the hearing, and what was alleged; and upon the consent of the said parties, filed, it is ordered that order 21402, in so far as it suspends Supplement 40 to C.P.R.'s Tariff, C.R.C. no. E-2353, be rescinded. That Supplement 44 to C.P.R.

Tariff, no. E-2353, substituting revised minimum weights per car on paper, woodpulp, and woodpulp board, be lawfully in effect from and including Feb. 25, 1914. That, upon the publication and filing of a supplement to G.T.R. Tariff, C.R.C. no. E-2513, substituting similar revised minimum weights on the said commodities for the minimum weight of 40,000 lbs., shown in its Supplement 28, suspended by order 21402, the said order shall lapse and cease to be effective.

Railway Finance, Meetings, Etc.

Atlantic, Quebec and Western Ry.—E. B. Read, Temple Chambers, London, Eng., has been appointed trustee, in place of Hon. C. M. Knatchbull-Hugesson, under the debenture trust deed of June 26, 1905, between the New Canadian Co. and others as trustees. A copy of the indenture, showing Ry. Co.'s line, and the deficit to be provided the change of trustees, was filed with the Secretary of State at Ottawa, Mar. 4.

Canadian Northern Ry.—There has been deposited with the Secretary of State at Ottawa a trust deed securing an issue of the company's 30 year 4½% bonds at \$15,000 a mile on certain lines in Saskatchewan, and dated Feb. 1; and trust deeds supplementary to those dated Jan. 21, 1912; Feb. 10, 1914, and May 18, 1909, securing bond issues and the building of lines in Saskatchewan.

Dominion Atlantic Ry.—Intercolonial Ry.—The lease of the line from Windsor Jct. to Windsor, N.S., known as the Windsor branch of the Intercolonial Ry., to the Dominion Atlantic Ry., expired Dec. 31, 1913. The House of Commons was informed recently that the company had made application for a new lease, and that negotiations were in progress as to terms and conditions.

New Brunswick Coal and Ry. Co.—The New Brunswick Legislature has under consideration a bill providing for the consolidation of all the acts respecting the issue of debentures for the company. The company, on the completion of its line, took over the Central Ry. of New Brunswick and subsequently got into financial difficulties. The property was taken over by the New Brunswick Government, together with its liabilities, and considerable sums were expended on putting the line into good condition and in meeting deficits. The C.P.R. has secured a lease of it for operation in connection with the Fredericton and Grand Lake Coal and Ry. Co.'s line, and the deficit to be provided for up to the date when the C.P.R. entered into possession is \$67,260.49. The bill provides for the consolidation of all the amounts of debentures issued on account of the line and the provision of a special sinking fund for the discharge of the same.

Quebec Southern Ry.—The settlement of the affairs of the old Q.S. Ry. Co. is being proceeded with slowly. The Exchequer Court of Canada is calling upon the creditors of the East Richelieu Valley Ry. to file their claims by April 21. The E.R.V. Ry. was one of the small lines which were amalgamated under the title of the Q.S. Ry., and are now controlled by the Delaware and Hudson Co.

White Pass and Yukon Ry.—A London, Eng., cablegram, Mar. 7, stated that more than ordinary interest was being evinced in the issue of a loan of £70,000 by the company, to take the form of 6% secured notes, redeemable by drawings at par, until Nov., 1918, when the whole issue will be paid off.

Railway Route Map Approved.—The Department of Railways, on Feb. 24, approved the route map of the Kettle Valley Ry., from Siwash Creek to Otter Creek Summit, B.C., 63.5 miles.

Mainly About Transportation People.

J. C. STUART, Assistant to President, Erie Rd., died at Garden City, N.Y., Mar. 4, aged 53.

D'ARCY TATE, Vice President, Pacific Great Eastern Ry., returned to Victoria during March, after a trip to Great Britain.

G. W. STEPHENS, formerly Chairman of the Montreal Harbor Commissioners, is a candidate for the mayoralty of Montreal.

W. H. POOLE, formerly G.T.R. station master at London, and later at Niagara Falls, Ont., died at Niagara Falls, Mar. 13, aged 75.

G. H. STREVEL, one of the earliest railway contractors in Northwestern Canada, died at Portage la Prairie, Man., Mar. 17, aged 79.

J. E. HUTCHINSON, Manager, Canadian Northern Ry., Prince Edward Hotel, Brandon, Man., was on leave of absence for a month during March.

H. E. BEASLEY, General Superintendent, Esquimalt and Nanaimo Ry., Victoria, B.C., returned to duty, Mar. 9, after an absence of two weeks, due to illness.

The engagement is announced of J. J. ASHWORTH, Secretary and Assistant Manager, Canadian General Electric Co., Toronto, to Miss A. L. Cooke.

JAMES PRINGLE, who died at Stratford, Ont., Mar. 3, aged 83, was formerly in G.T.R. service, having been stationmaster of the first station there.

C. H. NICHOLSON, Manager, G.T. Pacific Coast Steamship Co., returned to Vancouver, B.C., at the end of February, after a six weeks trip in Eastern Canada.

ROBERT BRUCE, of Ottawa, Ont., succeeds the late George Brophy as Superintending Engineer of the Ottawa River works under the Public Works Department.

F. H. PHIPPEN, General Counsel, Canadian Northern Ry., Toronto, Mrs. Phippen and their daughter, left Toronto early in March to spend two or three weeks in Europe.

N. S. DUNLOP, Tax and Insurance Commissioner, and Claims Adjuster, C.P.R., Montreal, left there early in March for a trip through Florida and the Southern States.

Miss Helen McNicoll, daughter of D. McNicoll, Vice President, C.P.R., Montreal, has had two of her pictures accepted by the Royal Society of British Artists, for exhibition.

SIR THOMAS SHAUGHNESSY, with Lady Shaughnessy and family, were visitors at Atlantic City, N.J., during March. Sir Thomas returned to Canada after a few days absence.

SIR JOHN MURRAY, who was killed in Scotland, Mar. 16, in an automobile accident, was a brother of the late James Murray, at one time Superintendent, C.P.R., at Winnipeg.

A telegram to Ottawa, Mar. 16, reported that the HON. F. COCHRANE, Minister of Railways and Canals, who is in the south of France for the benefit of his health, was progressing favorably.

T. AHEARN, President, and J. D. FRASER, Director and Secretary-Treasurer, Ottawa Electric Railway, left Ottawa, Mar. 4, for a three weeks trip to Florida and other southern points.

J. O. BROWN, who died at Fredericton, N.B., recently, aged 71, was identified with the construction of various railway lines in New Brunswick, among them being the Northern, C.P.R., and Central of New Brunswick.

D. B. HANNA, Third Vice President, Canadian Northern Ry., addressed the Toronto Y.M.C.A.'s Finance Forum, on Mar. 3, on the effect of railways on the civilization of new countries.

H. B. YEWDALE, one of the purchasing agents in the Right of Way Department, C.P.R., Winnipeg, was presented with a silver tea service by the local staff, on his marriage recently.

CARL R. GRAY, whose resignation as President, Great Northern Ry., St. Paul, Minn., was reported in our last issue, has been appointed President, Western Maryland Ry., Baltimore, Md.

J. S. DENNIS, Assistant to the President, C.P.R., in charge of the Natural Resources Department at Calgary, Alta., addressed the members of the Calgary Ad. Club, Mar. 11, on the colonization of Western Canada.

SIR THOMAS TAIT, formerly Chairman of the Victorian State Railway Commission,

D. M. Crawford,
Commercial Agent, Grand Trunk Ry.,
Pittsburgh, Pa.

addressed the Canadian Railway Club in Montreal, Mar. 10, on Australia, with special reference to its railway system.

D. B. HANNA, Third Vice President, Canadian Northern Ry., Toronto, is shown by the Directory of Directors, published in London, Eng., to be a director of 30 companies. Only 17 persons are shown to be directors of more than 22 companies each.

H. G. McMICKEN, formerly of Winnipeg whose appointment as European Traffic Agent, Great Northern Ry. (U.S.A.), in London, Eng., ceased at the end of 1913, has established a general steamship ticket agency at 64 Haymarket, London.

W. K. BIXBY, Receiver of the Wabash Rd., has resigned on account of poor health. He is the second of the three receivers to resign recently, F. A. Delano having withdrawn to become President of the Chicago, Indianapolis & Louisville Ry. E. B. Pryor is now sole receiver.

G. E. FAIR, Managing Director and Secre-

tary Treasurer, Farrar Transportation Co., Collingwood, Ont., was presented with a cabinet of silverware and an address by a number of local citizens, on his leaving for Toronto, where the head office of the company has been moved to.

E. G. TRUMP, Chief Dispatcher, District 2, Manitoba Division, C.P.R., Winnipeg, was presented with a gold watch and a travelling bag, with a cut glass bowl for his wife, by the local dispatching staff, Mar. 6, on his transfer to Moose Jaw, Sask., as Chief Dispatcher, District 2, Saskatchewan Division.

A. C. GAMBRAITH, General Superintendent of Construction, Edmonton, Dnnevagan and British Columbia Ry., is being sued at Edmonton, Alta., by G. G. Whyte, a contractor, for \$5,000 for damages alleged to have been sustained through being forcibly ejected from the railway office recently.

C. E. JENNEY, who has been appointed General Agent, Passenger Department, G.T.R., G. T. Pacific Ry., and G. T. Pacific Coast Steamship Co., Vancouver, B.C., was presented with a purse of money by a number of his associates, Mar. 7, on his leaving Toronto, where he was City Passenger and Ticket Agent, G.T.R.

H. D. STOKER, who has been appointed Westbound Traffic Agent, Manchester Liners, Ltd., Montreal, was born in England, and has been in C.P.R. Steamships service for the past six years, three of which were in Vancouver, B. C., and the remainder in the Vice President's office in Montreal.

STEPHEN BURROWS, of Belleville, Ont., who, among other things, is city ticket agent, C.P.R., there, has organized Burrows of Belleville, Limited, which has been incorporated under the Ontario Companies Act with an authorized capital of \$50,000, to acquire and carry on his insurance, express and ticket agencies, etc.

A. BUTZE, Assistant Secretary and Purchasing Agent, National Steel Car Co., Hamilton, Ont., died at St. Louis, Mo., Mar. 3. He was born at Quincy, Ill., in 1845, and entered G.T.R. service in 1896, and retired in Jan., 1912, when General Purchasing Agent at Montreal. Prior to entering G.T.R. service he had served with the Wabash Rd., Missouri Pacific Ry., and the Monon Route, and had been in the general railway supply business.

T. S. SCOTT, President and Manager of Columbia Bitulithic, Limited, has resigned to practice as consulting engineer at Vancouver. He is a graduate of Queens University, Kingston. His experience includes contract work in connection with Niagara Falls power construction, maintenance on the Grand Trunk, and the Timiskaming and Northern Ontario Ry., and municipal work as principal assistant to the City Engineer of Toronto.

A. K. LEIGHS, whose appointment as Car Foreman, G.T. Pacific Ry., McBride, B.C., was announced in our last issue, was born in Great Britain, Mar. 6, 1883, and entered railway service Oct., 1908, since when he has been, to Nov., 1909, leading hand, C.P.R., Winnipeg; Nov., 1909, to Feb., 1911, Assistant Night Foreman, C.P.R., Winnipeg; Feb., 1911, to Feb., 1912, Night Foreman, C.P.R., Winnipeg; May to Aug., 1912, car repairer, G.T. Pacific Ry., Edson, Alta.; Aug., 1912, to Jan., 1913, Car Inspector, same road, Edson, Alta.; Jan., 1913, to Feb., 1914, air brake man, same road, Edson, Alta.

H. M. POTTICARY, whose appointment as Soliciting Freight Agent, Canadian Northern Ry., Montreal, was announced in our last issue, was born at Wallaceburg, Ont., Sept. 11, 1888, and entered railway service, June 20, 1904, since when he has been, to

May 31, 1906, yard clerk, night clerk, and chief clerk, consecutively, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont.; June 1, 1906, to Oct. 13, 1912, billing clerk, claims, abstract and accounting clerk and joint cashier C.P.R. and T.H. & B.R., Hamilton, Ont.; Oct. 14, 1912, to Jan. 31, 1914, Soliciting Freight Agent, Canadian Northern Ry., Toronto.

ALPHONSE J. DONEGAN, who has been appointed Superintendent, Algoma Eastern Ry., Sudbury, Ont., was born at Perth, Ont., Feb. 17, 1882, and entered transportation service June 1, 1899, since when he has been, to May 1, 1900, freight clerk, C.P.R., London, Ont.; May 1, 1900, to Mar. 15, 1901, billing clerk, Dominion Express Co., London, Ont.; Sept. 1, 1910, to Mar. 15, 1911, storekeeper, Lake Superior Iron and Steel Co., Magpie Mine, Ont.; Mar. 15, 1911, to Oct. 15, 1913, Assistant Superintendent, Algoma Central and Hudson Bay Ry., Michipicoten, Ont.; Oct. 15, 1913, to Mar. 1, 1914, Superintendent, same road, Hawk Jct., Ont.

SYDNEY E. DEWEY, whose appointment as Commercial Agent, All Rail Lines, G.T.R., New York, was announced in our last issue, was born at Beckenham, Kent, Eng., July 4, 1879, and entered G.T.R. service, Jan. 1, 1896, since when he has been, to May 10, 1893, clerk, Division Freight Office, Toronto; May 10, 1903, to Mar. 1, 1904, Soliciting Freight Agent, Hamilton, Ont.; Mar. 1, 1904, to Apr. 16, 1906, Travelling Freight Agent, Hamilton, Ont.; Apr. 16, 1906, to Jan. 14, 1907, Contracting Freight Agent, New York; Jan. 14, 1907, to Oct. 23, 1911, Travelling Freight Agent, New York; Oct. 23, 1911, to Feb. 16, 1914, Commercial Agent, Pittsburgh, Pa.

DON MATTHEWS CRAWFORD, whose appointment as Commercial Agent, G.T.R., Pittsburgh, Pa., was announced in our last issue, was born at South Bend, Ind., May 28, 1886, and entered railway service, Sept. 1, 1901, since when he has been, to Mar. 1, 1903, clerk and stenographer, Freight and Passenger Departments, Chicago Great Western Ry., Pittsburgh, Pa.; Mar. 1, 1903, to June 1, 1905, similar position, Seaboard Air Line Ry., Pittsburgh, Pa.; Oct. 1 to Nov. 5, 1905, stenographer, Freight and Passenger Departments, Pittsburgh and Lake Erie Rd., Pittsburgh, Pa.; Nov. 5, 1905, to Nov. 1, 1909, stenographer and clerk, G.T.R., Pittsburgh, Pa.; Nov. 1, 1909, to Feb. 16, 1914, Travelling Freight Agent, G.T.R., Pittsburgh, Pa.

HAMILTON McMURRAY KILLALY, B.A.Sc., M. Can. Soc. C.E., who died at Montreal, Mar. 18, was born at St. Joseph, Mo., July 25, 1871, and graduated from McGill University. During 1897 he was in charge of the construction of a section of the C.P.R. at Crowsnest, B.C.; 1897 to 1898, Resident Engineer on construction, Kootenay Valley Ry.; 1899, Resident Engineer on construction, Erie and Detroit Rd.; and in the same year in charge of a locating party, Algoma Central and Hudson Bay Ry.; 1902 to 1906, Assistant Engineer, in charge of certain location and reconnaissance work, C.P.R.; 1906 to Aug., 1913, Engineer of Surveys, in charge of surveys and location, Eastern Lines, C.P.R., Montreal; Aug., 1913, to the date of his death, Engineer of Construction, Canadian Government Railways, Moncton, N.B.

FREDERICK GEORGE WOOD, whose appointment as Commercial Agent, Canadian Northern Ry., St. Louis, Mo., was announced in our last issue, was born at Toronto, Sept. 15, 1890, and entered railway service in 1906, since when he has been, to 1908, clerk, District Freight Agent's office, G.T.R., Toronto; 1908 to 1909, clerk, General Freight and Passenger Agent's office, Canadian Northern Ry., Toronto; 1909 to Aug., 1910, secretary to General Freight and Passenger Agent,

C.N.R., Toronto; Aug., 1910, to Feb., 1911, chief clerk, District Freight Agent, G. T. Pacific Ry., Edmonton, Alta.; Feb. to Apr., 1911, secretary to General Traffic Manager, Canadian Northern Ry., Toronto; Apr., 1911, to June, 1912, Contracting Freight Agent, C.N.R., Pittsburgh, Pa.; June, 1912, to Feb., 1914, Travelling Freight Agent, C.N.R., Pittsburgh, Pa.

WILLIAM APPS, who died at Toronto, Mar. 21, aged 66, was born at Helston, Cornwall, England, and was, from May, 1881, to Oct., 1887, General Foreman, Car Department, St. Paul, Minneapolis and Manitoba Ry.; Oct., 1887, to May, 1891, Master Car Builder, Western Ry. of Alabama and Atlantic and West Point Ry.; June to Sept., 1891, Master Car Builder, Chicago and Eastern Illinois Rd.; Oct., 1891, to Dec., 1895, Master Car Builder, Illinois Central Rd., Chicago, Ill.; Dec., 1895, to Sept., 1902, Master Car Builder, C.P.R., Montreal; Sept., 1902, to 1906, Master Car Builder, Algoma Central and Hudson Bay Ry., Sault Ste. Marie, Ont. He subsequently engaged in building operations in Toronto, which he later discontinued owing to failing eyesight, becoming totally blind about a year ago. J. O. Appis, General Baggage Agent, C.P.R., Montreal, is a son.

ROBERT GRANT THACKRAY, whose appointment as chief clerk and Auditor, Midland Ry. of Manitoba, Winnipeg, was announced in our last issue, was born at Ottawa, Ont., May 23, 1889, and entered railway service in June, 1910, since when he has been, to Oct., 1910, clerk in Freight Claims Department, C.P.R., Winnipeg; Oct., 1910, to June, 1911, clerk, Local Freight Office, C.P.R., Regina, Sask.; June to Sept., 1911, clerk, Superintendent's office, C.P.R., Moose Jaw, Sask.; Sept., 1911, to June, 1912, railway claims clerk in private business, Moose Jaw, Sask.; June to Sept., 1912, clerk, District Freight Office, Canadian Northern Ry., Winnipeg; Sept. to Nov., 1912, clerk, General Freight Office, G.T. Pacific Ry., Winnipeg; Nov., 1912, to Feb. 1, 1914, clerk in Manager's office, Winnipeg Joint Terminals, C.N.R. and G.T.P.R.

CECIL WRAY JOHNSTON, whose appointment as Assistant to the Passenger Traffic Manager, G.T.R., Montreal, was announced in our last issue, was born at Actonvale, Que., July 27, 1879, and entered G.T.R. service Sept. 1, 1897, since when he has been, to Mar. 8, 1900, operator and agent at Richmond, Que.; Berlin, Ont.; Island Pond, Vt.; and Sherbrooke, Que., consecutively; Mar. 9, 1900, to June 21, 1901, clerk to Auditor of Freight Accounts, Montreal; June 22, 1901, to June 25, 1902, ticket clerk, Montreal; June 26, 1902, to Dec. 31, 1904, Travelling Passenger Agent, Montreal; Jan. 1, 1905, to Feb. 15, 1907, excursion clerk, General Passenger Agent's office, Montreal; Feb. 16, 1907, to May 10, 1909, Travelling Passenger Agent, Montreal; May 11, 1909, to Jan. 21, 1912, chief clerk, General Passenger Agent's office, G. T. Pacific Ry., Winnipeg; Feb. 1, 1912, to May 25, 1913, chief clerk, Assistant Passenger Traffic Manager's office, G.T.R., Montreal; May 26, 1913, to Feb. 15, 1914, chief clerk, Passenger Traffic Manager's office, Montreal.

W. E. DUPEROW, who has been appointed Assistant General Passenger Agent, G.T. Pacific Ry., Winnipeg, was born at Stratford, Ont., Sept. 4, 1872, and entered transportation service Nov. 3, 1893, since when he has been, to Oct. 15, 1894, in G.T.R. service at Seaforth, Ont.; Oct. 15, 1894, to June 1, 1896, ticket clerk, G.T.R., London, Ont.; June 1, 1896, to July 11, 1898, ticket clerk, G.T.R., Toronto; July 11, 1898, to Aug. 1, 1899, theatrical and excursion clerk, General Passenger Agent's office, G.T.R., Toronto; Aug. 1, 1899, to Apr. 19, 1902, chief clerk, same office; Apr. 19, 1902, to Feb. 15,

1907, General Manager, Secretary and Treasurer, Huntsville, Lake of Bays and Lake Simcoe Navigation Co., Huntsville, Ont.; Feb. 15, 1907, to June 1, 1910, Travelling Passenger Agent, G.T.R., Toronto; June 1, 1910, to Apr. 15, 1912, City Passenger and Ticket Agent, G.T.R. and G.T. Pacific Ry., Victoria, B.C.; Apr. 15, 1912, to Mar. 1, 1914, General Agent, Passenger Department, G.T.R., G.T.P.R. and G.T.P. Coast Steamship Co., Vancouver, B.C.

In our March issue it was stated that J. ALEXANDER HUTCHISON, M.D., had resigned his position as Chief Medical Officer, G.T.R. and G. T. Pacific Ry., and had been appointed Senior Surgeon of the Montreal General Hospital. Dr. Hutchison has not resigned his positions with the G.T.R. and G. T. Pacific Ry., but has, as stated in "Transportation Appointments throughout Canada," in our March issue, resigned as Chief Surgeon of the Central Vermont Ry., owing to pressure of work. He is still Chief Medical Officer of the G.T.R., which position he has held since 1891. During the whole of that time he has been a surgeon to the Montreal General Hospital. As Professor of Surgery and Clinical Surgery in McGill University, he has held the senior teaching surgical service in the hospital for some years, although not the senior in point of appointment or age. The recent resignation of Dr. Shepherd from the hospital staff, while not making any alteration in Dr. Hutchison's position or duties, makes his tenure of office longer than that of any other surgeon on the staff. There is no such position officially as Senior Surgeon on the hospital staff.

ROBERT MCCHESNEY SMITH, who has been appointed City Passenger and Ticket Agent, G.T.R. and G. T. Pacific Ry., Detroit, Mich., was born at Milford, Mich., Sept. 14, 1851, and entered railway service, Aug. 9, 1871, since when he has been, to 1875, in general ticket office, Chicago, Rock Island and Pacific Rd., Chicago, Ill.; 1875 to 1876, City Ticket Agent, same road, Chicago, Ill.; 1876, in city ticket office, P. Ft. W. & C. R., Chicago, Ill.; 1876 to 1878, Travelling Agent, same road, Chicago, Ill.; 1878 to Apr., 1883, Travelling Agent and General Travelling Agent, Chicago, Rock Island and Pacific Rd., Chicago, Ill.; Apr., 1883, to 1888, Travelling Passenger Agent, Chicago, Burlington and Quincy Rd., Columbus, O.; 1888 to 1891, same position, Cleveland, O.; 1891 to Apr., 1893, same position, Detroit, Mich.; Apr. to Dec. 24, 1893, Traffic Manager, multiple speed and traction railway in the World's Fair, Chicago, Ill.; Apr., 1894, to May, 1896, Travelling Passenger Agent, G.T.R., Detroit, Mich.; May to Aug., 1896, in General Passenger Agent's office, G.T.R., Montreal; Aug., 1896, to Mar., 1902, Southern Passenger Agent, G.T.R., Cincinnati, O.; Mar., 1902, to June 1908, same position, Detroit, Mich.; June, 1908, to Feb. 16, 1914, Special Passenger Agent in charge of exhibition work, G.T.R., Montreal.

LOUIS CHARLTON FRITCH, who has been appointed Assistant to the President, Canadian Northern Ry., was born at Springfield, Ill., Aug. 1867. He took a course in civil engineering at the University of Cincinnati, and subsequently a law course, and was admitted to the bar in Ohio. He entered railway service in 1884, as supervisor's assistant, Ohio and Mississippi Ry., and was, from Jan. 1, 1886 to Oct. 1892, Assistant Engineer, same road; Oct. 1892 to Nov. 1, 1893, Engineer Maintenance of Way, same road, and was also Chief Engineer in charge of construction, Cincinnati and Bedford Ry.; Nov. 1, 1893, to Sept. 1, 1899, Division Engineer, Baltimore and Ohio Southwestern Rd., which absorbed the Ohio and Mississippi Ry.; Sept. 1, 1899, to Nov., 1902, Superintendent, Mississippi Division, same road; Feb.,

1904, to Mar. 1, 1905, engaged on special work, Illinois Central Rd., Chicago, Ill.; Mar. 1, 1905, to Nov., 1906, Assistant to General Manager, same road; Nov., 1906, to Mar. 1, 1909, Assistant to President, same road; Mar. 1 to Nov. 15, 1909, Consulting Engineer, same road; Nov. 15, 1909, to Mar. 31, 1914, Chief Engineer, Chicago Great Western Rd., Chicago, Ill. He was President, American Railway Engineering Association for the year 1909-10.

GEORGE SPENCER, whose appointment as Chief Operating Officer, Board of Railway Commissioners, Ottawa, was announced in our last issue, was born in London, England, Feb. 21, 1865, and entered railway service July 1, 1880, since when he has been, to Sept. 1, 1880, assistant agent, Toronto, Grey and Bruce Ry., Dundalk, Ont.; Sept. 1, 1880, to Mar., 1881, assistant agent, same road, Markdale, Ont.; Mar. to July, 1881, agent, same road, Waldemar, Ont.; July, 1881, to Oct. 1, 1882, telegraph operator, same road, Toronto; Oct. 1, 1882, to Nov., 1883, dispatcher, same road, Toronto; Nov., 1883, to June, 1884, dispatcher, Ontario and Quebec Ry., Toronto; June, 1884, to Aug. 15, 1887, dispatcher, C.P.R., Toronto; Aug. 15, 1887, to Oct. 1, 1889, dispatcher, C.P.R., Smiths Falls, Ont.; Oct., 1889, to Oct., 1891, dispatcher, C.P.R., Toronto; Oct. 1, 1891, to Nov., 1892, Chief Dispatcher, C.P.R., Smiths Falls, Ont.; Nov., 1892, to Feb., 1898, Trainmaster and Chief Dispatcher, C.P.R., Smiths Falls, Ont.; Feb., 1898, to May 1, 1901, Chief Dispatcher, C.P.R., Smiths Falls, Ont.; May 1, 1901, to May 25, 1903, Chief Dispatcher, C.P.R., Toronto; May 25, 1903, to Nov. 30, 1906, Superintendent, District 1, Ontario Division, C.P.R., Toronto; Dec. 1, 1906, to Jan. 1, 1911, Superintendent, District 1, Lake Superior Division, C.P.R., North Bay, Ont.; Jan. 1, 1911, to Sept. 1, 1913, Superintendent, same district, Sudbury, Ont.; Sept. 1, 1913, to Jan. 31, 1914, Assistant Chief Operating Officer, Board of Railway Commissioners, Winnipeg.

Quebec Bridge.—The foundations for the new Quebec Bridge, particularly the details of the shore piers, were discussed by C. N. Monsarrat, M. Can. Soc. C.E., Chairman and Chief Engineer, Quebec Bridge Commission, before the Toronto branch of the Canadian Society of Civil Engineers, Feb. 25. The lecture was illustrated by slides. Mr. Monsarrat also addressed the Canadian Club, in Montreal, Mar. 2, when the whole bridge was described in a general way, the address being also illustrated with slides. This latter address, being of a general nature to appeal to a non-technical audience, was replete with comparisons with many local landmarks with which the citizens of Montreal are familiar, thereby forcing home the immensity of the project.

Locking of Main Track Switches.—The Board of Railway Commissioners has issued a circular drawing railway officials' attention to the fact that it has from time to time received returns of a number of accidents resulting in serious, and sometimes fatal, injury to employees and passengers, as a result of non-compliance with par. 4 of rule 104, which reads as follows: "Main track switches must be locked and other switches secured. After a switch is turned, the points must be examined to know that they are in proper position." The circular asks that such action be taken as will ensure strict compliance with the requirements of paragraph quoted.

F. C. WOOD, Commercial Agent, Canadian Northern Ry., St. Louis, Mo., writes: "I have been reading the Canadian Railway and Marine World for some years and find the articles contained therein most interesting."

Canadian Northern Railway Construction, Betterments, Etc.

Canadian Northern Quebec Ry.—Press reports state that the company is preparing to erect a large coal discharging plant at Quebec and to extend its coal wharf 150 ft.

Mount Royal Tunnel and Terminal Co.—Work was started Mar. 10 on Cathcart St., Montreal, sinking a shaft to the level of the tunnel for the purpose of assisting to get in construction material.

The clearing of the buildings on the blocks bounded by Cathcart, Ste. Monique, LaGauchetiere and Mansfield Streets is being pushed forward. The tenants of the buildings on the north side of Dorchester St., which have been acquired by the company for its terminals in the city, have been notified to leave. It is expected that excavation for the terminals will be started at an early date. The area will be excavated to 50 ft. below the ground level, involving the moving of over 500,000 cubic yards of earth and 95,000 cubic yards of rock. It is estimated that there will be required in the construction of the terminal buildings 100,000 cubic yards of concrete, 3,500,000 lbs. of reinforcing steel, and 8,000,000 lbs. of structural steel.

Montreal-Ottawa-Port Arthur Line.—Press reports state that grading on the unfinished portion of the Ottawa-Capreol section of the line is expected to be completed about Sept. 1 and the track laying finished Dec. 30.

Canadian Northern Ontario Ry.—The New York State Legislature has under consideration a bill for the incorporation of the Niagara-Ontario Connecting Bridge Co., to build a bridge across the Niagara River from Lewiston, N.Y., to the Canadian shore, for electric and steam railways. The incorporators are:—E. G. Connette, H. Holden, C. L. Ingham, F. A. Dudley, L. Albright. It is reported that Canadian Northern Ry. interests are associated with this project.

Canadian Northern Ry.—H. K. Wicksteed, M. Can. Soc. C.E., Chief Engineer of Surveys, Mackenzie, Mann & Co., and a representative of the company's legal staff had an interview with the Port Arthur City Council, Mar. 10, to discuss and settle various matters connected with the eastern entrance of the railway and the closing of certain street ends. An agreement is said to have been arrived at as to the closing of the streets, but the matter of the eastern entrance is to be further considered.

Press reports state that the company has under consideration plans for the erection of a new storage shed for incoming freight in the south section of Port Arthur.

It is reported that a new station is to be erected at Kakabeka Falls, Ont., during the summer.

The new station at St. Boniface, Man., has been opened for business.

Press reports state that a number of new sidings are to be put in at the quarries of the Manitoba Gypsum Co. at Gypsumville, Man., during the summer.

It is reported that a spur line is to be built from Radville, on the Maryfield branch, northerly to Weyburn, Sask.

Plans have been deposited in the Land Titles offices at Moose Jaw, Sask., and at Saskatoon, Sask., showing the right of way of the C.N.R. as located through the 26-28, ranges 26-29, west of the 3rd meridian.

Press reports state that the company will start construction this year on a line from Brudheim to Vermillion, thence to Wainwright, and through Medicine Hat to the International boundary between Alberta and Montana. This line is one of the projected lines of the C.N. Western Ry., for the building of which an issue of bonds, guaranteed by the Province of Alberta, was recently

placed on the London, Eng., market. A press report states that a contract for building branch lines in Alberta has been let to Foley, Welch and Stewart, Spokane, Wash.

A train service has been put in operation out of Calgary on the newly completed line south from Vegreville, which is joined near Drumheller by a line from Saskatoon, Sask. At present only one station has been opened between Calgary and Drumheller.

Press reports state that it is expected to have about 20 miles of the line south from Calgary to Lethbridge open for traffic this year.

The line from Onoway, Alta., to the Peace River country is completed to the Pembina River, over which a large bridge is under construction. Grading has been completed for a considerable distance beyond the Pembina River. A. T. Fraser, district engineer in charge of construction, was in Edmonton, Mar. 14, and is reported to have stated that considerable further grading will be done during this year.

Canadian Northern Pacific Ry.—The British Columbia Legislature has granted further aid, by means of a guarantee of bonds, for the construction of this railway. The act sets out that in addition to the bonds guaranteed under chap. 3 of the statutes of 1910, the Government is authorized to affix the provincial guarantee to the company's bonds as to principal and interest for \$10,000 a mile for the line from the south end of New Westminster bridge to the Yellowhead Pass, 500 miles, and for a line from the north end of the New Westminster bridge to the terminals in Vancouver, 11 miles. The interest on this further issue of bonds is not to exceed 4½%, and the principal is payable April 2, 1950. These bonds are to be secured by a mortgage on the lines mentioned, and are to rank next after the bonds guaranteed under the act of 1910. The act also grants an extension of time to July 1, 1916, for the completion of the lines.

In support of the act the Premier informed the Legislature, Feb. 27, that 16 of the steel bridges across the Fraser and Thompson Rivers, having a total length of 12,214 ft., have been completed. There are still 19 bridges, having an average length of 224 ft., to be completed. The total construction cost of the line is now put at \$33,029,200, or about \$8,000,000 more than the original estimates. This is accounted for by the high standard of construction required and the increased cost of labor and materials. The extension of time granted applies only to the Okanagan and another branch line, as it is expected to have the main line finished this year.

T. G. Holt, executive agent, is reported to have stated at Ottawa, Mar. 12, that track would be laid on the entire line from the Yellowhead Pass to Vancouver by August.

Vancouver Island Lines.—Referring to the construction of the line on Vancouver Island, the Premier is reported to have said in the Legislature, Feb. 27, that the line from Patricia Bay to Alberni is expected to be completed by the end of this year, although, under the act, the time for completion has been extended to July, 1915. (Mar., pg. 126.)

The ninth annual dinner of the G. T. R. apprentices at the Stratford locomotive shops was held in the G.T.R. Assembly Hall, Stratford, Ont., Mar. 23. R. Patterson, Master Mechanic, occupying the chair. H. G. Kelley, Vice President, and W. D. Rohb, Superintendent of Motive Power, were also present.

Canadian Pacific Railway Construction, Betterments, Etc.

Ontario Division.—Tenders are under consideration for the excavation, masonry and concrete work in connection with the double tracking of the bridge across the Humber River at Lambton. The line across this bridge is the only piece of single track between Toronto and Guelph Jct., and all trains have to stop just before reaching it, in order to obtain a clearance order. Gangs of men have been at work since Mar. 1 preparing for the starting of work on the sub-structure.

The question when the C.P.R. will start work on the union station for itself and the Canadian Northern Ry. in North Toronto depends very much on what action the Toronto City Council takes with regard to the project for widening Yonge St. The station plans are said to have been completed.

Lake Superior Division.—Press reports state that in all about 120 miles of second track work are being put in hand this season, west of Sudbury, on the Lake Superior Division. The building of second track on this division has been in progress for about three years. The work done to date consists of the building of short stretches of second track at various points along the line; and the improvement of alignment and the reduction of gradients, by the building of short lengths of new double track. This work is being continued along these lines, and in due course the various stretches will be connected up in one continuous second track.

The Board of Railway Commissioners has approved plans for the revision of gradients and alignment between a number of points on the Webbwood and Algoma subdivisions.

Saskatchewan Division.—A contract has been let to Dutton and Timson, Winnipeg, for grading on 13 miles of line, 15 miles southwest from Expanse, Sask. Expanse is about 34 miles southwest of Moose Jaw, at the terminus of a branch. The extension will connect up with the line southeasterly from Swift Current, which now has its terminal at Vanguard. The contract involves about 300,000 cubic yards of earthwork.

Press reports state that engineers are on the field making surveys for a line from Instow to Swift Current.

Tenders were received by the Division Engineer, Moose Jaw, to April 1, for the supply of labor and material and to complete all work in connection with the erection of concrete pier and abutments for two steel spans and trestle approach on the line at 8th Ave. West, Moose Jaw; and for the trenching and back filling 8 in. steel pipe line from sec. 9, tp. 84, range 22, west of the 2nd meridian, to Lanigan, Sask., 4.6 miles.

Alberta Division.—A train service is being operated on the Weyburn-Lethbridge line as far west as Shaunavon, Alta. A service has also been put in operation on the Sufield-Retlaw branch as far as Blackie, 57 miles; this is an extension of the service previously in operation to mileage 26.

Rogers Pass Tunnel.—George Bury, Vice President, was in New York recently in connection with the proposed electrification of the double track, 5½ mile tunnel which is being driven in the Selkirk Range. Westinghouse, Church, Kerr & Co. have been retained by the company as engineers to investigate and report on the type of system to be installed, the relative economies of steam and water power, and the effect of the electrification upon operating conditions.

Local press reports state that about six miles of the line on either side of the tunnel will be electrified. There are a number of water powers in the vicinity, any one of

which might be utilized to develop power for the operation of the tunnel and approaches.

Kootenay Central Ry.—The Board of Railway Commissioners has approved location plans from mileage 91.85 to 94.81.

Pacific Division.—Press reports state that the company will erect a large storage oil tank at Port Moody, B.C., adjoining which will be a pumping station, that a pipe line will connect the oil tank with the service tanks at Coquitlam, and that a wharf is to be built in connection, so that the oil steamships may lie alongside.

Rapid progress is being made with the erection of the new station at Vancouver, and press reports state that it is expected to have it completed early in May. (Mar., pg. 123.)

Railway Rolling Stock Notes.

The Intercolonial Ry. has ordered 10 Pacific locomotives from Montreal Locomotive Works.

The Canadian Furnace Co. has ordered 2 all steel dump cars, 50 tons capacity, from Eastern Car Co.

The G.T.R. has received 250 box cars from Eastern Car Co., and 61 box cars from Western Steel Car and Foundry Co.

The C.P.R., between Feb. 15 and Mar. 15, received 121 steel frame box cars from its Angus Shops, and 376 steel frame box cars from Canadian Car and Foundry Co.

The Robert McNair Shingle Co., Vancouver, B.C., has ordered a saddle tank locomotive, with cylinders 13½ ins. diar. by 18 ins. stroke, and 70,000 lbs. in working order, from Canadian Locomotive Co.

The Asbestos and Asbestic Co., Asbestos, Que., has ordered a saddle tank locomotive, with cylinders 13 ins. diar. by 16 ins. stroke, and weight in working order 54,000 lbs., from Canadian Locomotive Co.

The Canadian Northern Ry., between Feb. 14 and Mar. 13, received the following additions to rolling stock:—3 first class cars from Canadian Car and Foundry Co.; 25 box cars from National Steel Car Co., and 5 switching locomotives from Canadian Locomotive Co.

Baldry, Yerburch and Hutchinson, St. Catharines, Ont., who have a contract on the construction of the Welland Ship Canal, have ordered a saddle tank locomotive, with cylinders 15 ins. diar. by 22 ins. stroke, and 80,000 lbs. weight in working order, from Canadian Locomotive Co.

With reference to the recent press reports that the G.T.R. was about to place gas electric cars in service on its Galt and Elmira Branch, Ont., we are officially advised that no such decision has been arrived at. Residents of the district are agitating for a more frequent service and have suggested that the branch be electrified.

The C.P.R., between Feb. 15 and Mar. 15, ordered the following additions to rolling stock:—18 steel frame box cars, 2 vans, 1 stock car, 1 freight refrigerator car, 2 all steel mail and express cars, 60 ft. long, from its Angus Shops; and 40 all steel Otis ore cars from Hart-Otis Car Co., which will be built by Canadian Car and Foundry Co.

The Intercolonial Ry. has received 125 box cars, 60,000 lbs. capacity, from Canadian Car and Foundry Co.; 6 vans from Nova Scotia Car Works; 4 first class passenger cars from Preston Car and Coach Co.; 2 switching locomotives from Canadian Locomotive Co., and 3 consolidation

locomotives from Canadian Allis-Chalmers, Ltd.

The Montreal Harbor Commissioners have ordered 15 Otis type all steel general service cars from Hart-Otis Car Co., to be built by the Canadian Car and Foundry Co. Following are the principal dimensions:—

Capacity	50 tons
Length over end sills	38 ft. 9 ins.
Length inside	36 ft. 9½ ins.
Width over all	9 ft. 11¼ ins.
Width inside	9 ft. 6 ins.
Height inside	5 ft.
Height from rail	9 ft. 4 13-16 ins.
No. of doors on each side	6

Following are the principal dimensions of the 40 Otis general service ore cars which the C.P.R. has ordered from Hart-Otis Car Co., and which will be built by Canadian Car and Foundry Co.:—

Capacity	50 tons
Length inside	22 ft. 5 ins.
Width over all	9 ft. 11¼ ins.
Width inside	9 ft. 6 ins.
Height inside	5 ft.
Height from rail	9 ft. 4 13-16 ins.
No. of doors on each side	4

The Pacific Great Eastern Ry. has ordered two consolidation locomotives, with superheaters, from Canadian Locomotive Co. Following are the chief details:—

Weight on drivers	156,000 lbs.
Weight in working order, total	176,000 lbs.
Wheel base, rigid	16 ft.
Wheel base, total	24 ft.
Wheel base, engine and tender	60 ft.
Heating surface, firebox	188 sq. ft.
Heating surface, tubes	2,500 sq. ft.
Heating surface, total	2,688 sq. ft.
Driving wheels, diar.	57 ins.
Driving wheel centres	Cast steel
Driving journals, diar. and length	9 by 12 ins.
Cylinders, diar. and stroke	21 by 28 ins.
Boiler, type Extended wagon top, radial stays	
Boiler, pressure	180 lbs.
Tubes, no. and diar. 158—2 ins.; 22—5½ ins.	
Tubes, length	14 ft.
Injectors	Ohio
Safety valves	Star
Brakes	Westinghouse American
Superheater	Locomotive Superheater Co., Schmidt A
Weight of tender, loaded	144,000 lbs.
Length over end sills	24 ft. 4½ ins.
Capacity, fuel	2,500 imp. galls.
Truck	Equalizer type
Truck wheel, diar.	33 ins.
Truck wheel, type	Steel tired
Journals, diar. and length	5½ by 10 ins.
Brake beams	M.C.B. 2
Capacity, water	6,000 imp. galls.

F. P. Gutelius' Salary, Citizenship, etc.—In the House of Commons, Mar. 4, the acting Minister of Railways, Dr. J. D. Reid, stated, in answer to questions, that F. P. Gutelius, now General Manager Canadian Government Railways, was appointed Jan. 29, 1912, as one of the commissioners to investigate matters connected with the National Transcontinental Ry. construction, that he commenced his duties as commissioner Feb. 1, 1912, his salary being \$65 a day, which was paid up to May 1, 1913, when he was appointed to his present position. He was naturalized as a British subject in Montreal, Feb. 23, 1912. His salary as General Manager, Canadian Government Railways, is \$20,000 a year, his engagement being for two years from May 1, 1913, and thereafter during the Minister's pleasure.

Marker Light Sockets on Cabooses.—The Board of Railway Commissioners has issued a circular drawing railway officials' attention to the fact that several accidents have happened recently whereby trainmen have been injured while in the act of putting up or taking down marker lights on cabooses, and asking whether railway companies have any, and, if so, what, objection to an order being issued requiring that where cabooses are equipped with marker sockets in the lower position, markers be carried in such lower sockets; that all cabooses hereafter constructed be equipped with marker sockets in the lower position; that all cabooses now in use not equipped with marker sockets in the lower position be so equipped on or before Nov. 1.

National Trans-continental Railway Construction.

The expenditure on the eastern division, to Dec. 31, 1913, exclusive of interest, was stated by the acting Minister of Railways in the House of Commons recently to have been \$140,562,147, and the estimated cost of completing the line is \$20,745,653. The cost to the Government of the old Quebec Bridge was \$6,424,781; the cost of the Royal Commission as to the bridge was \$31,765,44; the expenditure to date on the reconstruction of the bridge is \$4,889,318.03, and the estimated cost of the completion of the same is \$12,000,000. On account of the N. T. Ry., \$41,966,890 has been paid out of borrowings, and the remainder out of revenue. The whole cost is a charge to capital account irrespective of the source from whence derived.

A few days previously, the acting Minister of Railways, in giving similar figures, added that \$2,448,867 was due to contractors on account of work done. The estimated amount required to complete the line is \$18,296,786. The cost of locomotive and freight car shops, but not passenger car shops, at Winnipeg, 16 roundhouses, seven being with machine shops, at different points on the line, was \$3,489,166.31. This amount includes what has already been expended and the amount required to complete the work.

A train service was put in operation, Mar. 3, on the section of the line between Levis, Que., and the Quebec-New Brunswick boundary, from St. Anselme to Monk, Que., 80 miles, by the Quebec Central Ry., under an arrangement with the Commission. The Q.C.R. is supplying the rolling stock and is furnishing the train crews. This is a temporary arrangement, and is expected to continue only until the entire section from Levis to the provincial boundary is taken over by the Commission, when it will be operated in connection with the Moncton-Edmundston section.

Tenders are under consideration for the supply of a shavings and sawdust exhaust system for the car shops plant at Transcona, Man. (Mar., pg. 124.)

Grand Trunk Pacific Railway Construction.

A return made to the House of Commons, Mar. 6, shows that the capital of the G.T. Pacific Ry. is \$20,000,000 of preferred and \$25,000,000 of common stock. The amount subscribed is \$1,034,000, of which \$1,000,000 is from the G.T.R.; and the amount paid up on account of the shares is \$203,600. The company held the following contracts for construction on the National Transcontinental Ry.:

From Moncton, N.B., westerly, 50 miles; completed, \$2,370,398.

From mileage 58 to I.R.C. crossing, about mileage 97.7; amount paid to Dec. 31, 1913, \$1,043,312. Total estimated cost, \$1,050,000.

From I.R.C. crossing to Tobique River, near mileage 165.7, amount paid to Dec. 31, 1913, \$2,750,679. Total estimated cost, \$2,840,000.

From 150 miles west of Quebec Bridge to Weymontachene, amount paid to Dec. 31, 1913, \$3,169,240. Total estimated cost, \$3,180,000.

Eight miles west of Abitibi crossing, easterly, 150 miles; amount paid to Dec. 31, 1913, \$5,445,762. Total estimated cost, \$6,710,300.

Track laying is being proceeded with westerly from Fort George, B.C., and it was reported at the company's Vancouver offices, Mar. 12, that steel had been laid to mileage 1,310 west of Winnipeg, or 30 miles west of Fort George. The track is also being laid

easterly from Prince Rupert, and it was stated, Mar. 12, that the steel had reached a point 89 miles from the point reached by the track laying gang working west. The bridge work yet to be completed will keep back track laying somewhat, but it was expected that the two sections will be joined up early in June, although one report states that the ends of steel will be joined up by April 30. If this is the case, says the report it will be possible to have trains running through from Winnipeg to Prince Rupert by June 30. The point at which the track laying gangs are expected to meet is Nechaco, 373 miles east of Prince Rupert, and 112 miles west of Fort George. A train service is being operated westerly to Fort George, and easterly to Wardsworth.

Considerable progress has been made with construction on the floating dry dock and shipbuilding plant at Prince Rupert, B.C. Several of the pontoons for the dock are well advanced, and all the filling in and levelling work, which has been in hand at the site for nearly two years, have been completed. A large boiler house has been built and is ready for the installation of the machinery. It is expected that the entire plant will be ready for operation this year.

The excavations for the foundations of the company's hotel at Prince Rupert are going on at a rapid pace.

A train service has been put in operation on the Tofield-Calgary line, between Calgary and Mirror, Alta. It is not expected, however, that a through service between Calgary and Edmonton will be inaugurated until April or May. There is considerable work yet to be done in the yards at Calgary, and the station buildings in use are merely temporary ones, pending the laying out and completion of the permanent yards and buildings on the site of the old police barracks. (Mar., pg. 124.)

The Central Railway of Canada and Its Land Grant Claims.

The Central Ry. of Canada, which has been considerably in evidence during the last few years, particularly on account of its claim to a land grant made in 1855-6 by the old Parliament of Canada, for the building of a railway from Montreal to Georgian Bay, is gradually being freed from the various entanglements which followed the assertion of the claim. One of the matters involved was the railway known as the Carillon and Grenville Ry., which was part of the original project, but which for many years was owned by the Ottawa Navigation Co., and operated by it in connection with its line of steamboats running on the Ottawa River. The O.R.N. Co. was acquired by the C. Ry. Co. of C., but how far it became really a part of the undertaking is uncertain. Anyway the C. and G. Ry. sold its property to Canadian Northern Ry. interests, retaining its charter and charter rights, by a resolution passed July 25, 1911. The O.R.N. Co. questioned the legality of the resolution, alleging among other things that the C. and G. Ry. had no authority to sell and the C.N.R. interests no authority to buy, and that the necessary proceedings prescribed by the Railway Act respecting sales had not been observed. An action was brought in the Quebec courts in the name of the O.R.N. Co. and certain other persons to have the sale set aside, and judgment was given Feb. 28, upholding the sale. During the trial of the action it was shown that 1,500 of the 2,000 shares of the C. and G. Ry. were owned by the O.R.N. Co., and 80 of the remaining shares by Senator Owens, who was at that time the owner or controller of practically the entire stock of the O.R.N. Co. Senator Owens at the meeting of the directors of the C. and G.

Ry. when the sale was authorized, voted as representing the O.R.N. Co., in favor of the resolution. The court held that technically, while Senator Owens might not have been authorized to vote for the resolution on behalf of the O.R.N. Co., yet being the owner of the shares voted, the passing of a resolution authorizing him to vote would be a mere formality. The court found that there was nothing in the Railway Act which would prohibit the sale.

The Canadian Northern Ontario Ry. is applying to the Dominion Parliament for an act vesting in it the right of way and other property acquired under the terms of the resolution referred to in the above mentioned action. The right of way so acquired is to form part of the Montreal-Ottawa section of the C.N.R. transcontinental.

The Central Ry. of Canada's application for an extension of time for the building of the various lines authorized, has been approved by the House of Commons. When the measure was before Parliament in 1913 there was a difference of view between the House of Commons and the Senate as to the inclusion of a section prohibiting the company carrying on litigation with a view of securing from Ontario and Quebec certain lands granted in pre-confederation days, which it was claimed were still available for the lines proposed to be built by the company. The following section is included in the present bill:—"It is hereby expressly declared and enacted that the C. Ry. of Canada shall not, nor shall the Ottawa River Ry., the Central Counties Ry., the Ottawa Valley Ry., the Carillon and Grenville Ry., or the Ottawa River Navigation Co., nor the assigns of any of the said companies, nor shall any other company or person whatsoever, be entitled to receive any land grant or grants under the provisions of the statutes of the late province of Canada, 19 and 20 Victoria, chap. 112, and 24 Victoria, chaps. 80 and 87, or any of them, or any amending or substituted acts, or any other statutes or acts of Canada or any of the provinces of Canada." (Sept., 1913, pg. 431.)

Earnings of Canadian Railways Per Mile of Line.

A. P. Landy, A.M. Can. Soc. C.E., Asso. R. Coll. Sc., Ireland, of Benton, N.B., has favored us with the following table which he has prepared from the railway statistics for the year ended June 30, 1913, showing the gross earnings per mile of track for 26 lines, having a length of 100 miles or upwards:—

Name of Railway.	Mileage.	Gross Earnings.	Gross Earnings per mile.
Algoma Central & H.B. Atlantic, Quebec &	133.77	538,580	\$ 4,026
Western	104.50	41,906	401
British Yukon	101.12	3,634.8	3,228
Canada Southern	380.04	10,906,491	28,910
Canadian Government:—			
Intercolonial	1,462.48	12,340,296	8,444
Prince Edward Island	279.23	390,461	1,398
Canadian Northern	4,070.05	24,277,478	5,168
Canadian Northern Ont.	500.15	1,280,521	2,560
Canadian Northern Que.	371.02	1,509,546	4,311
Canadian Pacific	11,597.89	130,760,707	11,364
Central Ontario	149.73	375,048	2,505
Dominion Atlantic	279.67	984,497	3,520
Esquimalt & Nanaimo	152.00	931,802	6,131
Grand Trunk	3,101.91	40,424,397	13,025
G.T.R., Canada Atlantic	456.26	2,382,258	5,221
Grand Trunk Pacific	1,395.77	8,162,201	5,818
Halifax & South West-ern	378.46	511,338	1,404
International of N.B.	112.00	114,912	990
Montreal & Atlantic	163.40	1,104,926	6,762
Quebec Central	253.00	1,571,150	6,210
Quebec Oriental	100.00	101,687	1,017
Quebec & Lake St. John	286.40	959,380	3,350
Quebec, Montreal & Southern	191.91	395,466	2,061
Temiscouata	113.00	250,760	2,210
Timiskaming & Northern Ontario	330.78	1,569,226	2,680
Vancouver, Victoria & Eastern	246.08	994,614	4,041

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Express, Telegraph, and Railway and
Canal Contractors' Interests.
Official Organ of the various Canadian
Transportation Associations.
Published on the first of each month.

ACTON BURROWS, LIMITED - Proprietors.
70 Bond Street, Toronto, Canada.

J. MEREDITH McKIM, 3 Regent St., London, S.W., Eng.

Authorized by the Postmaster General for Canada,
for transmission as second class matter.

Entered as second class matter, July 25, 1913, at
the Postoffice at Buffalo, N.Y., under the Act of
Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage any-
where, \$2 a year.

SINGLE COPIES, 20 cents each, including post-
age.

The best and safest way to remit is by express
money order. Where one cannot be obtained, a
post office money order, or bank draft, payable at
par in Toronto, may be sent. Cheques or drafts not
payable at par in Toronto cannot be accepted. Re-
mittances should be made payable to Canadian
Railway and Marine World.

NOTICE TO ADVERTISERS.

ADVERTISING RATES furnished on application.
ADVERTISING COPY must reach the pub-
lishers by the 10th of the month preceding the date
of publication.

May 1.

Fraud Charged in Southampton Railway Construction.

The House of Commons agreed, Mar. 9,
to a motion for the bringing down of all
correspondence and papers relating to the
payment of a subsidy to the Southampton
Ry. Co. This railway runs from Millville,
N. B., to the St. John River, near Pikiok
bridge, 12.7 miles, and is being operated by
the C.P.R. The company was incorporated
by the New Brunswick Legislature, and in
1911 the Legislature voted a guarantee of
bonds in aid of its construction at the rate
of \$10,000 a mile, and in 1913, on account of
increased cost of construction, an increased
guarantee of bonds for \$2,000 a mile was
granted. These securities have been issued
and sold by the company. The Dominion
Parliament, in 1912, voted a subsidy upon
the usual terms and conditions in aid of
the construction of the line, and on receipt
of the necessary certificate that all the con-
ditions had been complied with, paid over
a subsidy at the rate of \$6,400 a mile, the
cost of construction being certified to be
\$291,517, or considerably more than is re-
quired to ensure the payment of what is
known as the double subsidy.

The reason for asking for the papers and
for an investigation into the matter was
stated by F. B. Carvell, M.P., in making the
motion. He said that a contract was let
by the Southampton Ry. to J. E. Stewart in
Sept., 1910, for the construction of the rail-
way in consideration of the bonds, for the
guarantee of which the New Brunswick
Government had undertaken to secure legis-
lative sanction, and the subsidy to be ob-
tained from the Dominion Parliament.
Construction was started under this con-
tract, but in less than three months the
company rescinded it, alleging that it had
been obtained by fraud. Stewart prepared
the plans and specifications upon which the
line was built by J. K. Pender for the com-
pany, which, after the rescinding of the
Stewart contract, consisted of J. K. Pender
Geo. Pender, Dr. McNulty, Mr. Gilman, and
Mr. Guthrie, a lawyer. With the exception
of the latter, all the members of the com-
pany were connected with the Pender
family.

Upon the rescinding of the contract
Stewart brought an action against the com-
pany, which did not come to trial until Jan-
uary of this year. The main question of
damage has not yet been decided, as the
jury disagreed and there is to be a new
trial. The hearing of the case lasted 11
days, and Mr. Carvell quoted from evidence
given by contractors, engineers and others,
which evidence, he said, was not assailed
on behalf of the company, showing that
the actual sum expended on the construction
of the line did not exceed \$157,618. Even
this amount, he said, was in excess of that
actually expended. There were only two
items upon which direct evidence of cost
was not given, viz.: two steel bridges, and
the water tower, and for these liberal es-
timates were made. When it was remem-
bered, said Mr. Carvell, that this road sim-
ply followed the surface; that the en-
gineers used seven degree curves when ne-
cessary; that only enough levelling was
done to make ditches and a grade of 1½%,
it could be understood that there was no
necessity for removing solid rock. If they
came to a rock they simply went around
it. "That is why the road cost only \$12,000
a mile," he added. "I did not believe it
was possible to build that kind of road, but
I went over the route myself, and satisfied
myself that my client (Stewart) was right."
Wm. McDonald, who built practically the
whole line, affirmed in his evidence that
he was paid for 4,423 cubic yards of rock
work, which was all the rock work done;

that there was no earth excavation under
water, or any loose rock and hardpan,
whereas in the estimates passed on to the
Department upon which the double subsidy
was paid, the following appeared:—Solid
rock, 12,800 cu. yds.; earth excavation
under water, 5,500 cu. yds.; loose rock and
hardpan, 24,000 cu. yds. The cost of rails
was set out at \$46,000 in the estimates sent
on to the Department, and there was pro-
duced at the trial a statement from the C.
P.R., and admitted by the Penders, show-
ing the quantity of tracklaying materials
supplied and the price of the same. The
cost of these, with the additional materials
required to complete the tracklaying, which
came from the same source, and were of
similar quality, worked out at \$28,000, while
the spikes would cost an additional \$1,700.

Amalgamation of Grand Trunk and Can- ada Atlantic Companies.

The Dominion Parliament is being asked
to confirm an agreement between these
companies, under which the C. A. R. Co. is
to be merged in the G. T. R. Co., and the
former is to cease as a separate company.
The agreement, dated Feb. 9, 1914, sets out
that the G.T.R. is the owner of the 10,000
shares of preferred stock and of 60,725
shares out of a total of 62,000 shares of the
ordinary stock of the C.A.R., and provides
for the merging in the G.T.R. of all the
rights, property, etc., and the taking over
of all liabilities of the C.A.R. The schedules
attached to the agreement set out liabilities
of the two companies, which, under the
agreement, become the liabilities of the
united company. These are as follows:—

GRAND TRUNK RAILWAY CO.

Accidents on Joint Lines.—The Board of
Railway Commissioners has decided that in
case a railway company grants, or has
granted, running rights or joint use of its
line, or any portion thereof, to another rail-
way company, and the latter company is
concerned in an accident attended with
personal injury on the joint section, both
companies shall report to the Board, as set
out in sec. 292 of the Railway Act and the
forms issued thereunder.

Fred. Behan, Assistant Foreman Erecting
Shop, G.T. Pacific Ry., Transcona, Man., in
remitting renewal subscription for Cana-
dian Railway and Marine World, writes:
"Enclosed find postal note to pay yearly
subscription to your valuable magazine."

Grand Trunk Railway Betterments, Construction, Etc.

Lachine, Jacques Cartier and Maisonneuve Ry.—Press reports, Mar. 17, stated that it is likely that construction will be started on this projected line during this year. The only matter at present unsettled is the final decision of the Montreal City Council, with respect to the closing of certain streets.

Montreal Track Elevation.—The Montreal City Council took up, on Mar. 16, the question of the cost of the proposed elevation of the G.T.R. tracks between Henri St. and Point St. Charles. The City Solicitor reported that the estimated cost is \$6,000,000, towards which the city has authority to contribute \$2,000,000. The city does not want to pay any more, but the company thinks it should. In the report on the electric railway situation, the City Engineer's department pointed out that the Montreal Tramways Co. would benefit by the carrying out of the work, and therefore should be asked to pay part of the cost. It is suggested that the Board of Railway Commissioners be asked to apportion the cost between the G.T.R., the Montreal Tramways Co., the City of Montreal and the town of Westmount.

Extensions in Kingston.—Press reports, Mar. 14, stated that some difficulty was being experienced in securing a connection between the foot of William St. and the shipbuilding and other industrial concerns, owing to the sharp curves necessary. The plans for the work are being prepared preparatory to negotiations with the City Council.

New Station Buildings at Bridgeburg, Ont.—We are officially advised that the plans for the proposed new passenger station, customs and immigration offices at Bridgeburg, Ont., are not yet sufficiently advanced to permit of a description being given. Press reports state that the buildings are to cost \$75,000, and that work is to be started at once.

Galt and Elmira Branches.—Press reports, Mar. 11, stated that the question of the electrification of the branch running south from Berlin to Galt, and north from Berlin to Elmira, is again under consideration, and that it is probable a start will be made on construction during this year. (Mar., pg. 129.)

Great Northern Railway Lines in Canada.

Vancouver, Victoria and Eastern Ry.—An arrangement has been made with the Kettle Valley Lines and the British Columbia Government, under which the K. V. Line will be built into Princeton, there joining the V. V. and E. Ry. The K. V. Line will then operate over the V. V. and E. Ry. to the point of its junction with the K. V. Line at the starting point of what is known as the joint section, extending down the Coldwater River valley to Hope.

Vancouver Terminals.—A Stewart, Assistant Chief Engineer, G. N. R., reported to Vancouver City Council, Mar. 5, that about 1,750,000 cubic yards of filling was still required to be done on the company's portion of the False Creek flats. The present fill around the site of the proposed station was still 2 ft. lower than the permanent level of the fill. The layout of the tracks had not yet been finally decided.

Work has been started on the reinforced concrete bridges over the railway cut at Victoria road and Broadway East. The first named bridge will be 200 ft. long, and will cost \$35,000; the second will be 288 ft. long and will cost \$76,000. The city has granted permits for their construction to the G. N. R. (Mar., pg. 129.)

Dominion Financing for Railway Construction.

In connection with the recent issue on the London, Eng., market of a Dominion Government loan for \$5,000,000, the Minister of Finance has given out an official statement in which he says this loan and the other Government borrowings during the past six months are for the following special purposes:—(1) To meet sterling and currency indebtedness of \$10,000,000 maturing in October and November last, all of which has been paid off. (2) To pay the special subsidies to the Canadian Northern Ry. under the legislation of last session of Parliament. (3) To purchase 3% bonds of the G.T. Pacific Ry. Co. guaranteed by the Dominion Government, which otherwise would, from time to time, have been sold by the railway company through issues on the London market. The proceeds of these bonds, as purchased by the Government, have been and are being devoted to the construction of the Mountain section of the railway. (4) To advance to the G.T. Pacific Ry. Co. the loan of \$15,000,000, repayment of which is guaranteed by the G.T. Ry. This loan was authorized by the legislation of last session. The G.T.P. Government-guaranteed debentures referred to in (3) above, and the loan made to the G.T.P. Ry. under the guarantee of the G.T. Ry., are of course assets in the treasury of the Dominion.

The proceeds of the present issue of \$5,000,000, underwritten in London, will, after the payment of £1,000,000 of treasury bills, which matured in March, be sufficient to meet the balance of expenditure under the headings mentioned above.

Canadian Ticket Agents Association.—At a meeting of the executive committee in Toronto, Mar. 5, G. W. Vaux, General Agent, Passenger Department, Union Pacific Rd., Chicago, on behalf of the Chicago & Northwestern, the Union Pacific, and the San Pedro, Los Angeles and Salt Lake lines, tendered the members a complimentary trip to Denver, Salt Lake City, Los Angeles and San Francisco, the idea being to start from Chicago Oct. 9, to hold the annual meeting in San Francisco, where three days would be spent and a day in each of the other places mentioned, free transportation, sleeping car berths and dining car service to be provided. The invitation was accepted conditionally upon the C.P.R. and G.T.R. providing free transportation to Chicago and return. The special committees appointed to discuss standardization of railways and steamship tariffs met on the same day.

Cash Proceeds of C. P. R. Stock.—Sir Thomas Shaughnessy, president C. P. R., is 225 lbs of baggage will be checked without \$100 share of the company's outstanding common stock there has been paid into the company's treasury \$112.25 cash. In view of the large discount at which it was necessary to sell the original \$65,000,000 common stock, upwards of 30 years ago, when the railway was in the course of construction, the showing is remarkable and almost unique in the history of the railways in the world.

Filling in a Trestle by Sluicing.—A culvert under a 170 ft. fill was recently completed on the C.P.R., about 20 miles west of Robson, B.C., where a high trestle on the Cascade tunnel grade has been filled in. The crossing is in a narrow canyon, and it was considered cheapest to sluice the fill material from the adjacent hills by the use of hydraulic giants. The culvert, which is about 500 ft. long, was built up of masonry and has an arched roof with a span of about 12 ft.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1912-13, from July 1, 1913:—

	Gross Earnings	Expenses	Net Earnings	Increase
July	\$1,328,803	\$1,414,500	\$514,300	\$19,700
Aug.	1,824,800	1,416,200	408,600	37,800
Sept.	1,934,900	1,470,000	524,900	104,400
Oct.	2,057,100	1,638,000	1,004,100	228,800
Nov.	2,673,300	1,708,500	964,800	87,000
Dec.	2,256,000	1,632,000	624,000	43,000
Jan.	1,570,300	1,218,000	352,300	82,700
Feb.	1,324,600	1,086,000	238,600	220,900
	\$16,269,400	\$11,625,200	\$4,632,200	\$640,500
Incr.	\$1,118,400	\$ 467,800	\$ 640,500

x Decrease

Average mileage under operation during above period, 4,500, against 4,297 for same period 1912-13.

Canadian Pacific Railway, Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1912-13, from July 1, 1913:—

Decr. \$ 3,420.48 \$ 581,915.20

x Decrease

Approximate earnings for Feb., \$7,365,000, against \$6,326,000 for Feb., 1913.

During February the mileage under operation was increased to 11,920.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T.W.R., and D.G.H. & M.R., for Jan., and increases, or decreases from the figures for Jan., 1913:

	1914	1913	Increase	Decrease
G.T.R.	\$5,597,335	\$6,017,439	\$420,105
C.A.R.	1,251,102	345,239	20,137
G.T.W.R.	1,039,878	1,108,295	68,417
D.G.H. & M.R.	353,693	343,028	\$7,665
Totals	\$7,315,958	\$7,817,061	\$501,103

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch, 1,104 miles, for Feb., were \$313,492, against \$374,084 for Feb., 1913. The aggregate earnings for two months ended Feb. 28, were \$681,810, against \$751,928 for same period 1913.

Use of Drawing Rooms, Etc.—The Board of Railway Commissioners having ordered suspension of the new regulations as far as concerns traffic between points in Canada, pending a hearing on the subject at Ottawa, which took place Mar. 17, the date for the new regulations becoming effective between points in Canada is postponed until further notice. The new regulations became effective on traffic to, from and between points in the United States on Mar. 15, 300 lbs. and lbs. of baggage will be checked without charge for one person travelling in a drawing room and a compartment, respectively, under these regulations.

Fires Originating Near Railways.—The Board of Railway Commissioners has under consideration the advisability of requesting railway companies to submit monthly, in duplicate, reports on fires originating within 300 ft. of the track and burning over an area of 100 sq. ft. or more outside the right of way. It is reported that the submission of such reports shall be limited to lines or portions of lines to be broadly classified as running through forest sections.

The Algoma Eastern Ry. has been admitted to Eastern Canadian Passenger Association membership.

Supervision of Officials and Employees on C.P.R. Western Lines.

An apparently supplied, or at least inspired, article has been published in some western papers, which mentions the large number of officials and employees on the lines west of Port Arthur, Ont., with some details of the organization, and then says:—

"With a view to bringing the management in as personal touch as possible with all the men employed on this vast transportation system, a new arrangement has been inaugurated by those conducting the company's business. Under this system, the officers will be required to make a report twice a year, in June and December, on the service of every officer and employee under his immediate jurisdiction. Under this report an account will be given of an employee's disposition, attention to business, loyalty, zeal and particularly of the tactful and courteous manner with which he deals with the patrons of the company. Realizing that fairness and courtesy are one of the greatest assets in the success of any company, greater stress will be laid on the degree in which that qualification is possessed. It has been made a rule, however, that should an officer find it necessary to make any adverse comment on the services or qualifications of an employee that employee must be called in, shown the report, and instructed to initial it with any comment he may wish to make. This report will go ultimately to the Vice President. Unfortunately, human nature is not perfect and this means is being adopted to prevent any possibility of a man being 'knocked' without his knowledge; in addition to these reports, a gentleman who is a good judge of human nature, of kindly disposition, whose name has not been divulged to the staff, has been selected who will travel over the road as a passenger, and in that capacity, or as a shipper, or consignee, will come into continual contact with the various employees, and his instructions are to look for the good points in employees and to draw attention to and send in the names of any of the staff whose courtesy, zeal, loyalty, ambition, and knowledge marks them out as above the ordinary, and likely material for advancement."

A Canadian Pacific and Canadian Northern Joint Section in Alberta.

The Alberta Central Ry., a C.P.R. subsidiary, and the Canadian Northern Western Ry., a C.N.R. subsidiary, both of which are building lines west of the Red Deer River to Rocky Mountain House and the Brazeau River coal fields, have agreed that a certain portion of the line is to be jointly owned, and the Dominion Parliament is being asked to confirm this agreement, which is dated June 15, 1913. The lands on which the joint section is to be built extend from the s. e. ¼ of Sec. 22, tp. 29, range 7, west of 6th meridian, to the west limit of sections 18 and 19 in the same tp. and range, and these lands, together with the lines, buildings, etc., to be laid out thereon, are to be known as the joint premises. The C. N. W. Ry. is given joint user of the entire joint premises, with the exception of a spur track to the banks of the North Saskatchewan River; but all maintenance and repairs are to be done by the A. C. Ry. The cost of all works, including a bridge across the North Saskatchewan River, is to be carried to capital account, and the C. N. W. Ry. is to pay interest on 50% of the same at 4½%, and the C. N. W. Ry. will also pay such a proportion of the total of maintenance as is represented by its proportion of the total traffic. The

C. N. W. Ry. proposes to extend its line from the westerly end of the joint premises to the westerly limit of range 19 west of the 5th meridian, and it is understood that this extension, or any portion, may be used by the A. C. Ry. on the same terms and conditions as the joint premises. The agreement provides for arbitration in case of differences as to terms.

Standard Rules on the Intercolonial Railway.

A. C. Barker, Inspector Stations, Trains and Train Dispatching, has issued the following circular:—

The operating rules now in effect on the I.R.C. will be superseded by Standard Code of General Train and Interlocking Rules, at 24 o'clock midnight, May 30. The new rule books are being distributed. Employees concerned not receiving a copy should apply to superior officer for same. The following employees must pass written examination in the new rules before date mentioned above, under supervision of instructor or superior officer:—Conductors, engineers, train dispatchers, brakemen, train baggage men, firemen, yardmasters, yard foremen, switch tenders, agents, operators, section foremen, bridge foremen and signal men. Instructors will hold classes at different points on each district, which employees are requested to attend, and obtain explanation of rules let thoroughly understood.

The following instructors in the rules have been appointed:—District 1—A. Dion, T. T. Marchessault, W. H. Toohy. District 2—J. Davidson, E. Smith, N. Sinclair. District 3—B. S. Ward, B. Ripley, W. B. Johnson. District 4—J. J. MacLeod, R. A. McDonald, A. S. Prowse.

I. R. C.—C. P. R. Traffic Agreement.—

The acting Minister of Railways informed the House of Commons, Mar. 11, that under the agreement between the Department of Railways and the C.P.R., covering the transportation of freight and passengers between Halifax and St. John, in connection with the C.P.R. and Allan Line steamships carrying the British mails, special freight trains consist of 500 tons contents east bound, and 400 tons contents west bound; special passenger trains are limited to 12 cars all told, including vans, their size being varied according to weather conditions.

Mail Transportation by Railways.—The Postmaster General has informed Canadian Railway and Marine World that, under the new arrangement with the railways, which has been made effective from Feb. 1, payment is to be made by the car mile, as follows:—Full length postal car, 16c. a car mile; half car, 9c; baggage car service, 4c. The arrangement covers the transportation of mails of all classes, including parcels.

Water for Locomotive Purposes on the Trans Australian Ry. is to be obtained by conveying it in wooden pipes from Kalgoorlie for about 257 miles, service tanks being provided every 50 miles. In addition an underground supply has been located by a bore at 344 miles from Kalgoorlie, and from that point water will be pumped to tanks at other points along the line.

Dominion Railway Subsidy Agreements.—

The Dominion Government has entered into agreements under the act granting aid for construction as follows,—Burrard Inlet Tunnel and Bridge Co., Feb. 16, for the construction of a bridge over the second narrows of Burrard Inlet; Kettle Valley Ry., Feb. 18, for the construction of a line from between Merritt and Penticton Wharf, to Midway, 135 miles.

Dominion Government Interior Terminal Elevators.

In the House of Commons recently, the Minister of Trade and Commerce gave the following information as to Government elevators, completed, under construction and under consideration. Applications have been received for the establishment of elevators from Calgary, Lethbridge, Edmonton, Alta.; Prince Albert, Broadview, North Battleford, Melville, Wolsley, Sask.; and Portage la Prairie, Man. It has been decided to build elevators at Moose Jaw and Saskatoon, Sask., and Calgary, Alta., and the requisite sites have been obtained for each place. At Moose Jaw and Saskatoon, the site was acquired from the municipality for the nominal price of \$1 in each case, and for Calgary the site was transferred from the Department of Militia. The elevators at Moose Jaw and Saskatoon are under construction, but no others have been placed under contract. The Moose Jaw elevator is being built by the Barnett-McQueen Co., and will have a working house capacity of 500,000 bush., with storage capacity of 3,000,000 bush. The Saskatoon elevator under construction by the same firm is of the same capacity, and the estimated totals of the contracts is \$2,005,620.

In reply to questions regarding the operating of these and other elevators to be built, and the charges to be made in connection therewith, it was stated that when they are more nearly approaching completion, and when the time comes for transactions with reference to them, all these matters will be taken up by the Board of Grain Commissioners.

Regarding the Government elevator at Fort William, Ont., it is reported that the receipts of grain between Oct. 16, 1913, the date on which it was opened for business, and Jan. 31, 1914, were 6,950,206 bush., and the shipments 5,278,145 bush. The gross earnings were \$61,394.56, and the operating expenses \$33,517.73. It has a capacity of 3,250,000 bush., and cost \$1,372,000.23.

Dominion Government Railway to Hudson Bay.

An Order-in-Council was passed, Mar. 2, vesting in the Department of Railways and Canals certain lands for trackage and ballast pits in connection with the railway under construction from Pas to Port Nelson, Man. The lands, 235.70 acres in extent, are situated in tp. 25, range 26 west of the 1st meridian. (Mar., pg. 119.)

Trade with Portugal.—Frederic Nicholls, Consul for Portugal, Toronto, has received the following letter from the Lisbon Commercial Association:—"Being desirous of enlarging our commercial business, especially the foreign one, the directors of the association have approved of the installation of a room for catalogues of the most important commercial houses in the world, in order to have our business men acquainted with prices of all articles in the world's market, and for the above reason we ask you to be kind enough to invite, by the most practical means, the commercial houses of your district that export their products to present their catalogues to the association." Catalogues should be addressed to "Associacao Commercial de Lisboa, Lisbon, Portugal."

During January, 9 employees were killed and 4 were injured in the course of their work on railway construction in the Dominion, and 16 were killed and 89 were injured in general steam railway service.

The Late George Westinghouse.

George Westinghouse, who died of heart disease in New York, Mar. 12, was born at Central Bridge, N. Y., Oct. 6, 1846. His father was an inventor, who, in 1856, removed his family to Schenectady, N. Y., where he established the Schenectady Agricultural Works. The boy attended the public and high schools of the town, spending much of his leisure time, after studies, in his father's machine shop. Before he was 15 he invented and made a rotary engine, and passed at an early age the examination for the position of Assistant Engineer in the U. S. Navy, in which he served from 1863 to 1865.

In 1865 he invented a device for replacing railway cars upon the track, which was made of cast steel, at Troy, N. Y. Going to Troy one day, a delay caused by a collision between two freight trains, suggested to him the idea that a brake under the control of the locomotive driver might have prevented the accident. His first thought was an automatic brake attached to the couplers, which was unsuccessful. This was followed by steam, which proved also to be unsatisfactory, because by the time it reached the brake from the engineer's cab it lost its power. He saw an account of the use of compressed air in digging the Mont Cenis tunnel, and after much study and investigation, the use of compressed air further impressed itself on him. Drawings of the air pump, brake cylinder and valves were made, but considerable time elapsed before a practical trial of the brake was obtained. The first patent was issued April 13, 1869, and the Westinghouse Air Brake Co. was formed on July 26 following. Many changes and improvements were being made in the brake all the while, the business flourished, and the manufacturing works, begun in 1869, were completed in 1870. In 1870 he went abroad to introduce the air brake in England—a difficult problem, as the trains in Europe had hand brakes upon only the brake vans, there being no brakes upon the other vehicles. Not only did this require the spending of seven years in Europe, between 1871 and 1882, but it taxed his inventive ability considerably to meet the new conditions of railway practice. In the meantime, he invented the automatic feature of the brake which overcame the imperfections in the first form, and removed the danger from parting of trains on steep grades. In 1886, he invented the quick action brake, the improvement being made in what is known as the triple valve. By this valve it became practicable to apply all brakes on the train of 50 freight cars in two seconds.

About 1880, he became interested in the operation of railway signals and switches by compressed air, and soon after there was developed and patented the system now manufactured by The Union Switch & Signal Co.

In 1886 the Westinghouse Electric Co. was formed for the manufacture of lamps and electric lighting apparatus. Mr. Westinghouse having become interested in the subject. The business rapidly developed and in 1889 and 1890 this company absorbed the United States Electric Co., and the Consolidated Electric Light Company. In 1891 all these properties were reorganized into the Westinghouse Electric & Manufacturing Co., which owns extensive works at East Pittsburgh, employing over 22,000 people.

In 1895 the Electric Co. outgrew its small quarters and moved to East Pittsburgh and the same year works of the British Westinghouse Co. were established at Manchester.

The question of the steam turbine and its applications was investigated by Mr. West-

inghouse and he secured the patent rights of C. A. Parsons of England in 1897-98. This development of a new prime mover soon led him to consider the use of the turbine as a prime mover for ships. The trouble was the high speed. He then developed and brought out the mechanical reduction gear for reducing the inherently high speed of a turbine to the slow speed of a ship propeller or direct current dynamo. He also occupied himself with the development of an air spring for automobiles and motor trucks.

He rendered an invaluable service to electrical development when, in spite of opposition, ridicule and many efforts to crush his alternating current system, he remained steadfast in his belief that this class of high tension transmission would make distant electrical distribution possible. This system his engineers developed, and in this connection secured Nicola Tesla, in 1887, who invented the alternating current induction motor. A struggle almost identical with that of the earlier fight for alternating current transmission is the recent development of alternating current traction by means of the single phase motor. In spite of the same opposition, Mr. Westinghouse achieved a far step in electric railway practice which the electrical world was quick to follow just as in the case of alternating current transmission.

Owing to his many achievements in mechanics, electricity, steam and gas, his name was known the world over, and he had many honorable distinctions conferred upon him for his achievements and in recognition of the services he rendered the various branches of engineering. His alma mater, Union College, Schenectady, conferred upon him the degree of doctor of philosophy. He was decorated with the order of the Legion of Honor, with the order of the Royal Crown of Italy, with the order of Leopold of Belgium. He was the second recipient of the John Fritz medal. He received the degree of doctor of engineering from the Koenigliche Technische Hochschule of Berlin, Germany. He was an honorary member of the American Society of Mechanical Engineers, of which body he was President in 1910. He was one of the two honorary members of the American Society for the Advancement of Science. He was an honorary member of the National Electric Light Association of America. He was awarded the Scott premium and medal by the Franklin Institute of the State of Pennsylvania. He received the Edison gold medal for meritorious achievements in the alternating current system of electrical distribution. He received the Grashof gold medal from the Society of German Engineers in Germany, which acknowledged him the greatest American engineer.

He was connected with a large number of industries at home and abroad, many of which bore his name. He was President and director of Westinghouse Air Brake Co., Westinghouse Machine Co., Nernst Lamp Company, Union Switch & Signal Co., Canadian Westinghouse Co., Societe Anonyme Westinghouse, Paris, Cooper Hewitt Electric Co., Pittsburgh Meter Co., Societe Italiana Westinghouse, Italy, East Pittsburgh Improvement Co., Westinghouse Brake Co., London, Westinghouse Cooper Hewitt Co., London, Westinghouse Friction Draft Gear Co., Westinghouse Metal Filament Lamp Co., London. He was also Chairman of the Board of Directors of Westinghouse Electric Co., London, and Director Westinghouse Electric & Manufacturing Co. Traction & Power Securities Co., Westinghouse Metallfabrik Glühlampenfab-

rik, Vienna. The Westinghouse companies employ 50,000 men, on whom 150,000 persons are dependent. The total capitalization of all the companies is \$200,000,000. Although actively associated with a large number of industries, he had during the last few years begun to transfer his responsibilities to the shoulders of his trusted lieutenants, the fortunate selection of which had always been one of the leading characteristics of his varied career. His death, therefore, will not cause any material change in the policy or operation of the companies so indelibly linked with his name.

Regulations Respecting the Removal of Regular Station Agents.

Canadian Railway and Marine World for March contained an order passed by the Board of Railway Commissioners, Jan. 31, respecting the removal of regular station agents, the complaints on which it was based having reference to certain specified stations west of Port Arthur, Ont. On Feb. 19 Assistant Chief Commissioner D'Arcy Scott gave the following decision which was concurred in by Commissioners McLean and Goodeve:—

"For some weeks past the Board has received many complaints from places in the Western Provinces where permanent agents had been established by railway companies, that the agent was being removed and the station being turned into a flag station. So numerous were these complaints, that the Board thought it proper to issue General Order 119, requiring railway companies which intend to remove a permanent agent from a station and make the station a flag station, to first notify the local municipality, or board of trade, of its intention to apply to the Board; and, then send in to the Board an application for permission to close the station, with a statement of the grounds upon which action was to be taken. When a railway company opens a station and appoints a permanent agent there, business in that locality is built up on the assumption that the station will continue to be a permanent station. The Board thinks it proper that it should be consulted, and that those representing the public should be heard before such a station is closed by a railway company. The services given by a railway company at a station where there is a regular agent, and at a flag station, are very different; and, it may amount to a great hardship to a community to suddenly have its station closed. The Board has no intention of interfering with a railway company in practising economy by closing a regular station, if the facts of the particular case warrant such action; but, as the closing of a station has such a material effect upon the interests of the public who have been using that station, the Board should have an opportunity of determining in each case upon its own merits whether the railway company would be justified in closing a regular station or not. At the hearing, the point of view of the railway companies was clearly set forth. We realize the necessity for prompt action in all cases where it is reasonable that a company should be permitted to close a regular station. No general rules can be laid down. Each case will have to be dealt with on its merits. The intention of the Board in issuing General Order 119 was that it should apply only to cases where the company desired to close a regular agency station and make that station a flag station. It was not intended to apply to cases where a special agent had been temporarily employed to look after some particular class of business which was of a temporary nature. No order is necessary in this case."

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Algoma Eastern Ry.—A. J. DONEGAN, heretofore Division Superintendent, Algoma Central and Hudson Bay Rd., Hawk Jct., Ont., has been appointed Superintendent, A.E.R., vice P. Robinson, transferred. Office, Sudbury, Ont.

Canada Steamship Lines, Ltd.—J. J. NELLIGAN has been appointed Division Freight Agent, Montreal.

C. W. BATH, heretofore Assistant Ticket Agent, Richelieu and Ontario Navigation Co., Toronto, has been appointed Passenger and Excursion Agent, Canada Steamship Lines, Toronto, vice S. J. Murphy, resigned. He will report to H. D. Paterson General Agent, Passenger Department, Toronto.

PERCY GRANT has been appointed Division Freight Agent, Hamilton, Ont.

H. B. BROWNELL has been appointed Division Freight Agent, Winnipeg.

F. W. GARDINER has been appointed District Freight Agent, Calgary, Alta.

B. C. TUCKER has been appointed Division Freight Agent, Cleveland, Ohio.

Canadian Car Service Bureau.—J. REILLY, heretofore acting Manager, has been appointed Manager. Office, 401 St. Nicholas Bldg., Montreal.

Canadian Government Railways.—H. H. SCHAEFER having retired from the service, the position of Division Freight Agent at Moncton, N.B., has been abolished, and agents in New Brunswick, Moncton north and east, report to the General Freight Agent, Moncton.

Canadian Northern Ontario Ry.—H. THOMPSON has been appointed Locomotive Foreman, Parry Sound, vice J. Quinn.

Canadian Northern Ry.—L. C. FRITCH, heretofore Chief Engineer, Chicago Great Western Rd., Chicago, Ill., has been appointed Assistant to the President, C.N.R.

M. A. THOMSON, heretofore Travelling Freight Agent, Hamilton, Ont., has been appointed City Freight Agent, Ottawa.

G. A. KEELER has been appointed acting Manager, Prince Edward Hotel, Brandon, Man., vice E. Hutcheson, Manager, resigned.

F. CLARKE has been appointed Locomotive Foreman, Calgary, Alta.

A. H. SWEETMAN has been appointed Car Foreman, North Battleford, Sask.

Canadian Pacific Railway.—L. C. ORD, heretofore General Car Inspector, has been appointed Assistant Master Car Builder, vice P. A. Chrysler. Office, Montreal.

G. W. GEHAN, heretofore storekeeper at Place Viger, Montreal, has been appointed storekeeper at Sortin Yard, Montreal, vice J. McDonald.

W. KENNY has been appointed storekeeper at Place Viger, Montreal, vice G. W. Gehan transferred.

F. W. NICKS has been appointed acting District Master Mechanic, District 2, Manitoba Division, vice P. S. Lindsay, on leave of absence. Office, Winnipeg.

G. T. COLEMAN, heretofore Chief Dispatcher, Moose Jaw, Sask., has been appointed Chief Dispatcher, Winnipeg, vice E. G. Trump, transferred.

E. G. TRUMP, heretofore Chief Dispatcher, Winnipeg, has been appointed Chief Dispatcher, Moose Jaw, Sask., vice G. T. Coleman.

J. GRAHAM has been appointed Assistant Roadmaster, District 2, British Columbia Division, North Bend, vice G. Wharton, transferred.

G. WHARTON, heretofore Assistant Road-

master, District 2, British Columbia, North Bend, has been transferred to Nelson.

C. E. PHELPS, heretofore Soliciting City Passenger Agent, Baltimore and Ohio Rd., Washington, D.C., is reported to have been appointed Southern Travelling Passenger Agent, C.P.R., with office at New York.

Central Vermont Ry.—MARCUS ALEXIE, heretofore Soliciting Passenger Agent, Montreal, has been appointed Canadian Freight and Passenger Agent, vice A. C. Stonegrave, deceased, as reported in our last issue. Office, 122 St. James St., Montreal.

Grand Trunk Pacific Ry.—W. E. DUPEROW, heretofore General Agent, Passenger Department, G.T.R., G.T.P.R. and G.T.P. Coast Steamship Co., Vancouver, B.C., has been appointed Assistant General Passenger Agent, G.T.P.R. Office, Winnipeg.

C. E. JENNEY, heretofore City Passenger and Ticket Agent, G.T.R., Toronto, has been appointed General Agent Passenger Department, G.T.R., G.T.P.R. and G.T.P. Coast Steamship Co., in charge of territory in British Columbia, Rivers Inlet and South, vice W. E. Duperow, promoted. Office, Vancouver, B.C.

The following station agents have been appointed:—Pope, Man., R. W. Gibson; Unc., Man., C. L. Bennett; Spy Hill, Sask., H. G. Boulger; Young, Sask., H. B. Briggs; Allan, Sask., M. R. Stirling; Bradwell, Sask., P. L. Harper; Asquith, Sask., O. Hawthorn; Juniata, Sask., G. S. Bass; Reford, Sask., T. Hutchings; Tofield, Alta., A. G. Sinclair; Stony Plain, Alta., E. B. Elgood; Dandurand, Alta., H. S. Creelman; Jasper, Alta., H. L. Gurwell; Mirror, Alta., D. W. Mathers; Trochu, Alta., F. C. Taylor; Calgary, Alta., A. B. Dowling; Terrace, B.C., O. E. Nash; Pacific, B.C., W. Norris; New Hazelton, B.C., T. S. Constantine; Prince George, B.C., H. F. Bickford; Wordsworth, B.C., R. A. Pake.

Grand Trunk Ry.—W. S. THOMPSON, heretofore connected with the Montreal press, has been appointed on the General Advertising Agent's staff, for the preparation of publicity articles.

W. J. MOFFATT, heretofore Travelling Passenger Agent, Toronto, has been appointed City Passenger and Ticket Agent there, vice C. E. Jenney, transferred to G. T. Pacific Ry.

S. R. JOYCE, heretofore ticket clerk, Toronto, has been appointed Travelling Passenger Agent there, vice W. J. Moffatt, promoted.

W. F. SHARPE has been appointed Chief Dispatcher, Brantford, Ont., vice E. O. Dunn, transferred.

R. McC. SMITH, heretofore Passenger Agent, has been appointed City Passenger and Ticket Agent at Detroit, Mich., vice C. M. Harwood, resigned.

R. KELLEY, heretofore Trainmaster, District 26, Detroit Division, Battle Creek, Mich., has been appointed Trainmaster, Districts 27 and 28, Detroit Division, vice G. B. Perdue, resigned on account of illness. Office, Durand, Mich.

E. O. DUNN, heretofore Chief Dispatcher at Brantford, Ont., has been appointed Chief Dispatcher at Durand, Mich.

ROY BULLEN, heretofore General Agent, Chicago Great Western Rd., Winnipeg, has been appointed General Agent, Freight Department, G. T. R., Minneapolis, Minn.

F. A. RUTHERFORD, heretofore Chief Dispatcher, London, Ont., has been appointed Trainmaster, District 26, Detroit Division, Battle Creek, Mich., vice R. Kelley, transferred.

The following agents have been appointed:—Britannia Mills, Que., T. A. Leclerc; St. Bazile, Que., H. M. Houde; Aubrey, Que.,

H. D. Reynolds; Glen Huron and Nottawa, Ont., W. Brethauer; Burlington, Ont., W. W. Langford; Winona, Ont., W. W. Weafer; Port Colborne, Ont., O. P. Seeman; Ravensworth, Ont., H. Desarmia.

Great Northern Ry.—L. W. HILL, Chairman of the Board, has been elected President, vice Carl R. Gray, resigned. Office, St. Paul, Minn.

A. R. BROOKS, heretofore agent at Brandon, Man., has been appointed District Freight and Passenger Agent, Montreal, vice W. T. Hetherington, transferred.

W. T. HETHERINGTON, heretofore District Freight and Passenger Agent, Montreal, has been appointed District Freight and Passenger Agent, Winnipeg, vice A. Brostedt, resigned.

Adams Express Co. has been appointed General European Traffic Manager, vice H. G. McMicken, heretofore European Traffic Agent. Office, 25 Cockspur St., London, Eng.

Intercolonial Ry.—W. A. COWAN, A.M. Can. Soc. C.E., heretofore Superintendent, District 1, Atlantic Division, C.P.R., Brownville Jct., Me., has been appointed Resident Engineer, Halifax Ocean Terminals, I.C.R. (See also Canadian Government Railways.)

Manchester Liners, Ltd.—H. D. STOKER, heretofore in the office of the Vice President in charge of Steamship Lines, C.P.R., Montreal, has been appointed Westbound Traffic Agent, Manchester Liners. Office, Montreal.

Moncton and Buctouche Ry.—We are officially advised that no appointment will be made to the Superintendency, left vacant by the recent death of F. N. Hall, the work being undertaken by the General Manager, E. G. EVANS. Office, Moncton, N.B.

New York Central and Hudson River Rd.—IRA H. HUBBEL, heretofore General Freight Agent, has been appointed Assistant Freight Traffic Manager, N.Y.C. & H.R.R., West Shore Rd., and Ottawa and New York Ry., vice H. D. Carter, deceased. Office, New York.

WILLIAM A. NEWMAN, heretofore General Freight Agent, Lake Shore and Michigan Southern Ry., Cleveland, Ohio, has been appointed General Freight Agent, N.Y.C. & H.R.R. and West Shore Rd., vice Ira H. Hubbel, promoted. Office, New York.

Southern New England Rd.—J. M. MORRISON, Engineer and Superintendent of Structures, Central Vermont Ry., has also been appointed Chief Engineer, S.N.E.R., vice H. R. Safford, Chief Engineer, G.T.R., who has resigned from S.N.E.R. service. Office, St. Albans, Vt.

Stopping Trains in their own Length.—A most important development of the air brake was demonstrated in recent experiments on the Pennsylvania Rd., when a 12 car steel train, nearly 1,000 tons in weight, running 60 miles an hour, was stopped within its own length of about 1,000 ft. The new Westinghouse brake may be operated with pneumatic or electric control, and it embodies among other improvements two shoes for each wheel instead of one, as at present. The new apparatus shortens the time of obtaining the maximum brake capacity from 8 seconds in the present system to 3½ seconds. With electric control, the time is shortened to 2¼ seconds. It was shown that a 12 car steel train running 80 miles an hour could be stopped within 2,000 ft.

Canada has not too many transcontinentals. With only 10% of the area of the country under crop, more railways and more wide-spreading railways are the chief means of development, and are a national necessity.—Toronto Globe.

Orders by Board of Railway Commissioners for Canada.

Begin, 1914, to 1914, Canadian Railway and Marine World, published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed our paper have a continuous record of the Board's proceedings. No other paper has done this.

The dates given of orders, immediately following the numbers, are those on which the hearings took place, and not the date on which the orders were issued. In many cases orders are not issued for a considerable time after the dates assigned to them.

21457. Feb. 10.—Ordering C. N. Ontario Ry. to build a permanent under crossing, not less than 15 ft. wide and 13 ft. high, at west bent of trestle through H. Ray's farm, March Tp.

21458. Feb. 21.—Authorizing C.P.R. to use 9 bridges on its Havelock, St. Thomas, Toronto, Hamilton and London Subdivisions, Ont.

21459. Feb. 21.—Authorizing C. N. Ontario Ry. to build spur for Sun Brick Co., York Tp.; to be completed within six months.

21460. Feb. 21.—Authorizing G.T.R. to use bridge 146, mileage 108.46, Napanee, Ont.

21461. Feb. 21.—Approving detail plans of Edmonton, Dunvegan and British Columbia Ry. bridge to be built across Athabasca River at mileage 131 west of Edmonton.

21462. Feb. 21.—Authorizing Young village, Sask., to build Dublin St. across C.P.R.

21463. Feb. 21.—Amending order 10033, Apr. 11, 1913, re building highway bridge over G.T.R. in Murray Tp., Ont.; and re appointment of cost between G.T.R. and Campbellford, Lake Ontario and Western Ry. (C.P.R.).

21464. Feb. 21.—Ordering C.P.R. to flag all train movements over crossing of Atwater Ave., Montreal, and to locate highway crossing sign so that good view of it can be had when crossing is being approached in either direction.

21465. Feb. 14.—Approving City of Toronto plan showing bridge to be rebuilt over G.T.R. and C.P.R. at Strachan Ave.

21466. Feb. 21.—Amending order 21200, Jan. 29, 1913, re G.T.R. protection of crossing near Hastings Station, Ont.

21467. Feb. 21.—Authorizing G.T.R. to rebuild bridge 63 over Madawaska River, at milepost 171.41, near Arnprior, Ont.; provided pier to be abandoned be lowered to 1 ft. below low water mark.

21468. Feb. 21.—Approving proposed changes in Vancouver, Victoria and Eastern Ry. and Navigation Co.'s main line, part of original section east line section 15, Tp. 16, to west line Tp. 26, B.C.

21469. Feb. 21.—Approving C. N. Alberta Ry. stress sheet and general design of bridge at mileage 200.9, across Stony River, Alta.

21470. Feb. 20.—Authorizing Toronto, Hamilton and Buffalo Ry. to divert two highways between Lot 5, Con. 12, and Lot 5, Con. 13; and Lots 6 and 5, Con. 13, to build a right angle crossing halfway between the two present crossings; and rescinding order 20341, Aug. 16, 1911, in so far as it authorizes highway diversion between Lot 5, Con. 12, and Lot 5, Con. 13, Pelham Tp., Ont.

21471. Feb. 21.—Approving locations of C.P.R. crossings at Millicent and Rosemary, Alta.

21472. Feb. 21.—Suspending, pending investigation by Board, increased minima on building papers and outboard published in Supplement 10 to C.P.R. tariff C.R.C. No. E. 2513, and Supplement 28 to C.P.R. tariff C.R.C. 2513.

21473. Feb. 21.—Authorizing C.P.R. to build road bridge at grade across its main line, Medicine Hat Subdivision, Ont.

21474. Feb. 21.—Further extending, to May 21, 1914, the time within which sidings for Orie-Fensom Elevator Co., Hamilton, Ont., to be completed; and to June 30 for completion of those for Godson Contracting Co., in Hamilton, Ont.

21475. Feb. 21.—Authorizing C.P.R. to build bridge over International Harvester Co., Leith bridge, Alta.; and extension to siding for C. S. Hyman Co., London, Ont.

21476. Feb. 26.—Authorizing McKim Tp., Ont., to build highway crossing over C.P.R. in Lot 6, Con. 5.

21477. Feb. 6.—Limiting speed of G.T.R. trains over crossing of Long St., Chesham, Ont., to 10 miles an hour.

21478. Feb. 11.—Authorizing G.T.R. to build temporary siding for British American Oil Co., Toronto, Ont., for storage of kerosene, and for storage of kerosene.

21479. Feb. 11.—Authorizing Canadian National Ry. to build siding for Alberta Agencies, Edmonton, Alta.

21480. Feb. 11.—Suspending, pending investigation by Board, of G.T.R. Whitchurch, Ont., and of C.P.R. Hamilton and Buffalo Ry. C.P.R. and Ontario Central Ry., regarding additional cost of tickets for use of baggage rooms.

21481. Feb. 6.—Approving C.P.R. detail plans of bridge to be built on its Eastern Branch at Doon, Ont., on the N. W. corner of the D. O. C. bridge, between Chalmers and Lashley and Latouche and Maisonneuve, Ont.

21482. Feb. 6.—Relieving G.T.R. from providing further protection at the crossing of third public road at Chatham, Ont.

21483. Feb. 20.—Authorizing Kaministiquia Power Co. to build temporary trestle and sluice way across Canadian Northern Ry., 1,390 ft. west of Kakabeka Falls station, Ont.

21484. Feb. 27.—Approving Edmonton, Dunvegan, and British Columbia Ry. plan for 50 ft. half deck plate girder span of bridge to be built over Athabasca River, mileage 131 west of Edmonton, Alta.

21485. Feb. 14.—Authorizing C.P.R. to build spur on Harbor Quay, Goderich, Ont.

21486. Feb. 24.—Amending order 20817, Nov. 11, 1913, re Campbellford, Lake Ontario and Western Ry. (C.P.R.) undercrossing for A. R. Farewell, Oshawa, Ont.

21487. Feb. 27.—Authorizing Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build bridge 88 across Trent River, Trenton, Ont.

21488. Feb. 27.—Authorizing Esquimalt and Nanaimo Ry. to build across Anderson Logging Co.'s line near mileage 33 of E. & N.R. extension from McBride 1st, 1st Convent; crossing to be protected by interlocking plant.

21489. Feb. 26.—Amending order 21137, Dec. 31, 1913, re Toronto Civic Car Line crossing of G.T.R. spur on Danforth Ave.

21490. Feb. 28.—Authorizing C.P.R. to use bridges 1560 and 1037.

21491. Feb. 28.—Authorizing C.P.R. to build its Bassano eastern branch at grade across road allowances at mileage 97.8 and 92.8, Alta.

21492. Feb. 27.—Authorizing C.P.R. to build signs for J. J. Perigo and Calgary Brewing Co., Swift Current, Sask., and for Crown Feed and Produce Co., Calgary, Alta.

21493. Feb. 27.—Rescinding order 20407, Sept. 21, 1913, re Kettle Valley Ry., in so far as it directs a crossing at west boundary of M. W. Smith's farm, Beavercreek, B.C.

21494. Feb. 27.—Amending order 10546, June 10, 1913, re Hamilton St. Ry. crossing of Toronto, Hamilton and Buffalo Ry. at Main and Trolley Sts., Hamilton, Ont.

21495. Mar. 2.—Extending to May 31 time within which G.T.R. shall complete siding for Harris Abattoir Co., Hamilton, Ont.

21496. Feb. 24.—Approving Bell Telephone Co. agreement, Feb. 7, with Corporation of Waterloo, Tp., Ont.

21497. Feb. 28.—Ordering G.T.R. to stop train 69 on flag signal at Glanford station, Ont.

21498. Mar. 2.—Amending order 21310, Feb. 4, re C.P.R. ballast pit spur crossing road allowance at La Fleche, Sask.

21499. Mar. 2.—Authorizing C.P.R. to use bridges 602, 606, 613 and 63.

21500. Mar. 3.—Rescinding order 21402, re suspension of Supplement 30 to C.P.R. tariff C.R.C. no. E-2513, and ordering that Supplement 41 to C.P.R. tariff no. E-2513 be in effect from Feb. 25.

21501. Mar. 3.—Authorizing C.P.R. to build road diversion in Sec. 3, Tp. 23, R. 28, W. 3 M., Sask.; and to build its Swift Current northwesterly branch across same at mileage 101.07.

21502. Mar. 3.—Ordering C.P.R. to maintain station agent at Ralph, Sask.

21503. Mar. 3.—Authorizing C.P.R. to build extension to trackage for Crown Grain Co., Winnipeg.

21504. Mar. 3.—Relieving G.T.R. from providing further protection at crossing of Main St., just east of Thornedale station, Ont.

21505. Mar. 3.—Authorizing Hamilton St. Ry. to cross G.T.R. and Hamilton Radial Ry. at grade on Kenilworth Ave.

21506. Mar. 3.—Ordering American Ex. Co. to establish a rate from Springfield to Hamilton, Ont., to become effective by April 3.

21507. Mar. 3.—Establishing express collection and delivery limits in Edmonton, Alta.; and rescinding order 20922, O. 11, 1913, in same connection.

21508. Mar. 3.—Relieving G.T.R. from providing further protection at Goodwill's crossing, 1 1/2 miles west of Georgetown, Ont.

21509. Mar. 3.—Ordering Kootenay and Alberta Ry. to grade west approach to bridge, in Sec. 7, Tp. 6, R. 1, W. 3 M., Alta., for about 300 ft., and extend guard rail for about 150 ft., to be completed by June 15.

21510. Mar. 3.—Ordering C.P.R., within 60 days, to install improved type of automatic bells at crossing of Kyle and Queen Sts., Port Moody, B.C.; 20% of cost to be paid out of "the railway grade crossing fund."

21511. Mar. 3.—Authorizing Nepean Tp., Ont., to build highway crossing over C.P.R. at Second Ave.

21512. Mar. 3.—Authorizing clearance, as shown on C.P.R. plan, between standard coal sheds and rail side tracks.

21513. Mar. 6.—Amending order 17264, Aug. 21, 1912, re C.P.R. spur to Sims' ballast pit, Sask.

21514. Mar. 6.—Authorizing C.P.R. to build its Swift Current northwesterly branch across highway, at mileage 92.17, between Secs. 5 and 6-23-27, W. 3 M., Sask.

21515. Mar. 7.—Approving revised location of C.P.R. Bassano eastern branch, from Sec. 17-21-18, easterly to Sec. 21-22-8, W. 4 M., Alta., at mileage 6 to 72.97.

21516. Mar. 7.—Authorizing G.T.R. to rebuild bridge 10, mileage 123.75 from Black Rock, over public road between Lots 5 and 6, Con. 1, Fullerton Tp., Ont.

21517. Mar. 6.—Ordering G.T. Pacific Ry. to ap-

point a regular station agent at Cadworth station, Sask.

21518. Mar. 9.—Authorizing Osborne Rural Municipality, 310, Sask., to open crossing over C.P.R. Pheasant Hills Branch at mileage 260.8.

21519. Mar. 9.—Declaring that land applied for at Tappen, B.C., in Little Shuswap Indian Reserve no. 5, is required by C.P.R. for railway purposes, and is land which, were it the property of a private owner, could be taken without owner's consent.

21520. Mar. 9.—Authorizing C.P.R. to rebuild bridge 37.0 over Saugeen River, Walkerton Subdivision, Ont., and rescinding order 20604, Sept. 25, 1912.

21521. Mar. 6.—Approving location of C.P.R. station at Cadillac, Sask.

21522. Mar. 6.—Authorizing G.T.R. to use 2 bridges, no. 12, mileage 48.98, and no. 13, mileage 49.20, District 30, Quebec.

21523. Mar. 9.—Authorizing C.P.R. to use bridges 24.1, St. Guillaume Subdivision, Que.; 22.5, Newport Subdivision; 32.6, Ottawa Subdivision, and 44.7, Ottawa Subdivision, Ont.

21524. Mar. 6.—Authorizing C.P.R. to build spur for T. W. Murray, Vaughan Tp., Ont.

21525. Mar. 10.—Approving location of C.P.R. station at Shannavon, Sask.

21526. Mar. 9.—Approving revised location of portion of Kootenay Central Ry. from mileage 91.85 to 94.81, and authorizing crossing of Laurier and Borden Sts., Athlmer, B.C.

21527. Mar. 6.—Ordering C.P.R. forthwith to reopen station at Dunkirk, Sask., and reappoint station agent there.

21528. Mar. 9.—Relieving Pere Marquette Rd. from providing further protection at crossing of public road just west of Renwick station, Ont.

21529. Mar. 10.—Authorizing Vancouver, Victoria and Eastern Ry. and Navigation Co. to build spur for British Columbia Milk Condensing Co. at Guichon, B.C.

21530. Mar. 9.—Authorizing C.P.R. to build its Weyburn-Stirling Branch across highways between mileage 245.23 and 253.34.

21531. Mar. 10.—Approving revision of grades and alignment on C.P.R. Wellwood and Algoma Subdivisions, Lake Superior Division, Ont.

21532. Mar. 9.—Ordering C.P.R., within 90 days, to install improved type of automatic bell at crossing of White Lake Road, Pakenham, Ont., switching movements on sidings to be flagged over crossing by train crew.

21533. Mar. 11.—Authorizing Lake Erie and Northern Ry. to operate for 90 days, for purposes of construction only, across Grand Valley Ry. at station 172.60, near Paris, Ont.

21534. Mar. 12.—Amending order 21345, Feb. 11, re C.P.R. bridge 18.71, over Battle River, Alta.

21535. Mar. 12.—Approving locations of C.P.R. stations at Notoken and Ponteix, Sask.

21536. Mar. 10.—Extending time for completion of siding for Whiteside and Arnold, Barrie, Ont., for 90 days from date.

21537. Mar. 12, 11.—Authorizing G.T.R. to use bridge 168 across Thames River immediately west of London, Ont., bridge across Elgin St., Brantford, Ont., and bridge 30, crossing River St., Paris, Ont.

21538. Mar. 10.—Authorizing Cedar Rapids Mfg. and Power Co. to extend its right of way for transmission line to 125 ft. in St. Polycarpe and St. Ignace du Coteau du Lac parishes, Que.

21539. Mar. 12.—Ordering G.T.R. to discontinue and limit use of Algonquin Park station, Ont., within 60 days; if it desires to discontinue use of locomotive whistle at station it shall, within 20 days, file plans for approval of Board, showing signal system to be established there and instructions as to operating same, either by electricity or by hand.

21540. Mar. 11.—Authorizing G.T.R. to use bridge over viaduct, near Port Hope station, Ont.

21541. Mar. 11.—Authorizing C.P.R. to build its Lacombe-Easterly Branch of Calgary and Edmonton Ry. across highway at mileage 188.56, Sask.

21542. Mar. 12.—Authorizing G.T.R. to build siding for Canadian Clarendon Marble Co., St. Johns, Que.

21543. Mar. 11.—Authorizing C.P.R. to build spur for Canadian General Electric Co., Calgary, Alta.

21544. Mar. 13.—Campbellford, Lake Ontario and Western Ry. (C.P.R.) to build spur at mileage 111 (spur mileage), Trenton, Ont., across C.N. Ontario Ry. at two points.

21545. Mar. 12.—Approving Campbellford, Lake Ontario and Western Ry. (C.P.R.) diversion as built at mileage 91.18 from Glen Tay; and rescinding order 18282, Dec. 11, 1912, in same connection.

21546. Mar. 13.—Approving location of G.T. Pacific Branch Lines Co.'s station at mileage 63 on Moose Jaw Northwest Branch, at Siding 11, in Sec. 36-56, W. 3 M., Sask.

21547. Mar. 14.—Authorizing G.T.R. to connect with Dominion Iron and Steel Co.'s siding, Point St. Charles, Montreal.

21548. Mar. 13.—Postponing cancellation of special mileage rates on grain for milling and export, as published in C.P.R. Supplement 3 to C.R.C. no. E-2515 and G.T.R. Supplement 16 to C.R.C. no. E-2566; and ordering that special mileage rates, as published in Sec. 3 of C.P.R. tariff C.R.C. no. E-2515, and Sec. 1 of G.T.R. tariff C.R.C. no. E-2566 be continued for one year from March 20, and granting leave to the companies to apply to Board at end of period for revision of rates.

21549. Mar. 13.—Ordering G.T.R. to install, within 90 days, improved automatic bell at cross-

ing of highway immediately west of Lorne Park station, Ont., 20¢ of cost of installation to be paid out of railway grade crossing fund.

21487. Mar. 13.—Authorizing C.P.R. to build spur for Adolph Lumber Co. at Baynes Lake, B.C., to install derrick 300 ft. from crossing of Great Northern Ry. and connect it with interlocking plant, to be completed within six months.

21488. Mar. 16.—Authorizing C.P.R. to build road diversion under main line in Sec. 5-14-23, at Carmangay, Alta.

21489. Mar. 14.—Authorizing C.P.R. to use bridges 62.8 and 79.1, Windsor Subdivision, Ont.

21490. Mar. 14.—Authorizing G.T.R. to use bridges 144, 90, 40 and 39, District 15, Middle Division, Ont.

21491. Mar. 16.—Approving G.T.R. plans showing location and details of freight shed and platform to be built at Prairie Siding, Ont.

21492. Mar. 16.—Amending order 20940, Dec. 3, 1913, re location of C.P.R. Swift Current Northwesterly Branch, Sask.

21493. Mar. 17.—Ordering C.P.R., within 60 days to install improved automatic bell at crossing of County Road no. 14, Hillsburg, Ont., 20¢ of cost to be paid out of the railway grade crossing fund.

21494. Mar. 16.—Authorizing C.P.R. to build spur for W. T. Williams and J. W. Davidson, Medicine Hat, Alta.

21495, 21496. Mar. 17.—Authorizing C.P.R. to build its Bassano Easterly Branch across highway between Secs. 5 and 6, Tp. 23-1, at mileage 112.47; also across highway between Secs. 25 and 26-21-6, w. 4 m., Alta., at mileage 83.6.

21497. Mar. 16.—Authorizing Esquimalt and Nanaimo Ry. to build spur to Newcastle Lumber Mills, at Newcastle, B.C., at mileage 6.64 on Comox Extension.

21498. Mar. 17.—Authorizing C.P.R. to rebuild bridge 109.36, Mountain Subdivision, B.C.

21499. Mar. 17.—Ordering C.P.R., by June 1, to erect shelter at Groverton, Ont., for passenger accommodation.

21500. Mar. 17.—Approving revised location of C.P.R. main line, as built from mileage 24.70, at Savona, to mileage 30, and from mileage 32 to 40.62, at Semlin, B.C.; and authorizing double tracking on same and across 4 highways.

21501. Mar. 16.—Authorizing G.T.R. to build bridge 266, at mileage 48.25, over Credit River, near Ingleswood, Ont.

21502. Mar. 16.—Authorizing G.T.R. to build siding in Macauley and Draper Tps., Ont., for I. C. McLeod.

21503. Mar. 16.—Authorizing G.T.R. to use bridge 130, over Nith River, mileage 75.64, near Princeton, Ont.

21504. Mar. 17.—Authorizing G.T.R. to rebuild 9 bridges on District 4, Que.

21505. Mar. 16.—Approving Canadian Northern Ry. revised location through Sec. 19-2-6, and Sec. 24-2-7, w. 2 m., Sask., mileage 0 to 1.43; and authorizing crossing of road between said sections.

21506. Mar. 16.—Approving G.T.R. plans of superstructure of 8 bridges, District 13, Ont.

21507. Mar. 17.—Ordering G.T.R. by June 15 to install gates at St. Clair Ave., Toronto, Ont., to be operated by day and night watchmen; 20¢ of installing gates to be paid by railway grade crossing fund, remainder, 1-1 by city, and balance by company.

21508. Mar. 14.—Ordering G.T. Pacific Ry. to make certain changes in highway crossings in Tp. 34, R. 1 and 2, w. 3 m., Sask.; to be completed by May 31.

21509. Mar. 16.—Authorizing G.T.R. to build siding for Chalmers Milling Co., west of Dawes Road, Toronto.

21510. Mar. 16.—Approving G.T.R. plan of proposed arrangement for lighting vehicular and pedestrian roadways on Victoria Bridge, Montreal; work to be completed within 3 months.

21511. Mar. 17.—Authorizing Canadian Northern Ry. to build across and divert public road between n.e. ¼ Sec. 33-28-20 and n.e. ¼ Sec. 4-20-20; to divert highway between n.e. ¼ Sec. 32-28-20 and n.w. ¼ Sec. 34-28-20 to new crossing in n.e. ¼ Sec. 33, w. 3 m., at station 5684+20.2.

21512. Mar. 17.—Authorizing Cedar Rapids Mfg. and Power Co., Montreal, to make right of way for transmission line, 125.9 ft. wide, across Lot 338, St. Joseph de Soulanges Parish, Que.

21513. Mar. 16.—Authorizing London and Lake Erie Ry. and Transportation Co. to connect with Michigan Central Rd., at west end of St. Thomas, Ont.

21514. Mar. 17.—Authorizing G.T.R. to rebuild overhead bridge carrying Westminster Road over its line in London Tp., mileage 121.58 from Suspension Bridge, Ont.

21515. Mar. 18.—Approving Marconi Wireless Telegraph Co. of Canada's Tariff C.R.C. 8, covering new rates for cable and weekend letters; same to be filed in form prescribed under order 6679 (general order 32), Mar. 26, 1909.

21516. Mar. 17.—Amending order 21417, Feb. 27, re Edmonton, Dunvegan and British Columbia Ry. plan for bridge over Athabasca River at mileage 131 west of Edmonton, Alta.

21517. Mar. 18.—Amending order 17400, Aug. 30, 1912, re Campbellford, Lake Ontario and Western Ry. (C.P.R.) right of way.

21518. Mar. 18.—Ordering C.P.R. by April 1 to restore old clearance by raising underside of top of culvert 11 ins. between mileage 24 and 25, just north of Flower station, Ont.

21519. Mar. 19.—Amending order 21418, Feb. 14,

re C.P.R. spur at Harbor Quay, Goderich, Ont.

21520. Mar. 16.—Authorizing City of Montreal to build 8 ft. steel water pipe under, across and along G.T.R., Montreal, to be used as emergency supply for city.

21521. Mar. 19.—Authorizing C.N. Ontario Ry. to build trestle across Indian River, Fraser Tp., at mileage 101 from Ottawa.

21522. Mar. 19.—Ordering C.P.R. to stop train 22 on flag, daily except Sunday, at St. Clet, Que.

21523. Mar. 20.—Authorizing C.P.R. to take certain lands in Lot 6, Con. 4, west of Hurontario St., Toronto Tp., for enlarging station yard at Streetsville Jct., Ont.

21524. Feb. 26.—Authorizing G.T.R. to build siding for Terminal Warehouse and Cartage Co., west of Common St., Montreal, and rescinding order 9859, Mar. 9, 1910.

21525, 21526. Mar. 20.—Authorizing G.T.R. to use 16 bridges on District 30, Ont., and bridge on District 10, across Birch Ave., Hamilton, Ont.

21527. Mar. 23.—Amending order 19958, Aug. 8, 1913, re crossing of certain highways in Maisonneuve, Que., by C.P.R. Forsyth St. Branch.

21528. Mar. 20.—Authorizing C.N. Ontario Ry. to take portions of Lots 81 and 82, Ste. Dorothee Parish, Que.

21529. Mar. 21.—Relieving C.P.R. from providing further protection at crossing of Government Road, Mortlach, Sask.

21530. Mar. 23.—Authorizing G.T.R. to build 2 bridges 138, mileage 91.90, near Woodstock, and 7 mileage 6.15, near Weston, Ont.

21531. Mar. 21.—Authorizing C.P.R. to use bridge 2.65 on its Prescott Subdivision, Ont.

21532. Mar. 23.—Amending order 21508, Mar. 14, re G. T. Pacific Ry. crossings of highways in Saskatchewan.

General Order 121 rescinding general order 109, re carriage of trunks containing personal effects by freight, as from March 1.

General Order 122 rescinding general order 116, Dec. 24, 1913, re increased minimum railroad weights on certain grain and root traffic.

General order 123, Mar. 19.—Approving form "Release of Responsibility," no. 981, respecting carriage of clothing, wearing apparel and personal effects, and secondhand, in trunks, securely corded, submitted by Canadian Northern Ry., and ordering that said form be applicable to all railway companies under Board's jurisdiction until ordered otherwise.

Telegraph, Telephone and Cable Matters.

The Timiskaming and Northern Ontario Ry. Commission is reported to have purchased the Elk Lake Telephone and Telegraph line, which was owned by A. J. Reece, Elk Lake, Ont.

The Canadian Northern Telegraph Co. has opened an office at Fairlight, Sask., and has installed telephones at Bayard, Ettington, Gravelbourg, Mazenod, Michellton, Palmer and Spring Valley, Sask.

The Western Union Telegraph Co. has deposited plans for works proposed to be erected on certain land, and land covered by Water in Halifax harbor, N. S., the property being known as the Market wharf.

The Dominion Government has completed the laying of a cable connecting Pender and Saturna Islands, and is also laying cables connecting Halfmoon and Buccaneer bays, across Welcome Pass, and from London Island to Savary Island. A telegraph office has been opened at Britannia Beach on the line connecting Vancouver and Squamish, B. C.

A. B. Smith, Manager of Telegraphs, G. T. R. and G. T. Pacific Ry., is on a trip of inspection through the west to arrange details for the rapid completion of existing telegraph lines, and extensions in connection with the commercial telegraph service. It is anticipated that the telegraph line will be completed between Winnipeg and Prince Rupert shortly, a small gap only having to be filled.

The report with recommendations in the arbitration respecting telegraph operators' wages on the Pere Marquette Rd., issued at Detroit, Mich., Mar. 1, grants to operators in towns with a population of 15,000 or more, who have been receiving \$70 a month, or less, an increase of \$5 a month; to operators in cities with a population of less than 15,000, who have been receiving \$60 a month or less, an increase of \$2.50 a month. Over-time is to be paid at a rate derived by divid-

ing the monthly rate by the monthly hours, with a minimum of 25¢ per hour, instead of an all round 25¢ an hour as heretofore.

It is announced that the extensions of the C. P. R. telegraph system in British Columbia during this year, will include the continuation of the line along the Esquimalt and Nanaimo Ry., from Nanaimo to Courtenay, connecting Qualicum Beach, Union Bay, Cumberland and Comox, and the erection of an additional wire between Nanaimo and Alberni. Another line will be erected between Golden and Windermere, 95 miles, along the Kootenay Central Ry., and the line in the Okanagan Valley will be rebuilt.

Among the Express Companies.

S. O. Martin has been appointed agent, Canadian Northern Ex. Co., at Ottawa, where an office has recently been opened.

The Dominion Ex. Co. has closed its offices at Bittern Lake, Dauntless, Ensign, Keoma, Mazeppa, Seebe and Spring Coulee, Alta.

The Board of Railway Commissioners has rearranged the express delivery and collection limits for Edmonton, Alta.

F. W. Holland has been appointed General Agent, Canadian Northern Ex. Co., Montreal, vice E. C. Miner, acting General Agent there, who has resigned.

The Canadian Northern Ex. Co. has recently opened offices at Rockville Jct., Caffeys Locks, Cumberland, La Framboise, Ottawa, Richmond, L'Orignal, Orillia, Rockland, Smiths Falls, Perth Road and Portland, Ont.; Rockyford and Calgary, Alta.

The Dominion Express Co.'s Traffic Manager, W. H. Burr, has sent the following circular to agents: "We are going to issue, from time to time, short letters containing information on subjects relating to transportation, and particularly with regard to the service of the express companies, which we think will be of interest to employees, and which may assist them in answering questions, or in discussing such subjects with patrons. We shall be glad to receive suggestions from employees, and will take pleasure in answering personal requests for information desired on any particular point relating to the service. This is not to be a correspondence school, but merely an effort to get into personal touch with those who are interested, to the end that we may be able to place ourselves fairly before the public and be prepared to meet the adverse comments of those who don't know."

The first letter sent out deals with parcel post vs. express service. It says:—

Do not knock the parcels post; it has come to stay; it fills a long felt want to those who are willing to perform the greater part of the service themselves, who are willing to assume all the risks of loss or damage, who do not consider time of very great importance. On the other hand, the express companies are necessary to those who desire the personal service, protection in transit, pick-up and delivery, the saving of time, the prompt payment for goods lost or damaged, the option of prepaying or having the charges collected from the consignee, the collection of the purchase price upon delivery (c.o.d.), the privilege of stopping goods in transit, and the innumerable special services which are performed by express agents and employees. It is a business proposition. Where there is a difference in the charge, the higher charge will not be paid unless it is justified by superior service or advantages. On the other side, we give you the schedules of the parcels post rates, also the charges by express on parcels weighing up to 6 lbs. Make our service worth the price and go after the business.

Electric Railway Department

The Sherbrooke Railway and Power Co.'s Electric Railway System.

The Sherbrooke Railway and Power Co. operates a railway of about 11 miles around Sherbrooke, Que., with a suburban extension to Lennoxville, three miles. It also conducts a power and electric lighting business, in competition with the municipal organization.

country surrounding the city is very fertile, and supports a prosperous farming community. All these features contribute to the welfare and development of the city. In consequence, the railway policy at the time of the amalgamation was planned with this future prosperity in view. At the

may be counted out, every section of the city is within a short walking distance of a street railway track.

The system consists of five lines, as follows:—Belt, Frontenac, Newington, Park city to the south of the C.P.R. line, which and Lennoxville, all but the latter being exclusively local. The Belt Line operates four cars normally, on a 10 minute headway, the cars running in both directions around the belt. The route followed is along Wellington, Dufferin, Queen, Wolfe, Belvidere, King, Alexander, Aberdeen, Depot, King, and then back along Wellington St. The reverse belt runs in the opposite direction. This is the principal line of the system, embracing the main residential district, and passing through the main business section of the city, which is along Wellington St., north of King St. In addition, this line passes directly in front of the union station, through which pass the trains of the G.T.R., Quebec Central Ry., and Boston and Maine Rd. It is also the line nearest to the C.P.R. station near the back of the city. The starting point, and one of the turnouts for the line, are at the local offices and waiting room on Wellington St.

The Frontenac line operates one car only, and in a sense is a one way belt line, the starting point being the waiting room, following Wellington, Frontenac, Wolfe, Portland, Ontario, Beckett, Dufferin, and then along Wellington St. to the starting point. This line operates on a 20 minute headway.

The Newington line, operating one car, connects the centre of the city with Newington, a small suburb in the southeast section of the city, where the Quebec Central Ry. shops are located. From the corner of Wellington and King Sts. a car leaves every 20 minutes, following King St.

Latest Type of Nearside Pay-as-you-enter Car, Sherbrooke Ry. and Power Co.

The street railway property first operated under the name of the Sherbrooke St. Ry. Co., under a charter granted by the Quebec Legislature in 1895, when the population of Sherbrooke was about 9,000. For some years the railway was operated in a perfunctory manner, and allowed to lapse into a state of decay, largely due to it not being considered a profitable property, and not worth developing. In 1909, when the gross earnings on a small mileage with limited rolling stock were only \$31,222, the Sherbrooke Ry. and Power Co. was incorporated by the Quebec Legislature, to take over the property and franchises of the Sherbrooke St. Ry., as well as certain water power rights held by the British American Land Co., an old English company then being wound up. The resultant combination produced a public utility company with a wide field of activity.

At the time of the combination, Sherbrooke had a population of about 17,000, and in view of the contemplated rapid development of the city, due to the influx of numerous industries, it was proposed to reconstruct practically the whole system, and replace nearly the whole of the rolling stock, bringing the line up to date, as it was felt that by so doing the property would become profitable. This reconstruction has been carried out, with new power plant, road bed, and practically all new car equipment.

Sherbrooke now has a population of over 18,000, which is rapidly increasing as mentioned, due to the rapid influx of new industries, and the growth of existing enterprises. It is the central point of the old United Empire Loyalist settlement called the Eastern Townships, and is one of the very few settlements in Quebec in which the English element predominates. The

time of the amalgamation, a 5 mile extension to Brompton, a city of 12,000 population, and a further 8 mile extension to Windsor Mills, with 4,000 population, were considered, but it was not decided to proceed with these lines, and nothing has been done in this connection.

Open Car Converted for Nearside Prepayment, Sherbrooke Ry. and Power Co.

The extent of the local system is shown in the accompanying plan of the city. The system covers the whole city area most thoroughly, and in a manner that is not excelled in many small railway properties. With the exception of the portion of the line a recent subdivision, and in consequence

across the bridge, and then along Bowen Ave. and Lennoxville St. to the Q.C.R. shops, where the line loops back. A complete round trip is possible in the 20 minutes with a short stop at each end.

The Park line, operating one car, leaves from the same point as the Newington line,

at exactly half time with regard to the Newtoning car movements. This line follows King St. to Pine St., which it follows to the exhibition grounds, where it loops back, making the round trip in 20 minutes. This is the busiest line of the system during the fair week. Sherbrooke has the distinction of holding the largest fair in Eastern Canada every fall—The Eastern Canada Exhibition, which draws big crowds, taxing the line to its capacity.

The Lennoxville line is the only radial line of the system, and operates two cars on a 15 minute schedule, between Sherbrooke and Lennoxville. Starting from the corner of King and Wellington Sts., the line follows the latter to the road along the east bank of the St. Francis River, parallel to the G.T.R. line, to Lennoxville, where it terminates in the centre of the village. It follows the side of the highway, and maintains a very high schedule speed for the class of traffic handled.

All the lines of the system are single track, with turnouts located at such intervals as to minimize the waiting at meeting points. This is essential, as it will be seen from an examination of the operating times mentioned earlier, that the lines all operate on a pretty quick schedule for a small system.

The layout of the system has been largely dependent on the physical characteristics of the city. The hills on either side of the St. Francis River at this point are quite steep. The streets paralleling the river are comparatively level, but those running at right angles to it are for the most part very steep. Following the courses of the various lines a minimum grade has been obtained in rising from the lower level, in the heart of the business section along the west bank of the river, to the upper residential sections. The heaviest grade is up King St., the second street of the city, and in consequence, it has been considered inadvisable to run the cars straight up this street. The belt line cars making a detour two blocks to the south, thereby obtaining an easier ascent.

The system is laid with 72 lb. rail, 7 in. section, and with the exception of a very small portion the track is in an almost perfect condition. In all there are 11 miles of line. The trolley wire in the city system is 00 grooved copper. On the Lennoxville line an experiment in line material was tried about a year ago, and has given the best of satisfaction. This 3 mile line required trolley wire renewal. It was decided to try a steel wire of similar size to the copper one formerly in use, so $\frac{3}{8}$ in. steel wire was obtained for a short section of the line. This was obtained in stock lengths, and welded together at the ends in the shops. This proved quite satisfactory, but it was found that the wire, coming as it did from stock, was rough, and could not be straightened perfectly, and in consequence the wear on the trolley wheel was more than it ought to be. The use of the steel wire was sufficiently satisfactory to warrant the completion of the whole line. Before doing so, an order was placed for smooth, clean wire from the mill in desirable lengths. This wire has proved most satisfactory, and it is claimed that there is practically no wear to the trolley wheels. What wear does occur is due principally, it is claimed, to the first section of rough stock wire. The old copper trolley wire was suspended from the spans, 12 ins. off centre, and connected with the trolley wire at every span by flat steel bars, 16 ins. long, which were forged in the shops in spare moments. The copper trolley, in a single subway through which the line passes, was replaced by a steel bar, $\frac{1}{2}$ by 2 ins., which gives good

results. The operation of this section of the line has been most satisfactory, and a new trolley line has been obtained at about one tenth the cost of a new copper one. By the use of the old line as an additional feeder alongside, the resistance

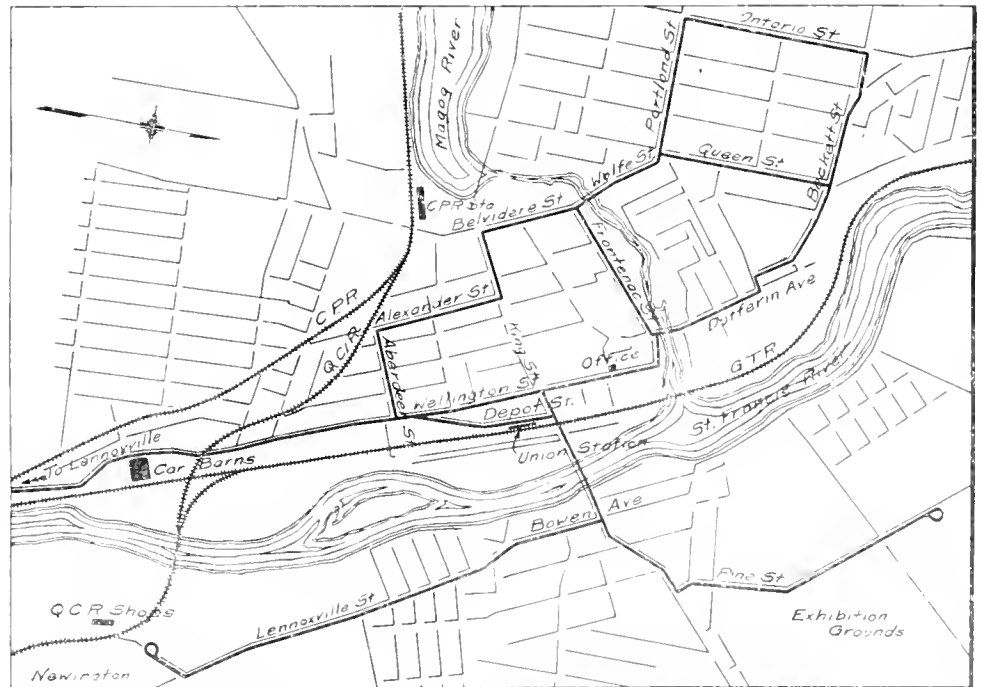

N. C. Pilcher,
General Manager, Sherbrooke Railway and Power Co

of the line is, if anything, reduced. On all curves on the city lines, as well as cross-overs, similar steel wire is used.

Power for the railway lines is obtained from two 250 k.v.a. motor generator sets,

which are in a theatre building near the north end of Wellington St., with waiting room and operating office on the ground floor, opening to the street, and staff office above. The frame car barns are near the south end of the town on the Lennoxville line, backing on the G.T.R. tracks. They have a capacity for 20 cars, the layout consisting of 5 tracks, each holding 4 cars.

The rolling stock consists of 21 cars, all of which are single truck, with the exception of a double truck sweeper. One of the latest additions to the equipment is shown in an accompanying illustration of one of the new nearside, prepayment cars, which are in almost general use on the system. On a small system, during the major portion of the day, the traffic is very light, and the question of a few men's wages often means the difference between profits and the passing of a dividend. It generally devolves itself into a question of the advisability of decreasing the service, and thereby reducing traffic by causing people to walk, or else putting on an expensive, frequent service to entice traffic. On this system, after considerable study, it was believed that just as good, if not superior, service could be given with a one man car crew. So, in Dec., 1912, most of the cars were changed over from the rear entrance type, that entrance being blocked, and another door added at the front of the car, the front one of which is for entrance, and the other for exit, the entering passengers passing in front of the motorman-conductor, who proceeds without having to await for a signal, as soon as the passengers have entered the car. The Frontenac, Newtoning and Park lines were all equipped with this service, which proved so satisfactory that last summer the Belt line was also given the same kind of service. It has not been considered advisable to change over the Lennoxville service, as these cars operate on a very fast schedule, and require two men. In order to secure a better class of men for this more responsible single service, the company raised

The Sherbrooke Ry. and Power Co.'s Lines in Sherbrooke.

receiving a.c. power at 2,000 volts, and delivering from the d.c. end at 550, which is the distribution pressure through the system.

The company's buildings consist of the office building and the car sheds. The ot-

their pay 4c. an hour. As a result of the new operation, since its installation, there has not been a single accident, no doubt due to the centralized control, both entrance and exit being directly under the observation of the motorman-conductor.

The interruption to service is practically negligible.

Most of the cars are of the closed type shown, the older cars being of the same general design as the newer equipment. When the change to the nearside operation was made, it was desired to convert four open cars for this service, and the manner of doing so is shown herewith. These cars may still be used for double end operation. All the cross seats were cut down, so as to form a side aisle, half way on either side. The side steps were removed, and the sides barred with a wire screening made of no. 10 wire, on a $1\frac{1}{4}$ in. mesh, completely closing in the car body. A door was cut in each bulkhead, and at each end a folding gate and step provided, the step being folded up and the gate closed on the rear end of the car, so that the entry and exit of passengers is still under the motorman-conductor's observation as in the closed car. The car bears out the statement of the chairman of the Quebec Utilities Commission, that it is "the safest open car in existence."

Following are some operating statistics for the year ended June 30, 1913:—Operating expenses to gross earnings, 77.22%; car mileage, 448,144; gross earnings per car mile, 10.746¢; operating expenses per car mile, 8.299¢; passengers carried, 1,115,038; transfer passengers carried, 220,809. The heaviest week of the year is at exhibition time, as mentioned. During the last exhibition the railway receipts for the week were \$3,200, with a single day record in the same period of \$1,000. This traffic was handled with 13 cars.

The operating officials are N. C. Pilcher, General Manager, and J. B. Woodyatt, Power Superintendent, to the former of whom we are indebted for the data from which this article has been prepared.

The Toronto Railway and Snow Removal.

Following is a summary of the judgment, delivered Mar. 5, in the York County Court, in the case of the City of Toronto against the Toronto Ry. regarding the removal of snow from the streets on which the company operates: It is the duty of the company to keep its track allowance, whether for single or double track, free from snow and ice, so that its cars may be used continuously, and if the fall of snow is less than 6 ins. at any one time, the company must remove it, and, if the City Engineer so directs, spread it evenly on the adjoining portions of the roadway, but should the quantity of snow at any time exceed 6 ins., the whole space occupied as track allowance, viz., for double track $16\frac{1}{2}$ ft., and for single track $8\frac{1}{2}$ ft., shall, if the City Engineer so directs, be at once cleaned of snow and ice, and the material removed and deposited at such point, or points, on or off the street, as he may order. The company shall not deposit snow, ice or other material upon any street, square, highway or other public place in the city without first having obtained the permission of the City Engineer, or the person acting as such. From the evidence adduced, a snow fall of 6 ins. occurred on Feb. 8, and the company swept it to the sides of the streets, which in due time would become a nuisance and a danger to the public, and that notwithstanding the City Engineer's request to remove it, the company refused to do so. On Feb. 10, 12, 14, 15 and 17 different quantities of snow also fell, which was not removed from the sides of the streets as required, the City being obliged to remove it, and it was therefore decreed that it was the duty of the company to have removed the snow as required by the City Engineer.

Explosion in Chatham, Wallaceburg and Lake Erie Railway's Power House.

On Feb. 24, employees of the Chatham Gas Co. proceeded to shut off the gas on the main valve in the building, controlling the gas to the regulating device. In doing so, the valve, of a cast iron plug type, broke off in the centre of the plug, allowing the top portion of the plug to be blown out by the pressure of the gas, which was in the neighborhood of 2 or 3 lbs. per square inch. On account of not having ready access to the valves outside of the building, the gas escaped and filled the boiler room, and ignited, apparently from the boiler furnaces, which are operated by gas, although it was supposed at the time that the men shut off the furnaces. The explosion did not take place until several minutes after the leak occurred, the men remaining in the building apparently trying to stop the leak by some of the methods at hand. During the period which elapsed between the break and the explosion, sufficient gas escaped to fill the room. While the door and ventilators were left shut when the explosion took place, it was sufficient to release the flat slanting roof from the upper wall. The result was that the lowest point in the wall was driven out

The Ontario Hydro-Electric Power Commission and Projected Electric Railways.

The proposition for the building of an electric railway from Toronto, via Markham to Port Perry, Whitby and other points east of Toronto, is being discussed by the municipal councils, through whose territory such a line would pass. The heads of a proposed agreement have been discussed by several of the municipalities interested, and some points upon which there may be differences of opinion have been reserved for full discussion at a general meeting of municipalities, which it is expected to hold in Toronto during April.

In Western Ontario, the points upon which interest is centered are St. Thomas, London and Guelph, each of which cities desires to be a centre from which will radiate a network of electric railways, to be built under the Commission plans. Representative meetings have been held at each of the cities named, and many meetings held in the municipalities surrounding these cities have also been held, favoring the plans. The Commission's engineers have been going over the territory which would be served. This covers practically the whole of the Ontario peninsula, west of a line drawn from Port

Chatham, Wallaceburg and Lake Erie Ry. Power House. After Explosion.

for the entire length of the building, the roof falling. No damage was done to the plant, with the exception of the breaking of a few of the steam pipes, which were repaired in a few hours. The accompanying illustration shows the boilers exposed, and the debris of the roof and wall lying in the foreground.

Winnipeg Electric Ry. Suburban Fares.—A new schedule of fares on the Winnipeg Electric Ry. line, between Winnipeg and Headingly, Man., and intermediate points, was announced Feb. 17. Under the arrangement heretofore existing, the line was divided into four zones, while under the new schedule the line as far as Deer Lodge will be counted as being in the city. Beyond Deer Lodge there will be three zones, viz., from Deer Lodge to Kirkfield post office; Kirkfield post office to the rifle ranges; and the rifle ranges to Headingly. The fares are 5c. within each zone; and the return fares from the city are:—Kirkfield, 15c.; rifle range, 20c.; Headingly, 30c. The new schedule came in operation Feb. 18.

The G. T. R. ambulance team at Montreal won the Dominion Bridge Co.'s trophy, there, recently.

Burwell to Collingwood.

Hon. Adam Beck, Chairman of the Hydro Electric Power Commission, speaking at Aylmer, Mar. 17, is reported to have said the Commission had 1,200 applications for surveys in connection with electric railways, under the Commission's plan. Only half a dozen of these had been dealt with. Four survey parties were in the field going over suggested routes. The Commission was prepared to give estimates for the building of lines in any direction the people desired, and it would be for the people to decide what lines it would be profitable to build. In the case of guaranteeing the bonds of a company, the ratepayers took all the risks, but if they built the lines themselves, they owned them, and would receive the profits.

Hamilton Incline Ry.—It was reported, Mar. 13, that work on the east end incline railway has been progressing satisfactorily. The concrete piers are reported to be ready for the steel. It is expected that the incline will be ready for operation by April 20.

The G. T. Pacific Telegraph Co. has commenced a commercial telegraph service to Prince George, B. C., its station serving Fort George, and South Fort George.

Answers to Questions on Electric Railway Topics.

Following are answers to questions in the American Electric Railway Association's question box, sent in by officials of Canadian electric railways:—

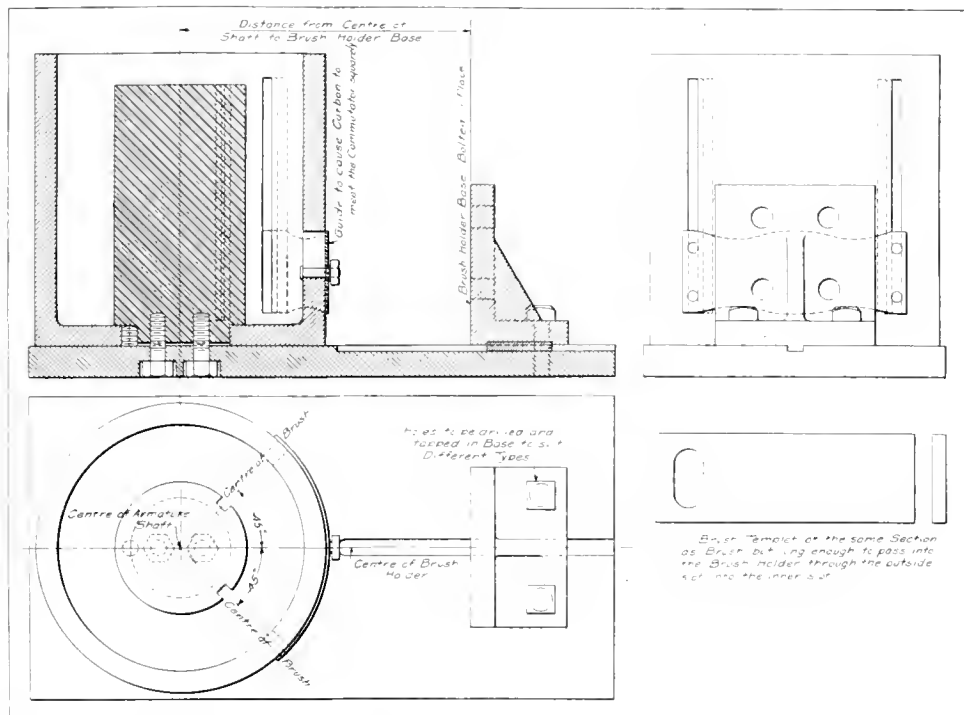

Equipment.—What is the best method of eliminating grounded fields in G. E. 67 and 80 motors? What is the best solder mixture for eliminating loose leads due to excess heating in these motors?

W. R. McRae, Master Mechanic, Toronto Ry.—All field coils in our motor equipment are impregnated, well taped on outside and dipped in air drying, black, waterproof compound. Prior to installing field coil in motor, canvas packers are placed under and over the coil, these packers having been previously treated with boiled linseed oil. The pole piece is then drawn down tightly to place, care being taken to see that it is tight against the frame. This to secure proper armature clearance. The use of the above mentioned liners is for the purpose of securing the coil tightly in the pole piece. We use flexible lead wires on field

Equipment.—What is the best treatment for brush yokes made in your own shop? What is the best way to secure the proper angle and spacing for new brush yokes for G. E. 67 and 80 motors?

W. R. McRae, Master Mechanic, Toronto Ry.—In the case of wooden yokes, these are made up of well seasoned maple wood, being produced by the use of correct jigs and templates; on completion they are painted with a light coating of shellac to prevent absorption of moisture.

The proper angle and spacing of brush-holders is secured by the use of a special jig, shown in one of the accompanying drawings, E. 247. Whilst it is possible by the use of this jig to secure proper angle and spacing, it would be well to check up the distance between centre of armature shaft and the top of motor frame where yoke is bolted on, as it has been found that this distance varies considerably in these types of motors, so much so that it has been found necessary to use fibre

E. 247. Jig used by Toronto Ry. in securing proper angle and spacing of Brush holders.

coils, consisting of 245 strands of no. 30 B. & S. gauge wire, rubber covered and double braided. In my opinion the majority of grounded field coils are caused by loose coils and the use of terminals on the coils. Two 1½ in. holes should be in the bottom of motor frame, and always kept open to permit of water which may get into motor frame, getting out and away from coils quickly.

Armature coils should be properly tinned before being placed in commutator slots. A solder consisting of 55% tin and 45% tea lead will give good results. The reason for using a solder of the above mixture is that it will let go of the coil ends in the event of excessive heating of armature. This for the purpose of protecting the armature coils. Motors should not be operated at such excessive overload as to cause the temperature to rise to a point where solder is thrown out of coil connection, and if this trouble is not caused from overload the seat of the trouble must be in the field coils, which should receive attention at once.

packers of different thicknesses, as shown in the accompanying drawing, F. 212. These packers are placed between the top of centre casting of yoke and the frame, and are used in conjunction with drawing H-78 for the purpose of securing proper commutation of current with a corrected brush-holder.

Buildings and Structures.—What are the advantages of brick, as against concrete walls, in the construction of buildings for railway purposes?

H. G. Salisbury, Architect and Structural Engineer, Toronto Ry.—It can be built on better lines, has a finer appearance and can be constructed at a less cost than good concrete. Alterations can be accomplished more neatly and readily, with less expense to almost any portion of the structure.

Equipment.—The matter of the reclamation of scrap is of importance, and information from companies having experience is of value. What methods do companies follow for the reclamation of iron and steel scrap, other scrap metals, scrap timber and lumber and miscellaneous scrap? Have

companies experience with furnace or small rolling mills in the reclamation of scrap? Have any companies special plants for reclaiming either at their scrap docks or main shops? What are the principal articles reclaimed from scrap pile?

W. R. McRae, Master Mechanic, Toronto Ry.—All scrap of standard type of material used on this road, is handled on an exchange basis between the stores department and the maintenance departments. Miscellaneous scrap is delivered to the stores

F. 212. Packer for G. E. Brush Holder Yoke. Toronto Ry.

department, from the maintenance departments, credits being given, in each case, to the proper accounts. All scrap material is under the control of the General Storekeeper, and is sold by contract, except such brass and copper as is used in our own foundry, in which case it is charged out from stores against the respective accounts for which it is to be manufactured. A suitable building has been constructed, with

bins, under lock and key, for the safeguarding of all scrap material, and a trustworthy man is in charge of building.

The Universal Radiotelegraph Syndicate's wireless telegraph station at Newcastle, N. B., is reported to be near completion. One of the engines has been installed, and recently completed a satisfactory test run of 48 hours. A second will be placed immediately. These are of the Diesel type, each of 200 h. p., using crude oil.

Electric Railway Projects. Construction. Betterments. Etc.

Cape Breton Electric Co.—We are officially advised that the company has no knowledge of any electric railway being projected in Sydney or vicinity from 15 to 25 miles in length (as recently reported in the daily press) nor of any mining company having such a line under consideration. (Mar., pg. 135.)

Dominion Power and Transmission Co.—It is reported that rapid progress is being made with the building of the new steam power plant in Hamilton, Ont., and that a contract has been let to the Canadian Westinghouse Co. for motors, generators, etc., at a cost of \$360,000. (Mar., pg. 135.)

Edmonton Radial Ry.—We are officially advised that the details of the estimates for work on the radial railway for the current year before the Edmonton, Alta., City Council, are: Permanent track on Portage Ave. from First St. to Norwood Boulevard, \$14,678.10; protection at railway crossings, \$12,270; distribution system negative feeders, \$37,214; work done during 1913 and unprovided for, \$20,216.60; new car barns, unprovided for in 1913, \$66,700; fire protection, \$2,033; sewer, construction \$1,780; tracks laid in barns, \$4,165; total, \$160,056.70.

We are further advised that it has been decided to report adversely on the proposed extension to Forest Heights on the ground that the population was insufficient to warrant service of any kind being given, and the committee further recommends that hereafter no extension be made by the department until the district to be served be sufficiently populated to insure adequate returns on the investment. This recommendation refers to the application for an extension into the Mill Creek and other districts. (Mar., pg. 135.)

Galt, Preston and Hespeler St. Ry.—We are officially advised that the company's franchise in Galt, Ont., does not expire until 1921, and that the press reports that a bylaw granting an extension had been approved by the ratepayers, are without foundation. We are also advised that the company has no power house at Galt, and that the press report that such a power house be extended is therefore without foundation. (Mar., pg. 135.)

Guelph Radial Ry.—We are officially advised that although additional stock has been issued by the company, it is not for the purpose of extending the line, but for the purchase of new cars. A. H. Foster, Guelph, Ont., is Manager. (Mar., pg. 135.)

Hull Electric Ry.—A press report states that the company is considering plans for the extension of the line from Hull to Gatineau Point, Que. G. Gordon Gale, Hull, Que., is General Superintendent. We are officially advised that the proposition is entirely on the part of the Hull City Council, and that the company does not contemplate building the extension at present. (Jan., pg. 38.)

Kingston, Portsmouth and Cataraqui Electric Ry.—We are officially advised that the company has ordered in the U. S. 130 tons of 90 lb. steel rails, A. S. C. E. section. H. C. Nickle, Kingston, Ont., is General Superintendent. (Mar., pg. 135.)

Lethbridge Municipal Ry.—We are officially advised that it is proposed to build extensions as follows: East of 2nd Ave. north from 13th St. to 19th St., north on 19th St. from 2nd Ave. to 7th Ave., west on 7th Ave. from 19th St. to 13th St., north on 13th St. to Harcheville, west on 9th Ave. from 13th St. to the C. P. R. coal mines. It

is not expected to make these extensions this year, but it is intended to prepare the plans and estimates in order to have the money in hand for construction in 1915. A. Reid, Lethbridge, Alta., is Commissioner of Public Utilities. (Mar., pg. 135.)

London and Lake Erie Ry. and Navigation Co.—After several conferences between representatives of the company and of the municipal authorities of St. Thomas, Aylmer, Yarmouth and Malahide, it was stated Mar. 5, that the company will build a line from St. Thomas to Aylmer and Sparta, upon the municipalities guaranteeing its bonds for \$20,000 a mile. The municipal representatives subsequently met and arranged that the municipalities will guarantee the bonds in the following proportions:—St. Thomas city, \$100,000; Aylmer village, \$45,000; Yarmouth tp., \$145,000; Malahide tp., \$20,000. It was also agreed that the ratepayers in the four municipalities will vote on the question Mar. 30. Subsequently the matter was discussed by gatherings of ratepayers, at all of which the question of building lines under the Ontario Hydro Electric Commission was raised. As a result of all this W. N. Warburton, Manager, is reported to have said, Mar. 11, that the directors had decided to withdraw the proposition for the present. G. B. Woods, Toronto, Vice President, is also reported to have said, Mar. 11: We intend to let the matter drop until such time as the people have had an opportunity to obtain an estimate from the Hydro Electric Commission or some other competent engineering authority. If, after the different municipalities have done this and have given the matter careful consideration, and are in a position to make a proposition to us, we will take up the matter with them again." (Mar., pg. 135.)

Montreal and Southern Counties Ry.—The Montreal City Council was informed recently that the Quebec Legislature had refused to sanction an agreement granting the company permission to lay its tracks across McGill St. and on Youville Square, Montreal. (Feb., pg. 87.)

Montreal Tramways Co.—The special committee of the Montreal City Council is studying the company's proposals in connection with the report made by the City Engineer's Department, which was specially submitted to them.

Press reports, Mar. 12, stated that the company's plans for work during the current year provide for the expenditure of about \$2,000,000, to include the purchase of 100 new cars, the construction of two new car barns, and the provision of several new routes, in addition to betterment work on existing lines. (Feb., pg. 87.)

Moose Jaw Electric Ry.—It is expected that as a result of the recent municipal census the company will be asked to extend certain of its lines. The agreement with the company provides for the building of lines according to the density of population. The new line suggested is past Wolfe Ave. on 16th Ave. and on to Laurier Ave., about 0.75 of a mile, with a possibility of extending it so as to complete a belt line. This would give a service to the Hillcrest district. (Dec., 1913, pg. 592.)

Ontario West Shore Ry.—It is said that those in charge of this uncompleted line propose to sell the rails which have been laid or are lying ready for laying.

Ottawa and St. Lawrence Electric Ry.—We are officially advised by M. Malone, Engineer of the company at Ottawa, that a contract has been let to the Ottawa and St. Lawrence Construction Co., of which H.

W. Pearson is Manager, at 201 Union Bank Building, Ottawa, to build 70 miles of line from the Connaught rifle ranges, 15 miles west of Ottawa, through Ottawa, and thence across country to Morrisburg, Ont., on the St. Lawrence River, with a branch line from Metcalfe to Russell, on the Ottawa and New York Ry.; that this line will cross the C.P.R. Montreal-Toronto line at Winchester; that the line will also pass through the following towns and villages, viz.: Britannia, South Gloucester, Greely, Kinmore, Vernon, Ormond, Winchester Springs and Williamsburg; that work will commence about May 1, and that bonds have been floated covering this portion of the line. He also stated that on this first portion, outside of terminals, in three of which there will be a 2.5% gradient, the gradients will not exceed 0.7%, with a maximum curvature of 8 degrees; that there will be 12 bridges varying in length from 30 to 400 ft., and that it is proposed to use Diesel electric cars.

The company's complete project is for the building of about 300 miles of line, the other portions including a line from Brockport, west of Brockville, to the Quebec provincial boundary by way of Cornwall, and another line north from Brockport through Smith's Falls, Perth and Lanark to Arnprior. J. A. Morden & Co., brokers, Toronto, are interested in the project.

Port Arthur Electric Ry.—The Mayor of Port Arthur, Ont., announced, Mar. 7, that the proposed extension of the line will reach Murillo, and pass through the townships of Oliver, McIntyre and Ware. No attempt will be made to extend the line into any district tributary to Fort William. The township councils of Oliver and McIntyre have passed resolutions favoring the construction of the extension. Nothing has been done in the way of locating the line, but it is expected that surveys will be made at an early date. The line will be built in sections, and as soon as the necessary legislative authority is obtained, the money bylaws will be submitted to the ratepayers. (See Port Arthur and Fort William Electric Ry., Jan., pg. 39.)

Prince Albert, Sask.—A Prince Albert press dispatch says:—"The Ottawa St. Ry. interests, which already have a line in operation at Moose Jaw, have offered to build a street car line in Prince Albert this year if a 20 year franchise is granted. The council will consider the matter at once." The Ottawa interests referred to are not connected with the Ottawa Electric Ry., but with the Ottawa Electric Co., the General Superintendent of which, A. A. Dion, is President of the Moose Jaw, Sask., Electric Ry.

Quebec Ry., Light and Power Co.—The Quebec City Council is considering a proposal to ask the company to build an extension of its electric railway in Belvedere Ward. (Feb., pg. 89.)

Sandwich, Windsor and Amherstburg Ry.—The three miles of track which it is proposed to build during the summer are, we are officially advised, practically all renewals on existing lines. Jas. Anderson, Manager, Windsor, Ont. (Jan., pg. 39.)

Sarnia St. Ry.—We are officially advised that it is likely the company will, during the summer, extend its line south on Christine St. to Clifford St., thence along Clifford St. west towards the river, about 0.5 of a mile. The extension would be to take care of new business offering from industrial plants. G. E. Wadland, Sarnia, Ont., is Manager. (Mar., pg. 126.)

Toronto Eastern Ry.—Surveys have been completed, according to local press reports, for an extension of the line from Pickering westerly to Scarborough, where connection will be made with the Canadian Northern On-

tario Ry. The distance of this extension is 15 miles. (Feb., pg. 88.)

Transcona, Man.—The Manitoba Legislature has granted power to the Municipal Council of Transcona, to build an electric railway within its limits, and, to make agreements for connecting the line with the Winnipeg Electric Ry.

Windsor, Ont.—A Windsor press dispatch of Mar. 20 says:—"Mayor Clay announced today that he would take immediate steps to bring about the building of a municipal street railway to compete with the private company." The present service in Windsor is supplied by the Sandwich, Windsor and Amherstburg Ry., which also has interurban lines connecting Windsor with Walkerville, Tecumseh, Sandwich, Amherstburg, and Ojibway. It is controlled by the Detroit United Ry., Detroit, Mich.

Winnipeg Electric Ry.—The City Council is asking the company to submit plans showing the extensions proposed to be made on the various lines in the city. (Mar., pg. 136.)

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and Allied Companies.—Gross earnings for January, \$777,102; operating earnings, maintenance, etc., \$561,146; net income \$215,956, against \$743,271 gross earnings; \$543,803 operating expenses, maintenance, etc.; \$199,468 net income for Jan., 1913. Aggregate gross earnings for 7 months ended Jan. 31, \$5,330,828; net earnings \$1,437,361, against \$4,994,095 aggregate gross earnings, and \$1,451,321 net earnings for same period 1912-13.

Cape Breton Electric Co.—Gross earnings for January, \$29,798.29; operating expenses and taxes, \$18,563.18; net earnings, \$11,235.11; interest charges, \$5,247.37; balance, \$5,987.74; bond sinking and improvement funds, \$1,190; balance for reserves, depreciation, etc., \$4,797.74, against \$31,835.43 gross earnings; \$17,760.49 operating expenses and taxes; \$14,074.94 net earnings; \$4,633.19 interest charges; \$9,441.75, balance; \$1,190 bond sinking and improvement funds; \$8,251.75 balance for reserves, depreciation, etc., for Jan., 1913.

The Guelph Radial Ry. Co.'s annual meeting was held at Guelph, Ont., Mar. 9. Following are the officers for the current year—President, J. W. Lyon; Vice President, W. E. Buckingham; Treasurer, C. E. Howitt; Secretary, T. J. Hannigan; other director, S. Carter. A. H. Foster is Manager.

Mount McKay and Kakabeka Falls Ry.—The Fort William, Ont., City Council passed a resolution Mar. 4 to appoint a commission to report on the value of the company's franchise, power rights, railway and other buildings.

Toronto Civic Car Lines.—A report from the Commissioner of Works to the City Council, Mar. 7, states that the receipts for 1913 were \$59,556.87, and the expenditure \$145,426.11, making a deficit of \$85,569.21, which does not include any allowance for depreciation. The operating charges were \$56,658 and the debt charges \$87,611. The amount mentioned for depreciation is about \$50,000. The question of an increased fare is being discussed but no decision has been arrived at. The present charge is 2c. cash, 1c. for children, and six tickets for 10c.

Toronto Ry., Toronto and York Radial Ry., and Allied Companies.—Gross earnings for January, \$847,945; operating expenses, maintenance, etc., \$440,337; net earnings \$407,608, against \$776,928 gross earnings; \$401,105 operating expenses, maintenance, etc.; \$375,773 net earnings, for Jan., 1913.

The Toronto Ry. earnings for January were \$501,843, and for February, \$461,274.45. The percentage to the city on the February earnings was \$72,057.90.

Toronto Ry. Co.—A London, Eng., cablegram of Mar. 10 said:—"The Morning Post states it understands that arrangements are being made for an issue of £500,000 4½% debenture stock by the Toronto Power Co. The price is stated as 96. This issue, which will be guaranteed unconditionally both as to principal and interest by the Toronto Railway Co., is in addition to debenture stock already issued to the amount of about \$13,900,000. The company's total debenture stock authorization is \$25,000,000, and issues within this total may be made for several purposes, chief of which is the acquirement of outstanding 5% bonds of the Electrical Development Co. of Ontario."

Winnipeg Electric Ry.—Gross earnings for January, \$382,670; operating expenses, \$226,177; net earnings, \$156,493, against

J. H. Larmouth,
Superintendent, Edmonton Radial Railway.

\$351,497 gross earnings; \$199,532 operating expenses; \$151,965 net earnings, for Jan., 1913.

Motor Busses for Winnipeg.—The Winnipeg City Council has passed a resolution granting a five years' franchise to the Winnipeg Motor Bus Co., to operate motor bus lines in the city. At the end of five years the city may take over the line at the value of the equipment. Each vehicle is to have accommodation for 25 passengers, and is not to run faster than 10 miles an hour.

Winnipeg River Power Co.—We are officially advised that this company, which is allied with the Winnipeg Electric Ry., has entered into a contract with J. G. White and Co., New York, to make explorations and surveys, and to prepare plans for the development of the water power at the Grand Bonnet Falls of the Winnipeg River. No contract has been let for the construction of the power plant.

Edmonton Radial Ry.—The Edmonton, Alta., City Council has authorized the expenditure of \$160,056 on the street railway system during this year. Of this sum \$90,000 is for work uncompleted in 1913, and for the new car barns, and the balance for track on Portage Ave.; protection at railway crossings, and for the power distribution plant. (Feb., pg. 87.)

Personal Paragraphs.

In connection with the recent resignation of H. Doughty as Superintendent of the Regina Municipal Ry., D. W. HOUTSTON has been appointed Acting Superintendent.

J. ANTONISEN, who has resigned his position as Superintendent of the Brandon Municipal Ry., was the recipient, Mar. 6, of a letter signed by all the employes, expressing regret at his leaving.

R. P. LEWIS, who has been appointed street railway traffic inspector by the Winnipeg City Council, at a salary of \$2,500 a year, started upon the duties of his office Mar. 12. Mr. Lewis was a C.P.R. locomotive driver for several years, subsequently moving to Winnipeg, where he took up general office work. After spending some time with the Canadian Northern Ry., in several capacities, he left the service in 1913, and worked for R. M. Fenstel on the preparation of his report on the Winnipeg street railway system.

W. T. WOODROOFE, Superintendent, Edmonton Radial Ry., Edmonton, Alta., has resigned, effective, Apr. 1. He was appointed to that position in June, 1912, after having been in the British Columbia Electric Ry. service at Vancouver, for some time. He is reported to have stated recently that the reason for the resignation was that the Mayor had signed an agreement with the street railwaymen's association, with which, he, as Superintendent, was not in accord. He also stated that he had made no plans for the present, but would probably return to Vancouver.

J. H. LARMOUTH, who has been appointed Superintendent, Edmonton Radial Ry., which is owned and operated by the City of Edmonton, Alta., was born in Montreal, May 19, 1872. He graduated from McGill University, Montreal, in 1894, since when his record is as follows:—In erecting shops, G. T. R., Montreal, about a year; in G. T. R. draughting office, Montreal, about 4 months; in Laurie Engine Co.'s draughting office, Montreal, about 2 years; in a chartered accountant's office a little over a year, in order to pick up business ideas; in general construction work in Ottawa about a year and a half; with E. B. Eddy Co., Hull, Que., as constructing engineer on paper and pulp mills, etc. about 2 years; then entered office of C. H. Keefer, consulting engineer, Ottawa, and was sent by him to Peterboro, Ont. as resident engineer on construction of Quaker Oats Co.'s dam and power house; then in Quaker Oats Co.'s mills doing construction work and installing machinery for about 2 years; put in charge of Peterboro Radial Ry. construction in 1904 and managed that line along with electric light and gas plants in Peterboro until the summer of 1910, when the Electric Power Co. was formed, which purchased the Peterboro properties, and he was made General Manager of the Electric Power Co., retaining that position for two years, when he resigned to practice as a consulting engineer, specializing in electric railway, electric light and gas work. Later he has also been Secretary-Treasurer of the Canadian Electrical Association.

It was recently reported in a local paper that the London St. Ry. contemplated purchasing 6 additional cars of the type recently added to the system, and of which a full description and illustrations have been given in Canadian Railway and Marine World. We are officially advised that no definite steps have been taken to this end. It is possible that the local reference was a mistaken one, the remarks on which the report was founded being concerned with the 6 cars added last year.

Dominion Power and Transmission Company's Annual Report.

Following are extracts from the report for the calendar year 1913, as presented at the annual meeting recently:—

Business has made its regular growth, as formerly, and but for a general trade depression during the last quarter of the year, the increases shown would have been substantially greater. The company's financial position is a good one.

The board has, after careful consideration, instituted a further feature of conservatism in accounting. The subject of maintenance of the physical integrity of the various properties has been carefully investigated, and the policy adopted of providing throughout the past year and hereafter more liberally for this purpose. Previous to 1913 it had been the practice to charge to operating expenses all sums spent on necessary renewals and maintenance, and the amount so spent in 1910 was \$210,752.99; in 1911, \$221,904.65; in 1912, \$282,443.11. It has been found that in those of the states that have public utilities commissions with power and authority over the public utility corporations operating therein, similar to the power exercised by the Board of Railway Commissioners over Canadian railways, such public utilities commissioners have laid down as a practice to be followed by corporations, similar to ours, that a fund must be provided for renewals and maintenance by charging a substantial percentage of their gross earnings each year for that purpose. Your directors have decided to follow the same practice. For the year 1913, the amount so charged was \$442,676.66, of which \$337,269.37 was actually expended, and the balance of \$105,407.29 remains at the credit of this account, which in the statement is shown under the head of maintenance and renewal account as a special reserve. While this may seem a liberal provision for such purpose, it certainly must be considered to be in the best interest of the owners of the company's securities, as it provides amply for renewals and maintenance, and will keep the company's properties in high physical condition without requiring new capital expenditures for this purpose, a bad practice frequently followed by many other enterprises in our line of business. It should also be mentioned that this provision is made in addition to the provisions of the sinking fund for the bonds; so that we believe our finances are on an absolutely sound, and perhaps an ultra conservative basis, but doubtless the shareholders will heartily approve of this action.

There has been transferred also to the general reserve account \$150,000, bringing that account down with a total of \$1,000,000, and leaving a balance of \$955,861.75 in profit and loss account.

A commencement has been made in the construction of an important addition to the company's power producing capacity by means of a steam supplemental station designed for an ultimate output of some 58,000 h.p. This will be a most beneficial adjunct to our hydraulic system, both by way of material increase of power produced on a financially economic basis and protection against possible interruptions of supply.

During the year a further considerable reconstruction, as well as extension, of the street railway track has been carried out; and the work of placing underground our distribution lines in the central part of the city is in progress. Attention should, we think, be directed to the great improvement of the street railway plant during the last four years. Notwithstanding the refusal of the Ontario Railway and Municipal Board

to order extensive changes, the Hamilton Street Ry. Co. has substantially rebuilt its tracks, provided a new equipment of cars, and is extending its track mileage by 50%. Much fresh capital has been needed to do all this, but the board feels sure that the returns will justify its expenditure.

The extension to Galt of our radial system has for some time been under consideration, and it is hoped that during the present year a branch line will be constructed from the Brantford and Hamilton line to that important town, effecting a comparatively direct and short connection between it and Hamilton.

The outlook for the coming year seems favorable, in spite of the general tendency to look forward to a rather unsatisfactory period of general business.

Earnings and Expenditures.	
Gross earnings	\$27,378,806.33
Operating expenses	14,585,992.80
	\$12,792,813.53
Transferred to maintenance and renewal accounts	141,116.50
Bond interest and interest	\$78,171.92
Surplus earnings	\$762,525.11
Profit and Loss Account.	
Balance from 1912	\$1,005,715.14
Surplus earnings, 1913	762,525.11
Dividends declared	\$ 362,378.50
Transferred to reserve accounts	450,000.00
Balance	955,861.75
	\$1,768,210.25

Dominion Power and Transmission Co. controls and operates the following properties:—Hamilton Cataract Power, Light and Traction Co., Hamilton Electric Light and Power Co., Hamilton and Dundas St. Ry. Co., Hamilton Radial Electric Ry. Co., Hamilton, Grimsby and Beamsville Electric Ry. Co., Brantford and Hamilton Electric Ry. Co., Hamilton Terminal Co., all with headquarters in Hamilton, Ont.; the Dundas Electric Co., Dundas; the Lincoln Electric Light and Power Co., in St. Catharines; the Welland Electric Co., in Welland, and the Western Counties Electric Co., in Brantford. Separate figures are not given for the different companies operated.

The directors for the current year are:—J. H. Moodie, President; Jas. Dixon, Vice President; Jno. Knox, Treasurer; W. C. Hawkins, Managing Director and Secretary; Sir John Gibson, W. Southam, Lloyd Harris, J. W. Sutherland. The General Manager is E. P. Coleman.

✓ The Grand Valley Railway and Its Subsidiaries.

The necessary formalities for the transfer of the Brantford St. Ry., and the Grand Valley Ry. from Brantford, via Paris, to Galt, Ont., to the Brantford City Council are being gone through. The contract of sale is being finally approved by the various interests, and its sanction by the courts will be asked after the approval of the ratepayers has been obtained. Application is being made to the Ontario Legislature for an act authorizing the city to acquire and operate the lines, and for other necessary powers, so as to cover any complications. The bylaw on which the ratepayers voted Mar. 23, set out that the amount of debt to be created by the purchase is \$270,000, and the citizens will assume a mortgage of \$125,000. The debt created is repayable in 30 years by means of the provision of a sinking fund of \$1,814 annually in addition to the interest amounting to \$12,500.

The Woodstock, Thames Valley and Ingersoll Ry., which extends from Wood-

stock to Ingersoll, Ont., was controlled by the Grand Valley Ry., which is now in liquidation. At a meeting of the bondholders of the W. T. V. and I. Ry., held in Toronto recently, it was stated that the G. V. Ry. had no equity in the W. T. V. and I. Ry. until the bonds and arrears of interest had been paid off. The arrears of interest on the bonds to date, was stated to be \$20,000. The total issue of bonds outstanding is \$110,000, and the owners of \$96,800 of the issue were present or represented at the meeting. The bondholders are asking that J. G. Wallace, who has had the management of the line for several years, be appointed trustee. The matter is to come before the courts.

Brantford, Ont., ratepayers voted, Mar. 23, by 1,234 majority in favor of the city buying the Brantford St. Ry. and the Grand Valley Ry. from Brantford to Galt, for \$253,000.

✓ Electric Locomotive Performance on Galt, Preston and Hespeler St. Ry.

The G., P. & H.S.R. placed a 50 ton Westinghouse locomotive in service on Nov. 20, 1910, it being described and illustrated in Canadian Railway and Marine World at the time. Since that date it has been in continuous operation, 24 hours every day, except Sundays, averaging about 150 hours a week. This service includes hauling practically every kind of freight in standard steam railway rolling stock, between the C.P.R. at Galt, and Berlin and Waterloo, a distance of from 12 to 14 miles.

Although the haul is not long, there are a number of 2% to 2½% grades from one to two miles long. The maximum number of cars hauled in one train is about 25, the average number being 15, and the tonnage per train is about 200 tons, or on four trips of road per day, 2,000 tons. It is hardly possible to estimate exactly the total mileage, as the greater part of the time, 16 hours a day, the locomotive is in switching service. No record is kept of the tonnage and mileage, but the switching mileage would easily equal half, if not threequarters, of the road service.

The locomotive is equipped with four Westinghouse 30S-B-2 commutating-pole, 600-volt railway motors, rated at 120 h.p., and unit switch control. The locomotive is given one half hour inspection every 24 hours, and about five or six every Sunday, when making light repairs, such as applying brake shoes, changing wheels for tire wear and inspection of motors, airbrakes and control equipment. Tires have been turned twice since the locomotive went into service, and the total repair account to July 11, 1913, is given below:—

Air compressor (principally due to armature and field trouble due to low trolley voltage)	\$ 170.00
Fire turning	45.00
Motor axle bearings	30.00
Unit switch control	50.00
Frolley parts, wheels, hays, poles and bases	110.00
Brake shoes	270.00
Miscellaneous	30.00

Total from Nov. 30, 1910, to July 11, 1913, \$705.00

The total, \$705.00, for repairs on this locomotive, covering a period of over 2½ years, is considered a very good record by the operating company, in view of the large amount of service received.

Nova Scotia Tramways and Power Co.—A bill has been introduced in the Nova Scotia Legislature to incorporate a company with this title to take over the Halifax Electric Tramway Co. and the Nova Scotia Light and Power Co. The provisional directors are E. A. Robert, of Montreal, and other directors of the Halifax Electric Tramway Co.

Electric Railway Notes.

The St. John Ry., St. John, N.B., has ordered 12 p.a.y.e. cars, with 20 ft. bodies on 21E trucks, turtle back roofs, and interior finish of cherry, from the Tillsonburg Electric Car Co.

The Peterborough Radial Ry. Co. has a bill before the Ontario Legislature authorizing it to issue bonds, etc., up to \$35,000 for each mile of single track, instead of \$20,000 as previously authorized.

The London, Ont., Board of Control, Mar. 14, recommended the City Council to pass a bylaw for improved street railway service. The schedule submitted by the City Engineer, calls for the operation of 40 cars, instead of 36 as at present, and for the rearrangement of a number of the routes.

The Preston Car and Coach Co. is building two motor busses mounted on Gramm motor trucks, with bodies 15 ft. long by 18 ft. wide, with six standard street car stationary seats, with a seating capacity for 24 passengers, for use by Edmonton, Alta., hotels.

The Saskatoon, Sask., Municipal Ry. was not in operation for a week prior to Feb. 27, owing to a breakdown at the power plant. First one generator gave out and then the second. These give 400 h.p. each. The estimates for the current year provide for the installation of a 600 h.p. generator, in order to provide against such another breakdown.

The six cars which the Niagara, St. Catharines and Toronto Ry. is having built by the Preston Car and Coach Co., of which mention was made in our last issue, will be equipped with four machines each, of the G. E. 204A type, split frame motors, 65 h.p. at 500 volts, 75 h.p. at 600 volts, 2 turn gear pinion, ratio 54:23, Sprague electric type M. K. control, all supplied by Canadian General Electric Co.

The Toronto Suburban Ry. has under consideration plans for cars for the line under construction from Lambton to Guelph, Ont., and it is said that about 10 cars, 65 ft. long, will be ordered in the near future. They will probably be equipped with four C. G. E. 85 h.p. motors of the latest type, fully ventilated, and the control will be of the multiple unit type to permit of train operation when required. They will be operated on a 600 volt line at approximately half normal speed, and changing from 1,500 to 600 volt trolley, or vice versa, will involve no loss of time in adjustment of control apparatus.

The Guelph Radial Ry. is having two double end, p.a.y.e. steel underframe cars, built by the Preston Car and Coach Co. Following are the chief details,—length overall 45 ft. 10 ins.; trucks standard O-50; wheels, 34 ins. rolled steel; motors, Westinghouse 101-B-2; controllers, K-28; air brakes, Westinghouse SM 1; hand brakes, Ackley type; headlights, Crouse Hinds; fenders, Providence type. The cars will be heated with a forced air ventilating system.

The Saskatoon, Sask., and the Lethbridge, Alta., city councils are considering rearrangement of the schedules for running cars on their municipal electric railways, with a view of reducing operating expenses. In Saskatoon it is reported that the present loss on operation is at the rate of \$14,000 a year, and in Lethbridge the saving in operating expenses by the new schedule is estimated at \$3,000 a year. It is said that the rerouting of cars on Winnipeg Electric Ry. will take effect April 16.

The Quebec Public Utilities Commission gave a decision, Mar. 14, on complaint of a

citizen of Longue Pointe Ward against the Montreal Tramways Co., in which the right of a private citizen to lay a complaint and to seek redress was upheld. The application is to direct the company to grant the Longue Pointe citizens the same advantages in fares as those afforded to residents in other parts of the city. The company raised the point that inasmuch as fares and conditions of service were a matter of contract with the municipality, a private citizen could not bring the matter forward. The Commission decided that this matter could be argued when the complaint came up for investigation.

The tentative agreement between the Toronto Ry. Co., and the city, relative to the proposed purchase of the railway by the city, is still in the drafting stages. The clauses relating to the entrance of the radial lines being in the hands of the Works Commissioner and the Engineer of Railways and Bridges, while those relating to the supply of power are being dealt with by the General Manager of the Hydro Electric System. The Mayor recently stated that the power question was one of the vital ones, and it was hoped to have it in such shape that there would be no change in the 3 year contract. When the agreement is completed, it is understood that a vote of the ratepayers will be taken.

St. John Railway Company's Annual Report.

Following are extracts from the reports for the calendar year 1913, presented at the annual meeting in St. John, N.B., recently:—

Your directors wish to congratulate the company on the steady progress that it is making. The statement of the past year's business shows a net profit of \$66,328.85, after providing for interest on the bonds and all other charges. Out of this net amount your directors have paid four quarterly dividends of 1½%, amounting to \$50,609.48, leaving a balance of \$15,719.37, which has been transferred to profit and loss account.

The property has been maintained in a high state of efficiency. A considerable sum has been spent in the upkeep of the tracks, rolling stock, plant and buildings. We have completed an extension of our street railway tracks from the foot of Brussels St. to Kane's Corner, on the Westmorland Road, thence along Douglas St. to the One Mile House, and from there along Rothesay Ave. to Cooper's Corner, 1½ miles.

The new car barn and repair shop on Wentworth St. has been completed, and the street between Queen and St. James Sts. has been paved. The company purchased during the year and put into service eight additional cars. New machinery has been installed in the repair shops, including a hydraulic wheelpress, lathes, pipe cutting machine and hydraulic bender, etc. A new boiler house and stack in connection with the power plant has been erected on Nelson St. New boilers with chain grate stokers are being installed. A 2,000 k.w. steam turbine and generator with condenser and pump, etc., also motor driven exciter and d.c. motor generator set have been added to the power house. The electric light wires and poles have been extended to accommodate the outlying districts. Three thousand feet of gas mains were laid for the purpose of furnishing a sufficient supply of gas for fuel purposes, the charge for which has been reduced to \$1 net per 1,000 cu. ft. During the year there were installed 402 gas stoves and appliances. Extensive improvements were made during the past year to Seaside Park, which is now one of

the best street railway parks in Canada. Six new p.a.y.e. cars have been ordered from the Tillsonburg Electric Car Co., delivery to be made on May 1.

The company has continued its liberal policy towards employees in respect of their wages, having increased them during the year. Your directors have much pleasure in making mention of the faithful and efficient service rendered by our officials and employees. It should be noted by the citizens of St. John that our company paid out in wages during last year \$208,186.82. We have in our permanent employ 269 employees. We paid the city last year \$30,905.54 for taxes, water rates and repairs.

In order to cover expenditures on capital account during the past few years your directors applied to the Lieutenant Governor in Council and obtained permission to issue 2,000 shares of new stock at par pro rata to the shareholders.

Your directors regret to have to report the death of James Ross, who was the first President of our company, and continued to hold that office until the time of his death, a period of 19 years. We wish to take this opportunity of paying tribute to the able assistance we at all times received from him.

We have just completed an agreement with the councillors of the Parish of Simonds, which has been approved by the Municipality of the City and County of St. John, for the extension of our tracks from Kane's Corner out Red Head Road as far as the corner of the Old Loch Lomond Road, and from the One Mile House on Rothesay Avenue to Coldbrook. We are paying the municipality for this extension \$400 per year for each mile of single track and \$600 per year per mile of double track. In carrying out our policy of extension your directors were desirous of putting down tracks from Fairville to South Bay Road, and for that purpose entered into negotiations with the Highway Board of the Parish of Lancaster, but were unable to obtain permission from the Board to make this extension.

The directors for the current year are:—H. H. McLean, K.C., M.P., President; F. R. Taylor, Vice President; R. B. Emerson, J. Manchester, W. H. Thorne, J. K. L. Ross. The General Manager is H. M. Hopper.

The Canadian-American Power Corporation has been granted permission by the Public Service Commission of the Second District of the State of New York to do business in the state, but restricting its capital to \$1,250,000 on account of the contract and acquisition of the Niagara Falls Transmission Co. The company desires to acquire a contract with the Electrical Development Co. for furnishing 46,000 electrical h.p. procured in Canada and providing for the sale of this power in the U.S., principally along the Niagara frontier. The proposition at one time was connected with a plan to acquire the Buffalo and Lake Erie Traction Co., and the Buffalo and Rochester trolley systems, and merge the whole, but this was defeated.

Toronto & York Radial Ry. Passengers.—In the table published in our March issue, pg. 135, it was set out that the number of fare passengers carried by the Toronto and York Radial Ry. for the year ended June 30, 1913, was 525,571. We have been advised that the insertion of these figures in the blue book was due to an error in tabulating in the department, and that the number of passengers carried on the T. and Y. R. Ry. was 5,255,706.

The Ontario Railway and Municipal Board is to have attached to its staff a telephone and electrical expert, for whom a salary of \$3,600 has been provided in the Ontario estimates.

Marine Department

The Dominion Canal Statistics for the Season of 1913.

Following are the principal portions of the report on canal statistics for 1913, as issued by the Department of Railways and Canals:—

The volume of traffic through Canadian canals during 1913 aggregated 52,053,913 tons, compared with 47,587,245 in 1912, an increase of 4%. The total traffic for 1913 was distributed among the various canals as follows:—

	Tons.	Increase.	Decrease.
Sault Ste. Marie	42,699,324	3,029,669	
Welland	3,570,714	718,799	
St. Lawrence	4,302,427	825,239	
Chambly	555,602		62,813
St. Peters	71,511		3,295
Murray	180,576	10,495	
Ottawa	105,138		20,912
Rideau	171,223	11,490	
Trent	55,200		21,350
St. Andrews	81,295		14,554
Total	52,053,913	4,595,292	128,624

The foregoing figures do not give the net tonnage. They represent the aggregate of the traffic which passed through all the canals, and it happens that a cargo may pass through two or more canals. From the analysis made, it may be said that the traffic of 1913, after eliminating duplication, involved a net tonnage of 44,901,804, of which 6,654,311 tons were of Canadian origin.

On the basis of gross traffic the following table will show the growth since 1904:—

Year	Tons
1904	8,256,236
1905	9,371,744
1906	10,523,185
1907	20,543,694
1908	17,542,820
1909	33,720,748
1910	42,990,608
1911	38,030,351
1912	47,587,245
1913	52,053,913

The increase of traffic through Canadian canals for the decade was equal to 530%.

The following table shows upon what canals the growth has taken place during the past five years:—

	1909.	1910.	1911.	1912.	1913.
Sault Ste. Marie	27,870,245	36,395,687	36,651,700	30,699,655	42,699,324
Welland	2,250,951	2,326,290	2,537,609	2,851,615	3,570,714
St. Lawrence	2,111,629	2,760,752	3,105,768	3,477,188	4,302,427
Chambly	732,117	669,299	599,826	618,415	555,602
St. Peters	70,350	85,051	75,298	74,800	71,511
Murray	10,129	177,641	163,457	170,681	180,576
Ottawa	316,939	385,261	320,671	302,350	305,138
Rideau	134,774	134,981	172,227	160,133	171,223
Trent	59,052	46,263	57,290	77,150	55,200
St. Andrews		8,283	47,135	95,549	81,295

The ratio which each of the foregoing classes bore to the total volume during the past four years is as follows:—

	1910.	1911.	1912.	1913.
Agricultural products	16.5	14.5	14.5	16.40
Animal	1.2	1.1	0.9	1.04
Manufactures	5.2	6.2	4.6	3.61
Products of forests	3.0	3.0	3.4	3.22
Products of mines	79.5	75.5	77.3	76.73

An overwhelming proportion of the traffic through the canals consists of products of the mine. This significant situation will be dealt with under the next heading. It arises entirely from the use made of Canadian canals by U.S. vessels.

The public service of Canadian canals must be measured in the light of the nationality of the traffic. The canals are entirely free to Canadian and U.S. vessels. Up to 1909 no record was kept of the origin of cargoes, but since that year it has been possible to separate the business of Canada from that of the U.S.

The facts with respect to tonnage of vessels and cargoes during the past six years are as follows:—

Year	Canadian vessels		U.S. vessels.		Freight tonnage		Total.
	No.	Tonnage.	No.	Tonnage.	Canadian.	United States	
1908	29,040	6,780,789	7,489	4,835,320	5,012,147	12,190,673	17,502,820
1909	22,507	7,811,578	9,000	10,459,322	7,378,057	20,344,691	33,720,748
1910	25,337	8,931,700	11,402	21,777,297	7,883,614	35,106,094	42,990,608
1911	25,585	9,172,192	10,370	18,231,622	7,792,907	30,237,446	38,030,353
1912	27,371	10,237,335	11,785	21,636,100	9,376,529	38,210,716	47,587,245
1913	28,054	12,078,041	10,739	21,238,788	11,130,875	40,023,038	52,053,913

Details of traffic, showing tonnage of commodities, will be found in accompanying tables. Comparing 1912 and 1913, following was the tonnage by classes and canals:—

	Agricultural products.	Animal products.	Manu- factures.	Products of forest.	Products of mines.	Total
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1912.						
Sault Ste. Marie	4,500,792	372	975,393	54,114	34,109,074	39,669,655
Welland	1,205,012	678	625,569	77,681	792,072	2,851,015
St. Lawrence	1,119,507	9,475	464,094	578,700	1,305,395	3,477,188
Chambly	19,706	338	11,000	125,313	161,158	618,415
St. Peters	15,457	2,996	7,583	11,161	37,642	71,500
Murray	448	37	101,511	706	67,379	170,681
Ottawa	5,278	2,880	20,958	226,600	136,634	392,350
Rideau	3,095	3,151	18,814	28,642	105,531	160,133
Trent	2,514	361	3,159	97,489	3,327	77,150

Trent	59,052	46,263	57,290	77,150	55,200
St. Andrews		8,283	47,135	95,549	81,295

These totals and percentages relate entirely to freight tonnage which passed through Canadian canals. They do not include the traffic which passed through the U.S. canal at Sault Ste. Marie. At that point vessels passing up and down may take either canal. When they pass through the Canadian canal a record is taken of the origin of the cargo; but when they pass through the U.S. canal no such record is taken. Hence it is always impracticable to ascertain with exactness the volume of traffic which belongs to Canada. Until the U.S. takes cognizance of the origin of cargoes this unsatisfactory situation will continue.

A record is kept at the Canadian canal office at Sault Ste. Marie, and it was found that for 1913 but 6% of all freight tonnage which passed through both canals was carried in Canadian vessels.

The overwhelming proportion of U.S. traffic which passes through the Canadian canals arises very largely at Sault Ste. Marie. In 1913 42,699,324 tons of freight

were transported through the Canadian canal. Of this 4,951,867, or 11.6%, was of Canadian origin. The remainder, equalling 88.4%, was of U.S. origin.

The situation is somewhat improved at the Welland canal. The total freight tonnage which passed up and down at that point in 1913 was 3,570,714 tons, and of this 2,093,406, or 58.7%, belong to Canada. Through the St. Lawrence canals 4,302,427 tons of freight were carried, and of this 2,837,119 tons were of Canadian origin, or 66%. There was a marked betterment at the Welland canal in 1913 as compared with 1912, the proportion of distinctly Canadian business having risen from 54 to 59%.

The character of the traffic at Sault Ste. Marie has a great deal to do with the preponderance of U.S. tonnage. Of the 42,699,324 tons of freight which in 1913 passed through the Canadian canal, 32,445,067 tons consisted of ores, chiefly iron. Practically all of this was U.S. business. If ores had been eliminated, the volume of Canadian business through the Canadian canal in 1913 would have been about equal to that of the U.S.

The movement of wheat from the head of Lake Superior eastward has become of increasing importance with the rapid development of the Canadian Northwest. Prior to 1909 the record was not kept in such a way as to separate Canadian from U.S. wheat. Bearing that fact in mind, following is a statement of wheat brought down through the Canadian canal at Sault Ste. Marie:—

1895	4,518,334
1896	19,314,231
1897	17,925,834
1898	9,746,600
1899	1,575,934
1900	9,092,931
1901	9,630,531
1902	27,015,500
1903	25,233,934
1904	26,791,100
1905	25,084,000
1906	34,380,300
1907	19,399,967
1908	58,521,031

1909	48,047,833
1910	51,774,833
1911	63,641,000
1912	83,743,034
1913	101,066,143

* For the first time represents Canadian wheat only. The figures of preceding years include U.S. wheat which passed through the Canadian canal.

There also was brought down through the U.S. canal at Sault Ste. Marie 40,660,766 bush. of Canadian wheat.

Following is a summary of the facts with respect to Canadian wheat:—

	Bush.
Through Canadian canal	101,066,133
Through U.S. canal	40,060,766
Total	<u>141,726,899</u>

As compared with 1912 this total shows an increase for 1913 of 31,884,868 bush.

There was also brought down 1,684,170 barrels of Canadian flour, which, at $4\frac{1}{2}$ bush. to the barrel, would represent 7,578,765 bush. of wheat. This would bring the final total up to 149,305,664 bush. of Canadian wheat. The aggregate on this basis in 1912 was 123,986,931; so that the net increase, counting wheat and flour together, for 1913 was 25,318,733 bush.

A careful analysis has been made of the course which Canadian wheat took in 1913 in its transportation by water. In order to make the statement complete, copies of all ships' reports filed at the office of the U.S. canal at Sault Ste. Marie were procured, and from these the movement of Canadian wheat through that channel was tabulated.

Taking first the facts in relation to Canadian wheat which passed through the Canadian canal, the distribution in 1913 was as follows:—

Port Arthur-Fort William to Montreal..	Bush.
" " " Bay Georgian	11,233,133
" " " Other Canadian ports	21,532,134
" " " Buffalo	25,580,000
Duluth to Montreal	39,282,500
" " Georgian Bay	437,533
" " Other Canadian ports	416,097
" " Buffalo	281,600
	2,303,166
Total	101,066,133

The volume of Canadian wheat which passed through the U.S. canal at Sault Ste. Marie in 1913 was distributed as follows:—

Port Arthur-Fort William to	Montreal Georgian Bay	Bush.
"	"	717,300
"	"	2,016,000
"	"	2,465,733
Duluth to	Montreal Georgian Bay	28,410,400
"	"	2,08,666
"	Other Canadian ports	1,180,800
"	Buffalo	646,000
		1,507,867
Total		40,660,766

Combining the Canadian wheat which passed through the Canadian canal with the Canadian wheat which passed through the U.S. canal the statement for 1913 is as follows:—

	Canadian Wheat.	Bush.	%
Port Arthur-Fort William to Montreal		11,950,433	8.4
Port Arthur-Fort William to Georgian Bay		24,448,134	17.2
Port Arthur-Fort William to other Canadian ports		28,045,733	19.8
Port Arthur-Fort William to Buffalo Duluth to Montreal		67,701,000	47.8
" Georgian Bay		3,236,199	2.3
" Other Canadian ports ..		1,605,867	1.1
" Buffalo		927,600	.7
" Buffalo		3,811,033	2.7
Total		141,726,899	100.0

The "other Canadian ports" referred to in the foregoing statements are ports between Georgian Bay and Lake Ontario. Cargoes consigned to Kingston are counted as being to Montreal, since Kingston is a port of transfer. The destiny of such cargoes is Montreal. 45.4% of Canadian wheat brought down from the Northwest by water in 1913 clung to wholly Canadian channels.

In order that a comparison may be made with the facts in preceding years, the fol-

following table is brought down to the end of 1913:—

	1900.	1910.	1911.	1912.	1913.
	Bush.	Bush.	Bush.	Bush.	Bush.
Fort William to Montreal	10,517,266	13,185,370	12,761,666	11,929,009	11,950,433
" " Georgian Bay	13,384,400	12,753,200	9,881,234	10,501,168	9,448,134
" " other Canadian ports	10,149,033	9,003,400	11,880,066	10,458,700	8,045,743
" " Buffalo	12,841,334	15,693,363	27,945,600	44,282,666	67,701,000
Duluth to Montreal	520,000	315,000	283,500	3,236,199
" " Buffalo	528,200	224,500	710,334	571,437	3,811,033
" " Georgian Bay	28,000	461,500	1,418,767	1,605,867
" " other Canadian ports	79,000	210,000	927,600
" " unclassified	3,078,164
Total	48,047,833	51,774,833	63,641,000	100,842,031	141,726,899
Through U.S. canal	9,117,328	5,324,440	1,681,481
Grand total	57,165,161	57,099,279	65,622,481	100,842,031	141,726,899

The following statement of percentages presents the foregoing tables in a convenient form for purposes of comparison:—

Canadian Wheat.	1909.	1910.	1911.	1912.	1913
Port William to Montreal	21.0	25.5	20.1	13.6	8.4
" " Georgian Bay	27.9	24.6	15.6	17.8	17.7
" " other Canadian ports.....	21.1	18.5	18.7	18.6	19.6
" " Buffalo	26.7	30.3	43.8	40.2	47.3
Duluth to Canadian ports	1.3	.6	.7	1.7	.4
" " American ports	1.1	.5	1.1	5.2	2.7
" " unclassified	3.9

The diversion of Canadian wheat to Buffalo-New York, instead of following wholly Canadian channels, is due to several causes. Chief among these is the matter of time. Cargoes are sold for delivery at a foreign port by a specified date, and during the period of pressure in October, November and December, but chiefly in November, the availability of ocean tonnage at New York is a factor rising above freight rates.

Carriers by water are not placed by law on the same reporting basis as are railways. Hence special and extraordinary measures have had to be taken in order to gather facts from which freight rates prevailing on Canadian inland waters might be ascertained. Such steps were taken for the first time in 1912, and were continued in 1913. They have resulted in assembling exceedingly valuable and useful statistical information. That information has been carefully classified and tabulated. With the co-operation of shipowners the system which was inaugurated in 1912 will be continued. It leaves much, however, to be desired. It would, for example, be most instructive also to have definite and authentic reports with respect to the number of vessels operating on inland waters, their tonnage, the capital invested, earnings, operating expenses, tonnage of freight other than that which passes through the canals, employees, salaries and wages bill, accidents, etc. The objects of the special inquiry to which allusion has been made were to show the average rate per ton per mile on inland waters, the average freight charges per ton and per bushel between certain points, and to compare these charges with railway rates. Before steps were taken in this direction in 1912 no information whatever was to be had from any source on these important aspects of transportation.

Having ascertained for 1913 the number of tons carried one mile, and the amount of gross earnings thereon, the following results were reached:—

Canadian traffic:—	
Average rate per ton	99.37c.
Average rate per ton per mile184c
U.S. traffic:—	
Average rate per ton	55.19c
Average rate per ton per mile074c

As compared with 1912 the foregoing results show a reduction. Following is a com-

		Per ton per mile. cent.	1912. Per bushel. cent.	Per ton. \$	Per ton per mile cent.	1913. Per bushel. cent.	Per ton. \$
To	Port Arthur-Fort William	157	5.774	1.024	142	5.351	1.786

Average rate per ton per mile .0070.				

The wide disparity between Canadian and U.S. rates is due wholly to the character of U.S. traffic. Of the 37,747,457 tons of U.S. freight which passed through the Canadian canal in 1913, there were 32,445,067 tons of iron and copper ore and 4,153,301 tons of coal. These two commodities made up 97% of the total U.S. traffic. The ore moved downward and the coal upward. An overwhelming proportion of both the ore and the coal is carried in vessels belonging to the iron and steel industries of Pennsylvania, at rates which can hardly be regarded as commercial. They are uniform year after year—55c. a ton for ore and 33c. for coal. That these rates are not commercial, nor subject to competition, is demonstrated by the fact that in every month of the season of navigation grain and other commodities have been carried over the same route at as high a rate as \$1.17 a ton. In some instances the rate was \$2 and over a ton.

The Canadian rates also exhibit a wide difference as between maximum and minimum. Wheat was moved during 1913 at as low a rate as .067c. per ton per mile, and at as high a rate as .172. Package freight, aggregating a considerable volume, earned as high as .500 per ton per mile.

The facts having been given with regard to the volume of Canadian wheat moved over the various routes in 1913, it will be instructive to observe the rates of freight which applied to this important traffic. A thorough analysis was made of the reports received, and they yielded the following averages:—

Port Arthur-Fort William to Montreal:—	
Per ton per mile	14.25
Per bushel	5.35 1/2
Per ton	\$17.8c.
Port Arthur-Fort William to Georgian Bay:—	
Per ton per mile	14.80
Per bushel	2.27 90
Per ton	76.00c.
Port Arthur-Fort William to other Canadian ports:—	
Per ton per mile	10.40
Per bushel	2.47 10
Per ton	\$1 21c.
Port Arthur-Fort William to Buffalo:—	
Per ton per mile	10.30
Per bushel	2.43 00
Per ton	81.00c.

A comparison of the foregoing rates for 1913 with the rates for 1912 is as follows:—

A record was also kept of the movement of Canadian wheat over the several routes during each month of the season of navigation and the results ascertained were as follows:—

Port Arthur—Fort William	Per bush.	Per ton.	Per mile.
April	4.12	1.00	.127
May	4.08	1.00	.127
June	4.08	1.00	.127
July	4.08	1.00	.127
August	4.08	1.00	.127
September	4.08	1.00	.127
October	4.08	1.00	.127
November	4.08	1.00	.127
December	4.08	1.00	.127

Port Arthur—Fort William	Per bush.	Per ton.	Per mile.
April	4.12	1.00	.127
May	4.08	1.00	.127

November	4.08	1.00	.127
December	4.08	1.00	.127

A study of the returns for 1913 showed that the largest volume of wheat was moved through to Montreal during May and June, when the rates were low and there was no apparent pressure for delivery abroad; while the movement to Buffalo was largest in October and November, when dispatch was the prime consideration, and the rates were high.

The all water rate from Port Arthur—Fort William to Montreal in November averaged 6.341c. a bushel, which must be regarded as a fair rate for the vessels. For the same month the average water rate between Port Arthur—Fort William and Buffalo was 3.296c. To this should be added the rail rate between Buffalo and New York, which in November, for export, was 5.12c. a bushel. This fact was officially ascertained from the Buffalo Chamber of Commerce. The combined water and rail rate from Port Arthur—Fort William to Buffalo in November was 8.796c., as compared with an average for that month between Port Arthur—Fort William and Montreal of 6.14c. With an advantage of 2.455c. a bushel in favor of the St. Lawrence route, it is still true that more than ten times as many bushels of Canadian wheat went out by way of Buffalo—New York in November than came down to Montreal. Such a situation is obviously created by other considerations than the rates of freight. They will be found in the availability of ocean tonnage at New York, the demand for exportation, and lower ocean freight and insurance rates from New York than from Montreal.

A larger volume of wheat was brought down to Georgian Bay ports in 1913 than in 1912. The average water rate to such ports was 2.279c. a bushel. The rail rate from Georgian Bay to Montreal was .6c. a bushel, but that rate was probably adjusted so as to make the water and rail rate

combined equal to the all water rate. A much larger volume of grain than in preceding years was brought to Port Colborne, passed into the elevator and subsequently carried on to Montreal by water.

Out of the facts which have been presented with respect to freight rates in 1913 on Canadian inland waters, grows quite naturally the suggestion of a comparison with rail rates. It must be said at once that the water rates were considerably lower than the rail rates. It is easily possible with the information in hand which has been gathered during the past years to put certain water rates side by side with rail rates; but such a measurement could not be made with satisfactory accuracy until carriers by water are placed on the same statistical footing as that now occupied by the railways. There are large and important factors lacking from the data which has been made available with regard to the operations of certain carriers by water on the inland waters of Canada. When all the factors are known it will then be practicable to make an exact comparison. The statistical facts dealt with in this report are satisfactory as far as they go; but in a matter of this nature absolutely complete and comprehensive reports are required before conclusions may be drawn which are sound from every point of view. It is believed that the whole statistical situation with regard to carriers by water will be changed during the current year.

Within the limited scope of canal statistics certain facts are definitely known. The rates of freight on a very large proportion of all the cargoes of Canadian origin moved through the canals have been ascertained. From that basic information the average rate per ton per mile has been calculated. The omissions from the account relate to cargoes which did not pass through the canals, and there are good reasons for asserting that such cargoes bore a somewhat higher freight rate than those which applied to the trade of the Great Lakes in particular. The latter is a more or less specialized business, in which competition is active.

It has been shown that the average rate per ton per mile on canal traffic in 1913 was .184c. The corresponding average rate for all the railways of Canada in 1913 was .758c. This comparison is most favorable to carriers by water, but it must not be forgotten that the Government makes a substantial contribution toward freight rates by water. The canals have not only been constructed by the Government, but the Government also maintains and operates them. It is therefore obviously reasonable to ask what the freight rate by water would have been in 1913 if carriers had been obliged to meet the interest on the cost of canals as well as the cost of maintenance. The facts are at hand. The capital cost of Canadian canals to March 30, 1913, was \$105,656,037. Interest at 3½% on this sum would amount to \$3,697,612. The cost of maintenance for the fiscal year 1913 was \$1,602,080. These two sums combined give a total of \$5,301,611. The Canadian tonnage in 1913 was 6,654,311; so the Government contribution was equal to 78.85c. a ton. Assuming that all this Canadian tonnage was carried at the same freight rates as the tonnage dealt with in the calculations preceding, it will be seen that 78.85c. was the precise equivalent to .146 per ton per mile. Put into tabular form the account would stand as follows:—

	Per ton.	Per mile.
Actual freight rate	99.17	.184
Government contribution	78.85	.146
Total	\$178.02	.330

The rail rate on wheat from Port William

to Montreal is 12c. a bushel, or \$4 a ton. This is equal to .402 per ton per mile; so that the difference in favor of waterborne wheat in 1913 was .071 per ton per mile. Put in another way, if shippers had been obliged to meet the amount involved in the public's contribution to the water rate, the freight cost to Montreal in 1913 would have been 8c. a bushel instead of 5.351c. It should be added that the cost and maintenance of the canals is not the only Government contribution to the water rate. If the cost and maintenance of harbors, lighting, dredging, etc., had been taken into account there would have been a considerable addition. As it was, however, the rate by water was very much lower than the rate by rail.

The insurance rates which prevailed during 1913 on the St. Lawrence and Great Lakes route were as follows:—43½% from the head of navigation to the eastern end of Lake Erie, an additional 1% to Ogdensburg, and a further 1% to Montreal. This would make the total 64½% from Port Arthur—Fort William to Montreal, or 2% more than to Buffalo. This difference must be taken into account in comparing freight rates as between Buffalo and Montreal. In December an extension was allowed for the first five days at an additional 1%.

The St. Lawrence River Route.

During a discussion in the House of Commons, Feb. 20, on the Marine Department's estimates for the current year, the Minister of Trade and Commerce stated in regard to insurance rates, that while the Government is in sympathy with any movement to secure lower insurance rates on the St. Lawrence, the representations made to Lloyd's had not accomplished much. The shipping firms of the Dominion have been assured by the Government that if they would do their share in organizing a new plan of insurance the Government will assist, but no practical step has been taken in this direction.

The Minister of Marine stated that the commission consisting of Dean Haskell, V. W. Forneret and W. Stewart, which investigated water levels, etc., during 1913, had found that further investigation would be necessary this season before a report could be presented. Nothing, however, had been learned that would cause the Government to abandon the plan of deepening the channel to 35 ft., and the work would be carried on during the season. Up to March, 1913, over \$15,000,000 had been spent on the St. Lawrence route, of which \$9,000,000 was for dredging. The north channel is now being dredged, and when this is completed, the last impediment to navigation between Montreal and Quebec would be removed. Provision will be made in the supplementary estimates for the building of an additional dredge for this work, but, he stated, it was doubtful if it could be built in Canada. In connection with the ice breaker which is to be built for the St. Lawrence, and which it was decided to have built in Canada, a contract had not been awarded, as no satisfactory tenders were received, the prices being considered too high. The vessel is to be 275 ft. long, about 50 ft. broad and 27 ft. draught, while the horsepower will be between 8,000 and 10,000. It is intended to have it superior to the well known Russian ice breakers, and with this in view conferences have been had with the Russian naval authorities. Winter navigation on the St. Lawrence, he continued, is now beyond the experimental stage, especially with vessels built for such service, and the only question that remains is whether it would be commercially profitable to build such vessels.

Another Steel Car Ferry for the Ontario Car Ferry Company.

An all steel car ferry, Ontario No. 2, a sister ship to Ontario No. 1, being operated between Cobourg, Ont., and Charlotte, N. Y., by the Ontario Car Ferry Co., has been ordered from Polson Iron Works, Ltd., Toronto. The Ontario Car Ferry Co., Ltd., is a combination of G. T. R. and Buffalo, Rochester and Pittsburg Ry. interests, formed some years ago to handle the coal traffic originating on the latter company's lines, destined to points in Eastern Ontario, on G. T. R. lines, the object being to eliminate the long haul around the west end of Lake Ontario. The business handled over by car ferry has increased so greatly that a second vessel is required. It will be in most particulars almost identical with the first ferry on the line, Ontario No. 1, which was described in Canadian Railway and Marine World, May, 1907. Following are some of the principal particulars:

It is to be a twin screw car ferry of the shelter deck type, with four tracks for cars on the main deck. The main deck is to be of steel throughout, without wood covering; the shelter deck is to be of steel laid flush, with a steel deck house running throughout its greatest length and containing accommodation for passengers, officers and crew. It will have a wooden pilot house and bridge on top of the deck house forward, and a pilot house at the after end of the deck house. It will be divided into six transverse watertight bulkheads, extending from the keel to the main deck, with a longitudinal bulkhead along the centre line, in three deep water ballast tanks. There will be three water tanks 13 ft. deep, two of which will be forward of the boiler room, and one aft of the engine room, steel lower deck, to be laid throughout forward and after holds and both peaks, forming the tops of the deep water ballast tanks. There will be two shaft alleys, one on each side from the engine room, extending into the stuffing box bulkhead. The boiler room will contain four single ended Scotch marine boilers placed amidships, with one firehold athwartships and one wing coal bunker on each side of the boiler room. The hull is to be bossed out on each side to enclose the propeller shafts. There will be two steel pole spars, without masts or sails.

The ferry will have a capacity for 28 standard coal cars of 68 tons gross weight each, and 200 tons of fuel in the bunkers. The draught of the vessel will not exceed 16½ ft. when fully loaded. It is to have a normal working speed of 13 miles an hour, to be maintained in open water, but will be capable of making 15 miles an hour to meet emergency conditions.

Length overall 318 ft.
Length, between perpendiculars 307½ ft.
Beam, moulded 54 ft.
Beam, on main deck 56 ft.
Depth at centre, main deck to promenade deck, 17 ft.
Depth at side, main deck to promenade deck, 17 ft.
Draught of water with 28 loaded freight cars, and 200 tons of bunker coal, not over 16½ ft.
Camber of main and promenade decks 9 ins.
Depth to promenade deck 20½ ft.
Rise of floor 2 ft.

The ferry is to be built on the transfer system, with solid plate floors and bulb angle frames. The steel plating will not be reduced forward, and will be extra heavy for working in ice. It is to be built to pass the inspection of the Great Lakes Register, and to receive the highest rating in the latter.

Plates and shapes will be of mild open hearth steel; stem, stern frame and rudder, of hammered scrap iron; and the spectacle frame, of cast steel in two parts. The frames from the after peak bulkhead to the stern post are to be 8 by 3½ in. by 19.17 lb. bulb

angles, spaced 24 ins. apart; from the collision to after peak bulkhead, 10 by 3½ in. by 25.9 lb. bulb angles, 24 ins. apart; and forward of the collision bulkhead, they are to be of the same section as in the after peak, but spaced 18 ins. apart on the water line. All frames are to extend to the main deck in one length. The frames above the main deck will be of 8 by 3½ in. by 19.17 lb. bulb angles, spaced 36 ins. throughout.

The bulkhead frames will be 5 by 5 in. by 16.2 lb. angles, double rivetted on both flanges, while the frames in the centre will be 6 by 3½ in. by 11.7 lb. angles. Where floor plates are to be fitted, they will be connected to the shell plating by 4 by 3½ in. by 11.9 lb. angles. The frames below the main deck in the way of the bossing are to be of 4 by 3½ in. by 11.9 lb. angles and 15 lb. plate, with 3 by 3 in. by 7.2 lb. reverse bars. The reverse frames will be of 3 by 3 in. by 7.2 lb. angles, with double reverse frames to be fitted on all floors in the engine space.

The floors in the engine and boiler space are to be 33 in. by 20 lb., and 17½ lb. elsewhere. At the end of the vessel, they are to be 17½ lb., but increased in depth wherever necessary to suit the shape of the vessel.

Ontario Car Ferry No. 1.

The floors are to be connected to the centre keelson by double 3½ by 3½ in. by 8½ lb. angles.

The centre keelson will be 45 ins. deep, of 25 lb. plate throughout, with double 5 by 4 in. by 14.5 lb. angles top and bottom. The side keelson will be of several kinds. The first, of double bulb angles, 6 by 3½ in. by 15.32 lb., on top of floor, with 17½ lb. plate filler intercostally between the floors, and connected to the floors and shell by 3½ by 3½ in. by 9.8 lb. angle clips. The second, of single 10 by 3½ in. by 25.9 lb. bulb angles, with 17½ lb. plates fitted intercostally. The third, of double 6 by 3½ in. by 15.32 lb. bulb angles, rivetted back to back, and connected to reverse bars with two ¾ in. rivets. Extra keelsons will be fitted forward, one in each strake of shell plating. There will also be additional keelsons under the engine space.

The keel plates will be 48 ins. wide, of 32½ lb. plate, reduced fore and aft to 30 lb. The hull plating will be in five courses, 25½ lb. plate reduced fore and aft to 21.5 lb.; three courses, 30.6 lb., reducing to 25½ lb., fore and aft; one course 12½ lb. plate, increasing to 15 lb. at the forward end; and two courses, respectively 12½ and 15 lb.

The bilge keel will be a 13 in. 27.95 lb. bulb angle, fitted between double 6 by 3½ in. by 12 lb. angles, and carried amidships for 119 ft. The main deck stringer will be a 30 lb. plate, 66 ins. wide for two thirds the length, tapering at the ends to 36 in. by 22½ lb., and connected to the shell by 1 by 4 in. by 14.3 lb. angles. The hold stringer will be double 6 by 3½ in. by 15.32 lb. bulb angles with 17½ lb. plate fitted intercostally and connected to the shell by 3½ by 3½ in. by 9.8 lb. angles. The lower deck stringers will be 17½ in. plates, 48 ins. wide for three quarters the length, reduced to 36 in. by 15 lb., connected to the shell and frame with 3½ by 3½ in. angles. The upper hold stringers will be 17½ in. plate, 39 ins. wide for three quarters the length, reducing to 30 ins. by 15 lb., and connected by 3½ by 3½ in. by 9.8 lb. angles. The promenade deck stringers will be 17½ in. plate 72 ins. wide for two thirds the length, reducing to 42 in. 15 lb. and connected by 3½ by 3½ in. by 11.1 lb. gunwale angles. The web plate will be 17½ lb. plate.

The deck plating for the main deck will be 17½ lb. plate; windlass deck, 12½ lb., with 20 lb. under the windlass; lower deck, 12½ lb.; and promenade deck 10.2 lb. The

deck beams for the main deck will be 13 by 4 in. by 32 lb. channels; windlass deck, 10 in. by 20 lb.; lower deck, 10 by 3 in. by 22.49 lb. bulb angles; and promenade deck, 8 by 3 in. by 18.4 lb. bulb angles. The six transverse bulkheads will be watertight, with the collision bulkhead 32 ft. abaft the stem.

There will be two 12 by 16 by 18 in. horizontal or vertical duplex piston type ballast pumps, connected so as to individually fill or empty the ballast tanks; one 12 in. centrifugal pump, directed connected to an engine in the engine room, and so arranged as to act as an air pump in emergencies; a fire pump; 6 by 5 by 7 in. duplex bilge pump; 6 by 5 by 7 in. sanitary pump; 4½ by 4 by 5 in. fresh water pump; and a 4½ by 4 by 5 in. cooler pump.

There will be an electric lighting plant, consisting of one 15 k. w. and one 20 k. w. generator. There will be a 16 in. search light. There will also be a 2 ton ice machine, working on the carbonic anhydride principal.

The accommodation on the main deck will be for 6 coal passers, and 6 firemen on the port side, and 2 oilers, 2 watchmen, 4 deck hands and 2 water tenders on the starboard

side all forward. The promenade deck will have accommodation for the vessel's officers, and in addition, 32 staterooms, as well as passenger saloons, dining room, etc.

There will be two triple expansion, 20½ by 33 by 54 by 36 in. jet condensing engines, operating normally at about 110 revolutions per minute. They will turn outwards.

The boilers will be four in number, 14 ft. diameter, and 12 ft. long, of the Scotch type, fitted for Howden's forced draught, and carrying 180 lbs. Each boiler will contain three 42 in. corrugated steel furnaces, 42 in. diameter.

Atlantic and Pacific Ocean Marine.

The Canadian Northern Steamships will continue to make Montreal the summer headquarters of the Royal Line during the forthcoming season, and will not run to Quebec only, as it has been reported.

It is reported from the Pacific coast that the Union Steamship Co. of New Zealand, which is now operating the mail steamship service between Canada and Australasia, is about to inaugurate a freight steamship service also, and is at present investigating the requirements of such a service.

The Merchants Trust and Trading Co., of Vancouver, B. C., is reported to be the moving spirit in the formation of a company to inaugurate another steamship service between Canada and Australia. It is said that a monthly or bimonthly service will be given with 13 knot vessels, with accommodation for one class of passengers.

The Royal Mail Steam Packet Co. has arranged to take over the s. s. Mandingo, to replace the s. s. Cobequid, which was wrecked in the Bay of Fundy recently, and operate her on the West Indies route. The Mandingo was formerly owned by the Elder Dempster Co., and was built for its West African service. The two companies named are closely allied.

H. B. Stoker, formerly in the C. P. R. Steamship Department, has been appointed Westbound Traffic Agent, Manchester Liners, Ltd., with office at Montreal. The company operates a line of steamships between Manchester, Eng., and Montreal, on the summer route, and St. John and Halifax in the winter. Furness, Withy and Co. are the General Agents.

Capt. F. Carey of the C.P.R. s.s. Tyrolean has retired from active service after over 50 years marine experience. He entered C.P.R. service when the C.P.R. acquired the old Beaver Line, and eventually was placed in command of the Empress of Ireland for her first few trips, after which he was transferred, at his own request, to one of the more southerly routes.

The Royal Mail Steam Packet Co.'s s. s. Cobequid which was recently wrecked in the Bay of Fundy, will probably be declared a total loss. She was insured on a value of £20,000, but the underwriters are only liable for the excess of £10,000 for particular average claims. She was built in 1893 for the Union Castle Line, and was formerly known as Goth.

Maritime Provinces and Newfoundland.

The Crystal Stream Steamship Co.'s steamboats D. J. Purdy and Majestic have both had their boilers and machinery overhauled.

The Cape Breton Electric Co.'s new steamboat Electronic will be placed in service on the company's ferry route during the summer.

The Maritime and Newfoundland Steamship Co. is reported to have placed an

order at Paisley, Scotland, for the construction of a steel screw driven steamship.

The Majestic Steamship Co.'s s. s. Champlain has been extensively overhauled during the winter, at Meteghan, N. S., and the hull has been practically rebuilt.

The Dominion Government has awarded a contract for the construction of a breakwater at Little Sands, P. E. I., to Phillips, Mutch and McLean, Charlottetown.

Furness Withy and Co. are considering tenders for the construction of a pile wharf and steel freight shed, and for moving the existing freight shed and building extensions to it, and for other work, at St. John's, Nfld.

It is reported that the St. John River Steamship Co.'s steamboat Elaine is about to be sold, and that she will be operated during the forthcoming season on the main river route by an independent company.

The steamboat Maggie Miller which runs on the ferry service on the Kennebecasis River, between Millidgeville and Bayswater, N. B., was practically rebuilt during the winter in readiness for the season's service.

The Victoria Steamship Co.'s s. s. Victoria has been thoroughly overhauled during the winter, and has had her furnaces so arranged that she will use wood as fuel during the forthcoming season, instead of coal.

The Minister of Marine has introduced a bill into the House of Commons, to repeal the acts relating to the North Sydney harbor and to transfer to the Government, the rights, assets and property now vested in the Harbor Commissioners there.

The C. P. R. s. s. St. George, operating on the Bay of Fundy service, is having new turbines installed at New York. The turbines were built at Birkenhead, Eng., and the work is being carried out under the superintendence of the builders.

The steamboats Malcolm Cann and Robert G. Cann, owned by Hugh Cann and Son, Ltd., Yarmouth, N. S., will be operated as follows, during the forthcoming season,—the first, between Guysboro and Mulgrave, daily, and the second, between Canso and Mulgrave, daily except Sunday.

The acting Minister of Railways stated in the House of Commons, Mar. 4, in answer to questions, that the amount of the contract for the construction of the Halifax ocean terminal docks, which was awarded to Foley Bros., Welch, Stewart and Fauquier, is \$5,208,715, based on schedule prices. The amount deposited by the contractors as security for carrying out the work is \$200,000.

Representations have been made to the Dominion Government for the removal of the tax of 1c. a ton on all vessels of over 100 tons capacity, entering the harbor at North Sydney, N. S., as it is claimed that many of the larger vessels which might otherwise utilize the port, avoid it on that account. For entering Sydney harbor, vessel owners pay a nominal fee twice a year.

The New Brunswick courts have recently declined to dismiss the application for a winding up order for the May Queen Steamship Co., Ltd., Gagetown, N. B., but allowed time for any shareholder to offer evidence to determine whether there should be an appeal against it. The winding up order had been asked for on account of the impairment of the company's capital to the extent of 25%. The company owns the s. s. May Queen, which was built at Carleton, N.B., in 1869, and which is a paddle wheel vessel driven by an engine of 60 h. p. Her dimensions are, length 160 ft., breadth 217 ft., depth 54 ft.; tonnage 539 gross, 310 register.

Province of Quebec Marine.

J. C. Sullivan, Harbor Master at Quebec for the past 16 years, died there, Mar. 23.

It was reported from the Montreal Harbor Commissioners' office, Mar. 18, that probably the ice would move out of the river by about Apr. 15.

The Dominion Public Works Department has awarded a contract for the construction of a wharf at Thurso, Que., to Belanger Bros., Papineauville, Que.

Polson Iron Works, Toronto, launched the first of the large dump scows, which it is building for the Quebec Harbor Commission, Mar. 4. In order to carry out the launching, the ice in the dock had to be dynamited.

The varying reports as to the future of the shipbuilding plant at Levis, owned by G. D. Davie and Sons, have been set at rest by the announcement of G. D. Davie, that he is incorporating a company with the title of The Davie Company, Limited, to take over the business, he remaining, as heretofore, in control.

Canada Steamship Lines, Ltd., has entered a tender for a mail service, which the Dominion Government intends to inaugurate along the north shore of the lower St. Lawrence, between Quebec and Seven Islands. If the matter can be arranged with the company, it may run the Northern Navigation Co.'s s. s. Saronic on the route.

The Department of Marine has issued a list of buoys to be placed, shortly after the reopening of navigation, in the steamship west channel of the St. Lawrence River, known as the Repentigny channel, and which is 300 ft. wide, 15 ft. deep at extreme low water of 1897, between Lavaltrie and Ile Deslauriers.

The Dominion Public Works Department during 1913 did considerable dredging in front of Bureau Quay, Three Rivers, giving a 30 ft. waterway at all points up to 30 ft. or less of the quay front, except at a point 400 ft. below the upper end, where there is a 28 ft. spot 100 ft. outside the quay, surrounded by a patch about 100 by 300 ft. having less than 20 ft. of water. A shelter basin 300 ft. square has been dredged to 14 ft. below lowest low water from the St. Lawrence River into the west mouth of the St. Maurice River.

Ontario and the Great Lakes.

The head office of the Farrar Transportation Co., operating the steamships Collingwood and Meaford on the Great Lakes, has been moved from Collingwood to Toronto.

Robert Bruce, of Ottawa, has been appointed Superintending Engineer of the Ottawa River Works, for the Department of Public Works, succeeding the late George Brophy.

J. Wiggins, who died at Toronto, Mar. 4, aged 90, was in his early days engaged in Great Lakes navigation, before sailing vessels were displaced by steamboats, and for 20 years owned the Erie Stewart.

Press reports say that the combined ports of Port Arthur and Fort William, with shipments of 203,328,129 bush. of grain in the navigation season of 1913, lead all ports on this continent in grain shipments.

A deputation from Bruce County waited on the Ministers of Public Works and Marine, Mar. 19, to lay before them a scheme for the construction of a port of refuge for lakes, at Inverhuron, on Lake Huron.

The report of G. H. Ferguson, a member of the Ontario Legislature, on a number of allegations in connection with the expendi-

ure of public money on the Trent Canal, was laid on the table of the House of Commons, Mar. 9.

The Department of Railways and Canals has awarded the contract for subaqueous work on section 3 of the Rice Lake Division of the Trent Canal, to Robertson and Co., Cornwall, Ont. The amount of the contract approximates \$100,000.

The Ontario Car Ferry Co., which operates between Cobourg, Ont., and Charlotte, N. Y., has applied to the U. S. Interstate Commerce Commission, under the Panama Canal law, for permission to retain, after July 1, its water line holdings in the U. S.

The Whitby Town Council is being asked to consider a scheme for the establishment of a ferry steamboat service between Whitby and Olcott, N. Y. The project would involve the expenditure of about \$1,500,000, it is reported, and is in the hands of a U. S. syndicate.

Capt. William McIlwain, who has been connected with marine business for the greater portion of his life, both on the Atlantic Ocean and the Great Lakes, died at St. Catharines, Mar. 2, aged 87. He was, for about 25 years, Examiner of Masters and Mates for the Dominion Government.

The Minister of Public Works, in response to a deputation respecting the proposed harbor improvements at Goderich, promised, Mar. 12, that the matter would be considered at an early date, but could not promise that provision would be made in the supplementary estimates for carrying out the work.

A press dispatch from Port Arthur recently stated that the large freight steamship under construction there for Canada Steamship Lines, Ltd., and of which a full description was given in our last issue, is to be named W. Grant Morden, and that the launching would probably take place Apr. 4.

It was announced in Ottawa recently that the commission to enquire into the commercial possibilities of the project to build a canal between the Georgian Bay and the St. Lawrence River will be appointed shortly. Among those who have been mentioned as members are, W. Sanford Evans, Winnipeg; F. S. Meighen and E. Gohier, Montreal.

Canada Steamship Lines, Ltd., has established a series of lectures in various parts adjacent to the Great Lakes, for the benefit of its navigation employees, with Capt. G. D. Frewer as Instructor. All those engaged in the navigation and handling of the company's vessels necessarily attend the course and pass an examination, which, it is said, makes for a standard considerably higher than that required by the Government examinations.

The U. S. Lake Survey reports the levels of the Great Lakes in feet above tidewater for February, as follows:—Superior, 602.10; Michigan and Huron, 580.06; Erie, 571.73; Ontario, 245.87. Compared with the average February levels for the past ten years, Superior was 0.38 ft. above; Michigan and Huron, 0.01 ft. below; Erie, 0.08 ft. above, and Ontario, 0.19 ft. above. It was anticipated that during March, Superior would fall 0.1 ft.; that Michigan and Huron, and Erie would rise 0.1 ft., and Ontario 0.2 ft.

A report from Windsor states that a steamboat company is in process of organization to operate a passenger and freight service between Sarnia, Wallaceburg, Windsor and intermediate points, and possibly calling at Detroit, Mich. It is said that the capital will be \$50,000, and that a vessel with capacity for about 1,000 passengers will be placed in service by May 1. Among those interested in the project are said to be H. B. Smith, D. A. Gordon, M. P., and T. B. Dunbar, of Wallaceburg.

The Algoma Central Steamship Co., a subsidiary of the Lake Superior Corporation and allied with the Algoma Central and Hudson Bay Ry., and the Algoma Eastern Ry., has purchased the s. s. J. A. McKee from the Western Steamship Co., Toronto. This vessel is on the British register, and was built at Newcastle on Tyne, Eng., in 1908. She is screw driven with engine of 201 n. h. p., and her dimensions are as follows:—Length 248 ft., breadth 43.1 ft., depth 22.5 ft., tonnage, 2,158 gross, 1,375 register.

Representatives from Leamington and Pelee Island waited on the Minister of Public Works, Mar. 3 to ask for an appropriation of \$75,000 for the construction of a breakwater at Leamington, so as to provide proper protection there with a view to securing safe and constant steamboat communication with Pelee Island. The Minister promised that if an amount was not included in the supplementary estimates during the current session, it would certainly be placed in the estimates for next session.

The Keystone Transportation Co., Montreal, is having built at Londonderry, Ireland, the s. s. Keynor of full canal size, 256 ft. long, 42½ ft. beam, 20 ft. deep, to Lloyd's highest class for lake and gulf trading, and especially strengthened for canal work. The engines will have the following dimensions: Cylinders, 16 by 26 by 44 ins.; stroke, 36 in.; boilers, 11½ ft. diameter, 10½ ft. mean length, fitted with forced draught on the Howden system. Capt. James Martin of Kingston will have command, with John Robertson as engineer.

Press reports from Cleveland, Ohio, state that James Playfair, formerly Vice President and Managing Director, Richelieu and Ontario Navigation Co., has purchased the steamships Griffin, La Salle and Wawatam, from the Pittsburgh Steamship Co. These vessels were built at Cleveland, in 1891, 1890 and 1890, respectively, their dimensions being, length 266 ft., breadth 38 ft., depth 23 ft.; tonnage, Griffin, 1879 gross, 1526 register; La Salle, 1935 gross, 1536 register; Wawatam, 1879 gross, 1526 register. They are steel vessels, each equipped with triple expansion engines with cylinders 17, 29 and 47 ins. diam., by 36 ins. stroke. It is also reported that Mr. Playfair is also negotiating for other vessels. Other press reports state that H. W. Richardson, of Kingston, is associated with him in these transactions, and that they have also purchased the steamships Minnekaita and Minnetonka from the Chicago and Duluth Transportation Co. It is also stated that the foregoing vessels will be operated in the Great Lakes trade, in conjunction with the steamships Glenmavis, Glenfoyle and Calgary, and the motor vessel Toiler. The Glenmavis and Glenfoyle are sister vessels built on the arch principle, which was fully described and illustrated in Canadian Railway and Marine World for Sept., 1913. The Toiler was the first vessel to be equipped with internal combustion engine for the lakes service, and these vessels, with the Calgary, are registered under the name of James Richardson and Sons, Ltd., Kingston.

Manitoba, Saskatchewan and Alberta.

C. A. Dunning, a member of the Saskatchewan Grain Commission, and Manager of the Co-operative Elevator Co., is advocating the construction of an inland waterway system, to enable large vessels to convey grain from the Prairie Provinces to the ocean, thus obviating the numerous transfers of cargo.

The channel at the mouth of the Red River, Lake Winnipeg, known as the new channel, is cut through the northeast ex-

treme of the delta between the middle and east mouths of the river to the lake shore, and extends between pilework breakwaters into deep water of the lake. Range lights have been established to mark the axis of the portion extending into the lake, and the old range lights at the mouth of the Red River have been discontinued, but the light-houses have been left standing so that in the event of the new channel filling up, the old one could again be used and the old lights put into operation temporarily.

British Columbia and Pacific Coast Marine.

The contract for the extensive harbor improvements at Victoria has been awarded to Grant Smith and Co. and Macdonnell, at prices approximating \$2,244,745.

B. W. Greer, Vancouver, has been appointed agent for British Columbia, for the Maple Leaf Line, running vessels between New York and Vancouver, with steel and other cargo.

The two steamships which are under construction at Dumbarton, Scotland, for the C. P. R. British Columbia Coast service, will probably be launched in June or July. It is reported that they will be named Princess Margaret and Princess Melita.

Press reports from Vancouver state that the British Columbia Government has decided to order a ferry steamboat, at a cost of about \$25,000, for service across the Fraser River at Ladner, and that tenders will be invited early in April.

We are officially advised that no action is being taken on the tenders recently received for the construction of a 15 in. hydraulic, self propelling steel suction dredge, for use in the Arrow Lakes and adjoining waters, in British Columbia.

The Provincial Government snag boat, recently built at Coquitlam, was towed down the river recently, to New Westminster, where she will have the machinery from the dismantled snag boat installed. The new vessel is named Samson, as was the old one.

Davis and Leslie, consulting engineers, Vancouver, are reported to have been appointed as harbor engineers by the North Fraser Harbor Commissioners, for the laying out of the North Arm of the Fraser River. The firm act as representatives of the English firm of Sir Douglas Fox and Partners.

The dock recently completed at Vancouver for Balfour, Guthrie and Co., consists of two piers, each 450 ft. long and 127 ft. wide. On the piers are warehouses, each 400 by 100 ft., supported on trusses, with no pillars to obstruct the free handling of freight. Railway siding facilities are also provided.

The Public Works Department has dredged a channel 1,700 ft. long by 75 ft. wide and 14 ft. deep, through a sandbar in Cloud Bay on the northwest shore of Lake Superior, to give access to Cloud River which runs into the bay. The north edge of the cut will, on the reopening of navigation, be marked by two red spar buoys, one at each extremity.

It was announced in the House of Commons, Mar. 10, that authority had been given by order in council for the purchase of a site for the proposed Government dry dock at Esquimalt, and that the Public Works Department is negotiating for the acquisition of a frontage of 2,703 ft. at Langs Cove, the estimated cost being \$334,595.

The Union Steamship Co. is said to have recently renewed its insurance on nine vessels of its fleet, the values ranging from

\$20,000 to \$150,000. On the Chelohsin Camosun, Cowichan, Cheakamus and Venture, 189 shillings; is paid; on the Cassiar, 219 shillings, and on the Capilano, Comox and Coquitlam, 231 shillings. This is an increase of 21 shillings over the amount paid in 1913.

In order to permit of repairs to the revolving machinery, the exhibition of the flashing white light at Race Rocks in the Juan de Fuca Strait, on the south coast of Vancouver Island, will be discontinued for about three weeks from May 1. While these repairs are under way, a temporary occulting white light will be shown from a lens lantern, placed on the top of the tower, lighted by acetylene.

A collision between the G. T. Pacific Coast Steamship Co's s. s. Prince John and the Dominion Government fisheries protection vessel Newington, off Queen Charlotte Sound, was reported, Mar. 3. The Newington was reported to have been considerably damaged above the waterline. She proceeded under her own steam to Esquimalt where she was docked for examination and repairs.

A deputation of the North Vancouver Council appeared before the municipal committee of the Legislature, recently, to ask that in the new Municipal Act, power be allowed the municipality to operate the ferry service between Vancouver and North Vancouver. The service between these points is now operated by a private company, the capital stock of which is practically all owned by the municipality. The proposal was not entertained, and the deputation was advised that the council should proceed with such a matter by the promotion of a private bill.

The Vancouver Shipmasters' Association recently adopted a resolution calling the attention of the Minister of Marine to the coasting trade so far as it affects the Pacific coast, claiming that at present the coastwise trade on the eastern seaboard has been cornered by aliens, chiefly Norwegians, and that probably on the opening of the Panama Canal, they would endeavor to do the same on the western seaboard. It also asks that no further orders in council, governing the participation in the coasting trade by foreigners, be renewed, or passed, and that a commission be appointed to investigate the whole matter.

The cases against a number of steamship companies, including the C. P. R. and the White Pass and Yukon Route, brought by the U. S. Attorney, alleging discrimination against the Humboldt Steamship Co., in monopolizing wharfage facilities at Skagway, Alaska, and making lower through rates than could be made by other lines, has been compromised by the companies charged pleading guilty, and submitting to fines of various amounts, the White Pass and Yukon Route's amount being \$2,600 and the C. P. R.'s \$500. In addition to the companies being charged, a number of employees of the companies were charged, but later dismissed from the case.

The Island Transfer and Trading Co., Victoria, the incorporation of which has already been mentioned, is taking over the East Coast Trading and Transport Co., and will run a steamboat service between Victoria and the Gulf Islands, chiefly in the general food supply business. The company has purchased the small steamboat Imperator, which was built at Victoria in 1910. She is screw driven by engine of 3 h.p. and is of the following dimensions,

Length 38 ft., breadth 10.6 ft., depth 4.8 ft., tonnage, 14 gross, 8 register. The steam tugboat Burin is also being operated by the company, and an option to purchase it has been obtained. The Burin was built at

Vancouver in 1910, and is screw driven by engine of 4 h.p. Her dimensions are,—length 55 ft., breadth 16.8 ft., depth 7.2 ft.; tonnage, 45 gross, 30 register. Following are the officers and directors,—Managing Director, A. C. C. Smith; Secretary, R. Wilmot; other directors, W. W. Foster, M.L.A.; B. Boggs, W. Blakemore and J. J. White.

The Shipping Federation of Canada's officers for the current year are,—President, A. A. Allan; Treasurer, J. R. Binning; Executive, J. Thom, chairman, A. A. Allan, J. R. Binning, D. W. Campbell, A. W. Mackenzie, W. R. Eakin and R. W. Reford.

Panama Canal Tolls.—In dealing with remarks recently made in the U. S. Senate, respecting the British protest against the exemption provision in favor of U. S. steamship owners using the Panama Canal, Sir Thomas Shaughnessy, President, C. P. R., is reported to have stated that the C. P. R., neither directly nor indirectly protested to the British Government, or any other government, against the Panama Canal tolls, and that the C. P. R. was quite unconcerned as to any decision the U. S. Government came to in the matter.

Victoria, B.C., Breakwater.—The breakwater being constructed by the Dominion Government at Ogden Point, near Victoria, B.C., has reached a stage where operations on parts of the substructure will have to await weather conditions such that divers can assist in the placing of the granite blocks which are to form the foundation for the concrete. In the three weeks in December, during which it was possible to carry on the work, 32,459 tons of rock were dumped, and for the first 900 ft. of its length the substructure has been brought up to a depth of about 20 ft. below low water mark. This work is under the direction of J. S. MacLachlan, District Engineer for the Public Works Department, and the contract is held by the Sir John Jackson Co., Ltd., of London, Eng.

Tides and Currents in the Gulf of St. Lawrence.—The Department of Naval Service has issued a report by Dr. W. Bell Dawson, on the currents in the Gulf, from investigation during 1894-5 and 6, 1906, 1908, 1911 and 1912. During these seasons the work was divided into sections and considerable surveys done in each, the vessel employed being anchored in positions carefully selected for the purpose. The observations of the currents were obtained by current meters registering electrically on board, the speed being measured at the standard depth of 18 ft. in all cases, and a continuous record of the tide was obtained simultaneously for comparison with the currents. The information is divided into two parts, viz., the description of currents on the surface as a mariner may expect to find them in each locality, and the general circulation of the water in the Gulf, and the characteristics of its water in regard to temperature, density, etc.

Canadian Notices to Mariners.

The Department of Marine has issued the following:—

66. Feb. 27. Quebec, River St. Lawrence, Lavaltrie to Ile Deslauniers, buoys established to mark Repentigny Channel.

67. Feb. 27. Quebec, River St. Lawrence, Lavaltrie to Repentigny, range lights established to mark Repentigny Channel.

68. Feb. 27. Quebec, River St. Lawrence, Ile a la Bague, light discontinued.

69. Mar. 2. British Columbia, Vancouver Island, Victoria harbor, Hospital rock, buoy to be moved as work of widening harbor progresses.

70. Mar. 2. British Columbia, Vancouver Island, south coast, Juan de Fuca Strait, Race Rocks, temporary light.

71. Mar. 3. New Brunswick, south coast, Bay of Fundy, Cape Spencer, intended change in character of light.

72. Mar. 3. Nova Scotia, Bay of Fundy, Larcher Shoal, position of lightship.

73. Mar. 3. Quebec, River St. Lawrence, Barrett ledges, changes in buoyage.

74. Mar. 3. Quebec, River St. Lawrence, Marmen rock, Demers rock, change in position and character of buoys.

75. Mar. 3. Quebec, River St. Lawrence, Montreal harbor, Ile Ronde, front range light to be improved.

76. Mar. 3. England, south coast, Plymouth Sound, light buoys established.

77. Mar. 5. Nova Scotia, Bay of Fundy, Long Island, Petit Passage, Boars Head, fog alarm established.

78. Mar. 5. Quebec, River St. Lawrence below Quebec, Traverse of St. Roch, change in characteristic of gas buoy lights.

79. Mar. 6. Ontario, Bay of Quinte, Picton, dredging.

80. Mar. 6. Ontario, Bay of Quinte, Nigger Narrows, dredging.

81. Mar. 6. Ontario, Lake Huron, Lyal Island, intended change in character of light.

82. Mar. 11. New Brunswick, Bay of Fundy, Machias Seal Island, change in fog alarm, new fog alarm building.

83. Mar. 11. New Brunswick, St. Croix River, St. Stephen, dredging.

84. Mar. 11. Nova Scotia, Bay of Fundy, Brier Island, permanent light.

85. Mar. 11. Nova Scotia, Bay of Fundy, Larcher Shoal lightship, wireless telegraph, additional information.

86. Mar. 11. Quebec, Gulf of St. Lawrence, Seven Islands Bay, names of lights.

87. Mar. 11. Newfoundland, south coast, Placentia Bay, off eastern entrance to Burin harbor, Iron Island, light discontinued.

Montreal Warehousing Co.—The annual meeting was held at Montreal, Mar. 1. Following are the officers and directors for the current year:—President, E. J. Chamberlin; Vice President, H. G. Kelley; other directors, W. Wainwright, M. M. Reynolds and J. E. Dalrymple; Manager and Secretary, G. H. Hanna.

Lake Grain Shipments in 1913.

The following table shows the bushels of grain shipped from Fort William and Port Arthur during 1913, the amounts in Canadian and U. S. bottoms, respectively, and the quantity sent by each route. The total amount of grain of all kinds shipped from the dual ports in 1913 was 203,328,129 bush., compared with 135,545,946 bush. in 1912.

	Wheat.	Oats.	Barley.	Flax.	Rye.	Mixed.
To Canadian ports in Canadian vessels	61,142,467	25,726,810	8,106,400	8,311,646	3,029	6,118
To Canadian ports in U. S. vessels	260,076	—	67,364	366,227	—	—
Total to Canadian ports	61,402,543	25,726,810	8,173,764	8,677,873	3,029	6,118
To U. S. ports in U. S. vessels	67,361,363	14,412,151	1,116,578	10,364,192	—	—
To U. S. ports in Canadian vessels	1,087,939	607,671	78,704	50,289	—	—
Total to U. S. ports	68,449,302	15,019,822	1,195,282	10,414,481	—	—
Grand total	129,851,845	40,746,632	9,369,046	19,092,354	3,029	6,118

Coast, Lake and River Officers for 1914.

The following appointments, made by the principal navigation companies, engaged in the Canadian navigation, for their various steam vessels and tugs, for this year, have been reported to Canadian Railway and Marine World, by the managements. The first column gives the names of the vessels, the second, those of the captains, and the third those of the chief engineers:—

ALGOMA CENTRAL STEAMSHIP CO., SAULT STE. MARIE, ONT.

Agawa	J. A. Brown	J. L. Smith
J. A. McKee	R. G. Bassett	A. M. MacInnes
J. Frater Taylor	R. H. Boyle	L. B. Cronk
Paliki	H. C. Wingrove	John Knight
Thomas J. Drummond	A. McIntyre	W. T. Rennie
W. C. Franz	W. C. Jordan	G. Sylvester

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Titanium Alloy Manufacturing Co., Niagara Falls, N.Y., has issued in sheet form 24 comparative sulphur prints, being a summary of prints shown in bulletins 1 to 5.

Canadian General Electric Co., Toronto, has issued the following bulletins:—A. 4190, Motor generator sets; A. 4185, Single phase motors; A. 4188, small direct current motors, motors.

Flannery Bolt Co., Pittsburgh, Pa., in "Staybolts, a Monthly Digest" for February, deals principally with the Tate flexible radial staybolts, recommending the sleeves LK and KK for button head type of crown stay.

Westinghouse Church Kerr & Co., 37 Wall St., New York, N.Y., have established a laboratory for testing concrete aggregates, waterproofing materials and for investigating joints and preservative coatings for steel and concrete.

Canadian Westinghouse Co., Ltd., Hamilton, Ont., has the following booklets, etc.:—Westinghouse Portable Meters for Alternating and Direct Current, circular 1104-9-13; Westinghouse Electric Fans, 1914; Westinghouse Ozonizer Sales Helps, the Electric Breakfast Set, Westinghouse Electric Curling Iron.

The Hart-Otis Car Co., Ltd., Montreal, has issued pamphlet 18, "The Yost Draft Gear," which it claims to be a friction gear of five times the capacity of the G Spring gear, at the same cost. The gear is fully illustrated and described under the headings of operation, compression, recoil, construction, strength, adaptability, service and efficiency.

Locomotive Superheater Co., 30 Church St., New York, N.Y., has issued a booklet on the use of highly superheated steam in marine practice, describing and illustrating the Schmidt fire tube superheater as installed in internally fired marine boilers, and giving a list of 881 vessels so equipped, the total horse power of their engines being 1,043,230, and the average h.p. per vessel 1,185.

Gold Car Heating and Lighting Co., 17 Battery Place, New York, N.Y., has issued a booklet, Gold's Electric Thermostatic Control of Steam Heating, which it describes as an economical method of controlling the steam, maintaining an equable temperature in every car throughout the train, lessening the parts and weight of the steam heating system, and cutting down the steam consumption in yards, at terminals, and in service.

Canadian Machinery Corporation, Galt, Ont., has issued a number of sheets 11 by 14 in. for its loose leaf binder describing and illustrating No. 393, heavy moulder, 504 tenover single or double head, 76 in. portable radial under drill, 36 in. heavy duty vertical drilling machine, 42 in. heavy car wheel lathe, 66 in. by 60 in. force planer, extra heavy driving wheel lathe, heavy gate shear with turntable, 50 in. rotary planing machine, horizontal punches, all geared head lathe, and heavy duty double axle lathe.

Northern Engineering Works, Detroit, Mich., has issued its crane catalogue 26, illustrating electric traveling cranes, hand

power cranes, electric and pneumatic hoists, also overhead track systems, bucket handling cranes and railway cranes. This catalogue is condensed, but contains references to various bulletins which more fully explain the numerous designs.

The company's Canadian works are the Northern Crane Works, Ltd., Walkerville, Ont., from which point Canadian trade is supplied.

Northern Electric Co., Ltd., which was incorporated recently under the Dominion Companies Act, with office in Montreal, has taken over the business of Imperial Wire & Cable Co., Ltd., and the Northern Electric & Manufacturing Co., Ltd., and will continue to operate without change in management. The officers of the new company are:—E. F. Sise, President; Paul H. Sise, Vice President and General Manager; Clement Saye, Secretary, and G. W. Jones, Treasurer. The Northern Electric & Manufacturing Co.'s present factory will continue to be used as a factory and engineering office for telephone apparatus, and the new works being built on St. Patrick St. will be devoted principally to wire and cable products, it being the intention to sell the Imperial Wire & Cable Co.'s present buildings on St. James and Guy Streets. The general offices will be in the new building on St. Patrick St., and the staffs of the two old companies will be amalgamated there as soon as the building is finished, which will probably be in August.

Mechanical Engineering Co., Ltd., 129 Mill St., Montreal, has issued the following announcement:—"We desire to inform you that Frank Ditchfield, formerly General Superintendent of the Canadian Car & Foundry Co., Ltd., has become associated with us, and will direct the affairs of our consulting engineering department. Mr. Ditchfield was with the Pressed Steel Car Co., Pittsburgh, Pa., for eight years, successively, as Engineer of Construction, Assistant Chief Engineer, and General Superintendent, coming to Montreal in 1907 in the same capacity with the Dominion Car & Foundry Co., and after the formation of the Canadian Car & Foundry Co., was General Superintendent of its plants until 1911, when its business demanded large extensions at its Montreal and Amherst plants, as well as the erection of its new plant at Fort William, all of which work was designed and carried out by Mr. Ditchfield. Francis A. Jacobs will continue in charge of our furnace and general mechanical departments, and his wide practical experience as mechanical engineer in railroad and industrial shops, and as combustion expert pertaining to the use of gas, oil or direct coal fuel, will be at the service of our clients. So that in soliciting your patronage as mechanical and consulting engineers, we feel confident that we can satisfactorily handle such business as you may place in our care."

The Interurban Co. is applying to the Dominion Parliament for an act authorizing it to change its name to the Interurban Telephone Co., and to give it power to build, acquire and operate telephone and telegraph lines, railways and tramways outside the Dominion of Canada. This is the company which reports said might conceal electric railway plans inimical to the interests of the City of Toronto. The company's solicitors have informed the City Council that the company is a subsidiary of the Rio de Janeiro Tramway, Light and Power Co., and has "no connection whatever with any past, present or contemplated undertaking in Canada."

During January one employe was killed and three injured in the course of their employment in electric railway service in Canada.

May, 1914.

The Location and Construction of the Canadian Northern Pacific Railway in British Columbia.

By J. V. Nimmo, B. Sc., M. Can. Soc. C. E., Division Engineer, C. N. P. R., Vancouver.

The route followed by the Pacific Section of the Canadian Northern Railway System in reaching tide water from the interior, is of remarkable interest, not only because it follows the best natural highway through the Pacific mountain system of North America, but because there appears to be no other instance where a great mountain region is traversed by a railway with such easy gradients and with such comparative economy of construction. To understand this situation it is necessary to consider briefly the main physical features of British Columbia.

TOPOGRAPHY.—In broad outline the Canadian Cordillera may be divided into four provinces: (1) The Rocky Mountain system; (2) The Middle or Interior Range, including the Purcell, Selkirk, Columbia, Cariboo and Cassiar Mountains; (3) The belt of interior plateaus; (4) The Coastal System, including the Coast, the Cascade, and the Vancouver-Queen Charlotte Ranges. The first, third and fourth of these provinces extend, with but minor interruptions, through Yukon Territory and Alaska to the Behring Sea. The middle ranges are specially broad in southern British Columbia, but practically disappear about latitude 54 degrees, and reappear again between latitudes 56 and 62 as the Cassiar Range. Thus, briefly, we have two main mountain systems, one composed of the Rocky Mountain and Middle Range systems, the other the Coast Range, and between the two lies the belt of the interior plateaus. The striking feature of the first group of mountains which form the first and principal obstacles met with in approaching tide water from the prairies, is that they are subdivided by a number of great depressions running approximately northwest, and making a small angle with the main axis of the mountain ranges. The greatest of these depressions extends from Flathead Lake, in Montana, to the Yukon boundary, 990 miles. It is a relatively narrow but imposing trough, successively drained by the headwaters of most of the great rivers of the Canadian Cordillera. The larger streams flowing in the depression are:—The Kootenay, the Columbia, the Canoe, the Fraser, the Parsnip and Finlay (of the Peace River system), and the Kachika (of the Liard River system). Many of these leave the trough by transverse gorges cut in the adjacent mountains. All the mountains in Canada and in Montana lying to the northeastward of the trench have long been segregated as the Rocky Mountain system, and the trough has been named the Rocky Mountain trench. A second trench, about 220 miles long, cleaves the southeastern wall of the first, near Beavermouth, and runs southward. It is successively drained by the Beaver, Duncan and Kootenay Rivers, and for 74 miles is occupied by the Kootenay Lake. This trough rigorously separates the Purcell Mountain Range on the east, from the Selkirk Range on the west, and is called the Purcell trench. The Purcell Range is thus bounded on the east and west by the two

trenches, and on the south by the loop of the Kootenay River in Montana and Idaho. A third depression extends from near latitude 52 degrees, where the Columbia River leaves the Rocky Mountain trench and flows south in a wide valley 310 miles long to the Columbia lava fields of Washington State, passing through the Arrow Lakes on its way. This depression is sometimes referred to as the Selkirk Valley. East of the Selkirk Valley, and west of the two master trenches, is the Selkirk Mountain system, which, like the Rocky Mountain and Purcell systems, extends into the United States. The rugged mountains to the west of the Selkirk Valley have been grouped under the name of the Columbia Mountain system. Between the 54th and 56th parallels the western wall of the main Rocky Mountain trench is much less prominent than it is either to the south or the north, where it is formed by the Cassiar Mountain Range, so much so that between these two parallels the interior plateaus might be said to extend right up to the trench. The various ranges to the west of the Rocky Mountain trench and south of the 52nd parallel concentrate into one north of the Selkirk Valley. The single range has its narrowest width and lowest pass at Albreda Lake, almost opposite the Yellowhead Pass.

In so far as this generation is concerned we may consider latitude 56 degrees as the northernmost limit of the territory across which a transcontinental railway would be constructed. Between this latitude and the International Boundary there are seven main passes through the Rocky Mountain chain, as follows:—The Crows Nest, at an elevation of 4,449 ft.; the Kicking Horse, at an elevation of 5,200 ft.; the Howse, at an elevation of 4,500 ft.; the Athabasca, at an elevation of 5,710 ft.; the Yellowhead, at an elevation of 3,718 ft.; the Smoky River, at an elevation of 5,400 ft.; the Pine, at an elevation of 2,850 ft.

The Crows Nest and the Kicking Horse passes have been taken by the C.P.R. They cross the Rocky Mountain and Selkirk groups of mountains at its widest and lead to routes which inevitably cut square across the great trenches enumerated above, and pass over intervening summits of magnitude. There is only one suitable route open to them across the Cascade and Coast Ranges, viz., the Fraser River Valley, to enter which involves, not only a circuitous route, but heavy gradients. The Howse offers no suitable approach from the east, and leads to the same difficulties as the Kicking Horse. The Athabasca and the Smoky are too high, and the approach to them from the west and the east is too rapid for easy grades. The Pine is good, but the geographical situation places it at a disadvantage as compared with the Yellowhead, which alone complies with the necessary requirements of:—Easy approach from the west and the east, access to an easy pass through the Cascades, and to a first class deep water harbor.

This leads to the consideration of the approach to the Pacific through the Cas-

cades. The main alternatives are by the way of:—The Fraser River to Burrard Inlet; Nomatco to Bute Inlet; the Bella Coola to the North Bentinck Arm; the Salmon River to Dean Inlet; the Komano River to Gardner Inlet; the Skeena River to Prince Rupert. Of these only the first and last are routes that pass through major breaches in the Cascade Range, and the only ones that do not offer gradients somewhere in their course which would be a serious obstacle to transcontinental traffic. The Coast Range is less mountainous towards the north than it is in the south, hence, although the Skeena in reality is not as great a river as the Fraser, yet it is so relatively to the country through which it passes, and provides almost an equally suitable approach to the Pacific. The second condition of the problem, viz., the satisfactory connection between the Rocky Mountain pass and these breaks in the Cascades, is wonderfully fulfilled by both routes. In stead of the great trenches being obstacles, as is the case in the southern routes, they now form part of the connecting link. The northern route through the Skeena follows the Rocky Mountain trench until the western wall of the latter comes to an end, whence there is an easy way across the great interior plateau by the Nechako and Buckley Rivers. For the southern route there is the providential opening through the Columbia Mountain system at the Albreda summit, from which flows a branch of the Thompson, the main tributary to the Fraser. Here is another illustration of how railways must, as far as possible, follow nature's highways, the rivers. Seldom, however, does nature put her great waterways in as suitable a position for the use of railway locators as she has done in this case. Of these two routes the northern is followed by the Grand Trunk Pacific, and the southern by the Canadian Northern Pacific.

THE GEOLOGICAL HISTORY of the Canadian Cordillera is yet largely a matter of mystery. The formation is chiefly sedimentary, and there is little evidence of volcanic action. There appear to have been several sedimentary periods alternating with periods of upheaval; and the evidence tends to show that the sediment was from detritus from mountains to the northeast. Probably the Rocky Mountain Range is younger than the Selkirks. There is no doubt that the region of interior plateaus was covered during the Pleistocene period by the cordilleran ice cap. With the waning of this ice cap it gradually gave place to alpine, cirque and valley glaciers, which slowly retreated until the time of maximum extension of the Keewatin ice sheet on the east, when the second period of valley glaciation took place. These glacial conditions, followed by eons of disintegration and slow (and probably discontinuous) land upheaval, appear to have modified the original form of the Cordillera to their present condition. By what exact process the wonderful rift was made, which is followed by the C.N.P.R. through these mountains, can only be determined, if ever, by very much more geological study

Route of the Canadian Northern Pacific Railway in British Columbia.

than has been given up to the present; but whatever the cause, the result is unique and stupendous. The route followed by the C.N.P.R. may be taken for geological purposes in the following divisions—1, From

Jasper House to Blue River. This section traverses the Rocky and Selkirk Mountains, and for part of the distance lies in the Rocky Mountain trench; 2, from Blue River to Ashcroft. This section is through the

belt of the interior plateaus; 3, from Ashcroft to Rosedale. Traversing the Coast Range; 4, the Fraser Delta from Rosedale to Vancouver. The formation through the first of these sections consists of sandstone,

Profile Showing Grades of Main Line Canadian Northern Pacific Railway, New Westminster Bridge to Yellowhead Pass.

limestone, argillaceous and siliceous shales etc., but the predominating features Spences Bridge to Boston Bar. The most for several thousand feet. ite, sandstone, limestone and shale. 3, Hope to Rosedale. The railway here passes on the benches consisting largely of gravel and sand. 4, The Fraser Delta. This is alluvial formation.

LOCATION.—For the consideration of the location in greater detail, the route will be followed in a general direction of east to west. The principal features of the route have long been well known, by reason of the very able and exhaustive surveys made under the direction of Sir Sandford Fleming from 1872 to 1880, both reconnaissance and in detail, on behalf of the Dominion Government, in order to find the best route for a transcontinental railway, which had been promised on British Columbia entering Confederation. One cannot pass this subject without expressing one's admiration for the ability and energy displayed by Sir Sandford and his able assistants, as is evidenced by the monumental reports on their work, which were published by the Dominion Government, and to which the author owes much of the information in the early part of this paper. Amongst others, an instrumental survey of the route now followed by the Canadian Northern was made, and Sir Sandford recommended that route to the Government. Why this advice was disregarded, and the C.P.R., the outcome of the Confederation policy,

source of the McLennan River, a tributary of the Fraser. The divide between Cranberry Lake and Canoe River, that is, the watershed between the Fraser and the Columbia system, is only a few feet high; hence McLennan Creek, Cranberry Lake and Camp Creek form one continuous wide valley. To put it in another way:—Cranberry Lake lies in the bottom of an enormous flat bottomed bowl, which is broken, as it were, into four quarters, by the Canoe River east and west, and McLennan Creek and Camp Creek, north and south. Hence we see that the Rocky Mountain trench, here drained by the Canoe River, Cranberry Lake, McLennan Creek and the Fraser River, is the key to the situation. From the Yellowhead, the Rocky Mountain Pass and from the Albreda, the Selkirk Mountain Pass, wide, gently falling valleys connect with the trench; and Cranberry Lake Flat, which must be crossed, is the governing feature of the connection. From the Yellowhead summit to Cranberry Lake, mile 439, there is a fall of about 1,100 ft. in 60 miles. That portion of this distance, however, which governs the grade, lies between Moose Lake, mile 473, and Cranberry Lake Flats, mile 439. From Moose Lake to the east end of Cranberry Lake Flats is 25 miles and the total fall is 816 ft. This gives a continuous seven tenths grade, when

ing at Blue River, has long ruling grades compensated for curvature and passing tracks, of seven tenths for eastbound, and four tenths for westbound traffic. From Hell's Gate, mile 372, to Cottonwood Flats, mile 367, the Thompson falls at the rate of 37 ft. to the mile, while the railway is again supported, dropping with a continuous four tenths compensated grade. At mile 367 it once more strikes the river bottom, which it follows to mile 353 along the Stillwater Flats, the river falling at the rate of 1.4 ft. to the mile. From the west end of Stillwater Flats to Birch Island, mile 322, a four tenths supported and compensated grade is again followed, as the river falls over the first part this distance at the rate of 18½ ft. to the mile. From Birch Island to Kamloops, mile 243, the river, whose average fall is only 3 ft. to the mile, is followed closely. From the Blue River, mile 384, to Kamloops Jct., mile 243, the starting point of the Vernon branch, is the second operating division, the eastbound grade being governed by the long supported four tenths grade referred to before. Against west bound traffic the ruling grade is two tenths per cent., less than two miles long. From the west end of Kamloops Lake, mile 218, to Lytton, mile 145, the main Thompson River is followed, the average fall being 9 ft. per mile. From Lytton,

Tilton Creek Concrete Culvert, Mile 130.5, Before Fill Had Been Made.

Cisco Bridge Over Fraser River, Near Lytton, Mile 140.

was built over the Kicking Horse Pass will, no doubt, be disclosed some day. But however surprising such a choice may appear to the engineer, there can be no doubt that this selection has been of great benefit to the country as a whole, inasmuch as it has opened up the southern portion of British Columbia more efficiently and earlier than otherwise could have been done. Moreover, this choice left open to its younger, and consequently less vigorous rival, a route without which the latter could hardly have become a transcontinental railway as soon as it now promises to be; while the broad back of the C.P.R. is well able to carry, and its financial strength to surmount, the difficulties which the Kicking Horse route is responsible for.

The approach to the Yellowhead Pass from the east is gradual and easy; and the crux of the whole problem lies in the part between the Yellowhead and the Albreda summit, which is a water shed for the Columbia River system on one side, and the Thompson River system (that is, the Fraser River system) on the other. Hence the route leaves the Fraser only to eventually return to it again, but a glance at the map shows the gain that this gives in distance. The water flowing north from the Albreda summit is called Camp Creek, and empties into the Canoe River, a tributary of the Columbia, at a point only about four miles south of Cranberry Lake, the

due compensation is made for curvature and passing tracks, and was considered to be the economic grade for that country. Thus was fixed the ruling grade for east bound traffic for the operating division whose eastern extremity is at the Yellowhead Lake, mile 495, and the western extremity at Blue River Flat, mile 384. From Cranberry Lake the line rises with a four tenths compensated grade to Albreda Lake, mile 425, at an elevation of 2,854 ft. Since the Albreda falls at the rate of 43 ft. to the mile, a supported grade going south was

mile 145, to Hope, mile 77, the Fraser River has an average fall of 5½ ft., and from Hope to Rosedale, mile 47, 3 ft. per mile. The third operating division is from Kamloops Jct. to Boston Bar, mile 119, over which distance there are short ruling grades against eastbound traffic, of four tenths compensated for curvature. Against westbound traffic there is a four tenths grade compensated for curvature, about three miles long, at the east end of Kamloops Lake. This grade, however, if traffic demands it, can be replaced without much

FROM	TO	Miles	Eastbound trains		Westbound Trains	
			Ruling grades	Other grades	Ruling grades	Other grades
Port Mann	Boston Bar	119	40% 9.3 Miles	70% 1% or less	8 vel. grades level and down hill	90% level or down hill
Boston Bar	Kamloops Jct.	124	35% 3.4 "	60% " " "	40% 3 miles	80% " " " "
Kamloops Jct.	Blue River	141	4 3% 2.9 "	50% 2% " "	2% 4.8 (Vel.)	90% " " " "
Blue River	Yellowhead	111	7 1% 25.5 "	60% 5% " "	1% 11.3 "	72% " " " "

inevitable, but for the sake of economy in construction it was desirable to reach the North Thompson Valley bottom as soon as possible, hence a seven tenths grade was introduced, striking the valley bottom at mile 496, or 16 miles below the mouth of the Albreda. From this point to Hell's Gate, mile 372, the Thompson falls 7 ft. to the mile and the line follows the river bottom. Thus the first operating division, end-

difficulty, by an easier one. The true ruling grade is that between the two crossings of the Fraser River south of Lytton, for this is a fixture. It is three tenths compensated and 3½ miles long. The fourth operating division is from Boston Bar to Port Mann. Against westbound traffic there are virtually no grades. While the ruling grade eastbound is fourth tenths compensated, 1.3 miles long. In the 500 miles from

the Yellowhead summit to Port Mann there are only 22.3 miles of adverse grades, or $4\frac{1}{2}\%$ of the total distance. The maximum curvature throughout is eight degrees, and this has been used as sparingly as possible.

There were no particular engineering difficulties encountered in the surveys but plenty of hard work, and even danger. The procedure was that customarily in vogue. The crux of the problem lay between Birch Island and the Yellowhead Pass. Even here the main lines are well defiled, and the alternatives few, the paramount difficulty being one of transportation and supplies. The country west of the Albrede summit was, at the time of the surveys, most readily accessible from Kamloops. This involved a pack train about 100 miles long. The physical difficulties in keeping a survey party equipped with supplies, quite apart from the strenuous work of the survey itself, makes this piece of location a most praiseworthy one. During the winter months communication was entirely cut off, except for the monthly trips of the mailman. The records of these trips are a story in themselves. The difficulties, however, were not over on the disappearance of the snow, for between that time and the rise of the rivers, which during high water are unfordable and covered large portions of the trail, there was only sufficient time for one trip of the pack train, and continuous packing could only be carried on after the floods had subsided and ceased in the autumn. Much credit is due to those who faced and

Gladwin Bluff, Above Lytton, Mile 151.

surmounted these difficulties. The first survey parties were sent out in May, 1909; construction was started from Port Mann to Hope in July, 1910; from Hope to Kamloops in Aug., 1911; from Kamloops to Birch Island in Oct., 1911; from Birch Island to the Yellowhead Pass in May, 1912; from the Yellowhead to Albrede in Aug., 1912, and from Blue River to the Albrede in May, 1913. The line should be open for operation by next autumn.

CONSTRUCTION.—We will now reverse our direction, and consider ourselves as going from west to east. For a railway passing through one of the main mountain regions of the world the work is, on the whole, extremely light. From Port Mann to

Rosedale, mile 47, the grading is largely prairie work, although spurs from the main mountain range give rise to heavier work at intervals. From Rosedale to Hope, mile 77, the work becomes heavier as the valley narrows, and still more so from Hope to Yale, mile 91; but so far there is nothing calling for special comment. At Yale the canyon proper is entered, and the heaviest work on the whole railway is encountered, the heaviest mile costing \$326,300, without fence, telegraph or track. From Yale to Boston Bar, 26 miles, the rock work is extremely heavy, and there are 15 rock tunnels, aggregating 8,321 ft. The rock is mostly granite, and bluff follows bluff, all with almost perpendicular faces. A great deal of this rock was shot into the river, but a surprising number of fills were successfully constructed. As the rock was largely in huge masses, partly owing to its rough nature, and partly owing to the fact that it was often separated into large blocks by natural seams, these fills are well calculated to stand even the Fraser floods. This piece of line was perhaps the most difficult one to locate and cross section. From Boston Bar eastward, gravel is frequently encountered; indeed, from mile 128 to Savona, mile 218, there is almost more steam shovel work than anything else. The heaviest yardage is in the neighborhood of Tilton Creek, mile 130. Here cuttings aggregating 414,000 cu. yds., were led to one large fill. Jackass Mountain, extending from mile 134 to 134.5, consists of massive conglomerate and shale, the yardage for this half mile was 182,000 cu. yds., with two tunnels aggregating 548 ft. One of these tunnels was, however, carried out in an enormous slide in the hill side on the night of Nov. 18, 1912, which followed a period of heavy rain about six weeks after the tunnel was finished. The formation through which the tunnel was driven was very broken. A large black shale seam about 2 ft. wide, which made an angle of about 20 degrees with the vertical, and 30 degrees with the centre line of the tunnel, crossed the line of the tunnel about one third way through from the east end, separating the country rock on the upside from an overlying rock formation on the other. This overlying material was very broken, and interspersed with soft clay. It seemed to be debris from the mountain side above, and bore no relation to the country rock. Whether the hill slid on the shale seam, or whether the clay, swollen by the heavy rains, exerted excessive pressure on the tunnel timbers, causing them to collapse, thus releasing the toe of the hill, it is impossible to say. The whole slide had been removed, and the hill side dressed to an apparently safe slope, when three weeks later, on Aug. 25, 1913, another slide of considerable magnitude occurred. This was in turn removed, and the slope redressed, leaving now an open cutting, probably safer than any other part of the mountain.

The line crosses the Fraser at Cisco to follow the north or left hand bank, thus avoiding the C.P.R. It recrosses again at Lytton, and three quarters of a mile further on crosses the mouth of the Thompson River, since it was considered less costly to build these two crossings than one large one across the Fraser, above the mouth of the Thompson. A piece of heavy work is met with at Gladwin's Bluffs, mile 149 to 151. This is a contact zone between the Coast Range Batholith and the Paleozoic Schistose rocks, the whole traversed by many Tertiary dykes and Chonoliths intrusions. It is a particularly awkward place on which to locate. The quantities for this two miles of work are as follows:—478,946 cu. yds. of excavation and 990 lin. ft. of tunnel. The average cost per mile is \$222,650, without

track, telegraph or fence. Just beyond the Gladwin Bluffs the line is constructed along the top of a rock cliff and at the foot of immense gravel slopes, which rise at an angle of between $1\frac{1}{4}$ and $1\frac{1}{2}$ to 1 to a height of some 700 ft. This gravel, which was well cemented, was excavated by the hydraulic method; excess roadbed width being allowed, depending on the height of the face. The faces have stood splendidly, although the debris naturally accumulates at the foot of the slope, but not to a greater extent than such maintenance forces as must necessarily be employed by a railway through such mountainous country, will be able to cope with. Bad bluffs were encountered at Thompson and Drynoch. The rock

Grading Chutes, Mile 30 West of Yellowhead Pass.

at Thompson was even more broken than that at Gladwin, and a huge slide has occurred which is still being removed. At mile 162 there is a heavy clay slide, which is still moving, although 350,000 cu. yds. have been removed to date (Feb. 3). There is no evidence of water seepage, and there is nothing to do but to keep on excavating until the material reaches its angle of repose. Drynoch Bluff, mile 163, was a most dangerous place on which to locate, and offered the usual difficulties in construction. It has three short tunnels and the open slope is very high, surmounted by a good deal of gravel and other debris. Crib traps have been installed at various points on this slope, but here, as in other places, constant watch must be kept by the maintenance organization. At mile 184 the line crosses on to the C.P.R. side of the Thompson River and recrosses at mile 188.5, passing direct from the bridge into a tunnel, 1,319 ft. long, in the famous Black Canyon. This formation is a black cretaceous shale and sandstone. Just east of this tunnel there is a slide similar to the one on the C.P.R. side, west of its Black Canyon tunnel. A spring, which made its appearance about one third of the way down the slide, was tapped by a water tunnel and led to an adjacent gully. At every high water, however, the slide moves and has moved for some 120 ft. since the records were first taken. It is thought that this is due partly to saturation from the melting snow, and partly from the action of the high water in the river, although what

Comparative Profiles of Railways Crossing the Western Mountain Ranges.

happens exactly is not yet understood. Borings showed 26 ft. of clay and then gravel, but they were not taken down through the gravel.

Some two miles further east the grade was first constructed at the foot of the bluff, partly in cut and partly in fill, the latter standing well until the flood of 1913. An extensive crib is now being constructed at this place. From Ashcroft, mile 194, to Savona, mile 218, it is almost all steam shovel work in glacial clay. Rock work is again encountered along Kamloops Lake, including a tunnel at Battle Bluffs, 2,835 ft. long. At mile 244, the line crosses to the east bank of the North Thompson. Immediately east of the bridge is the Kamloops division yard. Between Lytton and Kamloops there are three crossings and recrossings of the Thompson River, to avoid heavy clay bluffs, the work on the C.P.R. side at these places being generally very light. From Kamloops Jct., mile 243, to Birch Island, mile 324, the work is easy on the whole, although occasionally the line hits a rock slope with some severity. From Birch Island to the third crossing of the Thompson River at mile 339 there is heavy steam shovel work along the supported grade. From mile 330 to the fourth crossing at mile 351, although the work was largely steam shovel material, it was entirely carried out by hand, owing to the difficulty of getting in machinery. There is little to call for comment from here on, except to refer to the extraordinarily light work across Stillwater Flats, until the supported grade is reached at mile 360 to 376 (Canoe Landing). This is the heaviest portion of the North Thompson River work, particularly at Hell's Gate, where the river passes through a miniature Fraser canyon, involving heavy rock cutting and two small tunnels. From mile 376 to the next supported grade at mile 406, the work is extraordinarily light for a mountain railway. From mile 406 to 417 extends a region of heavy sand, gravel and clay cuttings and tunnels, one of these

a group of 32 piles, capped by a three course grillage of 12 by 12 timbers. This in turn is topped by a 1 in. steel plate, bored to receive the anchor bolts from the girder bearings. Placed about the piling is a timber crib pointed on the up stream and square on the other end. These cribs are not attached to the piling, but form a sleeve, and are sufficiently free of the piling to permit their sinking, as they are built up from the water surface. The tops are completed to about 5 ft. above high water and then are

particularly great for the last ten of these miles, owing to the fact that the grade had to be constructed immediately above the G.T.P.R., then in operation. The two lines run on the north shore of Moose Lake, side by side as double track. From Moose Lake the G.T.P.R. falls with a 1%, and the C.N.R. with a seven tenths compensated grade. Hence the two lines rapidly diverge in elevation but remain very close in alignment. All mucking over this portion from the C.N.R. had to be carried across the

Hells Gate, Fraser Canyon, Mile 110.6.

rock filled. The third crossing is a temporary pile bridge below the permanent crossing, which will be of concrete piers. The other two crossings are low and short, and are over wooden pile bridges. From mile 425 to Canoe River crossing at mile 436 the rock work is fairly heavy, although

G.T.P.R. on trestles and shot direct into the Fraser River. Six of these trestles and chutes were constructed. From Moose Lake to Yellowhead the work calls for no special comment, as it is light, and the valley wide and uniform enough to provide an easy route for both railways.

There is not much in this work of interest to railway engineers, except the bridging; the steam shovel work in gravel and clay, and the resulting slopes; the rock blasting; the classification. As the steel bridges were designed and entirely under the supervision of Waddell and Harrington, consulting engineers, the author does not propose to make any reference to them, beyond showing some views in the hope that a paper will be read some day before the Canadian Society of Civil Engineers by a member of Waddell and Harrington's firm.

In regard to the steam shovel work in gravel and clay, and the resulting slopes, no one would deny the value of steam shovels, or their necessity, if such work as is now being described, is to be carried on economically and expeditiously. At the same time the engineer would be delighted to dispense with them, were that possible, unless the material was being excavated to a final angle of repose. In some cases this was done, but speaking generally such a plan is a counsel of perfection, and not economically practicable. The difference in yardage between 1 to 1 slopes and $1\frac{1}{2}$ to 1 slopes, on side hills that extend upwards for hundreds of feet, is self evident. Moreover, in most gravel cuttings, a 1 to 1 slope, if not permanent, would give very little trouble for a number of years, when it could be economically handled by steam shovels with mainline equipment. But when 1 to 1 quantities are dug by steam shovel and the slopes left standing nearly plumb, it means that the company has frequently to face comparatively heavy further excavation expenditure after the line is opened. Sometimes a portion of the slopes

Mullen Bluff, Fraser Canyon, Showing Tunnel 6, Mile 98.31.

latter being 1,000 ft. long. All this work is done by hand, as it is not practicable to take in machinery. From mile 417 to the Albreda Summit, the work is again very light, indeed at the summit itself it would be cheap for prairie country. The two crossings and recrossings of the North Thompson are to avoid heavy work, and to get better alignment. The first two of these crossings are 80 ft. deck plate girders, supported on pile piers, consisting of

there are a good many gravel cuttings also. Canoe River is crossed on a steel viaduct. From this point to mile 445 the work would be light even on the prairies. No really heavy work is encountered until the Fraser Valley is entered at mile 453. From this point the Grand Trunk Pacific is paralleled and the two roads are never more than a few hundred yards apart. From mile 456 to Moose Lake, mile 472, there are some very heavy rock cuttings. Difficulties were

in steam shovel work was lightened by having the top hand sloped, but in the more cemented gravels and harder clays, the slope was left as dug by the steam shovels. Undoubtedly, all things being equal, unless the quantities to be excavated in the first instance are those contained by slopes at the angle of repose, hand slope work is infinitely more satisfactory than steam shovel work. Most of the gravel and clay lies in the dry belt, otherwise it may be supposed there would be little left. Hence the conditions on this construction were unusually favorable for the safety of undressed slopes.

One of the main difficulties the railway engineer encounters is to prevent the contractor from using too much powder. Such work as is here described is usually car-

ried out by stationmen working under sub or sub-sub contractors of the main contracting company. The stationman, who seems to live in a state of perpetual hope, is strongly tempted to over shoot, with a view to breaking up his rock as small as possible, and to save handling, where, as was largely the case on this work, the material was wasted direct into the river, whose course the railway is following. That this may result in over-break the stationman is well aware, but his faith and hope in the engineer's charity will induce him to chance the disallowing of the over-break. If allowed, he stands to gain heavily. Besides there are seams, which with a little flattery and talk about the experience of the engineer, etc., etc., he may hope to pass off as the cause of the over-break. Indeed the engineer will often be in a quandary to know whether the rock, even though lightly shot, would not have broken to a clearly indicated seam. The sub contractor has little inducement to check the stationman from overshooting, for the more powder the stationman uses, the more profit the sub contractor stands to make. If no more than the estimated yardage is paid for, the sub contractor makes at least as much profit as he set out to make, and if over-break is included he is that much to the good. Thus with blarney and bluster pressure is brought to bear on the engineer on all sides, which it is frequently very hard to resist, especially by the younger members of the profession. The Canadian Society of Civil Engineers excludes in its Standard Specifications the use of powder in large blasts in seams, drifts, shafts and coyote holes. This again is merely a code of perfection, nor would its strict enforcement tend to economy. The remedy must always be in the judgment and experience of the engineer in charge, who should make a point of at once warning the contractor against the results of heavy shooting, as soon as he sees any signs of such a course being proceeded with, and hold him strictly to account if

his warnings and instructions are neglected. From the experience of this work the author is strengthened in his convictions that more than from 1 lb to 1½ lbs. of explosive to a cubic yard of excavation is needed only in very rare cases; and in ordinary sandstone and limestone, if at all seamed, ¾ lb. per yard would generally be sufficient. For shales ½ lb. or less is plenty.

From Port Mann to Hope, and from Kamloops to the Yellowhead Pass, four classifications were used in accordance with the C.N.R. standards, as to which no special comment is necessary, except as to the definition of solid rock, which is the same through the whole work. From Hope to Kamloops there are only two classifications,

Deck Girder Bridge. With Lift Span. Over North Thompson River, Near Kamloops.

which read as follows:—"All stones or boulders found in excavation measuring more than 27 cu. ft., and all solid quarry stone requiring blasting in order to remove it, shall be termed 'solid rock.'" "All other materials other than solid rock as described above, shall be termed 'all other materials,' and paid for at the schedule rate for 'all other materials.'" The solid rock definition is a great deal more definite than most, and leaves very little room for the questioning of engineers' decisions. It may be thought at first sight that this solid rock definition and the two material classifications would remove many of the classification difficulties, which all engineers have to face. In practice, however, even through country where as in this case the material can be broadly classed as rock and gravel or clay, grades of rock are met with, which although strictly coming under the "other material" classification, must in equity, be allowed for in part as solid rock, and one is again left with the conclusion that no specification can be drawn up which does not require to be interpreted on the broad grounds of professional intelligence and common sense.

The foregoing paper was read before the Canadian Society of Civil Engineers, Vancouver branch, recently. We are indebted to T. H. White, M. Can. Soc. C.E., Chief Engineer, C.N.P.R., for the diagrammatic profiles accompanying the paper, and for the photograph of the Kamloops bridge; also to the author of the paper, Mr. Nimmo, for the photographs from which the other illustrations have been made.

Comparative Profiles.—Following are figures relating to the comparative diagrammatic profiles given of eight transcontinental railways:—

	Maximum Grade.	Maximum Elevation.	Maximum Length.
Canadian Northern ..	0.7%	3,706 ft.	1,610
Canadian Pacific ..	2.2%	5,321 ft.	1,184
Grand Trunk Pacific ..	1.0%	3,719 ft.	1,745
Great Northern ..	2.0%	5,262 ft.	1,814
Northern Pacific ..	1.6%	5,500 ft.	1,907
Union Pacific ..	1.8%	8,200 ft.	1,800

Chicago, Milwaukee and Puget Sound ..	2.5%	6,322 ft.	1,770
Atchison, Topeka and Santa Fe ..	2.6%	7,421 ft.	1,927

Tilton Creek Culvert.—Mr. Nimmo has given us the following data about this culvert:—Height from grade to top of culvert at the junction with the tunnel, 137 ft. The culvert is 21 ft. 7 ins. wide, 19¾ ft. high, giving an opening of 312 sq. ft. The tunnel was taken out a foot wider than the culvert to allow for future lining. The length of tunnel is 300 lin. ft., and of the culvert, 226 ft. There are 3,150 cu. yds. concrete in culvert, and 90 cu. yds. in tunnel lining. The total cost of the water tunnel and culvert was about \$70,000.

Kamloops Bridge.—This structure, over the North Thompson River at Kamloops, is a deck girder bridge, 1,209 ft. long, and has a deck girder lift span 93 ft. long. There are 12 fixed spans, also of 93 ft. length. Approaches at both ends of the bridge, of timber trestle construction, total about 1,100 ft. The lift span weighs 118 tons, and is fully counterweighted. The sixteen 1¼ in. lifting cables are equalized in the attachment to the span. Centring castings provide for keeping the span in proper alignment as it comes down to bearing, and also take the longitudinal braking thrust. The lift of the span is 53 ft., giving a 55 ft. clearance above high water. The motor is capable of raising the span in 100 seconds. The lifting power is a gasoline engine, which, with all the machinery, except the operator's levers, is located below the deck, at the middle. Limit switches coming into operation near the ends of travel of the span control the igniter circuit of the engine.

The bridge was designed by Waddell and Harrington, of Kansas City, Mo. The lift span is built with the arrangement and details used by them in their various lift bridges built in recent years.

Imperial Service Medals for long service have been awarded to Canadian Government Railways employees, as follows:—J. Anderson, foreman, Moncton, N.B.; T. Bowes, shed foreman, Halifax, N.S.; J. Enman, station master, Summerside, P.E.I.; F. E. Harrington, ticket agent, St. John, N. B.; J. W. Henderson, conductor, Moncton, N.B.; R. Howell, machine man, Moncton, N.B.; J. Kennedy, machinist, Moncton, N. B.; W. M. Kingston, baggage master, St. John, N.B.; D. LeBlanc, track man, Moncton, N.B.; D. H. Lockhart, fitter, Moncton, N.B.; T. McCurdy, section foreman, New Mills, N.B.; D. McKenzie, fitter, Sydney, N.S.; A. McKim, baggage man, Moncton, N.B.; J. A. McMullan, track foreman, Pugwash, N.S.; J. Martin, station master, St. Fabien, N.B.; D. Montgomery, station agent, Georgetown, P.E.I.; P. Morin, section foreman; G. Murray, foreman carpenter, Truro, N.S.; P. Murray, spring maker, Moncton, N.B.; A. Ormiston, general foreman, Truro, N.S.; J. Patterson, track master, Campbellton, N.B.; A. Patterson, seamstress, Halifax, N.S.; J. Royer, baggage master, Campbellton, N.B.; J. Scott, tank man, Alton, N. S.; G. Soule, conductor, Riviere du Loup, Que.; W. Spear, freight checker, Sussex, N. B.; D. Stewart, repairer, Mulgrave, N.S.; J. Stewart, repairer, Mulgrave, N.S.; J. Stratton, engine man, Moncton, N.B.; J. Wood, section man, Kent Jct., N.B.; and C. Wood, section man, Kent Jct., N.B.

The preservative value of salt is said to have been demonstrated in the Great Salt Lake district of Utah, where, in the replacement of a timber trestle the engineers found the piles perfectly sound after 43 years' service. The same action is not met with in ocean waters, as the latter are not sufficiently strong, the Great Salt Lake water being practically a saturate solution.

Mikado Locomotives for the Canadian Pacific Railway.

By T. C. Chown, Leading Draughtsman, Motive Power Department, Canadian Pacific Railway.

During the autumn of 1913, the C. P. R. had built by the Montreal Locomotive Works, 75 mikado locomotives, having a tractive effort of 42,000 lbs., 23½ by 32 in. cylinders, 180 lbs. boiler pressure, and of a total weight in working order of 258,000 lbs. They are very similar in design to the 20 designed and built by the C. P. R. in its

and valve gear as far forward as the lifting link, are all interchangeable with those on the consolidations. From the lifting link back, the motion was changed to use the screw reverse gear. On the last order of 75, the cylinders were changed to bring the valve chest out to within ½ in. of the centre line of the cylinder, so as to elim-

passes through the combination lever, crosshead guide block and both arms of the rocker.

The valve stem guide is similar in design to that of the usual type of small stationary engine crosshead, being semi-circular top and bottom, with babbitted faces, which have the advantage of being renewed to compensate for any wear, by rebabbiting and turning to suit the valve stem guides on the cover. All other parts of the motion, with the exception of the combination lever,

Fig. 1.—Mikado Locomotive, Canadian Pacific Railway.

Angus shops, Montreal, during the autumn of 1912, for service on the Lake Superior division, which is recognized as one of the hardest on the whole system to operate, especially in the autumn and winter when the severe climatic conditions to be contended with, have to be given special consideration. It extends largely along the north shore of Lake Superior, through a

inate the long rocker arm that was necessary in the other design to cross the motion over to the valve chest, which was located over the frame.

To make this alteration, a new combination back steam chest cover and valve stem guide was designed, similar to that applied to some lighter consolidations in 1908, as it had been found that these latter had

are interchangeable with those on the original order. The driving boxes are of cast steel; the hub facing and shoe and wedge faces are of brass, cast directly on the boxes. The idler and engine truck boxes also have cast brass facings.

The boilers are of the extended wagon top type, with an outside diameter at the first course of 72 ins., and at the dome

Fig. 3.—Cross Sections and Plan of Trailing Truck Equalizer and Motion Work on Mikado Locomotives, C.P.R.

rough and barren country, making operating conditions particularly severe.

In designing the original order of mikados, the C. P. R. took its standard consolidation locomotive as a base to work from, using all standard parts wherever possible. The cylinders, pistons, piston rods, cylinder covers, wheels, axles, driving boxes, rods,

given excellent service, requiring very little attention between shoppings of the locomotive. This cover consists of a double rocker arm 12 ins. long, which fits over both sides of the valve stem guide, with bosses of sufficient length to permit of the combination lever being applied on the outside of the guide and crosshead. One long pin

course, of 79 ins. Both radial and cross stays are used in staying the firebox. The length of the flues between the flue sheets is 20 ft. 7¾ ins., as opposed to the 15 ft. 1¾ in. tube length of the consolidations, giving an approximate increase of 13.7% in the tube heating surface, with a corresponding increase in the superheating surface.

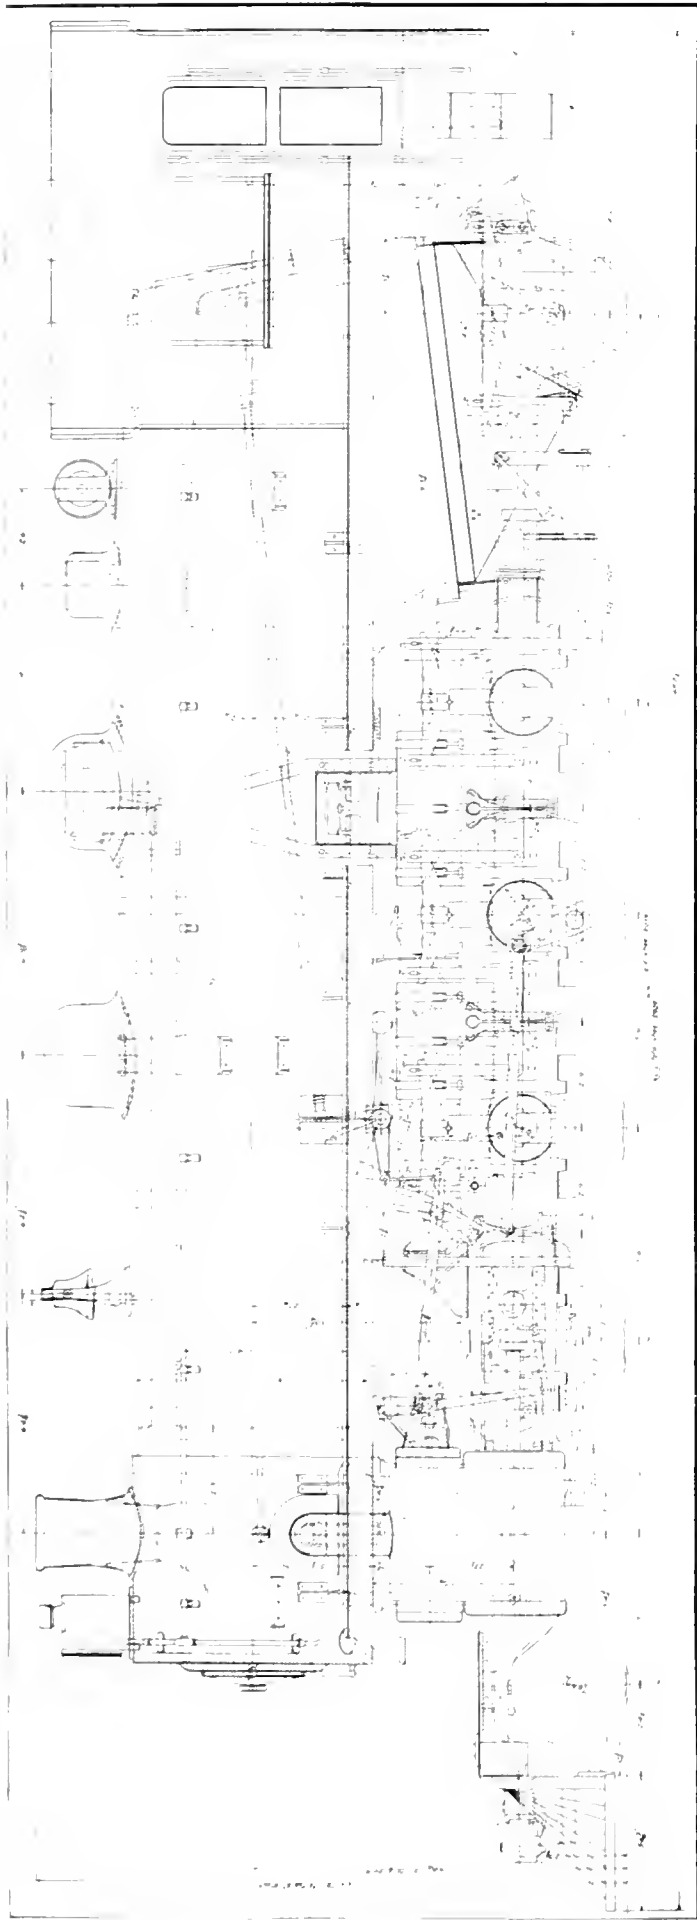

Fig. 2.—Side Elevation of Mikado Locomotives, Canadian Pacific Railway.

The fire-box heating surface was also increased 11.4% by deepening the throat and lowering the grates at the back end, the grate area remaining the same as in the consolidations. The superheater is of the Vaughan-Horsey type, with thirty 5¼ in. flues and sixty 1½ in. return superheater units, the latter extending to within 30 ins. of the back flue sheet. The gas area of the 5¼ in. flues, less the area of the superheater units, is practically 40% of the total tube gas area.

One of the principal features in the design of these mikados, is the style of trucks adopted. The trailing truck is the Vaughan outside bearing, with 7 by 14 in. journals, the same as on the C. P. R. standard Pacific type locomotives. This type of bearing has taper wedges set on top of the box and the bottom of the spring seat, to take up the necessary lateral movement, instead of having the usual 3 point suspension. With this arrangement of wedges, a constant lateral resistance is transferred to the rail, regardless of the degree of curvature, thereby permitting of a greater flexibility in adjusting the proper guiding power to the truck than would be possible in the case of the 3 point suspension. The wedges are lubricated with oil from a pocket formed in the spring seat over the top wedge.

The front truck is the same as that on the consolidations up as far as the truck

frame, from which point the design was altered in order to take wedges instead of the ordinary king pin and swing rollers. This truck frame is made of a box section, and the bumper casting with cast iron

Fig. 4.—Detail of Front Truck Wedges, Mikado Locomotives, C.P.R.

with pockets for the springs over the boxes. It also carries the bottom wedges set 18 ins. apart, and at an angle of 8½ degrees with the centre line of the truck, which allows for clearance between the wedge vertical edges when curving. The top wedge is carried on a bolster inserted between the frames, which is fitted into the bumper

of a parallel movement upward at all times, with only one set of faces in service at a time. Fig. 4 shows details for the front wedges used on the front truck. A series of running tests were made on both trucks to determine the most desirable taper, one which would give the necessary guiding power to the trucks when running and at the same time give the required freedom on curves. After several such tests, in which wedges of different tapers were applied to both trucks, tapers of 1 in 2½ for the front truck, and 1 in 6 for the back truck, were adopted. The guiding power of this style of front truck, with wedges having a taper of 1 in 2½, in comparison with a truck having 7½ in. swing links and 3 in. centres, is shown in the accompanying curve, fig. 5. From this comparison, it will be observed that the curve representing the guiding power of the wedge truck is a straight line, giving a constant guiding power for any movement of the truck, as compared to the variable guiding power of the swing link type, where an equal amount of guiding power is not obtained until the link has moved over about 1½ ins.

The vestibule cab, which was fully described in Canadian Railway and Marine World for June, 1912, was also applied to these locomotives. It is completely enclosed, with entrance through a side door, a flexible connection being maintained between the locomotive and tender by means

of a spring maintained contact.

The tenders are of the combined tank and underframe type, with capacity for 7,000 imperial gallons of water and 16 tons of coal. They are equipped with hinged type coal pushers, which are operated by two 12 in. cylinders, controlled from the cab. The tender trucks are of the pedestal equalizer type, with cast steel bolsters, 6 by 11 in. axles, McCord boxes and inside hung brakes.

These locomotives are giving excellent satisfaction in freight service, and since the first of this year, two of them have been placed in passenger service on the

Victoria Rolling Stock and Realty Co. of Ontario, Limited.

Following are extracts from the report for the year ended Feb. 15, 1914, presented at the annual meeting in Toronto recently:—

During the year the company arranged for a new lease with the C.P.R. Co. amounting to \$14,100,000 against mixed rolling stock, and pending further arrangements the C.P.R. has advanced to this company the full cost of the rolling stock delivered to date and hold as collateral against this advance the balance of the outstanding debentures.

During the year outstanding debentures against leases have been reduced by \$630,000. All payments during the year have been promptly met. The profit on the year's business, after charging up directors' fees and expense account, is \$38,103.04, out of which a dividend of 6% per annum on the paid up capital stock has been paid, amounting to \$14,400, leaving \$23,703.04 carried for-

ward to profit and loss account, which now stands at \$91,189.60.

ASSETS.

Obligations on leases ..	\$14,380,208.33

MEMORANDUM re ROLLING STOCK

Original cost of rolling stock held under existing leases	\$17,039,370.00
Amount paid in on account by railway companies in addition to interest ..	2,609,370.00
	\$14,430,000.00
Total amount of company's debentures outstanding	\$14,430,000.00

The officers for the current year are:—President, Sir Edmund B. Osler; Vice President, W. D. Matthews; Other directors:—Duncan Coulson, Hon. J. S. Hendrie, F. G. Osler, D. R. Wilkie; Secretary, G. F. Chisholm.

Dry Grass, Weeds, Etc., on the Right of Way.

The Board of Railway Commissioners has issued a circular calling railway officials' attention to sec. 297 of the Railway Act, which provides that "The company shall at all times maintain and keep its right of way free from dead or dry grass, weeds and other unnecessary combustible matter."

Attention is especially needed as to the annual growth of grass and other vegetation on rights of way, particularly through forest sections. This can, as a rule, be readily and safely burned off as soon as the snow has disappeared from the right of way, and while the adjoining lands are still too wet to permit the spread of fire.

Attention is also called to the necessity for a thorough clean up of yards and sidings, especially where the peeling and loading of timber has resulted in the accumulation of inflammable debris.

The work of burning or otherwise disposing of combustible matter on rights of way should accordingly be begun at the earliest possible date in the spring and prosecuted vigorously until completed. As required by regulation 9 of General Order 107, such supervision of burning must be provided as will prevent fires from spreading beyond the strip being cleared.

The Board requests the submission of statements showing what arrangements have been or will be made for handling this work on the various lines.

The Lackawanna Rd. is to build a new station at Buffalo, N.Y.

Railway Mechanical Methods and Devices.

Wheel and Axle Hoist of Canadian Northern Railway.

The C. N. R. has adopted as standard practice, the wheel and axle hoist shown in the accompanying illustration, and the arrangement has been found most useful in the expeditious handling of wheels and axles in and out of the shop. It consists of an overhead travelling hoist used for loading and unloading car wheels from the storage yard to flat cars for transmission to

for storing the wheels as they come from the machine shop, the hoist serving both pairs of tracks as well as the central feeder tracks. With this hoist, it is said that two men can load or unload a car containing from 14 to 18 pairs of wheels in from 15 to 20 minutes.

The narrow gauge service track car is of interest from the peculiar design. There are two pairs of 12 in. wheels mounted on $2\frac{1}{2}$ in. axles, at 7 ft. centres. On each of these axles, there is mounted an 8 by 12 in. block, bolted to the axle journals. Between

This is threaded into one arm of a right angle head member, this latter bearing up against a shoulder on the taper shank. Making the tool in two parts like this has the additional advantage of renewal of the head in case the latter is injured. The turning tool is carried at an angle in a slot in the projecting arm of the head, and is held in position with a set screw.

In the centre of the outer end of the shank there is a $\frac{3}{8}$ in. pin, a working fit in the shank, which is used for centring the tool to the work, but which is removed

Wheel and Axle Hoist on Canadian Northern Railway.

other points on the system, or on shop cars, for transferring into the shop for remounting, etc.

The runway consists of a 30 ft. span, made up of two 6 in. 17 25 lb. I beams, placed side by side at 6 in. centres. Each I beam is trussed by a $\frac{7}{8}$ in. truss rod bearing up against 15 in. truss rod struts at 15 ft. centres. The ends of the runway are supported on pipe tripods, these latter consisting of 3 in. extra heavy pipe, through the centre of each which passes a $\frac{7}{8}$ in. rod, with a nut on each end. Each tripod leg fits into a triple cap at the top, and cast iron shoes at the bottom, these latter resting on concrete foundation blocks, 20 ins. square, let into the ground, and grouted on top. They are secured in place by four bolts in each block, the lower end of each block being fitted with a washer.

The trolley has two pairs of 12 in. wheels at 18 in. centres, mounted on $2\frac{1}{2}$ in. axles. A Y-shaped hanger, made of $4\frac{1}{2}$ by $1\frac{1}{2}$ in. stock, is suspended from the trolley axles between the wheels, passing down between the I beams, with the hoist cylinder attached to the lower end. This air cylinder has a 16 in. diameter and 60 in. stroke, with the control operated by a double chain attached to the air valve.

Under the central part of the crane, there is a standard gauge track leading in from the yard, and also a 20 in. narrow gauge service track intermediate to it, leading out from the shop, which is just back from and parallel with the crane runway. Wheels may be brought in over the yard track, or out from the shop over the service track and be handled by the hoist. Under the tripod legs, there are on each side a pair of storage tracks, the pair on one side for receiving wheels from the road, and the other

these two blocks, there are four 3 by $\frac{1}{2}$ in. bars, bent upward at the end, and secured to the end blocks. Under the central portion of the car, they are on edge, with separating blocks between. The floor, or top of these bars, is 6 ins. above rail level.

Boring Mill Tool for Turning Surfaces That Cannot be Handled in the Lathe.

Boring Mill Tool for Turning Difficult Surfaces.

The tool shown in the accompanying illustration is used for turning difficult surfaces that cannot be handled in the lathe, in the boring mill. These difficult parts include such operations as the turning of grease cups on driving rods, turning the ends of rocker arms, and truing the ends of rocker shafts. It was designed for use on the horizontal boring mill.

The tool is made in two parts, as it was found that by so doing it could be made more easily and at a lesser cost. The shank is a solid taper plug, threaded on the outer end, with a driving tang on the other end.

from the shank once the work is trued up in order that the head might work up as far as possible over the member being machined.

When truing up the ends of tumbling shafts, the shaft is placed in V blocks on the table and centred with the $\frac{3}{8}$ in. pin in the tool, and a dead centre placed in the boring bar support. After it is firmly clamped, the centre pin is removed from the jig, and the bearings are then trued up. The tool is placed at an angle of 15 degrees, so that the point of the tool will be in advance of the end of the jig. The information in regard to this tool is taken from the Railway Age Gazette, Mechanical Edition.

Cab Storage at Grand Trunk Railway Montreal Shops.

As pointed out in the last issue of Canadian Railway and Marine World, in describing the locomotive tire storage system of the G.T.R. Montreal shops, it is most essential, if repair work is to be handled expeditiously and at low cost, that the parts in most frequent demand should be conveniently stored, where they may be got out quickly, as required. Certain standard parts of a locomotive may be made before the demand for their use arises, minimizing the time shopping to that extent when it becomes necessary to renew that part.

This applies to locomotive cabs, which are more or less standard on the different types of locomotives in use on the G.T.R. At the Montreal shops there are always on hand at least a dozen, which has been found to be a time saver when a locomotive comes in that requires only a cab renewal, all that

is required being the replacing of the old cab with a new one from stock.

To make the cabs convenient for ready application, a storage space has been set aside, which resembles closely the tire storage space at the same point, referred to above. The cab storage space is shown in the accompanying illustration. Three rows of old bridge columns support three runways, with two parallel craneways, the cranes on which are hand operated, wherein they differ from the tire storage space, where the crane is electrically operated, necessitated by the frequent use to which the yard is put. In the cab space the cabs are raised from the ground on low frames, and are ranged side by side, to be conveniently got at. The same storage space is used for the stock of pilots, which are always kept in store for quick repairs.

Removing Centre Sills at Canadian Pacific Ry. West Toronto Car Shops.

The C. P. R.'s general policy about wooden freight car repairs has been, when a car comes into the shops requiring a new centre sill, to replace the damaged centre sill by the new C. P. R. steel centre sill, which can be applied to wooden equipment with practically no change in the car design, the steel sill slipping into place in the position formerly occupied by the wooden sill, the connecting members all fitting to the new steel sill with but little adjustment.

In the removal of the old wooden sills, whether for replacement with wooden or steel sills, the West Toronto shops have in use a type of air jack, manufactured on the premises, which does excellent work, not only in the speed with which it is executed, but also from the manner in which it does it without damage to the body of the car. The usual procedure is to first of all remove the draft gear, needle beams, truss rods, and any other members that are attached to the sills. Then, with considerable effort, resulting in the removal of a good portion of the floor, the nails from the floor into the sills are removed, when, with some prying, the sills can be dropped to the

air jack shown consists of an old locomotive air cylinder, mounted on wheels with air connection pipes and valves attached to the handle of its truck. This air jack truck is run in under the I beam member, directly below the sill to be removed. A small hole is cut in the floor directly over the sill, over which a chain is passed from the hook on the end of the air cylinder plunger rod, when the latter is in its uppermost position. Turning on the air causes the plunger to descend, pulling the cylinder up against the I beam member, and bodily

in the illustration, and the trucks removed from underneath, the trucks being run under the crane. While the old sill is being removed, a new steel sill is being applied to the two trucks, the combined trucks and sill on completion being run back under the jacked up car. The crane is used for fitting the sill on the trucks, lifting the sill from the storage pile to the truck.

Pile Driver on Intercolonial Work.—What is said to be the largest pile driver ever built has been used in driving the large con-

Crane Served Storage Space for Cabs and Pilots.

drawing the sill away from the nails and other minor holding obstructions in the car floor. Moving the jack and I beam member along further under the centre of the car, the operation is repeated, this second pull completely loosening the sill, which may then be drawn out from under the car on the air jack truck, from the end of the car. The operation is very quickly performed.

For the replacement of steel sills for the

crete piles in the I.R.C.'s ocean terminal at Halifax, N.S. The combined weight of the hammer with follower is stated to be 24,000 lbs.; weight of ram only, 4,000 lbs.; diameter and stroke of cylinder, 14 by 36 ins. The hammer is said to have driven 1,800 reinforced concrete piles, 24 ins. square, varying in length from 37 to 77 ft.

Electric furnaces for the ordinary

Air Jack for Removing Damaged Wooden Centre Sills.

ground from under the jacked up car. The sills are then taken out from under the car.

With the use of the device herewith illustrated, this procedure is somewhat altered. The car is jacked up as usual on trestles, the trucks removed, and all attached parts loosened from the sills. Then, under one end of the sills, the double I beam member is placed, blocked on its ends from the under side of the side sills, and held up under this blocking by chains. The

wooden ones, the yard crane arrangement shown herewith was built at the West Toronto shops, and is used in conjunction with the jack. The crane consists of runway tracks at right angles to the yard tracks, and covering four tracks. The overhead crane carries air plunger hoists. Alongside the tracks, the steel sills, as received complete from Montreal, are unloaded ready for use. The car to have the sill replaced is jacked up to the right of the crane position

Crane for Handling Centre Sill Repairs.

steel foundry are now being regularly built and are claimed to give good results, electric melting having many advantages from a metallurgical standpoint. The new electric furnaces are made as nearly automatic in action as possible and many improvements in their design have been introduced during the last few years, so that it is claimed to be easier at present to get good results from an electric furnace than from the ordinary type.

Steam Railway Freight Statistics.

The aggregate tonnage of freight carried by Canadian railways during the year ended June 30, 1913, was 106,992,710 tons, against 89,444,331 in the previous year, and 79,884,282 tons for the year ended June 30, 1911. Of the total tonnage carried during the last statistical year, 56,829,297 tons originated on home lines, 21,284,742 were received from other lines in Canada, and 27,317,214 were received from U.S. railways. This is the first year in which the tonnage received from other lines has been divided so as to show that received by Canadian lines from U.S. lines. The totals of the three columns in the following table do not aggregate 106,992,710 tons, the difference being caused by the fact that the G.T. Pacific Ry. carried 1,561,457 tons, which is not divided under the several headings. Figures showing the total freight tonnage on each line are given in a table on pg. — of this issue.

The Board of Railway Commissioners' Report.

The great delay in the issuing of blue books at Ottawa, due probably to congestion in the printing bureau, renders the contents of many of them so stale when they are issued that they are of little current value. The Board of Railway Commissioners' report for the year ended March 31, 1913, has not yet been printed and is not expected to be for some months, but the following summary of some of its principal contents has been given out:—

During the year the Board held 102 public sittings, at which 698 applications were heard, as compared with 89 sittings for the previous year at which 695 applications were heard. The number of public sittings held in the various Provinces were as follows:—Ontario, 64; Quebec and Maritime Provinces, 13; Manitoba, 6; Saskatchewan, 7; Alberta, 6; British Columbia, 8. The applications heard included a variety of matters under the Railway Act, from the complaint of a private individual to matters of more general public interest affecting the community at large, such as express rates, railway company's tariffs, telephone rates, telegraph tolls, and matters pertaining to the operation of railways generally. The number of general orders issued was seven, and the number of general circulars issued to all railways subject to the Board's jurisdiction was 14. The total number of orders issued was 2,785, a slight decrease from the preceding year. In addition to the matters heard at formal sittings there were a large

number of informal matters dealt with. Of a total of 5,751 applications and complaints dealt with by the Board, only 8.2% were set down for formal hearing and 91.8 were disposed of without a formal hearing. These informal complaints, which are settled without the necessity of a formal hearing, often times entail a very considerable amount of correspondence and enquiry on the part of the Board's officers.

Traffic Department.—The number of tariffs received and filed were as follows, including supplements: Freight, 49,200; passenger, 6,774; express, 17,994; telephone, 2,051; sleeping and parlor car, 22; telegraph, 17; making a total of 76,058, or a grand total to Mar. 31, 1913, of \$391,989 tariffs.

Engineering Department.—A large number of inspections were made covering the Dominion. They numbered 316 and included inspections of bridges, subways, highways and farm crossings, interlocking plants, opening of lines for traffic, culverts, fences, cattle guards, etc.

Operating Department.—In this department is included the investigation of accidents, car service, condition of rolling stock, etc. The total number of killed and injured, reported by the various railway companies for the year was 2,517, of which 643 persons were killed and 2,231 injured. Of the total of 643 persons killed 250, or approximately 39% of the total, were trespassers on railway tracks. Twenty-one passengers were killed, or 3.26% of the total. Of this total of 21 passengers killed it appears that 15 met death by what would appear to be preventable causes on the part

of the passengers themselves, such as falling off trains while in motion, endeavoring to board trains in motion, and endeavoring to get off trains in motion, so that the actual number of passengers killed in what might be termed preventable causes on the part of the railway companies, was only 6, or less than 1% of the total number of 643 persons killed. The railway employees killed numbered 303, or 47% of the total. Of the total injured 410, or 17.9%, were passengers, and of this number 75, or 18.3%, were injured from preventable causes on the part of the passengers injured, such as attempting to get off and on trains in motion. Of the total of persons injured 1,603, or 71.8%, were employees of the railway companies. It will be noted that of what may be termed the preventable loss, 250 killed fall under the heading of trespassers, which is a very large percentage of the total killed, and in this connection the Board has taken up with the attorney general of the various Provinces, the question of prosecuting trespassers on railway property, with a view to limiting the large number of fatalities which occur in this way. The following table shows the totals by Provinces as regards trespassers killed and injured:—

	Killed	Injured.
Ontario	132	62
Quebec	35	21
Alberta	19	7
Saskatchewan	14	19
British Columbia	31	7
Manitoba	14	6
New Brunswick	4	6
Nova Scotia	1	1
Yukon	1	—
	250	116

Fire Inspection Department.—The organ-

ization of this Department was proceeded with immediately following the issuance of order 16,570, May 20, 1912, which deals with the question of fire protection generally, throughout the Dominion. During the season of 1913 200 fires were reported as started within 200 ft. of railway tracks and the classification of the causes of the fires shows that 164 are credited to trains, and the balance of 36 are ascribed to tramps, camp fires and unknown causes. The acreage burned over by the fires outside of the right of way of cultivated land, 4,135 acres, of young forest growth, 17,017 acres, of timber land, 1,322 acres, and of slash or old burn, not restocking, 2,674, making in all a total of 25,148 acres visited by fire. The total value of the property destroyed by fire, as reported, is estimated at \$88,480. These figures relate only to lands adjacent to railway lines subject to the Board's jurisdiction.

Birthdays of Transportation Men in May.

Many happy returns of the day to:—

Jas. Bain, General Superintendent, Halifax and South Western Ry., Bridgewater, N. S., born at Pictou, N. S., May 24, 1860.

W. R. Baker, Secretary, and Assistant to President, C.P.R., Montreal, born at York, Eng., May 25, 1852.

G. S. Cantlie, General Superintendent Car Service, C.P.R., Montreal, born there May 2, 1867.

M. Donaldson, M. Can. Soc. C.E., Vice President and General Manager, Grand Trunk Pacific Ry., Winnipeg, born near Edinburgh, Scotland, May 1, 1851.

A. E. Duff, ex-District Passenger Agent, G.T.R., Toronto, now of Winnipeg, born at Sherbrooke, Que., May 1, 1872.

G. C. Dunn, District Engineer, G.T.P.R., Winnipeg, born at Quebec, May 13, 1862.

G. I. Evans, Superintendent, Angus Locomotive Shops, C.P.R., Montreal, born there, May, 1880.

M. A. Fullington, A.M. Can. Soc. C.E., Assistant Superintendent, District 4, Eastern Division, C.P.R., Ottawa, born at Johnson, Vt., May 12, 1880.

D. J. Hackett, Superintendent, Canada Division, Michigan Central Rd., St. Thomas, Ont., born in Cass County, Mich., May 1, 1868.

G. H. Hedge, Master Mechanic, Central Division, Canadian Northern Ry., Winnipeg, born at Neath, Wales, May 26, 1865.

T. Henry, Operating Superintendent, Passenger Steamers, Canada Steamship Lines Ltd., Montreal, born there, May 29, 1865.

G. A. Hoag, Superintendent, Central Ontario Ry., Trenton, Ont., born at Walter's Falls, Ont., May 31, 1866.

W. T. Huggan, Division Accountant and District Passenger Agent, Prince Edward Island Ry., Charlottetown, P.E.I., born at Halifax, N.S., May 24, 1851.

J. Irwin, Superintendent, District 3, Canadian Northern Ry., Dauphin, Man., born at Clinton, Ont., May 28, 1866.

A. C. Shaw, General Passenger Agent, Western Lines, C.P.R., Winnipeg, born at Detroit, Mich., May 12, 1865.

H. B. Sherwood, Superintendent, Bay of Quinte Ry., Napanee, Ont., born at Auburn, N. Y., May 25, 1847.

W. Stapleton, District Passenger Agent, Canadian Northern Ry., Saskatoon, Sask., born at Bristol, Eng., May 20, 1884.

E. Tiffin, General Western Agent, Canadian Government Railways, Toronto, born at Hamilton, Ont., May 5, 1849.

J. H. Walsh, General Manager, Quebec Central Ry., Sherbrooke, Que., born at Quebec, May 12, 1860.

H. K. Wicksteed, B.A.Sc., M. Can. Soc. C. E., Chief Engineer of Surveys, MacKenzie, Mann & Co, Ltd., Toronto, born at Quebec, May 25, 1855.

James Yeo, ex-Roadmaster, Intercolonial Ry., Riviere du Loup, Que., born at Bideford, Devonshire, Eng., May 1, 1830.

The Grand Trunk Pacific Hotel at Regina.

Building operations have been commenced at Regina, Sask., by the G. T. P. R. on the Hotel Qu'Appelle. The site selected is Wascana Park at the corner of Sixteenth Ave. and Albert St., two sides facing these thoroughfares and the other elevation overlooking the park and commanding a view of the Legislative Buildings. The building will be set back from the street line suf-

ficiently to give it a setting and relationship to the surrounding landscape that will take advantage of the situation to the fullest extent. Architecturally, like the other hotels on the system, it will be of the chateau type. Immediately opposite the hotel, the station will be erected, providing convenient and immediate communication with the hotel. The station building will also include the power house from which light, heat and power service will be transmitted to the hotel through a service tunnel under the streets.

Grand Trunk Pacific Ry. Hotel Qu'Appelle, Regina, Sask.

ciently to give it a setting and relationship to the surrounding landscape that will take advantage of the situation to the fullest extent. Architecturally, like the other hotels on the system, it will be of the chateau type.

Immediately opposite the hotel, the station will be erected, providing convenient and immediate communication with the hotel. The station building will also include the power house from which light, heat and power service will be transmitted to the hotel through a service tunnel under the streets.

The main entrance of the hotel will be placed in the centre of the Albert St. elevation. A few steps will lead from the entrance to the concourse or rotunda and immediately opposite this entrance, commanding also the ladies' entrance, the elevator, stair, palm room and dining room

main floor and the mezzanine, there will be seven floors for guests' bedrooms. All rooms facing Wascana Park and the streets, will have outside private bathrooms, all rooms to the main court will have running water, and on every floor will be provided ample lavatory accommodation. There will be a total of 224 bedrooms, almost all of which can be used as double rooms on account of their large dimensions. The grill room, bar, barber shop, general toilet, main service and kitchen will be in the basement, and the laundry, stores, locker rooms, elevator machinery and refrigerator equipment in the subbasement.

In construction the exterior will be of grey brick with stone dressings and finish, the interior will be of steel frame and reinforced concrete. The typical floors of guests' rooms will be finished with hardwood doors and enamelled white trim.

Book Reviews.

Any of the books reviewed may be obtained through Canadian Railway and Marine World at the published price.

PROCEEDINGS OF NATIONAL ASSOCIATION of Railway Commissioners. Annual Meeting at Washington, 113. 612 pages, 9 by 6 ins., cloth, Law Reporting Co., 115 Broadway, New York, N.Y.

This includes all committee reports and the discussion thereon.

GREAT LAKES REGISTER. 450 pages, 8½ by 12 ins., leather. Great Lakes Register, Rockefeller Bldg., Cleveland, Ohio, \$25 a year, including supplements, by subscription.

This register, which is issued under the control of, and has been adopted by, the Lake Underwriters, as their official classification register, on which they base all rates of insurance for both hulls and cargoes, contains a full and up to date list of all steam and sailing vessels of any importance, sailing on the Great Lakes, and owned in Canada and the United States. These are arranged in a convenient manner for ready reference, and give full data of both hulls and machinery, with complete lists of owners, their addresses, and the vessels controlled by each. There are also lists of vessels, the names of which have been changed, of shipbuilders with the names, gross tonnage and date of building all vessels built by them; and also of dry docks, floating dry docks and marine railways, with their capacity and location. The information contained in the register cannot be found in any other publication, and is without doubt of great service to all interested in the lake marine.

OUTLINES OF RAILWAY ECONOMICS.—By Douglas Knoop, M.A., Lecturer on Economics in the University of Sheffield, Eng. 274 pages, 8 by 5 in. Cloth boards. Macmillan Co. of Canada: Toronto. \$1.25 net.

AMERICAN RAILROAD ECONOMICS.—By A. M. Sakolski, Ph.D., Staff Lecturer in New York University School of Commerce, Accounts and Finance. 296 pages, 8 by 5 in. Cloth boards. Macmillan Co. of Canada: Toronto. \$1.25 net.

These two books treat at considerable length upon the important and interesting question of railway economics. They are independent studies of the question, the first on the general subject by a British author, and the second, an analysis of the practical working of United States railways, and an attempt to lay before investors and students, such information as may assist them in forming a correct judgment of railway activities and operating results. Although written by men having different viewpoints the two books may be profitably read together.

Mr. Knoop, in the "Outlines of Railway Economics," devotes his first chapter to considering the subject matter of economics, the definition and methods of economical science, and then applies these methods to railways. In the following nineteen chapters he discusses at length all the various features and laws governing production, markets, increasing and decreasing returns, applying them specifically to railways, and illustrating his course of reasoning from the experience of British railways. The book includes a good deal of matter which would ordinarily be excluded from a work on railways, but its inclusion has the advantage of emphasizing the connection between general economic and railway economics, a connection which is too often ignored in the popular discussion of questions affecting railways. The final chapter deals with

the state ownership and management of railways.

The second book, "American Railroad Economics," sets out to discuss data relating to the character of the transportation facilities; data measuring efficiency and economy of operation; data measuring revenues, expenses and net earnings, and data measuring the capital investment in relation to the corporate resources and liabilities. In other words, the author finds his material in the statistical reports issued by the railways to their shareholders and filed with the Interstate Commerce Commission. He then proceeds to show that while these tables give a vast amount of valuable information, prepared "by professional analysts and railroad statisticians" who aim "to gauge railway activities by the use of rigid standards and definite mathematical formulae," they do not form an accurate standard by which to measure one railway against another, and do not show the relative values of the capital stock as an investment. The twelve chapters into which the work is divided discuss the various data mentioned in detail, and, without laying down any definite plans by which a correct judgment in these matters can be reached, such information is given as will enable any one interested to work out plans for himself. One of the principal causes of the defects in the use of railway statistics, he points out, is the misunderstanding of the real significance of each statistical item. Lack of appreciation of the intrinsic worth of the figures presented leads to erroneous analyses and improper comparisons. Unless a statistical analysis is of some distinct value to the railway executive or manager, to the investor, or to the statesman, or to the public at large, it cannot be justified economically. In other words, each class of railway data should have an underlying purpose, and should be compiled, classified and interpreted to accord with this purpose. Chap. 8, which deals with Interstate Commerce Commission's system of railway accounts, is especially worth study.

TEXT BOOK ON RAILROAD SURVEYING.—By G. W. Pickles, C.E., and C. C. Wiley, C.E., 263 pages, 4¼ x 6¾ inches, 66 figures, 14 tables, morocco. John Wiley & Sons, Inc., N.Y., \$2.50 net.

H. K. Wicksteed, B. A. Sc., M. Can. Soc. C.E., has favored us with the following: This is a little book written and compiled by two professors of Illinois University, and it bears the marks of its scholastic origin to a very large extent, but it is nevertheless one of the most satisfactory books of its kind ever published, and it is the first which considers the spiral curve in conjunction with the simple, and as an essential part of it, and it is the first we believe to be placed on the market which sets forth the true spiral as primarily a variation of the circle and to be run in the field in the same way by tangential angles, and that the relation of these angles one to another, and to the central angle, are almost as simple and easy to remember as those of the circular curve itself, although it is susceptible like the latter to being laid out when necessary under exceptional conditions by rectangular co-ordinates. A large portion of the book is given up to the discussion of this curve and its properties, and in the appendix is a demonstration of some of the theorems for those who have sufficient knowledge of the higher mathematics to follow it. The subject of overhaul in earthwork and its calculation by means of the "mass curve" or "curve of volumes" is pleasingly discussed and demonstrated, and a third departure from the older books of the same type is a short dissertation on the vertical curve which is now an essential

of all first class location. It is a pity, perhaps, that while the authors have been liberal in diagrams they have not illustrated this problem by one, but have contented themselves by merely working out one supposititious case of the very simplest nature in figures. We can easily imagine an assistant engineer with a very fair knowledge of geometry being puzzled to follow the demonstration and we think, too, that the method of co-ordinates as being especially adapted to drawings on profile or cross-section paper might have been brought to great advantage as an alternative and, in some cases, a simpler method. The tables given are good and well arranged and sufficient for all ordinary surveying operations, and withal the book is quite small and portable, nearly double the thickness might be carried about without inconvenience. Under these circumstances and when the up to dateness of most of the matter is so marked and satisfactory, one is led to wonder why a little more of that found in the older pocket books is not reintroduced so as to make the little manual complete in itself. Some of the devices for running curves past an obstacle, for instance, might well have been illustrated, and a few pages might have been devoted to astronomical determination of the meridian and of the latitude and to the adjustment of instruments, etc. One striking feature which is hardly modern is the amount of pains and space given to the calculation of the long chord of the curve and the ordinates from it, while no notice is taken of the "tangential" method of running in curves, which is becoming more and more general on Canadian roads as a time saver. Only three or four pages out of 120 are devoted to a discussion of questions of "economics" of location. What is said is good, and generally well said, but it would seem a pity that a few general data should not have been given to enable a locating engineer to estimate even roughly the value of reducing or eliminating a grade or a series of curves. To sum up the criticism in a few words, it may be said that so much is better put than it has ever been put before, and so much is new in form at least, that we should like to see the scope of the book expanded so as to include the best of what has been said before and to cover so far as a pocket book may the subject of which it treats.

Lackawanna Passenger Terminal at Buffalo.—Ground has been broken for the new passenger terminal of the Delaware, Lackawanna & Western Rd. at Buffalo, N.Y. The station will be across Main St. from the present one, between Ohio St. and Buffalo River. In order to give the necessary width, Ohio St. will be moved north for several blocks, half its width most of the way, but about 120 ft. at Main St. There will be six elevated stub tracks, covered by a trainshed. These tracks will terminate at the east line of Washington St., the space between there and Main St. being occupied by the head house. A seventh elevated track will pass the station on the north and reach the docks beyond the present station. There will also be a track across Main St. at grade to accommodate the freight house. Underneath the new station will be a warehouse; this will be served by one track at the low level, the design ultimately allowing for three tracks. More than 1,000 ft. of the station layout will bear directly on the bulkhead wall along the river. Except in two or three places where complications will require special piers, this wall, which will be mass concrete, will be carried on piles.

About 135,000,000 railway ties are used each year in the United States.

Railway Development.

Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta and Great Waterways Ry.—It was expected to have the right of way from the junction with the Edmonton, Dunvegan and British Columbia Ry. to Lac la Biche, Alta., cleared by April 30. Grading is to be pushed as fast as possible, and track is expected to be laid to Lac la Biche by the end of the year. J. D. McArthur, Winnipeg, is the contractor, and W. R. Smith, Edmonton, Alta., is Chief Engineer.

The route map for the first 125 miles of the line shows that it will run almost entirely through an agricultural country. The line starts from the Edmonton, Dunvegan and British Columbia Ry. about two miles north of the Sturgeon River, and passes through or near Excelsior, Bon Accord, Battenburg, Fedorah, Staybridge and Egremont, on to tp. 26, range 24, about six miles south of Flat Lake, and then on to the south of Big Egg Lake. (April, pg. 165.)

Bruce Peninsula Ry.—In passing through the House of Commons the bill to incorporate this company was amended by striking out the section giving authority to develop and transmit electric power. (April, pg. 165.)

Burrard Inlet Tunnel and Bridge Co.—The Dominion Parliament has extended the time for the construction of the proposed bridge, tunnel and railway at the second narrows of Burrard Inlet, Vancouver, B.C.

Tenders were opened April 1, for the construction of the proposed bridge. Contractors were asked to submit prices for substructure and superstructure separately, on the plans prepared by Sir J. W. Barry, Consulting Engineer, London, Eng., and approved by the Dominion Government. The tenders were:—Missouri Valley Bridge Co., Kansas City, Mo., substructure, \$923,484. Armstrong and Morrison, Vancouver, substructure, \$1,376,173. Dominion Bridge Co., Montreal, superstructure, \$1,453,047. Canadian Bridge Co., Walkerville, Ont., superstructure, \$1,519,615. Sir William Arroll, Glasgow, Scotland, per Armstrong and Morrison, superstructure, \$1,626,635. Cleveland Bridge and Engineering Co., Darlington, Eng., superstructure, \$2,122,062. Alternative plans and tenders were submitted as follows:—Armstrong and Morrison and the Dominion Bridge Co., substructure, \$1,110,656; superstructure, \$1,177,135. Armstrong and Morrison and Dominion Bridge Co., substructure, \$1,080,700; superstructure, \$1,097,544. Western Foundations Co., Toronto, substructure, \$825,997; superstructure, \$904,169. Metropolitan Tunnel and Public Works Co., London, Eng., superstructure, \$2,276,300. (Mar., pg. 121.)

Calgary and Fernie Ry.—Vancouver, B.C., press reports state that five engineering parties have been placed in the field to locate this projected line from Calgary, Alta., into the Crownsnest Pass coalfield. The parties are said to total 80 men, and to be working under the general direction of Du Cane, Dutcher & Co., Vancouver. Mr. Du Cane is a son-in-law of one of the partners in Childs Bank, London, Eng., and has recently been over the route along with A. H. Barry, an English engineer associated with Sir John Wolfe-Barry, who designed the projected bridge across the second narrows of Burrard Inlet. It is stated that surveys have reached such a stage that Government approval will be asked for the plans, and a contract let for construction at an early date.

The Dominion Parliament has extended the time for construction; changed the head office from Fernie, B.C., to Calgary, Alta.;

and increased the bonding powers from \$20,000 to \$50,000 a mile. (April, pg. 165.)

Central Canada Ry.—Plans for this railway, to start from the Edmonton, Dunvegan and British Columbia Ry. at Round Lake, and proceed along the valley of the North Hart River to Peace River Crossing, Alta., have been filed with the Alberta Government. It is estimated that 50,000 yds. of earth per mile will have to be moved, and that many bridges will have to be built. On one section of 18 miles the plans show that 60 steel bridges of from 75 to 125 ft. spans will be required. In the last 18 miles to Peace River Crossing the line will drop 700 ft. A steel bridge will have to be built at Peace River Crossing at an estimated cost of \$400,000. Surveys along the north bank of the Upper Peace River to Dunvegan are being made. J. D. McArthur, Winnipeg, who is also associated with the Edmonton, Dunvegan and British Columbia Ry. and the Alberta and Great Waterways Ry., is one of the provisional directors. (Mar., pg. 121.)

Central Western Canada Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Winnipeg in a generally northwesterly direction, via Yorkton, Saskatoon and Battleford to Edmonton, Alta. (Mar., pg. 121.)

Chicago, Milwaukee and St. Paul Ry.—Chicago, Milwaukee and Puget Sound Ry.—P. Williams, the former company's right of way agent, has been in the district south of Vancouver recently, and press reports state that he has secured a right of way south of the International Boundary, which will link up the company's lines with the British Columbia Electric Ry. near Sumas. The company's engineers are reported to be making surveys for an independent line from near Sumas to Vancouver. It is stated that construction on the line to Sumas will be started this year. (Mar., pg. 121.)

Cornwall and Hawkesbury Ry.—Application is being made to the Dominion Parliament to incorporate a company with this title to build a railway from Cornwall, via Martintown, Alexandria, to Hawkesbury, Ont., thence to a connection with the C.P.R. at Grenville or Calumet, Que., about 50 miles. Pringle, Thompson, Burgess and Cote, Ottawa, solicitors for applicants.

Dominion Atlantic Ry.—The Dominion Parliament has extended the time within which the company may build the line from between Kentville and Canning, on its Cornwallis Branch, to the main line between Berwick and Middleton, N.S. (Feb., pg. 69.)

Edmonton, Dunvegan and British Columbia Ry.—Track laying has been completed beyond Sawridge, Alta., at the southeastern end of Lesser Slave Lake, and a freight service has been placed in operation from Edmonton. Progress is being made with the erection of a bridge across the Athabasca River at Smith, five miles beyond Sawridge. Eighty-five per cent. of the substructure has been completed, and a large quantity of steel for the superstructure has been delivered on the site. The station and other buildings at Smith are reported to be nearing completion. Considerable grading has been done beyond Smith, and it is expected that track will be laid as far as Big Smoky River by Dec. 31. W. R. Smith, Edmonton, Alta., is Chief Engineer. (April, pg. 165.)

Esquimalt and Nanaimo Ry.—The Dominion Parliament has granted an extension

of time for the completion of the following lines:—From Comox to Campbell River, B. C.; any branches to the east coast of Vancouver Island authorized in general terms by sec. 9, chap. 14 of the statutes of British Columbia, 1884; a branch from Comox southwesterly to the Alberni Canal; a line from Oyster Bay to Hardy Bay.

It is expected to complete the extension of the line from McBride Jct. to Comox, 44 miles, by July 1. Track had been laid to Sable River, Mar. 27, when R. Marpole, Vice President, made a trip of inspection over the line, and the other work through to Comox was found to be well advanced.

On the line to Nanaimo, considerable ballasting is being done near Table River, where a new steel bridge is to be erected. The Canadian Bridge Co. is getting in the necessary materials. (Dec., 1913, pg. 573.)

Glengarry and Stormont Ry.—The Board of Railway Commissioners has approved several deviations from the original plans for this line from a connection with the C.P.R. at St. Polycarpe, Que., to mileage 4.96; and from mileage 15.05 to Cornwall, Ont., mileage 27. (Feb., pg. 69.)

A press report April 22 stated that contractors have been let for the construction of this line as follows: G. R. Phillips, from north of the G. T. R. tracks, near Cornwall Station, to Glen Donald, 4 miles; the company proposes to build the next section itself; McDonald and Grant, from near Williamstown for 4 miles; A. C. Mulhern, next section easterly; A. C. McArthur, from C. P. R. at St. Polycarpe, Que., westerly to connect with the Mulhern contract. It is stated that the contracts call for the rapid completion of the work, and that it is hoped to have track laid by Nov. 1.

Intercolonial Ry.—The acting Minister of Railways stated in the House of Commons, April 1, that an engineering staff in charge of H. S. Clark is making surveys on the line near Dorchester and Sackville, N.B., with a view of securing improved gradients and curvature, and for the laying of a second track.

We are officially advised that the surveys being made on the line between Point Tupper and Sydney are simply the continuation of the grade revision surveys which were started in 1913. Several parties of engineers are in the field in connection with this work.

The Dominion Parliament has voted the following amounts for betterments:—

Amherst, additional facilities	\$2,666.67
Aston Jct., interlocking tower	1,666.67
Chatham, diversion of line, etc.	1,666.67
Chaudiere Jct. to St. Romuald second track	26,666.67
Nelson to Derby Jct. diversion	18,000.00
North Sydney-Leitch Creek diversion	26,666.66
Fredericton, increased accommodation	1,666.67
Halifax, docks and wharves	26,666.67
Halifax, new terminal facilities	416,666.66
Halifax, increased accommodation	3,583.33
Halifax, Willow Park yard service	2,500.00
Hampton, subway, etc.	6,666.66
Moncton, level crossing elimination	16,666.66
Moncton, new roofing	1,166.66
Mulgrave, new car ferry and dock	76,333.33
Point Tupper, improvements	5,000.00
Pugwash, spur line	4,666.66
Riviere du Loup, additional facilities	12,933.24
St. Flavie, increased accommodation	3,166.67
St. John, spur line	22,333.33
St. John, increased accommodation	550.00
Sussex, improvements	4,666.67
Sydney Mines, diversion	4,166.67
Truro, increased accommodation	16,666.66
New railway, Halifax to Dean's Settlement, further on account	141,666.67
Original construction	133.34
Increased water supply	4,500.00
Increased facilities generally	33,333.33
Surveys and inspections	8,333.34
Equipment of car shops, Moncton	6,000.00
Telephone operating system	10,666.66
Block system installation	16,666.67
Power plants, increase of	3,333.34
Protection of highways, general	5,500.00
Anti creepers and tie plates	5,333.34

Interprovincial Ry.—We are officially advised that the temporary officers and directors of the company are:—President, L. N. Asselin; Secretary, E. Letendre; Directors:—J. Theberge, L. Tache, A. Raymond, O. A. Talbot, all of Rimouski, Que. Provincial Securities, Limited, Quebec, of which R. Dupont, formerly with the Canada and Gulf Terminal Ry., is Managing Director, is interested in the project. A preliminary survey of the route from Rimouski, Que., to Edmundston, N.B., is being arranged for. (See Rimouski International Ry., April, pg. 166.)

Joliette and Lake Manuan Colonization Ry.—The Dominion Parliament has extended the time for the building of this projected railway from Joliette to the National Transcontinental Ry., and from Joliette to Montreal. (Jan., pg. 21.)

Kettle Valley Lines.—It is expected that track laying will be completed on the unfinished sections, between Midway and Penticton, by June 30. Satisfactory progress is being made with construction on the line west of Penticton, and it is expected to have Penticton and Spence's Bridge linked up by the end of the year.

Construction has been started on the section of the line from Osprey Lake to Princeton, 32 miles, the deviation into the latter place having been authorized last session by the British Columbia Legislature. We are officially advised that the contract for this section has been let to Guthrie, McDougall & Co. The contract calls for the completion of the work by Oct. 1. This is the last section of the entire line from Midway to Hope to be put under construction. When constructed with the joint section arranged with the Vancouver, Victoria and Eastern Ry. from Princeton to near Otter Creek, it will give a through line between the points named, with a branch from Coldwater Jet., to Merritt, 25 miles.

The section from the Coquihalla Summit, near Otter Creek, to Hope, will be operated jointly with the V. V. and E. Ry., under an agreement. About 25% of the grading on this section is reported to have been completed.

At Hope a bridge over the Fraser River is under construction to give connection with the C.P.R. It was reported April 10, that two of the piers for the substructure have been completed, and the construction of the other piers and abutments is well advanced. The Canadian Bridge Co. is assembling the material for the superstructure.

We are officially advised that it is expected to have steel laid on the uncompleted portions of the entire line from Midway to Hope, by Dec. 31. (April, pg. 165.)

Lake Erie and Northern Ry.—An act has been passed by the Dominion Parliament enabling the company to increase its bonding power from \$20,000 to \$45,000 a mile, and to issue other securities for the purpose of developing properties along its line, but these extended powers are not to be used until every municipality which has aided the company, has been released from its agreement.

Track laying was reported to have reached Brantford, from Galt, Ont., April 9, and ballasting has been started, a train working each way from the pit at Paris.

Construction is being proceeded with on the Brantford Port Dover section, and it is expected that track laying will be started in both directions from Simcoe, as soon as work on the Brantford Galt section is completed. The line is not expected to be ready for operation until the end of the year. (April, pg. 166.)

London, Grand Bend and Stratford Ry.—

The Ontario Legislature has incorporated a company with this title to build a railway to be operated by electricity or any other motive power, from London to Lake Huron at the boundary between Lambton and Huron counties, thence to Stratford and London, Ont., with branches as may be deemed necessary. The company is given authority to generate electrical power and to distribute the surplus in the municipalities along its route. The authorized capital is \$2,000,000 with a bonding power of \$35,000 a mile of line. The provisional directors are:—W. R. Willard, G. H. Gray, J. J. Gray. (Dec., 1913, pg. 593.)

Miramichi Bay Shore Ry.—The New Brunswick Legislature has under consideration a bill to incorporate a company to build a railway to serve Newcastle, Chatham and other places on the shores of Miramichi Bay.

Moncton and Buctouche Ry.—The bridge at Scotch Settlement, which was wrecked recently, has been reconstructed, and the line beyond that point has been cleared. The train service has been restored. Negotiations are in progress with the Intercolonial Ry. management for permission to switch the company's trains on the I.R.C., near Humphrey's Mills, and run them to and from Moncton station, instead of to and from the M. and B. station on Harper St., Moncton. (See Moncton and Northumberland Strait Ry., Jan., pg. 21.)

Newfoundland Railway and Train-Ferry Syndicate.—An act has been passed by the Newfoundland Legislature incorporating a company with this title to build a railway from Rantem or from any other suitable point on Trinity Bay, across the Isthmus of Avalon to Little Southern Harbor, or any other suitable point on Placentia Bay, with the right to put in a train ferry slip at Burin, and to build a railway from Humbermouth on the Bay of Islands, to South West Arm, on Green Bay, with a branch line to White Bay. The Isthmus of Avalon line is to commence within three years, and the line to Green Bay within five years from the completion of the Isthmus of Avalon railway. The company is entitled to two square miles of land at each of the sea frontages of its several terminals, the price of the same to be fixed by arbitration; it is authorized to take material for construction purposes on Government land, when it cannot be obtained on the right of way granted. The company may operate a train ferry to connect the two sections of its line, and other train ferry services to Louisburg, N. S., and to Gaspé, Que., or to other suitable ports. H. C. Thompson, St. John's, Nfld., is solicitor for the syndicate, the names of the members of which have not been disclosed.

Norfolk and Elgin Ry.—The Dominion Parliament has incorporated a company with this title to build a railway from Simcoe to Port Burwell, Ont., and to operate a car ferry across Lake Erie. (April, pg. 166.)

North Shore Power, Ry. and Navigation Co. Application is being made to the Dominion Parliament for an act authorizing the company to carry on its business and undertaking without the limits of Canada, and to change its title to that of the Gulf Pulp and Paper Co. Christie, Greene and Hill, Ottawa, solicitors for company.

Ottawa and Ungava Ry.—An extension of time for the building of this projected railway, as authorized by chap. 102 of the statutes of 1909-10, and by chap. 94 of the statutes of 1912, has been granted by the Dominion Parliament. Power has also been given to build a branch line with various spur lines. (Dec., 1913, pg. 574.)

Pacific, Peace River and Athabasca Ry.—

The Dominion Parliament has incorporated a company with this title to build a railway from Naas River, on the Pacific Coast, to Prince Albert, Sask., by a route described in a former issue. (Mar., pg. 121.)

Pacific and Hudson Bay Ry.—The Board of Railway Commissioners has approved location plans for this projected railway from Bella Coola, easterly to Hagensborg, B.C., 10.00 miles. (Jan., pg. 22.)

Pacific Great Eastern Ry.—The first portion of the line, viz.: from Vancouver to Fort George, B. C., has been under construction for nearly two years, and two sections are in operation. The first is from North Vancouver to Dundarave, 4.5 miles, and the second is from Squamish, the new name given to Newport, to Cheakamus, 13 miles, which includes the seven miles of track laid by the old Howe Sound and Northern Ry. The recent decision of the British Columbia Legislature to extend the line from Fort George to the Peace River country and to have the extension ready to handle traffic through to the Alberta boundary in 1916, has apparently given a great impetus to construction. It has been announced that 10,000 men will be distributed along the line between Vancouver and Fort George. The construction is well advanced to Kelly Lake, 200 miles from Vancouver, and we are officially advised that contracts have been let for the line southerly from Fort George, to Kelly Lake, to H. E. Carleton & Co., 25 miles; A. E. Griffin & Co., 25 miles; and Burns, Jordan & Co., 50 miles. These contractors have just completed subcontracts on the G. T. Pacific Ry. west of Fort George, and it was reported, April 3, that their outfits were being transferred to the P. G. E. route. The points between which these contractors will work had not been decided at the date of our advice. The construction on the 280 miles between Kelly Lake and Fort George is reported to be light. The main points on the route with distances from Vancouver are:—Squamish, 43 miles; Pemberton Meadows, 100 miles; Lillooet, 163 miles; Clinton, 210 miles; Lac la Hache, 285 miles; Quesnel, 395 miles; Fort George, 480 miles.

In connection with the extension of the line from Fort George to the Peace River Valley, where a junction would be made with the Edmonton, Dunvegan and British Columbia Ry., preliminary surveys have been completed, and locating parties are going over the 330 miles of the route. The location for some miles out of Fort George has been settled, and it is expected that contracts for grading the first 100 miles will be let at once. The line will start at the confluence of the Salmon and Fraser rivers, following the first named to Summit Lake, thence along the Crooked River valley to Fort McLeod, and McLeod Lake, thence along the Missinichurka River through Pine Pass and along the Pine River to Hudson's Hope, following the Peace River to the Alberta boundary. The distance from Fort George to Pine River Pass is 142 miles, and from Fort George to the Alberta boundary, 330 miles.

In preparation for the construction of docks for ocean going vessels and railroad terminals at Squamish, which is the point in Howe Sound where the line leaves Howe water, the company is reclaiming a tract of land about a mile long. Foreshore rights along the waterfront were recently granted to the railway company by the Dominion Government, conditional on the expenditure by the company of \$2,000,000 in improving the harbor. The dredging and refilling to be carried out this year at Squamish are to cost about \$200,000. (April, pg. 166.)

Peace River Ry.—The Dominion Parliament is being asked to incorporate a com-

pany with this title to build a railway from Grand Prairie to Fort Vermilion, Alta. Griesbach, O'Connor & Co., Ottawa, solicitors for applicants.

Prince Albert to Upper Beaver River.—Press reports from Prince Albert, Sask., state that a preliminary survey has been made by R. T. Gough for a railway from Prince Albert to the Upper Beaver River and thence to the provincial boundary, about 250 miles.

Prince Edward Island Ry.—The Dominion Parliament has voted the following sums for work on this line:—Original construction, \$166.67; to increase accommodation and facilities, \$866.66; on account of car ferries, terminals and connections, \$250,000. (Feb., pg. 70.)

Quinze and Blanche River Ry.—The Dominion Parliament has extended the time for the building of the line as provided in sec. 8, chap. 123, of the statutes of 1907. The company has power, subject to the consent of municipalities, to erect lines for the distribution of electric power which it may generate (Jan., pg. 22.)

Reid Newfoundland Co.—The Premier of Newfoundland was in London, Eng., recently for the purpose of raising a loan of \$2,000,000 to complete the government's railway plans. The agreement with the Reid Newfoundland Co. provided for the building of six branch lines, aggregating about 400 miles. Several of these have been completed, and the others are under construction. It is expected that in all 250 miles will be completed by Dec. 31, leaving 120 miles to be completed in 1915. The proceeds of the loan will be utilized to pay the government subsidy on the lines under construction. (Mar., pg. 122.)

Salmon Harbor Coal Co.—We are officially advised that the company has no railways constructed. There was formerly a spur line of about three miles, connecting the mines at Salmon Harbor, N. S., with the New Brunswick Coal and Ry. Co.'s line near Midland, but the rails were removed before the present company obtained possession of the property. The company has not reached any definite decision as to the reconstruction of this spur, or as to building any other line. The officers of the company are: President, G. Sargeant, New York; Treasurer, W. E. Conklin, New York; Secretary, W. F. Williams, New York; Manager, M. B. Davis, Salmon Harbor, N. S.

The St. Francis Valley Ry. Co. is the present title of a company incorporated by the Quebec Legislature under the title of the L'Avenir and Melbourne Ry., to build a line from Richmond or Melbourne to Drummondville, Que. We have been advised that this projected railway will start from near Drummondville, Que., and will follow the St. Francis River to Richmond, and thence continue south of Sherbrooke to the International Boundary line near Stanstead.

Press reports stated recently that in building the line the old C. P. R. line between L'Avenir and Melbourne will be used. We are advised that this piece of line was abandoned about 20 years ago. C. B. Hibbard, Montreal, is Vice President. (See L'Avenir and Melbourne Ry., Jan., 1913, pg. 83.)

St. John and Quebec Ry.—A bill is under consideration in the New Brunswick Legislature providing for the granting of further aid for the St. John Valley Ry., which is the portion of this proposed line being built in New Brunswick. The estimated cost of the three sections of the line under construction was stated by the Premier to be \$4,366,275. The total expended up to Nov. 30, 1913, was \$3,542,275, and it is estimated that \$757,080 more will be required to complete the work. The Province guaranteed the

company's securities to the amount of \$25,000 a mile, but the company was unable to find a market for the unguaranteed securities, and is therefore obliged to seek further assistance. The Government had the option of taking over the uncompleted line under section 5 of the contract and complete it as a public work, but it was decided, the Premier explained, in introducing the bill, April 8, that it would be more economical for the Legislature to give further assistance. The Government proposed that the Province guarantee a further issue of bonds to the amount of \$10,000 a mile, varying the amount of guarantee from \$8,000 a mile on the Centreville-Gagetown section, to larger amounts on the other sections, the whole not to exceed \$10,000 a mile on the whole line. \$1,500 a mile was reserved for the payment of interest, and it is proposed to increase this by the setting aside of \$1,000 a mile additional out of the new issue.

The Government has no intention of departing from the route of the line originally laid down, viz.: to provide a line from Grand Falls to St. John. It was suggested that the line from Gagetown be diverted so as to join the C. P. R. at Westfield. The Government, however, has no intention of so diverting it. The question of the bridge construction is an important one. It was anticipated that \$1,260,000 would have been sufficient to build the three bridges required, but it was a matter of surprise when the estimate of \$2,000,000 for the building of the bridge at Dunham's Wharf was submitted. However, a delegation waited on the Dominion Government and was assured that that Government will increase its undertaking to finance the building of these bridges up to \$3,000,000 and will meet the interest on that amount for 15 years.

An allegation was made in the House that the contractors for the railway had been compelled to pay large sums of money to members of the New Brunswick Government before they got their contracts, and it was asked that a committee be appointed to investigate the matter. (April, pg. 166.)

Thessalon and Northern Ry.—An extension of line has been granted by the Dominion Parliament for the building of the projected line from Thessalon Station, on the C. P. R. Algoma branch, to Thessalon town, and from Thessalon Station thence northerly to the Mississauga River in Gould tp. The section of the line into Thessalon has been built and is being operated by the C. P. R. (Nov., 1909, pg. 831.)

Timiskaming and Northern Ontario Ry.—We are officially advised that the plans for the electrification of branch lines are not yet completed to the extent that any information as to what may be done can be given.

We are further officially advised that a survey party under W. R. Maher, has left Cochrane for Moose Factory, Ont., to continue the investigations carried on during the past couple of years, as to the route for a line to that point, and the possibilities of harbor development at Moose Factory. The scope of the investigations was outlined in an address recently delivered before the Toronto branch of the Canadian Society of Civil Engineers by J. G. G. Kerry, Consulting Engineer to the Commission. (Mar., pg. 122.)

The Minister of the Interior gave notice in the Dominion Parliament, April 15, of a resolution providing for the transfer to the Province of Ontario of such portion of the Crown Lands now controlled by the Dominion Government in the Province of Manitoba, where such lands are necessary to make provision for the extension of the T. and N. O. Ry. to Port Nelson.

Toronto, Hamilton and Buffalo Ry.—Press reports state that arrangements are being made for largely increasing the company's yard accommodation at Brantford, Ont. (Mar., pg. 122.)

Toronto Terminals Ry.—Application is being made to the Dominion Parliament for power to increase the capital from \$10,000,000 to \$12,000,000.

The directors finally approved of the plans for the new union station in Toronto, April 6, and application was made for the approval of the Board of Railway Commissioners, at the sittings held in Toronto, April 24. It is said that tenders will be called for at once for the buildings. J. R. W. Ambrose is Chief Engineer. (April, pg. 166.)

Winnipeg.—The railway which is about to be built by the Greater Winnipeg Water District, will start from where the aqueduct will cross the Grand Trunk Pacific Ry. east of the Red River, and will extend to Indian Bay on Shoal Lake, a part of the Lake of the Woods, 85 miles. The first 16 miles will be built across the prairie on a location about six miles from the G. T. P. Ry. The rest of the country is largely rock and muskeg, but is not heavy. The grade for the entire 85 miles will not exceed 300 ft. The right of way which is being provided for railway and aqueduct, runs from 250 to 300 ft. wide, and is being cleared. Ties and other lumber for the work are being provided either from the right of way or from the adjoining territory. The construction of the railway is being pushed ahead rapidly, as it is desired to have it practically completed this year. (April, pg. 167.)

Railway Lands Patented.—Letters patent were issued during February, in respect of Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acre.
Calgary and Edmonton Ry.	2,874.95
Canadian Northern Alberta Ry.	4.01
Canadian Northern Ry.	693.495
Canadian Pacific Ry.	340.544
Manitoba Southwestern Colonization Ry.	23.69
Qu'Appelle, Long Lake and Saskatchewan Rd. and Steamboat Co.	1,758.00
Total	5,694.289

G. T. R. Apprentices' Annual Dinner. The second annual dinner of the apprentices of the Motive Power Department was held at the Windsor Hotel, Montreal, Apr. 9. W. D. Robb, Superintendent of Motive Power, occupied the chair, and speeches were made by W. McNab, Principal Assistant Engineer, A. A. Maver, Master Mechanic, Montreal, and R. Patterson, Master Mechanic, Stratford, Ont.

The British Columbia Minister of Railways has ordered that the regulations set forth in the Dominion Board of Railway Commissioners' general order 102 with respect to railway safety appliances standards, shall be adopted by the B. C. Department of Railways in respect of all railways operated under special acts of the B. C. Legislature, and incorporated under the Railways Act.

Railway Route Maps Approved.—The acting Minister of Railways approved of the following route maps, Apr. 1.—Calgary and Fernie Ry.—from Fernie to Kananaskis Pass, about 83 miles; and Pointe aux Trembles Terminal Ry.—from Montreal Harbor Commissioners' boundary, Pointe aux Trembles Parish, to Canada Cement Co.'s mill, about 1.5 miles.

G. T. R. Coal Rates. The Interstate Commerce Commission has suspended from May 1, to July 30, the G. T. R. tariff increasing rates on coal in carloads from interstate points to certain points on the Chicago and North Western Ry., in the Chicago switching district.

The Death of Sir William Whyte.

The death of Sir William Whyte, which occurred at the Hotel Del Coronado, San Diego, California, April 14, was a great shock even to his intimate friends, who though they knew he was ill, had no apprehension of a fatal result. The public manifestation of regret, not only in the vast territory between Lake Superior and the Pacific Coast, which owes so much of its development to his foresight and great ability, but throughout Canada, is a remarkable tribute to the character of the man, who is referred to by the Manitoba Free Press as "the most distinguished private citizen of Western Canada." The writer of this article, whose intimate acquaintance with Western Canada dates back to 1879, has never before witnessed such widespread feeling of sorrow and has no hesitation in saying that no death since the inception of that vast territory has been so widely regretted. Flags were half masted through the whole territory from Port Arthur to Vancouver and the entire press bore tribute to the great loss sustained.

William Whyte was born at Charleston, Fifeshire, Scotland, Sept. 15, 1843. He commenced his railway career with the West of Fife Ry., May, 1862, and after about two years service, came to Canada, July, 1863, after which his record was as follows:—To Apr., 1864, brakeman, G.T.R., Cobourg, Ont.; Apr., 1864 to 1866, freight clerk, G.T.R., Cobourg, Ont.; 1866, freight clerk, G.T.R., Toronto; 1866 to 1867, foreman, Freight Department, G.T.R., Toronto; 1867 to 1868, yardmaster, G.T.R., Toronto; 1868 to 1870, conductor, G.T.R.; 1870, night station master, G.T.R., Toronto; 1870 to 1874, station agent, G.T.R., Stratford, Ont.; 1874 to 1880, station master and Freight and Passenger Agent, G.T.R., London, Ont.; 1880, Freight Agent, G.T.R., Toronto; 1880 to Apr., 1883, Division Superintendent, G.T.R., Toronto; Apr. to Oct., 1883, General Superintendent, Credit Valley Ry., Toronto; Oct., 1883, to May, 1884, General Superintendent, Ontario and Quebec Ry., which included the Credit Valley Ry., and the Toronto, Grey and Bruce Ry., Toronto; May 1, 1884, to May 1, 1885, General Superintendent, Ontario Division, C.P.R., embracing all lines in Ontario west of Smith's Falls Jct., Ont.; May 1, 1885, to Oct. 1, 1886, General Superintendent, Eastern and Ontario Divisions, C.P.R. He went to Winnipeg in October, 1886, as General Superintendent of the then Western Division, in charge of all lines between Lake Superior and British Columbia's eastern boundary. On May 3, 1897, he was made Manager of all lines west of Fort William to the Pacific Coast, and in 1901 was appointed Assistant to the President. In Dec., 1903 came the crowning point in his career, when he was appointed Second Vice President, in general charge of the maintenance and operation of the Western Lines, and, under the President's direction, of the administration of the company's affairs in the territory between Lake Superior and the Pacific Coast. Never has any other railway appointment in Canada been so popularly acclaimed. The people and the press throughout the west unanimously gave expression to the general feeling of satisfaction and a new era of relations between the company and the western public was inaugurated. In

June, 1910, when the numerical designations of the Vice Presidents were abolished he became Vice President, retaining the same jurisdiction as before. In June, 1911, he was knighted, and in Sept., 1911 he retired from active service and was elected a director of the company.

He was married in Toronto in 1871 to Miss Jane Scott, who survives him, as well as his only son William, and four daughters, Mrs. J. F. Fisher, Winnipeg; Mrs. C. Meek, Vancouver; Mrs. J. A. Hunter, Minneapolis, and Miss Gladys Whyte.

Under ordinary circumstances Sir William would have retired from the C.P.R. service in 1908, when he attained 65 years of age, but as Sir Thomas Shaughnessy stated in announcing the retirement at a dinner in Winnipeg in Sept., 1911, he personally solicited Sir William to remain in

Sir William Whyte.

office for a few years longer. In the years that elapsed prior to Sir William's retirement in 1911 when he was elected a director of the company, the wisdom of the C.P.R. directorate in placing him at the head of its western affairs became plainer day by day. He administered its great interests with conspicuous ability and unwearying devotion, and while maintaining the company's position carried the public with him, by his absolute candor and fairness. The public confidence in his integrity was a most valuable asset to the company and enabled him to carry through many negotiations in a manner that very few indeed, if any other, men could have done. A notable instance of how he could maintain the company's position without alienating public opinion occurred in the eighties, when the Northern Pacific Rd., backed by the Manitoba Government, the Winnipeg Board of Trade, and in fact the citizens generally, attempted to lay a track across the C.P.R. in the Fort Rouge suburb of Winnipeg. Mr. Whyte

having been apprised of what was to be attempted, was on the spot with a small army of men, before the N.P.R. forces arrived. He effectually prevented the laying of the crossing, for which there was no legal authority, but so judiciously handled the delicate situation that he made no enemies for himself or the company. The historic name, Fort Whyte, will ever be a reminder of this memorable incident, when most serious trouble might easily have occurred had the protection of the company's interests been in the hands of a less diplomatic man.

As was remarked in Canadian Railway and Marine World in Oct., 1911, his withdrawal from active railway work was an event of really national importance, and the announcement was received with deep regret, not only throughout the vast territory of empire extent west of Lake Superior, where he had general charge of all the company's great interests, but in every part of Canada, his name being a household word from the Atlantic to the Pacific. Among the other officers and the employees of the Western Lines there was the deepest regret at the severance of the tie with their chief of so many years. Absolutely fair in every respect, Sir William was looked on as the friend of everyone on the pay roll and everyone knew that he could always get a patient and fair hearing and that he would not be the victim of any injustice or hasty action.

The history of Sir William's administration of the vast territory under his jurisdiction is practically the history of its general development and expansion. From a comparatively small mileage, he saw the company's lines west of Lake Superior grow many times over, until the Western Lines alone have to-day more mileage than many of the more important systems on this continent. Most of the mileage was constructed on his initiative and recommendation, in which and many other respects he took a foremost position as a great empire builder.

Last year Sir William intended going on a trip round the world, but was prevented by indisposition from which he apparently recovered. When he left Winnipeg early in February he was suffering from pyelitis, but it was believed that the change to California would restore him to health. He enjoyed golf and motoring there to some extent, but complications set in and at times he suffered acutely, but he was apparently getting better and up to a couple of days before his death wrote letters to some of his intimate friends, in fact the attending physician stated that on the morning of his death there was nothing to indicate that it was so near, though he had had no hope for some weeks that Sir William would recover. Lady Whyte and his youngest daughter, Gladys, were with him when he died. His only son, William, left Winnipeg immediately, on being advised of his father's death, and Sir William's private Secretary, P. J. Loyce, also went to meet the body, which was taken to Winnipeg via Omaha in a special car.

The funeral at Winnipeg on April 22 was the occasion of a great demonstration of the public's grief. The body lay in state in Knox church, which was visited by vast throngs. A private service was held at the house and a public one at Knox church, the coffin being carried by representatives of the locomotive drivers, locomotive firemen, conductors, trainmen, machinists, mainten-

ance of way men from the C.P.R., and inspectors and conductors from the Winnipeg Electric Ry. The pallbearers were Sir Daniel McMillan, Geo. Bury, N. G. Leslie, A. M. Nanton, J. A. M. Aikins, J. T. Gordon, D. K. Elliott, G. R. Crowe, K. McKenzie, James Fisher. Business in Winnipeg was practically suspended during the funeral, and the streets were lined with parallel rows of people who evidently felt that they had lost a friend. From 3.15 to 3.18 p.m. all trains on the C.P.R.'s western lines and the Winnipeg Electric Ry.'s cars were stopped. Sir Thomas Shaughnessy, President, C.P.R., went from Montreal, and there were a large number of the western cities from Fort William to the coast officially represented by their mayors. Railway officials from the C.P.R. lines and also from the other roads were present in scores, while among the mourners were hundreds of the railroad rank and file.

Winnipeg Press Comments.

Following are extracts from the three Winnipeg daily papers, which are indicative of the expressions of the western press generally:

Winnipeg Free Press:—"It is a simple matter of fact that everyone who came in contact with him—and during the past quarter of a century and more there has been no man in Western Canada with whom a greater number came in contact—regarded him with respect, which was of a quite remarkable quality in its blending of confidence, and admiration and strong personal liking. His was a personality that attracted liking and confidence. He was a big man, in every sense of the word—a man of big bodily frame, of big mind and of big heart. No man has ever been better known throughout the West, and better liked. * * * He will live long in the remembrance of the West as a true man, behind whose dignity of manner there was a genuine, kindly spirit that put all sorts and conditions of people in the mood of frank, straightforward speech. His growing power as a man of affairs in the world never altered in the least the simplicity of his nature or of his relations with his friends or his feeling about the values of life."

Winnipeg Telegram:—"In the philosophy of worth-while people Sir William Whyte attained a high position. In the world of finance his striking personality was a factor and his busy life led him into many channels which make for the progress of the country. He acquired commanding prominence as the directing genius of the great railway with which he was connected west of the lakes. * * * There can be no greater tribute to his fine qualities than the sincere respect with which he has so long been regarded among the humblest of the men with whom he was so long associated in his life-work. A man of singularly pleasing address, a large grasp of affairs, his energetic career embodies, in the best sense, the spirit of the west. * * * He will be mourned by thousands as one of those strong characters whose charming personality and considerate disposition invited general confidence."

Winnipeg Tribune:—"It falls to the lot of very few men, and especially men of prominence, to enjoy in such a universal degree the sincere respect and affection of the public as was possessed by Sir William Whyte, whose somewhat untimely end has created such a shock to the community and left such a void in its social and business life. The Tribune, which has known Sir William intimately for nearly 35 years, can truthfully say that it knows of not one single enemy he has ever made, and it has never in that long stretch of years heard an unkind or unfriendly word said about the man, who, in connection with the active railway life of the country, enjoyed such a

commanding position and participated so largely in the development and upbuilding of the Canadian West."

A Letter from Sir William Whyte.

When Sir William retired from active service, in 1911, the Managing Director of Canadian Railway and Marine World wrote him expressing thanks for courtesies and kindnesses extending over a long period of years, and received in reply a letter from Sir William, which said in part:—

"I assure you that it has always been a pleasure to me to be able to assist you in building up a magazine that is now a standard of excellence in its get up, and correctness in the valuable information it disseminates. I have always valued your friendship since I first had the pleasure of becoming acquainted with you and I can truthfully say that I have felt your friendship to be genuine. It is my earnest desire that nothing will ever intervene to lessen or mar that friendship. It is also my sincere wish that the Railway and Marine World may grow in influence and interest as the years go by and that it will not only be a source of pride to you, its creator, but that it will also be a source of profit."

"A word about my retirement. For some time past I have felt that the duties of my position were becoming more and more strenuous each year; that if any serious illness befell me my recuperative powers could not be as good as they were 20 or 25 years ago. Besides, I believe that when a man reaches my time of life, filling some high position, that in order to give the officers associated with him in the business some opportunity for advancement, he should retire. I also feel that if I were to enjoy the balance of my days I should not wait until I had to retire through ill health. I will no doubt feel a little lonesome sometimes, almost like a clergyman in politics, but I have a number of interests in Winnipeg that will give me a reasonable amount to do."

Ownership of Canadian Northern Terminals, etc.—In the House of Commons recently the acting Minister of Railways stated, in answer to questions by the Hon. H. R. Emmerson, ex-Minister of Railways, that the C.N.R. terminals at Quebec, Montreal, Port Arthur, Winnipeg, Moose Jaw and other points except Port Mann and Vancouver, are owned by the Canadian Northern Ry. System Terminals, Ltd., the capital stock of which terminal company is owned by the Canadian Northern Ry. Company. The terminals at Vancouver and Port Mann are owned by the Canadian Northern Pacific Ry. Co., the stock of which company is all owned by the Canadian Northern Ry. Co. The title of the right of way through Carleton county, Ont., is owned by the Canadian Northern Ontario Ry. Co.,

Canadian Ticket Agents Association.—As stated in our April issue, the Chicago and Northwestern, Union Pacific and San Pedro, Los Angeles and Salt Lake Lines recently tendered the C.T.A.A. a complimentary trip to Denver, Salt Lake City, Los Angeles and San Francisco for October, and the same was accepted, conditional on the C.P.R. and G.T.R. providing free transportation from Canadian points to Chicago and return. Opposition to the acceptance of the invitation appears to have developed in the C.P.R. and G.T.R. passenger departments, and a conference was held recently between the Passenger Traffic Managers of those two lines and the Association's executive. No official statement as to what took place is available, but it is said the difficulty in the way has not been removed and that the trip may have to be abandoned in consequence, in which case Halifax, N.S., may be selected for the annual meeting.

Canadian Northern Railway Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1912-13, from July 1, 1913:—

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$1,928,800	\$1,414,500	\$514,300	\$19,700
Aug.	1,824,800	1,416,200	408,600	37,800
Sept.	1,994,000	1,470,000	524,000	101,400
Oct.	2,687,100	1,683,000	1,004,100	208,800
Nov.	2,673,300	1,708,500	964,800	87,000
Dec.	2,256,000	1,632,000	624,000	43,000
Jan.	1,579,000	1,218,000	361,000	82,700
Feb.	1,324,600	1,086,000	238,600	820,900
	\$16,260,400	\$11,628,200	\$4,632,200	\$640,500
Incr.	\$1,318,400	\$467,900	\$850,500

x Decrease.

Approximate earnings for March, \$1,533,300 against \$1,685,900 for March, 1913.

Canadian Pacific Railway, Earnings, Etc.

Gross earnings, working expenses, net earnings, increases, or decreases, compared with those for 1912-12, from July 1, 1913:—

	Gross Earnings	Expenses	Net Earnings	Increase or Decrease
July	\$11,993,062.27	\$7,876,260.09	\$4,116,703.18	x\$331,383.72
Aug.	11,434,450.88	7,473,320.64	3,961,130.24	x\$756,786.42
Sept.	12,167,082.17	7,741,503.48	4,425,578.69	105,274.84

Nov.	13,407,015.31	8,518,760.25	4,888,255.06	630,107.02
Dec.	11,814,325.67	7,557,503.96	4,256,821.71	x168,897.80
Jan.	7,916,216.25	6,916,042.19	1,000,174.06	x\$662,104.72
Feb.	7,504,172.73	6,122,596.27	1,381,576.46	1,048,492.88

\$90,706,551.01 \$61,113,363.82 \$29,683,187.19 \$1,630,408.08
Decr. \$2,156,933.30 \$26,525.22 \$1,630,408.08

x Decrease.

Approximate earnings for March, \$9,298,000, against \$10,965,000 for March, 1913.

Grand Trunk Railway Earnings, Etc.

The following figures show the earnings of the G.T.R., C.A.R., G.T.W.R., and D.G.H. & M.R. from Jan. 1 to Feb. 28, and increases, or decreases, from the figures for same period, 1913:—

	1914	1913	Increase	Decrease
G.T.R.	\$9,021,363	\$9,704,824	\$683,461
C.A.R.	517,26	546,351	29,025
G.T.W.R.	1,654,884	1,716,621	61,737
D.G.H. & M.R.	549,088	531,147	\$17,941

Totals..... \$11,742,661 \$12,498,948

Approximate earnings for March, \$1,133,671, against \$4,678,651 for March, 1913.

Grand Trunk Pacific Railway Earnings.

The approximate earnings of the Prairie Section and Lake Superior Branch, 1,104 miles, for March, were \$461,997 against \$415,377 in March, 1913. The aggregate earnings for three months ended Mar. 31, were \$1,143,807 against \$1,167,305 for same period 1913.

Suburban Steam Railway for Toronto.

In an address on city planning at the city development exhibition in Toronto, April 11, J. P. Hynes, advocated the building of a line running east and west from the Yonge St. crossing to a point 25 miles distant on each side from the heart of the city. There would be a grand central station built at Yonge St. and a number of stations at various distances along the line. The road would have direct connection with all railways and would open up a large amount of good residential districts which have now practically no transportation facilities. The road would also bring the present residents nearer to the city through rapid transportation. The road would also have separate tracks for local and express service, and would be in a position to handle freight. Eventually it could be linked up with the suggested railway to be operated by the Harbor Commission, and in this way would belt the city.

The Railway Signal Association will hold its summer meeting at New York, May 27 and 28.

Mainly About Transportation People.

C. N. MONSARRAT, M. Can. Soc. C.E., Chairman, Quebec Bridge Commission, and Mrs. Monsarrat, are visiting Europe.

HUGH SUTHERLAND, Executive Agent, Canadian Northern Ry., Winnipeg, and Mrs. Sutherland, are in Europe.

N. J. HOLDEN, President of the Holden Co., railway supplies, etc., Montreal, who has been in Europe with Mrs. Holden, for some months, is expected back in May.

J. E. LONG, Safety Engineer, Canadian Government Railways, lectured on the Safety First movement at Moncton, N.B., Apr. 7.

G. F. BAER, President Philadelphia and Reading Ry. was stricken in the street at Philadelphia, April 25, with what physicians believed to be a stroke of paralysis. His death was announced shortly after.

W. WAINWRIGHT, Vice President, G.T.R. and G.T. Pacific Ry., Montreal, was absent from his office for several days early in April owing to a severe cold.

D. POTTINGER, I.S.O., formerly Assistant Chairman, Canadian Government Railways Managing Board, has been appointed an Esquire of the Order of the Hospital of St. John of Jerusalem.

F. P. BRADY, General Superintendent, Canadian Government Railways, who was in the Southern States for a few weeks, has returned to Moncton, N.B., and resumed his duties.

J. S. DENNIS, Assistant to the President, C.P.R., Calgary, Alta., addressed the members of the Lethbridge Board of Trade recently, chiefly on the duties of boards of trade in general.

D. C. COLEMAN, General Superintendent, Alberta Division, C.P.R., Calgary, addressed a meeting of the chief clerks of the division there recently, on the problems affecting chief clerks.

C. E. McPHERSON, Assistant Passenger Traffic Manager, C.P.R., Winnipeg, visited Los Angeles, Cal., recently, to attend the Western Transcontinental Passenger Agents Association's meeting.

J. E. McLEOD, Superintendent, Toronto District, Railway Mail Service, Post Office Department, has been granted three months leave of absence, at the expiry of which he will be superannuated.

R. COLCLOUGH, District Superintendent, Intercolonial Ry., Levis, Que., who acted as General Superintendent at Moncton, N. B., during the absence of F. P. Brady, has resumed his own duties.

F. W. COWIE, M. Can. Soc. C.E., Chief Engineer, Montreal Harbor Commissioners, has been awarded the Telford gold medal by the British Institute of Civil Engineers, for his paper on transportation problems in Canada and the Montreal harbor.

F. DANE, one of the Commissioners operating the Timiskaming and Northern Ontario Ry., on behalf of the Ontario Government, has resigned on his appointment as Trade Commissioner at Glasgow, Scotland, for the Dominion Government.

P. A. CRYSLER, who recently resigned the position of Assistant Master Car Builder, Eastern Lines, C. P. R., Montreal, has entered the service of The Holden Co., Ltd., dealers in railway supplies, etc., Montreal.

T. E. DRINKWATER, who had been in C. P.R. service for 25 years in Montreal and Fort William, Ont., in which latter place he spent 20 years, and who died there, Apr. 19, was a brother of the late C. Drinkwater, at one time Secretary, C.P.R. Co., and Assistant to the President.

F. SANDY, station agent, G.T.R., Peterboro, Ont., was, on Apr. 13, presented with a Morris chair, a silver tea service and club bag, by a number of local business men, and with a writing desk by the local employees, on leaving for Lindsay, Ont., where he has been transferred in a similar position.

A. M. NANTON, who was formerly Managing Director Alberta Ry. and Irrigation Co., and who is intimately connected with various transportation interests, in Western Canada, as well as being a Governor of the Hudson's Bay Co., returned to Winnipeg, Apr. 13, after a prolonged absence in Europe.

J. E. ROBERTS, heretofore Superintendent, Quebec, Montreal and Southern Ry., and Napierville Jct. Ry., Sorel, Que., has been appointed General Superintendent, Greenwich and Johnsonville Ry., Greenwich, N.Y., vice T. J. Lynch. The companies named are subsidiaries of the Delaware and Hudson Co.

L. C. Fritch.

Assistant to the President, Canadian Northern Railway.

C. S. MELLEN, formerly President New York, New Haven & Hartford Rd., who has been under indictment for manslaughter in connection with a wreck on that road, over a year ago, has been discharged from custody, on the ground that there is no evidence to connect him directly with the cause of the wreck, nor of gross negligence.

ALBERT HENRY SWEETMAN, whose appointment as Car Foreman, Canadian Northern Ry., North Battleford, Sask., was announced in our last issue, was born at Kensington, Eng., Feb. 25, 1883, and entered C.N.R. service in Mar., 1905, since when he has been, to Aug., 1910, in car shop, Winnipeg; Nov., 1910, to Feb., 1914, Assistant Foreman Repair Track, Winnipeg.

J. E. LONG, who has been employed by the Canadian Government Railways in connection with the safety first movement, was originally employed, the acting Minister of Railways told the House of Commons recently, in a similar capacity on the New

York Central and Hudson River Rd., and is in receipt of a salary of \$175 a month from the Government.

W. G. ROSS, Chairman, Montreal Harbor Commissioners, who, in company with F. W. COWIE, Chief Engineer, has been touring the chief harbors in Europe, with the view of obtaining information which might be of use in the developing of the harbor at Montreal, left London, Eng., recently for Nice, France, to meet Mrs. Ross. The party hopes to return to Canada during May.

JOSEPH GRAHAM, who has been appointed Assistant Roadmaster, C. P. R., North Bend, B. C., was born in Ontario, May 23, 1870, and entered C. P. R. service, Mar. 24, 1898, since when he has been, to Mar. 18, 1899, track laborer, Ashcroft, B. C.; Mar. 18, 1899 to Sept. 22, 1913, section foreman, Ashcroft and Kamloops, B. C.; Sept. 22, 1913, to Mar. 12, 1914, extra gang foreman, Kamloops and Tranquille, B. C.

CY WARMAN, who died at Chicago, Ill., Apr. 7, following a paralytic stroke, had been connected with the literary department of the General Advertising Agent's office, G.T.R., for several years. He achieved considerable success as a magazine writer, and in 1910 was President of the American Press Humorists' Association. In his early days he had worked as a locomotive wiper, fireman and driver in Colorado.

A. W. JONES, who has been appointed Commercial Agent, Chicago, Milwaukee and St. Paul Ry., Toronto, was born at Montreal, July 4, 1889, and entered railway service in Aug., 1903, since when he has been, to Nov., 1908, clerk, General Passenger Department, C.P.R., Montreal; Nov., 1908, to Apr., 1911, Soliciting Agent, Great Northern Ry., Montreal; Apr., 1911, to Feb., 1914, Travelling Freight and Passenger Agent, Chicago, Milwaukee and St. Paul Ry., Toronto.

JAMES J. NELLIGAN, whose appointment as Division Freight Agent, Canada Steamship Lines, Montreal, was announced in our last issue, was born at Hamilton, Ont., Jan. 20, 1876, and entered transportation service in 1892, since when he was, to 1904, in various positions, G.T.R. at Hamilton, St. Catharines, Ingersoll, Ont., and Montreal; 1904 to 1907, Travelling Freight Agent, Northern Navigation Co., Montreal; 1907 to March, 1914, General Agent, Canadian Lake Line, Montreal.

JOHN A. TAIT, District Freight Agent, Canadian Northern Ry., Regina, Sask., who resigned from railway service recently to enter the contractors' and builders' supply business there, was, from Oct. 1907, to Dec. 1908, clerk in the general office, C.N.R., Winnipeg; Jan. to Sept., 1909, City Freight Agent, Winnipeg; Oct. 1909, to Apr., 1910, Travelling Freight Agent, Winnipeg; May, 1910, to May, 1911, City Freight Agent, Regina, Sask.; June, 1911, to Apr., 1914, District Freight Agent, Regina, Sask.

LOUIS C. JACK, who has been appointed District Freight Agent, C. P. R., Kansas City, Mo., was born in California, Nov. 18, 1876, and entered railway service in 1896, since when he has been to Dec. 1900, clerk, local office, Chicago, Rock Island and Pacific Ry., Kansas City, Mo.; Dec. 1900 to June 1901, rate clerk, Chicago Great Western Ry., Kansas City, Mo.; June 1901 to Oct. 1905, chief rate clerk, general office, Union Pacific Rd., Kansas City, Mo.; Oct. 1905 to Apr. 1, 1914, Agent, C. P. R. Kansas City, Mo.

R. F. MACFARLANE, for several years in charge of the passenger business of the Dominion Line, the White Star-Dominion Line, and latterly of the White Star-Dominion, Canada and Austra-American lines, in conjunction with P. V. G. Mitchell, has re-

tired from active service, and taken up residence on his fruit farm at Winona, Ont. He entered the Dominion Line service in 1874, when it was known as the Mississippi and Dominion Steamship Co., with vessels running between Liverpool and New Orleans, and Liverpool and Montreal.

HAROLD T. MALCOLMSON, who has been appointed Superintendent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was born at Hamilton, May 22, 1877, and entered railway service in March, 1899, since when he has been, to Sept., 1899, stenographer to Superintendent, G. T. R., Toronto and Allandale, Ont.; Sept. 1899, to June, 1903, stenographer to General Superintendent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont.; June, 1903, to Mar., 1912, chief clerk to General Superintendent, and General Manager, same road; Mar. 25, 1912, to Jan. 14, 1914, Car Accountant, same road; Jan. 14, to Mar. 31, 1914, Superintendent of Car Service, same road.

W. J. HUNTER, Commercial Agent, G. T. R., and Division Freight Agent, G. T. Pacific Ry., Winnipeg, died there, Apr. 8, following an apoplectic stroke. He was born at Toronto, Jan. 10, 1864, and had been in G.T.R. service for about 30 years. He moved to Winnipeg, Dec. 31, 1903, on his appointment as Commercial Agent, G.T.R., there, and in 1907, was also appointed Division Freight Agent, G. T. P. R. Prior to settling in Winnipeg, he was, at various times Soliciting Freight Agent, Detroit, Mich., Travelling Freight Agent, Battle Creek, Mich., and Commercial Agent at Buffalo and Pittsburgh, consecutively. The funeral took place at Detroit.

JAMES T. GARDNER, who carried on an extensive railway equipment business in Chicago, and was well known in Canada, died suddenly at his home, Apr. 9. He began his career in railway service as a telegraph operator with the Pennsylvania lines in 1876. Two years later he was made Superintendent of the Buffalo, New York, and Philadelphia Ry., which position he relinquished in 1881 to become General Superintendent of the Buffalo, Rochester, and Pittsburgh line. From 1887 to 1890 he was General Manager of the Cincinnati, Saginaw, and Mackinac Rd., and the following year he went into the railroad equipment business.

B. W. FOLGER, who died at Toronto recently, was born at Cape Vincent in 1833, and came to Canada about 50 years ago, settling in Kingston, where he was one of the founders of the firm of Folger Bros., who at one time controlled the lighting and street railway systems in Kingston, and were also the principal stockholders in the St. Lawrence River Navigation Co., and the Thousand Islands Steamboat Co., now owned by Canada Steamship Lines, Ltd. He was, from 1876 to 1895, Superintendent, Kingston and Pembroke Ry., and was subsequently General Manager. He was one of the founders of the Canadian Pacific Express Co., in 1880, and of the Donnelly Wrecking and Salvage Co., in 1890.

F. G. ADAMS, who has been appointed Commercial Agent, G. T. R., and Division Freight Agent, G. T. Pacific Ry., Winnipeg, was born at St. John's, Nfld., Apr. 6, 1878, and entered railway service Sept. 4, 1893, since when he has been, to Dec. 31, 1902, clerk, general offices, G. T. R., Montreal; Jan. 1, 1903, to Mar. 31, 1907, Contracting Freight Agent and Travelling Freight Agent, G. T. R., Montreal; Apr. 1, 1907, to Aug. 31, 1908, Contracting Freight Agent, G. T. R., Winnipeg; Sept. 1, 1908, to July 31, 1911, Travelling Freight Agent, G. T. R., Winnipeg; Aug. 1, 1911, to July 14, 1913, Commercial Agent, G. T. Pacific Ry., Regina,

Sask.; July 14, 1913, to Apr. 16, 1914, Division Freight Agent, G. T. Pacific Ry., Edmonton, Alta.

ROBERT BRUCE McINTOSH, who has been appointed chief clerk, General Freight Office, Canadian Northern Ry., Winnipeg, was born at Waterville, Que., July 5, 1883, and entered railway service, Sept. 10, 1904, since when he has been, to Sept. 1, 1905, clerk, General Purchasing Agent, C.P.R., Montreal; Sept. 1, 1905, to Aug. 31, 1906, clerk, Purchasing Department, Canada Car Co., Montreal; Aug. 31, 1906, to Oct. 19, 1907, in Freight Department, Canadian Northern Ry., Edmonton, Alta.; Oct. 19, 1907, to Sept. 10, 1909, in General Freight Office, G.T.R., Montreal; Sept. 10, 1909, to Mar. 30, 1910, in General Freight Office, C.N.R., Winnipeg; Mar. 30, 1910, to Nov. 18, 1911, in private business; Nov. 18, 1911, to Mar. 15, 1912, in General Freight Office, C.N.R., Winnipeg; Mar. 15, 1912, to Jan. 10, 1914, chief clerk, District Freight Office, C.N.R., Saskatoon, Sask.

HENRY BEATTY, who died at Toronto, Apr. 10, was born at Cootehill, Ireland, May

R. Preston,
Assistant Superintendent of Motive Power,
Western Lines, Canadian Pacific Ry.

1, 1834, and came to Canada with his parents, in 1843. In 1870, in conjunction with some relatives, he started a steamship business at Sarnia, Ont., and operated vessels to the upper lakes, under the name of J. and H. Beatty and Co. In 1877 the name was changed to Northwest Transportation Co., and he continued to manage the company until 1882. On the inauguration of the C. P. R. Upper Lakes Service he was appointed in charge, and remained in that capacity until 1892, when he retired from active service. He retained an intimate connection with the C. P. R. Steamship Department up to his death, and also acted as representative of the British Marine Underwriters. Of his sons, Dr. H. A. Beatty is Chief Surgeon, and E. W. Beatty is General Counsel, C. P. R.

B. R. MARSALES, who has been appointed District Freight Agent, Canadian Northern Ry., Regina, Sask., was born at Guelph, Ont., Apr. 13, 1887, and entered railway service, July 25, 1901, since when he has

been, to Aug., 1902, clerk, Hamilton, Grimsby and Beamsville Electric Ry., Hamilton, Ont.; Aug., 1902, to Mar., 1905, billing clerk, Michigan Central Rd., Suspension Bridge, N.Y.; Mar., 1905, to Mar., 1906, rate clerk, Central Railway Clearing House, Buffalo, N.Y.; Mar., 1906, to Apr., 1910, billing clerk, New York Central and Hudson River Rd., Buffalo, N.Y.; Apr., 1910, to Feb., 1911, in private business; Feb. 5, to May 1, 1911, in general office, Canadian Northern Ry., Winnipeg; May 1 to July 15, 1911, City Freight Agent, same road, Winnipeg; July 15, 1911, to June 1, 1912, City Freight Agent, same road, Edmonton, Alta.; Jan. 1, 1912, to Apr. 1, 1914, Contracting Freight Agent, same road, Brandon, Man.

ALBERT E. LOCK, who has been appointed Car Accountant, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont., was born at Albany, N. Y., July 14, 1879, and entered railway service, Dec. 1, 1896, since when he has been, to Sept. 1, 1897, telegraph operator and relief agent at various points, Lehigh Valley Rd.; Sept. 1, 1897, to July 1, 1902, tower man, telegraph operator, relief agent, ticket clerk, assistant agent, etc., Mohawk and Adirondack Divisions, New York Central and Hudson River Rd.; July 1, 1902, to Aug. 15, 1903, City Ticket Agent, same road, Lake Placid, N. Y.; Aug. 15, 1903, to Sept. 15, 1904, Travelling Passenger Agent, New York Central Lines, Saranac Lake, N. Y.; Sept. 15, 1904, to Nov. 1, 1913, Travelling Passenger Agent, New York Central Lines, Montreal; Nov. 1, 1913, to Apr. 1, 1914, Commercial Agent, Toronto, Hamilton and Buffalo Ry., Hamilton, Ont.

ROBERT PRESTON, whose appointment as Assistant Superintendent of Motive Power, Western Lines, C.P.R., Winnipeg, was announced in a recent issue, was born at Toronto, July 28, 1863, and entered railway service in 1877, since when he has been, to 1878, machinist apprentice, G.T.R., Toronto; 1878 to 1882, machinist apprentice, Toronto, Grey and Bruce Ry., Toronto; 1882 to 1884, machinist, C.P.R., Winnipeg, and Toronto, Grey and Bruce Ry., Toronto; 1884 to 1887, machinist, C.P.R., Toronto; 1887 to 1890, Locomotive Foreman, C.P.R., Havelock, Ont.; 1890 to 1894, Locomotive Foreman, C.P.R., London, Ont.; 1894 to 1897, Locomotive Foreman, C.P.R., White Falls, Ont.; 1897 to 1898, Locomotive Foreman, C.P.R., Montreal; 1898 to 1901, Locomotive Foreman, C.P.R., Toronto; 1901 to 1903, Master Mechanic, C.P.R., Lake Superior Division, North Bay, Ont.; 1903 to 1909, Master Mechanic, Ontario Division, Toronto; 1909 to Feb., 1914, Master Mechanic, Manitoba Division, Winnipeg.

L. C. FRITCH, Assistant to the President, Canadian Northern Ry., Toronto, of whom some biographical particulars were given in our last issue, and whose portrait appears in this issue, is a member of the following engineering and allied associations:—American Society of Civil Engineers, American Institute of Electrical Engineers, American Railway Engineering Association, American Association for the Advancement of Science, Western Society of Engineers and the Geographical Society. He was President, American Railway Engineering Association in 1910, a director from 1905 to 1913, and a member of the rail committee in 1913; a member of the railway committee of the American Institute of Electrical Engineers, from 1910 to 1913; chairman of the committee on engineering of the American Railway Association, in 1913; a member of the committee on electrical working, of the American Railway Association, from 1910 to 1913, and a member of the committee on electricity of the American Railway Engineering Association from 1910 to 1913.

Grand Trunk Pacific Railway Construction.

We have been favored by the Chief Engineer, B. B. Kelliher, with the following statement of work done during 1913. Construction on the main line was in progress, also on eight branches in Manitoba, Saskatchewan and Alberta. In the case of the main line construction was confined to British Columbia, being worked both westerly from the eastern boundary of the province, and easterly from Prince Rupert, the Pacific terminus of the railway. Approximately 275 miles of grading and 297.6 miles of tracklaying were done on the main line during the year, and on the branches a total of 80 miles of grading and 267 miles of tracklaying, respectively, was done, so that during the year 355 miles of grading and 564.6 miles of tracklaying were done on the entire system. This is exclusive of second track and sidings. Below is a brief description of each portion of the work:—

Main Line.—At the end of 1913 grade was completed to mile 1270 west of Winnipeg, track being laid to within five miles of that point. The substructures for the large steel structures of the third crossing at mile 1233, and the fourth crossing at mile 1278, of the Fraser River, were being built. Grading was fully under way and well advanced to completion all along the line westerly until the end of steel was reached at mile 323.9 east of Prince Rupert, or mile 1422 west of Winnipeg. Railway in operation from Prince Rupert, easterly to Bulkley summit, mile 360. Grading in Prince Rupert terminals well advanced.

Harte-Brandon Branch.—Length 25 miles. 21.85 miles of grading completed, but no track laid. Erection of Assiniboine River bridge substructure was in progress at end of 1913.

Regina Boundary Branch.—Length 155 miles. Completed and in operation.

Talmage to Weyburn Branch.—Length 15 miles. Grading completed. No track laid.

Moose Jaw North West Branch.—Length 67.86 miles. Grading and tracklaying completed to mile 67.

Prince Albert Branch.—Length 111.5 miles. Grading completed throughout. Track laid to mile 87.2, at which point there is a large steel bridge over the South Saskatchewan River, the erection of which had not been commenced up to the end of 1913.

Cutknife Branch.—Length 50 miles. Grade completed throughout. Track laid to mile 33 and should be completed during 1914.

Biggar-Calgary Branch.—Length 105 miles. Completed and in operation.

Calgary Branch.—Length 202 miles. Completed and in operation. Terminal work at Calgary has been commenced.

Speaking of the railway construction in the Dominion, in presenting the Railway Department's report to the House of Commons recently, the acting Minister said the construction of the line from Winnipeg to Prince Rupert, is divided into two sections—the prairie section from Winnipeg to Wolf Creek, and the mountain section from Wolf Creek to Prince Rupert. The first section is 911.9 miles, and is in full operation. There is some work at terminals yet to be completed, and some bridges and culverts to be put in permanent condition. The total amount expended to date upon this section is \$10,427,322.65. The mountain section is 830 miles. From Wolf Creek to Fort George, 363 miles, the road is graded and track laid, with the necessary sidings, and 326 miles have had a good lift of ballast. Some steel bridges have not yet been erected, but the traffic now going into Fort George is being carried over temporary bridges. The concrete substructures for the third and

fourth crossings of the Fraser River have been built. Station buildings have been erected to mileage 219 from Wolf Creek. From Prince Rupert easterly the line is completed and traffic is in operation for 339 miles, of which 100 miles have been fully ballasted, and 170 miles have received a first lift. Station buildings are either erected or are under construction on this mileage. There are 15 steel bridges yet to be erected to replace temporary pile structures. The intervening 128 miles, on which the acting Minister stated 90% of the grading had been completed, and steel was being laid at the date of the reports to him, have since been connected up with the east and west sections, the last spike having been driven by the Vice President, M. Donaldson, April 8. The total expenditure on the line is shown by the following general statement:

Mountain Section.	
Total expenditure, as certified by Government Chief Engineer . . .	\$71,449,962 90
Company Chief Engineer . . .	71,514,398 00
Total payments to company . . .	52,139,534 50
Total payment to company upon guarantee and implementing same . . .	52,139,534 50
Total payment to company on account of special loan . . .	7,000,000 00
	59,139,534 50
Total cost to complete as given by Government Engineer . . .	9,089,000 00
Total cost to complete as given by company engineer . . .	13,700,000 00
Cost per mile, Government Chief Engineer . . .	97,035 00
Cost per mile, company Chief Engineer . . .	102,775 00
Prairie Section.	
Total expenditure . . .	\$40,427,322 65
Total payment to company upon guarantee . . .	\$11,135,482 91
Total payment to company on account special loan . . .	10,500,000 00
	21,635,482 91
Estimated cost at completion . . .	41,335,180 00
Cost per mile . . .	45,180 00

The last mile of track on the main line from Winnipeg to Prince Rupert, was laid in the presence of Vice President and General Manager, M. Donaldson, and other officials, April 8. The party arrived from Winnipeg by special train, and were received at mileage 1,375 west of Winnipeg, and mileage 371 east of Prince Rupert, by officials from the western end of the line, and representatives of the contractors, Foley, Welch and Stewart. There was no special ceremony at the connecting up of the two sections of the line, and the special train immediately afterwards proceeded on its way to Prince Rupert, reaching there, April 9.

The line is 1,744.9 miles long, and is built throughout on a 0.4% gradient against east-bound, and on a 0.5% gradient against west bound traffic, with a maximum curvature of six degrees. The roadbed is 18 ft. wide and 80 lb. steel is used for the tracks. There are tangents on the prairie sections as long as 47 miles. Construction was started in Manitoba in 1905, and at Prince Rupert in 1908, and tracklaying was started Sept., 1906. Following are some of the principal features of the route:—

Elevation at Winnipeg, 767 ft. above sea level. For 160 miles west of Winnipeg line built on prairie level, reaching elevation of 1,650, with maximum grade of 0.5%—26.4 feet to the mile.

Banks of Qu'Appelle River followed for 25 miles.

Height of prairie land at mile 300 from Winnipeg, with elevation 2,225 (Touchwood Hills.)

Line follows prairie level at average ele-

vation of 2,000 from mile 330 to Wolf Creek, mile 915, end of prairie section.

Mountain section commences at mile 915 (Wolf Creek.)

Athabasca River Valley followed for 100 miles, thereafter the Miette River Valley, a tributary of the former, for 17 miles westerly.

Continental divide reached at elevation 3,723. This is Yellowhead Pass, the highest summit on the entire transcontinental system.

Line proceeds from the Pass to the headwaters of the Fraser River, skirting the north shores of Yellowhead and Moose Lakes.

Fraser River Valley is followed and crossed four times between Tete Jaune and Prince George, elevation dropping as course is proceeded westerly from 2,400 to 1,880.

Nechaco River flows into Fraser River at Prince George.

Nechaco River Valley followed for 116 miles between Prince George and Endako, elevation rising from 1,880 to 2,245.

From Endako westerly the line follows Endako River Valley and skirts the north shores of Burns and Decker Lakes, reaching the headwaters of the Bulkley River at Bulkley Summit, elevation 2,366. Bulkley River Valley followed in a northwesterly direction to Hazelton, elevation 985.

At Hazelton the Bulkley River flows into the Skeena River.

From Hazelton to Prince Rupert line follows the banks of the Skeena River, there being a gradual descent in elevation to sea level.

There are 65 large steel bridges on the line having a total length of 5.3 miles. They are all designed to the highest Dominion specifications for heavy traffic. The largest bridges on the prairie section are: South Saskatchewan, at Saskatoon, 1,500 ft. long and 71 ft. high. Battle River, mile 676 from Winnipeg, 5,440 ft. long, including approaches, and 190 ft. high. Clover Bar, over North Saskatchewan River, mile 786.5, 1,653 ft. long and 138 feet high. The largest bridges on the mountain section are: McLeod River, mile 915.6 from Winnipeg, 1,065 ft. long and 118 ft. high. Rau Shuswap, mile 1,124, from Winnipeg, 1,030 ft. long and 190 ft. high. Fourth Crossing, Fraser River, mile 1,278 from Winnipeg, 2,650 ft. long and 36 ft. high. The highest bridge is that over the Pembina River, 860 miles west of Winnipeg, rail level being 208 ft. above high water. The Fraser River is crossed four times, at mileage 1,073, 1,189, 1,233 and 1,278 from Winnipeg. The mainland and Karen Island, on which Prince Rupert is situated, are connected by the Zanardi Rapids bridge, 655 ft. long, and 33 ft. above high water.

The company has also built and placed in operation 940.10 miles of branch lines, and is completing 119 miles of additional branch lines this season. These are located as follows:—

	Total Mileage.	Completed.
Manitoba—		
Harte-Brandon	25
Saskatchewan—		
Melville-Canora	55.20	55.20
Melville-Regina	98.40	98.40
Regina-boundary	155.00	155.00
Regina, Moose Jaw and N.W.	108.	90.20
Prince Albert branch	111.80	67.00
Battleford branch	48.50	48.50
Cutknife branch	50.00	2.60
Biggar-Calgary	104.06	104.06
Talmage-Weyburn	15.00
Alberta—		
Tonold-Calgary	201.50	201.50
Alberta Coal branch	56.40	56.40
Mountain Park Coal branch	30.24	30.24

At the Canadian Railway Club's monthly meeting at Montreal, Apr. 14, J. E. Duval, General Superintendent of Car Service, G. T.R., read a paper on the misuse of cars and the causes of car shortage.

of Congress of March 3, 1879.

SUBSCRIPTION PRICE, including postage
anywhere, \$2 a year.

SINGLE COPIES, 20 cents each, including
postage.

The best and safest way to remit is by express
money order. Where one cannot be obtained, a
post office money order, or bank draft, payable
at par in Toronto, may be sent. Cheques or
drafts not payable at par in Toronto cannot be
accepted. Remittances should be made payable
to Canadian Railway and Marine World.

F. W. COWIE, M. Can. Soc. C. E., Chief
Engineer, Montreal Harbor Commission,
read a paper, Apr. 7, before the Institute of
Civil Engineers, London, Eng., the general
trend of which was to demonstrate the desir-
ability of an all Canadian route from
Great Britain and the European continent,
with Montreal as the head.

Quick Time in Floating Operations on C.P.R. Lachine Bridge.

In publishing the article on the double
tracking of the C.P.R.'s St. Lawrence River
bridge at Lachine, by P. B. Motley, Engin-

Span.	Between piers nos.
Downstream—408 ft.	13 and 14

Upstream—408 ft.	12 and 13
Upstream—408 ft.	13 and 14

eer of Bridges, C.P.R., in our last issue, the
table showing the time occupied in the
floating operations was inadvertently
omitted. It should have followed the matter
at the bottom of pg. 153, column 1, and is
as follows:—

Date floated into position.	Elapsed time, Hrs. Min.	Net time occupied in moving, Hrs. Min.	Total distance floated.
Nov. 4/12	3—0	1—0	275 ft.
Nov. 22/12	2—30	28½	275 ft.
Sept. 18/13	1—30	22½	275 ft.
Oct. 6/13	2—0	16	275 ft.

Canadian Freight Association Committees.

The following standing committees were
elected at the annual meeting in Montreal,
April 16:—

ADVISORY—C. E. Dewey, W. M. Kirk-
patrick, G. H. Shaw, J. H. Meglemry.

EXECUTIVE—W. M. Kirkpatrick, F. F.
Backus, G. Tombs, H. C. Martin.

CLASSIFICATION—W. M. Kirkpatrick,
J. Edward, G. Tombs, F. J. Watson, E. N.
Todd, L. Macdonald, H. E. Macdonnell, G.
T. Pettigrew, R. E. Perry, M. H. Brown.

FREIGHT INSPECTION—R. W. Long, F.
A. Shaw, M. H. Brown, R. W. Youngs, R. J.
S. Weatherston, J. Edward, G. H. Clark, W.
B. Bamford, W. S. Elliot.

The General Utilities Corporation has
been incorporated under the Dominion Com-
panies Act with power among other things
to acquire and operate electrical power
plants; to operate steam and other vessels;
to build docks, wharves and warehouses.
The capital is fixed at \$50,000; its office is
at Sorel, Que., and the provisional directors
are:—A. E. Pontbriand, Mrs. M. L. Pont-
briand, J. A. Simiard, Mrs. R. B. Simiard, A.
Petitclerc, Sorel, Que.; G. E. Pontbrian,
Shawinigan Falls, Que.

Plans for the C. P. R. Building at the San
Francisco exhibition of 1915 have been pre-
pared. The building, which was designed
by F. S. Swales, will cover a ground space
of 65 feet square, and will be a one story
structure in the Spanish renaissance style.
The roof will be of tile and the wide cornice
will be colored to conform with the general
style of the neighboring buildings. The
interior will be divided into an exhibition
hall, and a moving picture hall.

The Ottawa City Cartage Co. has been in-
corporated under the Ontario Companies Act
to carry on a general cartage and forward-
ing business, in connection with railways,
steamships, etc., and particularly to take
over the business at present carried on by
the City Cartage Co. Its capital is fixed at
\$40,000; its office is at Ottawa, and its pro-
visional directors are: G. S. Kelley, W. L.
Scott, A. J. Fraser, M. J. Brennan, and
L. E. Milks.

The Ottawa Motor Transportation Co. has
been incorporated under the Ontario Com-
panies Act to carry on the business of
cartage contractors, warehousemen, and
other allied businesses in Ottawa and else-
where throughout Ontario. The capital is
fixed at \$40,000; its office is at Ottawa, and
the provisional directors are:—G. D. Kel-
ley, C. H. Maclaren, A. J. Fraser, M. J.
Brennan and L. M. Sibley, Ottawa.

Hamilton Incline Ry.—Orders have been
placed with the Canadian Electric Co., for
one special double fixed drum, double geared
electric Lidgerwood incline hoist, two C. G.
E. 180 h.p., 550 volt, d.c. motors with special
automatic control; one C. G. E. motor
generator set; one Tudor storage battery of
262 F. 11 cells, and one C. G. E. four panel
switchboard.

Dredge for Little Current Work.

A dipper dredge, which is being built for
the C. S. Boone Dredging and Construction
Co., of Toronto, for use at Little Current,
Ont., was launched by M. Beatty & Sons,
Ltd., at Welland, Ont., April 13. It is of
steel, 100 ft. long, 40 ft. wide, 10 ft. deep
at bow, and 8 ft. at stern. It is of the
crane type, the crane being 40 ft. long. The
dipper is of 5 cu. yds. capacity, the dipper
handle is 61 ft. long, which will allow it
to make 40 ft. of water. The main engine
is double cylinder, 15 in. bore by 15 in.
stroke, the boiler 10 ft. dia. by 12 ft. long, of
the Scotch marine type. Each bow anchor
or spud is operated by an independent
reversible engine, 10 in. bore by 10 in.
stroke, compound geared, the anchors being
raised and pinned up by steel cable. The
engine for handling the stern anchor is
9 by 9 compound geared. On each side of
the deck forward is a 7 by 7 double cylin-
der, triple friction, drum engine, to be
used for warping the dump scows into
position. It is expected to have the dredge
completed and ready for towing early in
May.

A new type of coal chute has been instal-
led on a large coal pier of one of the larger
U. S. lines. The chutes, which will be tele-
scopic, and automatic in operation, will be
attached to the end of the pocket through
which the coal passes when leaving the car,
and will be adjusted to an angle which will
eliminate a large amount of the destructive
effect of gravity.

Electrification of the Norwegian Govern-
ment railways is the subject of a newly
submitted report by a special commission.
The excessive prices of imported coal (Nor-
way having no coal mines) led to the in-
vestigation of the feasibility of using
"white coal," and the electrification of seven
trunk lines at a cost of \$9,000,000 is recom-
mended.

The gas electric car which was operated
on the Quebec and Lake St. John Ry. be-
tween Quebec and Lake St. Joseph during
the past two summers, and which has been
running on the Canadian Northern Ontario
Ry. between Picton and Napanee, Ont., dur-
ing the past winter, will continue in the
latter service this year.

F. G. Smith, Chief Draughtsman, Cana-
dian Allis-Chalmers Ltd., read a paper on
steel railway bridges before the Central
Railway and Engineering Club, in Toronto,
April 28.

N. C. Stibbs, Storekeeper, C.P.R., Leth-
bridge, in remitting his renewal subscrip-
tion to Canadian Railway and Marine World
writes:—"Please find enclosed subscrip-
tion to your valuable paper for 1914."

H. M. Gain, Trainmaster, G.T.R., Belle-
ville, Ont., writes:—"I value very much the
information contained in each issue of Cana-
dian Railway and Marine World."

The Montreal Harbor Commissioners pro-
pose to expend about \$300,000 on railway
equipment during this year.

The Board of Railway Commissioners' Judgment in the Western Rate Case.

Western freight rates, in one form or another, have engaged the attention of the Board of Railway Commissioners since its inception in 1904. The complaint of the Vancouver Board of Trade, in the Coast Cities Case, alleging discrimination, was preferred before Commissioners Blair and Mills on Aug. 25, 1904. It was again brought up in another form in Oct., 1909, supplemented by an application of the British Columbia Government. The Winnipeg Board of Trade, on Nov. 14, 1911, passed a resolution alleging that the tolls of western lines were both unreasonable and discriminatory, and forwarded it to the Minister of Railways. This was referred to the Board of Railway Commissioners on Dec. 4, 1911. On Jan. 8, 1912, the late Chief Commissioner, J. P. Mabee, and his fellow commissioners determined that a full inquiry was necessary as to the reasonableness of the freight tolls, and placed upon the railways the onus of justifying the discrimination alleged to exist. The whole progress of the inquiry involved 62 hearings, taking up 100 days, at every important point from Port Arthur to Victoria, besides Montreal, Toronto and Ottawa; 72 witnesses were examined; 158 exhibits containing 4,870 pages were filed; and 6,118 pages of evidence were taken down.

The cases of the Vancouver and Victoria Boards of Trade and the B.C. Government were handled by W. A. McDonald, K.C., and C. G. McPhillips, K.C., assisted by the Vancouver Board of Trade's Traffic Officer and Mr. Calderhead, Statistician to the Washington State Commission. M. K. Cowan, K.C., ex M.P., represented Alberta and Saskatchewan, Alex. MacDonald, of Winnipeg, preparing his traffic exhibits. The Winnipeg Board of Trade engaged the services of Isaac Pitblado, K.C. The Dominion Government was represented by Jas. Bicknell, K.C., of Toronto; R. W. Whitla, K.C., of Winnipeg, and F. A. Morrison, K.C., of Alberta, assisted by Mr. Carpenter, Traffic Officer of the Winnipeg Board of Trade, and Mr. Muller, formerly Statistical Officer of the Interstate Commerce Commission, as experts in traffic matters. The C.P.R. was represented by its Chief Counsel, E. W. Beatty; F. H. Chrysler, K.C., of Ottawa, who conducted the case, and W. N. Tilley, K.C., of Toronto; the Canadian Northern by its Chief Counsel, F. H. Phippen, assisted by F. A. Anderson, of Winnipeg; the Grand Trunk Pacific by its Chief Counsel, W. H. Biggar, K.C., and Mr. Lafleur, K.C., of Montreal.

The case was hardly under way when the death occurred, in May, 1912, of Chief Commissioner Mabee. His successor, H. L. Drayton, K.C., was appointed in July, 1912, and some delay naturally ensued until he became familiar with the material that had been presented. Hearings from that date were held whenever possible, the last on Dec. 11, 1913. Making allowance for the Christmas season, the commissioners were but little over three months in reviewing the immense mass of statistics, accounts, evidence and argument, and reaching a conclusion thereon.

The judgment, which was delivered on April 7, covers some 260 pages and deals with each contention in order. It refers frequently to the report of the Board's Chief Traffic Officer, Jas. Hardwell, and attaches his examples of reductions ordered. The following is an official summary of the judgment:—

On account of the different interests concerned, the conflicting evidence, the number of hearings, and the importance of the subject, there is set out at length a history

of the application. The first step leading up to the inquiry was the resolution of the Winnipeg Board of Trade, on Nov. 14, 1911. This resolution was forwarded to the Government, and the matter was referred to the Board for action. There was at the same time pending a complaint of the Vancouver Board of Trade that the existing rates from eastern points on a western movement were discriminatory as compared with rates from Vancouver on an eastern movement. The Vancouver complaint, being bound up with and affecting the question of western rates, was joined in the Board's order of Feb. 15, 1912, with the general investigation of rates in Manitoba, Saskatchewan and Alberta, and in Ontario west of and including Port Arthur, which had been provided for in its order of Jan. 8, 1912.

It is unfortunate that an issue has been made between the east and the west. Cash payments or credits from the east in aid of railway development do not justify higher rates in the west. The opening up of the west by railway construction is of value to the east. The lower the rates in the west, the greater the extension of eastern business therein. The lower the rates in the east, the lower is the rate charge on which western goods find their way into the world's market. It is contended that the existing rates in the east are made possible by the excessive rates in the west. An analysis of this points out that the C.P.R. first commenced its operation in the west; that its main line was opened May 26, 1887; and that when it commenced its operation east of Fort William, it simply adopted the rates charged by other railways in that territory, and the rates so adopted were not affected in any way by the rates west of Fort William. No voluntary benefaction by way of reduction of rates was made to the people in the east at the expense of the people in the west.

In an attempt to ascertain whether the existing rate structure was inordinately profitable, the earnings of the C.P.R. were apportioned between its operating divisions on the basis of the mileage contained therein. It is recognized that in so dividing revenues between the eight operating divisions of the C.P.R., results are arrived at which are not characteristic. For example, the Lake Superior Division, which originates or terminates practically no traffic, is shown with a large proportion of revenue. As was pointed out by M. K. Cowan, K.C., the railway operating divisions are not the proper basis for distribution of revenue, because, for example, the provincial boundaries of Saskatchewan and the boundaries of the railway operating division of Saskatchewan are not the same.

The judgment makes a lengthy and careful consideration of the legislative provisions in regard to discrimination, setting out the provisions of the Railway Act which bear upon this matter. The Railway Act does not forbid all discriminations and preferences; it forbids an unjust discrimination or an undue preference. The Board has recognized in various decisions that the question whether discrimination is unjust or a preference undue is a matter of the particular facts of a particular case. Examples are cited. Group rates, while they have some elements of discrimination, are in the public interest so long as the discrimination is not unjust. Water competition has been recognized as a factor affecting rates. The Board has held that it is in the discretion of the railway whether it shall or shall not make rates to meet the competition of markets. A similar

position has been taken by the English Railway and Canal Commission. The Board has recognized that a division of the through rate is not a necessary measure of the reasonableness of the local rate. Special rates, such as those contained in town tariffs, and commodity rates, result in some discrimination. The commodity tariffs, under which the large bulk of the country's merchandise moves, work a two fold discrimination. In the first instance, a discrimination in favor of shippers of a particular class of merchandise from points where the volume moving justifies commodity rates as against shippers of the same commodity at points where no commodity rates exist; and, secondly, a discrimination in favor of an article carried at the commodity rates as against articles of a kindred nature which might come more or less into competition with an article moving under a commodity rate. But the low commodity rate basis works to the advantage not only of the shipper but also of the consumers. The effect of a town tariff is to give the advantage to a distributing centre as against similar stations within the area in which goods are distributed under the town tariff scale. While, theoretically, it might be proper to do away with town tariffs, it appears for the present that it would be contrary to public interest to interfere with the principle of town tariffs under which many distributing centres, particularly in the west, have been able to meet the competition of the well established distributing centres in the east. No doubt other distributing centres will spring up and make use of the town tariffs, when an economical distribution of merchandise seems to demand such centres.

It being recognized that the rates west of Fort William are higher than those east, the question of the factors affecting eastern rates has to be considered. In the territory extending from Windsor and Sarnia to eastern ocean ports, there is real and effective railway competition of United States lines. This competition was recognized by the Board in the International Rate Case. Water competition is effective throughout Eastern Canada as far as Port Arthur and Fort William. The low rate basis brought about by the lake transportation facilitates the movement of commodities into and out of the west. Counsel for Saskatchewan and Alberta recognized the existence of water competition at certain points, but disputed its efficiency at points some distance more remote from the railway. He recognized that the water competition might either be actual or potential, and that the water rate may hold down the combined lake and rail rate. It may be pointed out that the rate from the east to Winnipeg is influenced to a considerable extent by the water rates to the head of the Lakes.

The C.P.R.'s Atlantic Division is shown by the returns to be unprofitable. The rates in the Maritime Provinces are low, not only as a result of water competition, but also as a result of the Intercolonial rates, a road whose operations have largely resulted in deficits. The earnings of this division, on the mileage basis, are also held down by the fact that a large part of the business is through traffic carried on a low rate. In the case of a grain movement from Regina to St. John on a through rate, the Atlantic Division may be apportioned a part of the through rate proportioned to the mileage moved by it within this division. If the basis of the rates on western products to St. John were applied to the local traffic of the Atlantic Division, the local rates would

be very greatly depressed. From Woodstock, N.B., to St. John, for instance, the company would receive on a grain or flour shipment on the Regina basis only one-sixth the local tariff rate. The through rates keep down the average earnings. The Atlantic Division is in reality to be regarded as a terminal. The result is that the western provinces, producing as they do grain and flour, and interested as they are in a cheap furtherance rate, not only from their own borders but also to the seaboard, instead of being injured, participate in the benefits of the low through rates on grain and flour passing through this division.

So far as New Brunswick and Nova Scotia are concerned, no argument whatever was advanced denying the existence of water compelled rates. So far as Ontario is concerned, exception was taken to certain points only. By far the greater part of railway business in Eastern Canada is on the line of water competition. The rate basis in Eastern Canada, both adjacent to and more remote from the waterways, was established by the railways at a time when there was no regulation of rates. The rate basis they put in was affected both by water and by U.S. rail competition. Mr. Muller, the expert called by counsel for the Dominion Government, pointed out the effect of U.S. rail competition in connection with C.P.R. traffic in Eastern Canada. Mr. Calderhead, an expert of the Public Service Commission of the State of Washington, stated in evidence that the rates between New York and Chicago are influenced both by rail and water competition, and that the effect of water competition of the Great Lakes is operative at St. Paul, 149 miles inland. No evidence has been submitted by any of the complainants negating the force either of water or of railway competition in the east, or the resultant effect of such competition. The Board is of opinion that while discrimination exists between the rates charged east and west of Port Arthur, the discrimination is justified under the Railway Act and the decisions of the Board; that is to say, it is not an unjust discrimination or an undue preference. In the main, the rate structure of Eastern Canada is justified on the basis of water and railway competition. There may be some points where discrimination which cannot be justified by competitive reasons exists. It may be that in connection with these there would be justification for increase of rates.

An examination of the different tariffs east of Fort William voluntarily put in by the railways or ordered by the Board since Dec. 1, 1904, has been made. The important changes are set out at length in the judgment. The analysis of the changes made by the Board's orders in rate matters in the east shows that these have been almost wholly concerned with the abuses flowing from undue discrimination. The Board's order in the International Rate Case resulted in a general revision of class rates in Eastern Canada. This was concerned entirely with the removal of existing discriminations under which the shipper in the Western States could use the Canadian lines at a proportionately much lower rate than the Canadian shipper could. The result of the order was to recognize the water competition between U.S. rail carriers and water carriers which brought about the Detroit rate, and, further, to recognize the general effect of this water competition throughout the Canadian territory east of Detroit. The analysis of the tariffs shows that the railways have been desirous of raising the rates wherever possible. The rates in Eastern Canada may be low; perhaps at certain points too low, even in view of its geographical advantages. It cannot fairly be said, however,

that these low rates are in any manner the result of excessive western rates. They are practically the rates which applied long before the profits of western railway operations had anything to do with Canadian railway resources.

The existing railway mileage in Western Canada is inadequate, at least so far as Saskatchewan and Alberta are concerned. To ascertain to what extent the existing railway mileage meets the needs of Western Canada, calculations have been made to show how much acreage in these provinces is more than 10 miles from the railway. Complaints made to the Board by farmers in the west show that, on the average, a 10 mile haul enables the farmer, where there are fair roads, to market his grain and return home in one day. Railways laid out, having in view a maximum 10 mile haul, would not be constructed nearer to each other through the farming territory than 20 miles. On this computation, the railways existing in Saskatchewan serve 70,000 square miles, or 44,000,000 acres on the basis of the 10 mile haul. South of Township 58, there is an area of 121,000 square miles, or 77,000,000 acres, thus leaving 51,000 square miles or 32,000,000 acres yet to be served. Railways which may be constructed under the guarantees of the Province outstanding last year, when completed, would provide facilities for 17,000,000 additional acres. This would leave in the territory south of Township 58, 39% of the total acreage further than 10 miles from the railway. In Alberta, within the boundaries formed by Township 74 and Range 10 of the West Meridian, there are about 85,000,000 of acres. In this acreage, existing railway lines serve 26,000,000 acres, on the basis of the 10 mile haul, leaving over 58,000,000 acres yet unserved. Railways proposed to be constructed under the guarantees of the Provincial Government and outstanding last year will provide for about 17,000,000 acres more, leaving 48% of the territory so referred to further than 10 miles, at least, from any railway. Complaints have been received by the Board that farmers living at a distance of from 18 to 35 miles from the railway spend, on getting the grain to the railway, more than it costs to take it from the railway station to Fort William. The farmers of Mervin district, Sask., furnished information which showed that grain was hauled into Edam, 35, 40, and 45 miles; that on a 14 mile haul from Mervin to Edam, allowing \$5 a day for teams and proper allowances for expenses on the way, the cost of haulage was 20c. a bush.; that on a 35 mile haul, a smaller load had to be taken and the round trip required from two to three days, making the cost of marketing about 32½c. a bush.; that is to say, farmers hauling a distance of 35 miles to Edam, with a load of 40 bush., were at an expense of 32½c. a bush. to get it to the station, while from Edam to Fort William, 1,046 miles, the rate was 14 4-10c. a bush. A petition signed by 390 farmers of Eagle Creek district, Sask., showed that a large amount of grain taken out from the district necessitated a two days haul, and the cost of getting the grain to the station was 25¼c. a bush., as against a rate of 13c. a bush. from the station to Fort William, 939 miles. The cost of haulage on earthen roads runs from 20c. to 25c. a ton per mile. From the standpoint of the necessity for railways, the activity of the provincial governments in assisting railway construction, with a view to shortening the average haul of the farmers, appears well justified. Mr. Pitblado, for the Winnipeg Board of Trade, argued that the construction of such lines is in the first instance unremunerative, and that this accounted for the Canadian Northern returns not being satisfactory. Mr. Cowan took the same position. At the same time,

it must be recognized that the bulk of the C.N.R. branch line mileage within Saskatchewan and Alberta has been made at the direct request of the provincial governments, and with their financial support.

Railway extension is of immediate interest to the distributing centres of the west, as every addition to the railway network widens the consuming area. On the other hand, the farmer who already has railway facilities is not interested in the providing of them for competing farmers. Extensions into new territory should be made at the risk of the company rather than at the expense of shippers on the old lines. At the same time, consideration must be given to the necessity of enabling railways to obtain additional capital. Extensions of service, betterment of facilities, and the enlargement of terminals have from time to time to be met often in the old settled districts of the country. As a matter of public policy, railway rates should be rates of such a character as to attract investment and to render the railway securities marketable.

Counsel for the Dominion Government pointed out that regulations of rates, without adequate control of future railway development, would likely lead to the duplication of mileage. Mr. Pitblado also stated there was too much paralleling of railways in the west. The situation in respect of the location of railway mileage in the west has been examined into. It is recognized that a certain amount of overlapping will have to take place on account of the lines making grades, the question of physical conditions, and the matter of access to the large centres of population. It does appear that in Manitoba, taking that portion lying south of Township 19, Lake Manitoba, and Township 14, as far east as Selkirk, that there are 2,850 miles of track, while 2,000 in this area would be sufficient to place railways within 10 miles of every farmer; that is to say, there is 40% more mileage than the territory requires on the 10 mile basis. The conditions in Saskatchewan show, by dividing the territory into blocks, the following results:

Territory east of the 3rd Meridian and south of the northern boundary of Regina and Saltcoats Districts—Area, 110 by 144 miles. Total mileage, 2,622. Total mileage required to cover territory at 10 mile distance, 2,400. Total duplication, that is where lines are within 20 miles of each other, 850, or about 33%.

Territory in Saskatchewan north of Regina and Saltcoats Districts, and east of the 3rd Meridian and south of the south boundary of Township 41—Area, 192 by 96 miles. Total mileage, 847. Total mileage required to cover territory, 1,700. Total duplication, that is where lines are within 20 miles of each other, 193, or 23%.

Territory north of south boundary of Township 41, east of 3rd Meridian and south of Township 51—Area, 180 by 60 miles. Total mileage, 306. Total mileage required to cover territory, 1,120. Total duplication, that is, where lines are within 20 miles of each other, 50, or 16%.

Territory between 3rd and 4th Meridian, and south of the south boundary of Township 24—Area, 180 by 138 miles. Total mileage, 430. Total mileage required to cover territory, 2,000. Total duplication, that is where lines are within 20 miles of each other, 36, or 9%.

Territory between 3rd and 4th Meridians and the south boundary of Township 51 and the north boundary of Township 2—Area, 168 by 162 miles. Total mileage, 1,656. Total mileage required to cover territory, 2,800. Total duplication, that is where lines are within 20 miles of each other, 302, or 18%.

Similar computations, by districts, in the

case of the Province of Alberta, give the following results:

District of Victoria—Total mileage, 166. No duplication.

District of Strathcona—Total mileage, 554. Total duplication, that is where lines are within 20 miles of each other, 111, or 20%.

District of Red Deer, east of east boundary of Range 8, West 5th Meridian—Area, 210 by 75 miles. Total mileage, 684. Total duplication, that is where lines are within 20 miles of each other, 138, or 20%.

District of Calgary—Total mileage, 537. Total duplication, that is where lines are within 20 miles of each other, 110, or 30%.

District of MacLeod—Total mileage, 384. Total duplication, that is where lines are within 20 miles of each other, 110, or 29%.

District of Medicine Hat—Total mileage, 746. Total duplication, that is where lines are within 20 miles of each other, 115, or 16% of the constructed lines.

In British Columbia there is the paralleling of the Canadian Northern and Canadian Pacific, while in Western Alberta there is the paralleling of the Canadian Northern and the Grand Trunk Pacific. It is recognized that paralleling also exists east of Fort William. No opinion is expressed as to how much of this duplication was or was not necessary. Mr. Pitblado's criticism is, in part at least, well founded, and the necessity for some business control by the Government which will prevent unnecessary duplication of facilities is established.

Which, if any, of the three lines, Canadian Pacific, Canadian Northern, and Grand Trunk Pacific, should be taken as a typical line? It is impossible for the Board to deal with rates in the west on the hypothesis that the C.P.R. is the only railway which should be taken into consideration; nor can it be held that the only measure of what rates should be is to be found in the position occupied by the C.P.R. Counsel for the Dominion Government expressed the wish that the Board would so reduce rates, taking the C.P.R. as a standard road, as not to injure other lines. He was unable to suggest how that end could be accomplished, nor was this to be wondered at, as, beyond all question, rates based on the C.P.R.'s power to stand reductions would inevitably bankrupt not only both the Canadian Northern and the Grand Trunk Pacific, but for the future preserve the western provinces to that company in so far as any new companies or new lines were concerned. It would be impossible for any ordinary company to live in competition with the C.P.R. under such conditions. The rates must be considered having regard to the traffic necessities of Western Canada and a fair return to the carrier, apart entirely from any question of reserves of the company on the one hand or liabilities of the company on the other. The matter must be dealt with from the standpoint of the principle laid down by the late Chief Commissioner, J. P. Mabee, who, at the outset of the inquiry, laid down the line of action in the following words: "With reference to the inquiry into the financial standing of the companies, it seems to me that if one is to be investigated they should all be investigated. We should not be submitted to the possibility of prejudice in settling these rates by placing before our eyes the millions and millions of treasure that the C.P.R. is supposed to have hoarded up. The question for us to decide is what rates are fair irrespective of how much any company is worth or is not worth."

The Board must take the existing railway mileage as it finds it. It was suggested that Parliament had not shown due care in chartering railways, or in allowing them to be constructed. The Board has had nothing to do with the steps whereby additional

railway mileage came into existence; and it is not in any way concerned with the question of whether or not a railway was constructed from the standpoint of political expediency, and expresses no judgment thereon.

Counsel for the Dominion Government presented as a basis for rate making a method whereby average costs might be ascertained. As explained by the expert, Mr. Muller, it is not concerned with specific or actual costs. An attempt is made to distinguish terminal charges from road haul charges. The terminal charges as well as the road haul charges are computed on a series of averages requiring the use of very complicated statistical methods. In dealing with the apportionment of expenses between freight and passenger business, Mr. Muller uses nine different methods of statistical apportionment. The statistical averages of the cost of road haul movement as computed depend on the averaging of high grade and low grade, long haul and short haul traffic. Neither the road cost nor the terminal cost so worked out is claimed to be in accordance with actual costs. All that is claimed is that it is an average. It is suggested that the cost so averaged out will, by the addition of a proper percentage to cover capital charges, afford a proper basis for the making of rates. The method which he advocates has never had a thorough going practical test as a basis of rate making. The Interstate Commerce Commission has not yet been able to work out, with its large statistical force, a satisfactory system based on cost. It has further stated that cost estimates of the kind in question cannot be relied upon as decisive factors. A portion of the C.P.R.'s present revenue is due to its having a through line, while the Canadian Northern and Grand Trunk Pacific are not yet in this position. With the opening up of the through lines of the two latter railways, not only will they share in the through business but business which they are at present handing over to the C.P.R. will be handled by them. But Mr. Muller says that to work out rates based on his system a five year period should be taken for comparison, and that the rates so worked on his basis should be revised every five years. However, with the change brought about by the opening up of the Canadian Northern and Grand Trunk Pacific through lines, rates based on the C.P.R.'s past performance would have no proper application to the new conditions arising. While recognizing the statistical ingenuity of the theory, it must at the same time be recognized that this

plete rate structure for all railways in Western Canada subject to its jurisdiction. The territory west of the Great Lakes is divided into three sections. The first is called the Prairie Section, extending from the Great Lakes to the Mountains; the second the Pacific Section, including main-land rail lines in British Columbia; and the third the B.C. Lakes Section, including the inland navigable waters in that Province. A standard scale of maximum freight rates is fixed for each section. The lowest scale in the west, now known as the Manitoba standard, has been amplified to show rates up to 2,100 miles, and will apply throughout the entire Prairie section and on the British Columbia Lakes, abolishing the higher scale now charged in Saskatchewan and Alberta. What will be known as the Pacific scale is on a somewhat higher basis and will govern in Pacific territory. These changes result in substantial reductions from the present standard maximum scales in Saskatchewan, Alberta and British Columbia.

Special distributing tariffs on a lower basis are authorized from recognized distributing centres, the reduction from the standard tariff of each territory being 15% of the prairie standard scale. The following first class rate examples indicate the character of the reductions, the other classes being proportionately scaled. The 1st class rate from Winnipeg to Regina is reduced by 8c.; to Swift Current by 9c.; Calgary, 12c.; Revelstoke, 15c.; Saskatoon, 13c.; Edmonton, 16c.; Lethbridge, 10c. per 100 lbs. From Regina the 1st class rate is reduced to Broadview by 3c.; to Swift Current, 6c.; Medicine Hat, 7c.; Colonsay, 13c.; Saskatoon, 6c.; and Wilkie, 18c. per 100 lbs. From Saskatoon the 1st class is reduced to Hardisty by 7c.; Wynyard, 4c.; Davidson, 4c. per 100 lbs. From Calgary to Regina, 10c.; Macleod, 3c.; Edmonton, 4c.; Lethbridge, 3c.; Cardston, 4c.; Fernie, 8c. per 100 lbs. From Edmonton to Saskatoon, 4c.; Camrose, 6c.; Wetaskiwin, 6c.; Calgary, 4c.; High River, 7c.; Lethbridge, 9c. per 100 lbs. Similar reductions are made from other prairie jobbing centres. From Vancouver to Ashcroft, 14c.; Kamloops, 20c.; Revelstoke, 26c.; Nelson, 15c.; Calgary, 7c. per 100 lbs.

Through rates from Eastern to Western Canada are based on those charged from Port Arthur or Fort William. After citing reductions already made by the Board in the Regina Rate Case, further reductions are made and a more uniform basis adopted. Examples of the new rates from the Lake Terminals are given below, those to other points being similarly scaled:—

Classes.	1	2	3	4	5	6	10
To Winnipeg—	86	72	57	42	38	34	20
	85	71	56	42	38	32	19
Regina—	164	129	102	77	68	59	34
	146	122	98	73	65	56	33
Moose Jaw—	159	132	106	79	71	61	36
	153	128	102	77	69	60	35
Calgary and Edmonton—	224	186	149	112	102	90	52
	213	178	142	106	95	85	49
Saskatoon—	175	146	116	87	78	68	40
	164	137	110	82	74	64	37
Lethbridge—	215	179	142	107	96	85	47
	201	167	133	100	90	79	46
Nelson and Revelstoke—	303	253	202	158	140	133	73
	251	209	167	126	115	104	61

theory has never had a practical test under such conditions as are present in this inquiry. There would be many difficulties in applying it, nor can it be said how it would work out. What is needed is a practical working method. With due consideration of all the factors concerned it does not appear how any practical application can in the present instance be made of this theoretical project for a new system of rate making.

After dealing with various arguments of counsel, the judgment proceeds to outline a comprehensive basis of tolls and a com-

Local grain and flour rates are substantially reduced by two methods, first by a direct reduction ranging from 20 to 30%, and secondly by making the terminal Fort William rates the maximum that may be charged between intermediate stations. For example, Broadview to Winnipeg, now 20c., becomes 15c. per 100 lbs.; and Calgary to Winnipeg, now 43c., through the application of the Fort William rate as maximum, becomes 24c. The westbound rates on flour and other grain products are similarly reduced. This is an endorsement of the complaint of the United Farmers of Alberta,

and the application of the Winnipeg Board of Trade. The United Farmers of Alberta also win in their application for reduced rates on these products to British Columbia stations.

Coal rates from Lethbridge and other Alberta mines are substantially cut; for example, from Lethbridge to Calgary from \$1.80 a ton to \$1.45; to Edmonton from \$2.85 to \$2.20; Swift Current, \$2.40 to \$1.90; Regina, \$3.10 to \$2.65; Virden, \$4.10 to \$3.40; Saskatoon, \$3.95 to \$3.30 a ton. From the Souris mines, reductions made by the Board in the Alameda case are confirmed and others made. Thus, from Estevan to Brundage from \$1.70 to \$1.40; to Carberry, \$1.90 to \$1.50; Emerson, \$2.30 to \$2.00; Rapid City, \$2 to \$1.60; Swift Current, \$2.15 to \$1.70; Colonsay, \$2.40 to \$1.80; Saskatoon, \$2.60 to \$2.10; Yorkton, \$2.80 to \$2.20. From Merritt, B.C., to Yale, from \$1.80 to \$1.65; to Kamloops, from \$2 to \$1.75; to Sicamous, from \$2.50 to \$2.20; to Penticton, from \$3.30 to \$2.90; to Nelson, from \$4.10 to \$3.65.

Carload sugar rates from Raymond, Alta., to prairie points also receive attention, Lethbridge being reduced from 11c. to 9c.; Cranbrook, 42c. to 38c.; Nelson, 60c. to 51c.; Calgary, 31c. to 23c.; Edmonton, 42c. to 37c.; Regina, 50c. to 42c. per 100 lbs. The special mileage rates on butter, cheese and eggs, dressed meats and dressed poultry between all prairie points come in for reductions. The special mileage tariffs on vegetables in Manitoba are shown to be reasonable; the rates, however, in Saskatchewan and Alberta, which are on a somewhat higher scale, are reduced to the Manitoba basis. The special rates on fruits and vegetables from British Columbia, which have been revised and reduced since the complaint against them by the United Farmers of Alberta, are left untouched. The rates on cement from Winnipeg are shown to vary little from those of Ontario, and are not reduced, but the higher rates from cement plants in Alberta and Saskatchewan are reduced to the Winnipeg scale. Lumber and joiners' work from British Columbia to prairie destinations have been already reduced following the Board's order in July, 1913. A table showing some of the reductions accompanies the judgment. The rates on sugar from Vancouver remain unchanged, the complaint of the British Columbia Sugar Refinery not being sustained. No reduction is made in livestock rates, which are shown to be reasonable in view of the favorable carload minimum weights and the volume of traffic. The rates on fence posts, firewood, brick, stone, gravel and sand are found to be generally lower than those applying in Ontario; but the higher scales prevailing in Alberta and Saskatchewan are reduced to the lower Manitoba basis. Rates on ores, concentrates, and smelter products, in and from British Columbia, are found to constitute a large percentage of the traffic of that Province, and are found remunerative only in the sense of contributing to the general prosperity. The rate on pig iron from Port Arthur and Fort William to Winnipeg is reduced from 20c. per 100 lbs. to \$3 per gross ton.

A review of the judgment shows that the whole structure of western rates, starting from the standard maximum mileage scale, the class tariffs from Lake Superior and Pacific Coast terminals, the class distributing rates, commodity tariffs applying on grain, coal, livestock, cement, fruit, vegetables, brick, sand stone, lumber, dairy products, etc., have been closely inspected and definite decisions given in connection with each.

The Board has considered the question of local passenger rates in British Columbia very carefully. It finds that the local pas-

senger business is being conducted at a loss. It, therefore, does not feel justified in directing any change until it is afforded an opportunity of seeing what improvement in passenger revenues will result from the improvement in railway grades and operating facilities which the railway is at present making.

Owing to the large amount of space which had to be devoted to the foregoing matter, the usual summaries of all orders passed by the Board, and the completed traffic orders have had to be omitted, but will appear next month.

Railway Rolling Stock Notes.

The G. T. R. has received 400 box cars from Eastern Car Co., and 10 box cars from Western Steel Car and Foundry Co.

The G. T. R. has ordered 1 dining car and 1 parlor buffet car from Canadian Car and Foundry Co.; and 2 dining cars and 1 parlor buffet car, from Pullman Co.

The Pacific Great Eastern Ry. has ordered one 250 h.p. passenger motor car from California, and 3 trailer cars from Canadian Car and Foundry Co.

The Canadian Northern Ry., between Mar. 13 and Apr. 13, received 7 first class cars from Canadian Car and Foundry Co., and 2 consolidation locomotives from Canadian Allis Chalmers, Ltd.

The C. P. R., between Mar. 15 and Apr. 15, received the following additions to rolling stock,—39 steel frame box cars, and 1 steel colonist car, from its Angus Shops; and 149 steel frame box cars, from Canadian Car and Foundry Co.

The Imperial Oil Co., Sarnia, Ont., has ordered 100 tank cars, underframes and trucks, 40 tons capacity, and 10 three compartment tank cars, underframes and trucks, 30 tons capacity, from Canadian Car and Foundry Co., for delivery during May.

The Pacific Great Eastern Ry. has ordered 3 cabooses, 3 refrigerator cars, 5 stock cars and 10 all steel ballast cars, from National Steel Car Co.; 3 steel passenger cars from Canadian Car and Foundry Co., and one gasoline motor car in San Francisco, Cal.

The Dominion Parliament has voted the following amounts for rolling stock, etc., for the Canadian Government Railways:—Rolling stock, \$166,666.66; safety appliances, \$2,333.33; to improve triple valves on airbrakes, \$1,191.67; electric equipment for charging electric lighted cars, \$166.67.

The Canadian Engineer of Apr. 16 announced that a contract had been awarded by the C. P. R. to the "New Glasgow Car Works" for the construction of 180 steel cars. We were officially advised by the C. P. R. management Apr. 22 that no such order had been placed.

The Intercolonial Ry. has received the following additions to rolling stock,—143 box cars, 60,000 lbs. capacity, from Canadian Car and Foundry Co.; 14 vans, from Nova Scotia Car Works; 4 first class cars, from Preston Car and Coach Co.; 4 consolidation locomotives from Canadian Locomotive Co., and 2 consolidation locomotives from Canadian Allis Chalmers, Ltd.

The Canadian Car and Foundry Co., during March, delivered the following rolling stock,—Canadian Northern Ry., 10 first class cars; C. P. R., 259 steel frame box cars; Cape Breton Coal, Iron and Ry. Co., 5 fifteen ton wood hoppers; Dominion Coal Co., 25 fifteen ton wood hoppers; Intercolonial Ry., 165 thirty ton steel frame box cars, and Montreal Tramways Co., 10 steel underframe street cars.

The Edmonton, Dunvegan and British Columbia Ry. has ordered one mogul (2-6-0) locomotive from Canadian Locomotive Co. Following are the chief details,—

Weight in working order on drivers	112,800 lbs.
Weight in working order, total	129,500 lbs.
Wheel base, rigid	12 ft. 6 ins.
Wheel base, engine, total	20 ft. 6½ ins.
Wheel base, engine and tender	49 ft. 3¼ ins.
Heating surface, firebox	133 sq. ft.
Heating surface, tubes	1,301 sq. ft.
Heating surface, total	1,434 sq. ft.
Driving wheels, diam.	50 ins.
Driving wheel centres	Cast iron.
Driving journals	8½ by 12 ins.
Cylinders, diam. and stroke	19 by 26 ins.
Boiler, type	Extended wagon top.
Boiler pressure	180 lbs.
Tubes, no. and diam.	210-2 ins.
Tubes, length	10 ft. 5¼ ins.
Injectors	Two, locomotive type.
Safety valves	Two 3 ins.
Brakes	Westinghouse.
Packing	Metallic.
Weight of tender, loaded	115,400 lbs.
Tank capacity	5,000 imp. galls.
Fuel capacity	9 tons.
Truck, type	4 wheeled arch bar.
Wheel, diam.	Steel tired, 33 ins.
Journals	5 by 9 ins.
Brake beam	Steel.

The City of Winnipeg has ordered one mogul (2-6-0) locomotive from Canadian Locomotive Co., in connection with the construction of its new water supply system. The price is \$13,400. Following are the chief particulars,—

Weight on drivers	113,000 lbs.
Weight, total	130,600 lbs.
Wheel base, rigid	12 ft. 6 ins.
Wheel base, engine, total	20 ft. 6½ ins.
Wheel base, engine and tender	49 ft. 3¼ ins.
Heating surface, firebox	133 sq. ft.
Heating surface, tubes	1,301 sq. ft.
Heating surface, total	1,434 sq. ft.
Driving wheels, diam.	50 ins.
Driving wheel centres	Cast iron.
Driving journals	8½ by 12 ins.
Cylinders, diam. and stroke	19 by 26 ins.
Boiler, type	Extended wagon top.
Boiler pressure	180 lbs.
Tubes, no. and diam.	210-2 ins.
Tubes, length	10 ft. 5¼ ins.
Injectors	Two locomotive type.
Safety valves	Two 3 ins.
Brakes	Westinghouse.
Packing	Metallic.
Weight of tender loaded	115,400 lbs.
Tank capacity	5,000 imp. galls.
Fuel capacity	9 tons.
Truck, type	4 wheeled arch bar.
Wheel, diam.	Steel tired, 33 ins.
Journals	5 by 9 ins.
Brake beam	Steel.

Following are chief details of the 10 Pacific (4-6-2) type locomotives, class S246 and S247, which the Intercolonial Ry. has ordered, from Montreal Locomotive Works, as mentioned in our last issue,—

Cylinders, diam. and stroke	23½ by 28 ins.
Tractive power	32,400 lbs.
Factor of adhesion	1.86
Wheel base, rigid	13 ft. 0 ins.
Wheel base of engine, total	33 ft. 10 ins.
Wheel base, engine and tender	66 ft. 6½ ins.
Weight, total	247,100 lbs.
Weight on drivers	157,600 lbs.
Weight on trailers	45,000 lbs.
Weight on engine truck	44,500 lbs.
Weight, total, engine and tender	397,500 lbs.
Boiler, type	Straight top, radial stay.
Boiler diam. first ring	72 ins.
Boiler pressure	180 lbs.
Firebox, length and width	108 by 75½ ins.
Tubes, no. and diam.	205-2 ins.; 28-5½ ins.
Tubes, length	20 ft. 6 ins.
Heating surface, tubes	2,994.3 sq. ft.
Heating surface, firebox	188 sq. ft.
Heating surface, total	3,182.3 sq. ft.
Superheating surface	591 sq. ft.
Grate area	56.4 sq. ft.
Cab vestibule	C. P. R. style.
Wheels, diam.	Outside 73 ins.; centre 66 ins.
Wheels, material, driving	Cast steel.
Wheels, engine truck	34 ins. w. i. centre, steel tire.
Wheels, trailing	48 ins.; c.s. centre, steel tire.
Wheels, tender	36 ins.; w. i. centre, steel tire.
Driving journals, main	10 by 13 ins.
Truck journals	6½ by 12 ins.
Trailing journals	8 by 14 ins.
Tender journals	5½ by 10 ins.
Journal boxes	Cast steel.
Brakes	Westinghouse American.
Engine truck	Standard 4-wheel.
Trailing truck	Cole radial, outside journals.
Grates, I. R. C. standard cast iron, operated by	Franklin shakers.
Water capacity	6,500 imp. galls.
Coal capacity	12 tons.

Railway Finance, Meetings, Etc.

Atlantic and Lake Superior Ry.—A general meeting of holders of certificates of participation in the A. and L. S. Ry. trust funds was held in Montreal, April 25, to value the assets to be distributed in kind; to alter paragraph 42 of the constitution and regulations for the management of the fund, so as to permit a distribution among the different classes in the manner resolved upon by general and separate meetings held Dec. 6, 1910, and to make a total or partial distribution of the same, and further that separate meetings of the holders of preference, ordinary and deferred certificate holders will be held consecutively in the same place on the same day, to agree to the valuation of the assets. J. Degalindey is chairman of the committee of management.

Canadian Pacific Ry. Not Borrowing.—Sir Thos. Shaughnessy is credited with saying recently:—"The C.P.R. will have no need to borrow further money for some time to come. A great deal of money will be spent this year for construction purposes; yet we have a good deal of money in our treasury for this purpose. The C. P.R. has been spending more money on its lines than it has borrowed; but it always has the debenture stock to fall back upon, and there are plenty of people who will eagerly buy this up."

Grand Trunk Pacific Ry.—Tenders are under consideration for the purchase of ten blocks of land, comprising in all about 625,000 acres of land along the company's branch line between Fort William and Graham, Ont. This comprises the lands granted by the Ontario Legislature in respect of the construction of the line. G. U. Riley, Land Commissioner, Winnipeg.

Grand Trunk Ry.—At the ordinary general half yearly meeting of shareholders in London, Eng., April 29, resolutions were submitted assenting to and accepting two acts of the Dominion Parliament, entitled respectively the G. T. Act 1914, and G. T. and Canada Atlantic Amalgamation Act, 1914, and authorizing the directors to exercise the powers conferred by these acts.

Intercolonial Ry.—In presenting the report of the Department of Railways and Canals to the House of Commons recently, the acting Minister said it was estimated that the receipts for the year ended Mar. 31, would amount to \$12,632,973.17, and the estimated expenditure to \$12,328,000, leaving a net surplus of about \$300,000, which would be transferred to renewal of equipment account. This surplus was less than that for the financial year ended Mar. 31, 1913, but it was to be largely accounted for by the fact that there had been a large increase in the cost of operation during the first eight months of the year amounting in all to \$782,000. During the past fiscal year there had been added to equipment renewal account, \$360,000; to rail renewal account, \$150,000 and to fire renewal account, \$60,000. The average revenue per month had been \$1,066,914.43 against \$998,766.89 for the previous year; while the operating expenses averaged \$1,641,571.84, against \$998,831.87. The figures for February and March were estimated, and subject to revision.

Kingston and Pembroke Ry.—A duplicate original of an indenture made between W. F. Nickle, K. C., Kingston, Ont.; the K. and P. Ry. Co., and the C. P. R., dated Feb. 25, has been deposited with the Secretary of State at Ottawa. The document conveys to the K. and P. Ry. Co. the franchise, undertaking and all other property of the company, conveyed to R. V. Rogers under a trust deed dated Dec. 31, 1895. This is a

discharge of an old mortgage, and signalizes the final transfer of the line to the C. P. R.

Lake Huron and Northern Ontario Ry.—G. P. McCallum, President of the Lake Huron and Northern Ontario Ry., disclaims any knowledge of the Boston parties offering bonds of the Lake Huron and Northern Ontario Co., and says that they are making entirely unwarranted statements in connection therewith, and that many of the statements are absolutely untrue and unauthorized. He repudiates all knowledge of the circular letter which is accompanying the offering of the bonds and states that the company has not yet issued bonds or securities of any kind. This circular was the subject of a short debate in the Ontario Legislature recently. The leader of the Opposition read the article to the House, and drew the attention of the Minister of Lands, etc., to the charge that the company was claiming to have the guarantee of the province back of its bonds, and was booming its stock as another C.P.R. bonanza. He asked if the Minister was acquainted with the facts. Mr. Hearst promised to look into the matter, and at the night session read a letter from the company's solicitor in which he stated that no such prospectus as that alluded to had been issued by the company. The Minister promised to look into the matter further, and assure himself that no company, particularly one having any connection with the Government, was making improper representations.

Maritime Coal, Ry. and Power Co.—The annual meeting was held in Montreal, April 18, W. Hanson, President, in the chair. The net profits for the financial year were reported to be \$116,000, an increase of 16% over those of the previous year. It is proposed during this year to largely increase the plant at the collieries. The directors were re-elected, and the following officers were elected:—President, W. Hanson; Vice President, A. E. Dymont, Toronto; Secretary, R. Wilson, Jr.

New Brunswick Coal and Ry. Co.—The New Brunswick Legislature has passed an act providing for the issue of debentures amounting to \$212,175.54 bearing 4½% interest, for the purpose of providing for the liabilities of this railway. The line came under the control of the N. B. Government in 1908, and was taken over by the C. P. R. June 1, 1913. During that period the following deficiencies accumulated: Financial year 1909, \$30,000; 1910, \$48,919; 1911, \$66,000; to June 1, 1913, \$67,260.49. The deficiencies to the end of the financial year of 1911 were provided for by means of temporary loans, and that to June 1, 1913, by an overdraft. The balance of the amount of \$212,175.54 is made up of the amount of the Dominion Government's claim for rails and materials furnished to the company prior to the line being taken over by the N. B. Government. The act provides for the provision of a sinking fund out of the consolidated fund of the Province to meet the debentures at maturity.

New York Central Lines in Canada.—There has been deposited with the Secretary of State at Ottawa an agreement, supplemental to a lease dated April 23, 1912, between the Guaranty Trust Co. of New York, as trustee, and the New York Central and Hudson River Ry., the Lake Shore and Michigan Southern Ry., the Michigan Central Ry., and the Cleveland, Cincinnati, Chicago and St. Louis Ry., under the New York Central Lines Equipment trust of 1912, with respect to the rolling stock used on the company's lines in Canada.

Pere Marquette Rd. Bond Interest Default.—New York press dispatch, April 1:—"The Pere Marquette Rd. Co., now under receivership, defaulted in its semi annual interest on \$5,000,000 bond due today. J. P. Morgan and Co., who have been the fiscal agents of the road, said they made no interest payments, and other banking interests identified with the property know of no interest disbursements. The bonds under default are divisional issues of the old Flint and Pere Marquette Rd., \$1,000,000 of which bears 4% interest, and the remaining \$4,000,000 6%. The amount defaulted is \$140,000."

On April 2 foreclosure proceedings were started at Detroit, Mich., by the Farmers' Loan and Trust Co. of New York, which is said to hold \$2,850,000 of the bonds.

Lake Huron and Northern Ontario Ry.—A bond issue of \$1,000,000 is reported to have been placed on the New York and Boston markets. The company was voted a large area of land for colonization purposes by the Ontario Government, on condition that the old Bruce Mines and Algoma Ry., which was taken over, be extended to a junction with the National Transcontinental Ry. The attention of the Ontario Government has been called to statements made in the prospectus as to the value of the land grant, which is asserted to be \$8 an acre.

Prince Edward Island Ry.—The estimated earnings for the financial year ended Mar. 31, were stated recently by the acting Minister of Railways, in laying the report of the Department before the House of Commons, to be \$410,000, and the expenditure \$555,000. The deficit of \$145,000 is an increase over that for the financial year ended Mar. 31, 1913, and is due largely to the increased cost of labor and material.

Temiscouata Ry. Gross earnings for Jan., \$22,930; operating expenses \$18,904; net earnings \$4,026, against \$18,729.16 gross earnings; \$14,877.36 operating expenses; \$4,851.80 net earnings, for Jan., 1913.

White Pass and Yukon Route. Gross earnings from Jan. 1 to Mar. 7, \$37,827, against \$47,689 for same period, 1913.

One of Sir William Whyte's Jokes.—"A Manitoba Free Press reporter discussed one day with the late Sir William Whyte the great number of claims preferred against the railway by reason of horses and cattle killed by trains. He remarked the peculiar fact that practically every animal killed figured in the claims as thoroughbred stock. 'Do you know,' said Sir William, 'I have reached the conclusion that nothing in this country so improves live stock as crossing it with a C. P. R. locomotive.'"

Moncton and Buctouche Ry.—We are officially advised that the railway extending from Moncton to Buctouche, N. B., 32 miles, is still being operated under the title of the Moncton and Buctouche Ry. The transfer of the line and other property to the Moncton and Northumberland Strait Ry., originally incorporated as the Buctouche Ry. and Transportation Co., has not been made.

Canadian Aviation Co., Ltd., has been incorporated under the Dominion Companies Act, with \$50,000 capital and office at Toronto, to build and deal in aeroplanes, hydroplanes, flying machines and air and water craft, and "to carry on the business of an aircraft navigation company." W. A. Dean, C. J. Hevey and W. J. and H. L. McCallum, Toronto, are among the incorporators.

C. P. R. Medical Service.—Arrangements have been completed for the establishment of a new plan for medical service on the C. P. R. lines in British Columbia, and a meeting of the employees was held at Revelstoke, April 17, for the purpose of adopting a constitution, electing officers, and placing the new system on a working basis.

Transportation Appointments Throughout Canada.

The information under this head, which is almost entirely gathered from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who, in any notice of an error in our announcements will confer a favor by advising us.

Alberta Central Ry. J. G. REID has been appointed Assistant Engineer, vice J. Grant MacGregor, who has been appointed Consulting Engineer. This line is a C. P. R. subsidiary.

Canada Steamship Lines, Ltd. W. J. KING has been appointed Agent at Montreal.

C. D. SECORD, heretofore master of the Pittsburgh Steamship Co.'s s. s. Rensselaer, has been appointed Assistant Superintendent, Toronto.

I. B. MCCONNELL has been appointed Agent, Yonge St. Wharf, Toronto.

F. MITCHELL has been appointed storekeeper in charge of Toronto stores, Yonge St. Wharf, Toronto.

A. ROSS has been appointed Accountant, Passenger Steamers, Yonge St. Wharf, Toronto.

J. J. HENNIGAR, heretofore General Agent, Richelieu and Ontario Navigation Co., Hamilton, Ont., has been appointed Agent, Canada Steamship Lines, Ltd., there.

J. J. BURKE has been appointed Agent at Fort William, Ont.

Canadian Government Railways.—J. C. BECKWITH has been appointed Engineer of Construction, Intercolonial Ry. and Prince Edward Island Ry., vice H. M. Killaly, deceased. Office, Moncton, N. B.

Canadian Northern Ry. A. W. SYMES, heretofore Soliciting Freight Agent, Montreal, has been appointed Travelling Freight Agent, Toronto.

G. M. ARGUE, heretofore Car Foreman, North Battleford, Sask., has been appointed Car Foreman, Fort Frances, Ont., vice E. W. Winnebeck resigned.

R. B. MCINTOSH, heretofore chief clerk, District Freight Office, Saskatoon, Sask., has been appointed chief clerk, General Freight Office, Winnipeg.

B. R. MARSALES, heretofore Contracting Freight Agent, Brandon, Man., has been appointed District Freight Agent, Regina, Sask.

A. BROSTEDT, heretofore District Freight and Passenger Agent, Great Northern Ry., Winnipeg, has been appointed Division Freight Agent, C. N. R., Calgary, Alta.

Canadian Pacific Ry. H. C. GRIFFIN has been appointed General Car Inspector, Eastern Lines, vice L. C. Ord, whose appointment as Assistant Master Car Builder, was announced in a recent issue. Office, Montreal.

J. AITKEN, heretofore Locomotive Foreman, Magantic, Que., has been appointed Locomotive Foreman, Sherbrooke, Que., vice C. W. Stackhouse transferred.

G. C. JACKSON has been appointed Auditor of Claims. Office, Montreal.

C. W. STACKHOUSE, heretofore Locomotive Foreman, Sherbrooke, Que., has been appointed Locomotive Foreman, Angus Shops, Montreal, vice W. Wood.

D. I. THORNTON has been appointed Shop Engineer, Car Department, Angus Shops, Montreal.

E. J. HARVEY has been appointed Assistant Shop Engineer, Car Department, Angus Shops, Montreal.

N. BERGER, heretofore Assistant Roadmaster at Farnham, Que., has been appointed Roadmaster, Farnham and Sherbrooke Subdivisions, Eastern Division, vice O. Kirkland transferred. Office, Farnham, Que.

J. H. DUFF has been appointed Chief Dispatcher, Farnham, Que., vice J. J. Morgan.

G. BRIMACOMBE has been appointed Locomotive Foreman, Sortin Yard, Montreal, vice W. Wood transferred to Angus Shops.

JAMES WEIR has been appointed Night Locomotive Foreman, Outremont, Que.

L. CLEARY has been appointed Assistant Locomotive Foreman, Outremont, Que.

C. E. SARNEY, heretofore Assistant Foreman, Outremont, Que., has been appointed Locomotive Foreman, Megantic, Que., vice J. Aitken transferred.

O. KIRKLAND, heretofore Roadmaster, Farnham and Sherbrooke Subdivisions, Eastern Division, Farnham, Que., has been appointed Roadmaster at Smiths Falls, Ont.

K. A. DUNPHY, heretofore Resident Engineer, Calgary, Alta., has been appointed Resident Engineer, Saskatoon, Sask.

E. B. SKEELS has been appointed Resident Engineer, Calgary, Alta., vice K. A. Dunphy transferred.

G. H. RAWLINS, Manager, Banff Springs Hotel, is reported to have been appointed Manager, Hotel Palisser, Calgary, Alta.

B. WILSON has been appointed storekeeper at Strathcona, Alta., vice G. M. Keates transferred to Mechanical Department.

C. BRADLEY has been appointed storekeeper at Coquitlam, B. C., vice J. H. Waters transferred.

P. H. WATERS, heretofore storekeeper at Coquitlam, B. C., has been appointed storekeeper at Vancouver, B. C.

A. G. G. LAUDER, heretofore Freight Agent, has been appointed District Freight Agent. Office, Milwaukee, Wis.

W. M. PORTEOUS, heretofore Freight Agent, has been appointed District Freight Agent. Office, St. Louis, Mo.

L. C. JACK, heretofore Freight Agent, has been appointed District Freight Agent. Office, Kansas City, Mo.

E. EDEN, heretofore Freight Agent, has been appointed District Freight Agent. Office, Omaha, Neb.

Chicago Great Western Ry. CHARLES A. FULLEN, heretofore General Agent, Fargo, N. D., has been appointed General Agent, Winnipeg, Man., vice Roy Bullen, resigned to enter G. T. R. service as announced in our last issue. Office, 195 Portage Ave. East.

Grand Trunk Pacific Ry. The following station agents have been appointed,—Justice, Man., J. E. Porter; Spy Hill, Sask., W. Thresher; Ituna, Sask., P. D. Hamilton; Young, Sask., J. T. Scott; Griffin, Sask., J. R. Wilson; Stoney Plain, Alta., D. J. Harnet; Bashaw, Alta., J. W. LeGallais; Battleford, Alta., R. L. Harrop; Coalspur, Alta., D. S. McCready; McBride, B. C., A. E. Robin.

Grand Trunk Ry. V. G. SNELL, heretofore Soliciting Freight Agent, Montreal, has been appointed Commercial Agent, Moncton, N. B., vice W. J. P. McGregor, transferred to G. T. Pacific Ry. service.

F. W. BERGMAN, General Manager, G.T.R. and G.T. Pacific Ry. hotels, Ottawa, Ont., has resigned, effective May 1. At the time of going to press, no appointment of a successor has been made.

JAMES CAMPBELL, heretofore Yard Foreman, York, Ont., has been appointed Supervisor of Track, Hamilton to Niagara Falls, and Port Dalhousie to Port Colborne, vice G. Stilson, deceased. Headquarters, Hamilton, Ont.

C. STEWART has been appointed Telephone Inspector at Stratford, Ont., vice G. G. Murray transferred.

G. G. MURRAY, heretofore Telephone Inspector, Stratford, Ont., has been appointed Telephone Inspector, St. Thomas, Ont.

F. G. ADAMS, heretofore Division Freight Agent, G. T. Pacific Ry., Edmonton, Alta., has been appointed Commercial Agent, G. T. R., Winnipeg, vice W. J. Hunter, deceased.

The following station agents have been appointed,—Millbrook, Jct., Ont., G. H. Raymes; Canfield, Ont., W. G. McCulla; outside agency, Toronto, W. J. Moffatt.

Great Northern Ry. A. R. BROOKS has been appointed District Freight and Passenger Agent, Montreal, vice W. T. Hetherington, transferred to Winnipeg.

W. T. HETHERINGTON, heretofore District Freight and Passenger Agent, Montreal, has been appointed District Freight and Passenger Agent, Winnipeg, vice A. Brostedt, resigned to enter Canadian Northern Ry. service.

Intercolonial Ry. JAMES W. BARNETT has been appointed Tariff Inspector and Assistant Weighing Inspector. Headquarters, Moncton, N. B.

Northern Pacific Ry. STANLEY EDWARDS has been appointed Soliciting Agent, Montreal, vice J. W. Maver resigned.

Pacific Great Eastern Ry. With reference to press reports stating that R. J. McDONALD has been appointed External Architect we are officially advised that there is no knowledge of such an appointment at the offices at Victoria, B. C.

Pere Marquette Rd. Effective Apr. 1, the system has been divided into four operating divisions, comprising the Chicago-Petoskey Division, Superintendent, J. W. MULHERN, Grand Rapids, Mich.; General Agent and Superintendent of Terminals, C. HARSCH, Chicago, Ill.; Toledo-Ludington Division, Superintendent, E. E. CAIN, Saginaw, Mich.; Port Huron-Grand Rapids Division, Superintendent, J. L. HAYES, Saginaw, Mich.; Detroit-Canadian Division, comprising Grand Rapids to Detroit, Oak to West Detroit, Walkerville to St. Thomas, Sarnia to Rondeau, London to Port Stanley, Black Rock and Suspension Bridge terminals and ferry operation between Detroit and Windsor, Superintendent, J. J. CORCORAN, Detroit, Mich.; Assistant Superintendent, Canadian Lines, R. S. BLACK, heretofore Trainmaster, Office, St. Thomas, Ont.

W. K. TASKER, heretofore Superintendent, Canadian Division, St. Thomas, Ont., has been appointed Superintendent of Telegraph, vice W. M. Hayes transferred. Office, Detroit, Mich.

Prince Edward Island Ry.—See Canadian Government Railways.

Quebec, Montreal and Southern Ry., Napierville Jct. Ry.—A. L. CURRIE, heretofore Secretary to the company, has been appointed Superintendent, vice J. E. Roberts, appointed General Superintendent, Greenwich and Johnsonville Ry., Greenwich, N. Y. Office, Sorel, Que.

T. BRENNAN has been appointed General Roadmaster, Sorel, Que.

Timiskaming and Northern Ontario Ry. GEORGE W. LEE, heretofore General Agent, North Bay, Ont., has been appointed a Commissioner, vice F. Dane, resigned, on his appointment as Trade Commissioner, Dominion Government, Glasgow, Scotland.

Toronto, Hamilton and Buffalo Ry. H. T. MALCOLMSON, heretofore Superintendent Car Service, has been appointed Superintendent, vice R. A. Barrett, resigned. Office, Hamilton, Ont.

A. E. LOCK, heretofore Commercial Agent, has been appointed Car Accountant, vice H. T. Malcolmson, Superintendent Car Service, promoted. Office, Hamilton, Ont.

White Star-Dominion Line, Canada Line, Austro-American Line. R. F. MACFARLANE, who was formerly identified with the Dominion Line, and latterly with the White

Star-Dominion Line, Montreal, retired Apr. 6, on completion of 40 years active service. The passenger business of the foregoing

lines, which has hitherto been jointly managed by P. V. G. MITCHELL and R. F. MACFARLANE, is now in charge of the former.

the transfer is completed, the buildings which they at present occupy will be torn down and the area utilized for other purposes. (April, pg. 171.)

Canadian Pacific Railway Construction. Betterments. Etc.

Montreal Terminals.—A press report states that among the plans under consideration is one for the electrification of the Windsor St. terminals, Montreal.

Campbellford, Lake Ontario and Western Ry.—The work of finishing up this line from Glen Tay to Agincourt, Ont., 182 miles, has been resumed, and it is expected that everything will be completed so as to permit of its opening for operation by July 1.

Humber River Bridge.—The bridge across the Humber River, near Toronto, is a single track one and is the only piece of single track on the line from Toronto west to Guelph Jct., 39 miles. The bridge is 471 ft. long, and consists of three Pratt truss spans of 157 ft. each, at a height of 100 ft. above average low water. The abutments and the two piers of the present bridge are of masonry. The reconstruction of the bridge was decided upon some time ago, but the work is just now being placed in hand. It is proposed to reconstruct the bridge as one of six spans of 78½ ft. of the deck plate girder type. To do this it is necessary to widen and raise the abutments and piers of the present bridge, and to build three new piers. All the new work on the substructure is to be of concrete. The new piers will be numbered 1, 3 and 5. Numbers 1 and 4 will be built on foundations 24½ ft. by 13 ft., at the base, tapering to 29½ by 7½ ft., and 66 ft. in height. Pier number three, which will be in the middle of the river, will be built on a foundation 50½ by 14½ ft. over all, to 16 ft. above low water, and then tapering to 28 by 7½ ft., with a height of 84 ft. The other two piers, 2 and 4, will have foundations 50½ by 14 ft. over all, including foundation of present piers, and will be tied into the present piers, the whole tapering to 29 by 7½ ft., with a height of 72 ft. The abutments are to be built into the existing abutments. So far as the new work is concerned, it is to be completed underneath the height of the present truss spans, but otherwise to the full height. The contract calls for the completion of this part of the work by Sept. 1. The new steel superstructure for the westbound tracks will be put in position and the track laid, then the traffic will be switched over, the present superstructure removed, and the abutments and piers raised so as to permit the putting in place of the new deck plate girder spans for the eastbound tracks. It is expected that the work will be completed by Dec. 31. The estimated quantities are:—Excavation and trackballing, 1,300 cubic yards; wet excavation, 250 cubic yards; loose rock and stone, 200 cubic yards; concrete piling where necessary, 900 ft.; concrete, 5,000 cubic yards. The contract for the substructure has been let to the Kennedy Construction Co., Montreal, and preparations are being made for starting work. The company is putting in a siding on the west bank of the river, on the north side of the line, to facilitate the work, which will be under the charge of J. A. Irvine, Resident Engineer, Toronto Terminals.

Lake Superior Division.—D. McNicoll, Vice President, is reported to have said at Toronto, April 12, that the work of building a second track along the north shore of Lake Superior would be further proceeded with, and that eventually the entire line from North Bay to Port Arthur will be a double track one.

Manitoba Division. The Winnipeg City

Council, April 7, approved plans for the building of a subway under the C. P. R. tracks at Salter St. It is not intended to build the subway this year, but to expend about \$60,000 on the approaches. The subway will be gone on with in 1915, unless the advocates of an overhead bridge are able to secure a change in the decision.

The Bergen cut off, which extends from west of Winnipeg into the Transcona yards, is expected to be put in operation, May 1. This will relieve the congestion in the Winnipeg yards, as traffic going through between points east and west will be sent by the cut off.

Saskatchewan Division.—George Bury, Vice President, is reported to have said in the course of a recent interview, it is the intention to proceed this season with the construction of the projected line from Expanse to Assiniboine, where it will connect with the Weyburn-Lethbridge line, and that it is also intended at some time to extend the line from near Expanse to Vanguard, to connect there with the line from Swift Current. The engineers are at present working westerly from Vanguard on this extension.

Alberta Division.—It is expected that the Weyburn-Lethbridge Branch will be completed this year. Construction is proceeding westerly of Shaunavon, Alta., a long stretch of grade is ready for tracklaying, and the material for this is being rushed in.

Additional gangs of men have been put to work on the cut off between Swift Current and Bassano, which it is expected to complete this year. Grading is reported to have been completed, and ties have been distributed as far as Gleichen. The steel for tracklaying has been distributed.

The Suffield branch is expected to be extended to about five miles south of the South Alberta Irrigation Co.'s north dam, by the fall.

Rogers Pass Tunnel.—We are officially advised that McIlwee and Sons, of Denver, Col., have been given a contract, by the general contractors, Foley Bros., Welch and Stewart, for driving the "pioneer" tunnel at Rogers Pass, the plant being furnished by the general contractors.

British Columbia Division.—In a recent interview, F. W. Peters, General Superintendent, is reported to have said that among the improvements to be made during this year is the boring of a 500 ft. tunnel, 40 miles west of Nelson, B.C., through a rock point, and will cut off a very sharp curve as well as eliminate a modern bridge. The plans are said to be ready, and it is expected that tenders will be called for on an early date.

The question of the electrification of the line between Vancouver and New Westminster is reported to be under consideration.

Work has been started on the train sheds and platform shelters for the new passenger terminals at Vancouver. The grade is being raised for the new station level and other work is being pushed forward. Practically all the exterior work on the new station has been completed, and several gangs are engaged on the interior work.

Arrangements were being made at the time of writing (April 13) to remove the Dominion Express Co. and the baggage department into their new quarters. When

Aid Granted to Canadian Northern Railway.

J. H. Burnham, M.P., asked in the House of Commons April 1:—"What aid has been promised, given or otherwise arranged for, directly or indirectly, by the Government to or with the Canadian Northern Ry. Co., or any of its subsidiary lines, or propositions or any part thereof, since the inception of the same?"

In reply the acting Minister of Railways submitted the following statement:—

Canadian Northern Railway.		Paid to
CASH SUBSIDIES	Granted, Dec. 11, 1913.	
Swan River section	\$ 374,606	\$ 374,606
O. & R.R. Ry.	1,534,526	1,534,526
E.Y. & P. Ry.	91,200	91,200
	\$ 2,000,332	\$ 2,000,332
Canadian Northern Alberta Ry.	\$ 3,120,000	\$ 2,832,024
Canadian Northern Ontario Railway.		
Toronto-Sudbury	\$ 1,872,960	\$ 1,872,960
Toronto-Ottawa	1,600,000	1,363,122
Hawkesbury-Ottawa ...	369,872	369,872
Ottawa-Port Arthur ...	10,920,000	6,518,516
	\$14,762,832	\$10,124,470
Canadian Northern Quebec Railway.		
Garnett-Quebec	\$ 523,820	\$ 523,820
St. Jerome branch	97,280	97,280
Rawdon branch	86,468	86,468
	\$ 707,568	\$ 707,568
Canadian Northern Pacific Ry.	\$ 6,300,000	\$ 4,349,930
Halifax and South Western Ry.	\$ 1,364,210	\$ 1,364,210
Total	\$28,254,942	\$21,378,534
GUARANTEES.		Paid to
	Granted, Dec. 31, 1913.	
Canadian Northern Ry.	\$17,256,584	\$15,397,488 36
Canadian Northern Alberta Ry.	6,719,998	4,394,077 30
Canadian Northern Ontario Ry.	35,770,000	20,149,256 53
	\$59,746,582	\$39,937,822 19

No land was granted direct to Canadian Northern Ry., but this company has received from the contractors for the Lake Manitoba Ry. and Canal Co., the Winnipeg and Hudson Bay Ry. and the Manitoba and South Eastern Ry., 4,002,848 acres.

EDITOR'S NOTE.—The heading of the column of figures under "Guarantees," which reads "Paid to Dec. 31, 1913," is rather misleading, as the Government has not been called on to pay anything in connection with guarantees of C.N.R. bonds. As the guaranteed bonds are sold the proceeds are deposited with the Government and are paid over to the company as the Railway's Department's engineers certify to the amount of work performed.

Safety First on G.T.R.—G. Bradshaw, Safety Engineer, states that the G.T.R. safety committee is doing most effective work in the prevention of personal injuries. From Sept., 1913, to Feb., 1914, inclusive, there was a decrease of 46% in the number of employees killed and a decrease of 16% in the number injured, including all classes of injury, serious or trivial, as compared with the corresponding months of 1912 and 1913. The safety movement was put into effect on the G.T.R. in Aug., 1913.

The C. P. R.'s Algonquin Hotel, St. Andrews, N. B., was practically destroyed by fire April 11, the damage being estimated at about \$500,000. The hotel had been renovated recently, and was ready for opening for the summer season on June 1.

Electric Railway Department

Steel Stores Car for Montreal Tramways Company.

Last autumn, the Montreal Tramways Co. built an all steel stores car, of the design shown in the accompanying illustrations, in its shops at Youville. The design was worked out with the paramount idea of convenience and utility. So well has this been

and is composed of $\frac{7}{8}$ in. planking. The forward end of the car is housed in with steel plating, and the section back of the motor-man's compartment has a double floor, the upper floor being about 20 ins. above the deck, forming an upper compartment, en-

located jib crane, pivoted top and bottom, serving the whole interior. The verticals consist of 2 in. angles, and the jib member, of an 8 in. I beam, on which there is a traveller, air operated, and with a capacity for 3,000 lbs., the operating motor being sup-

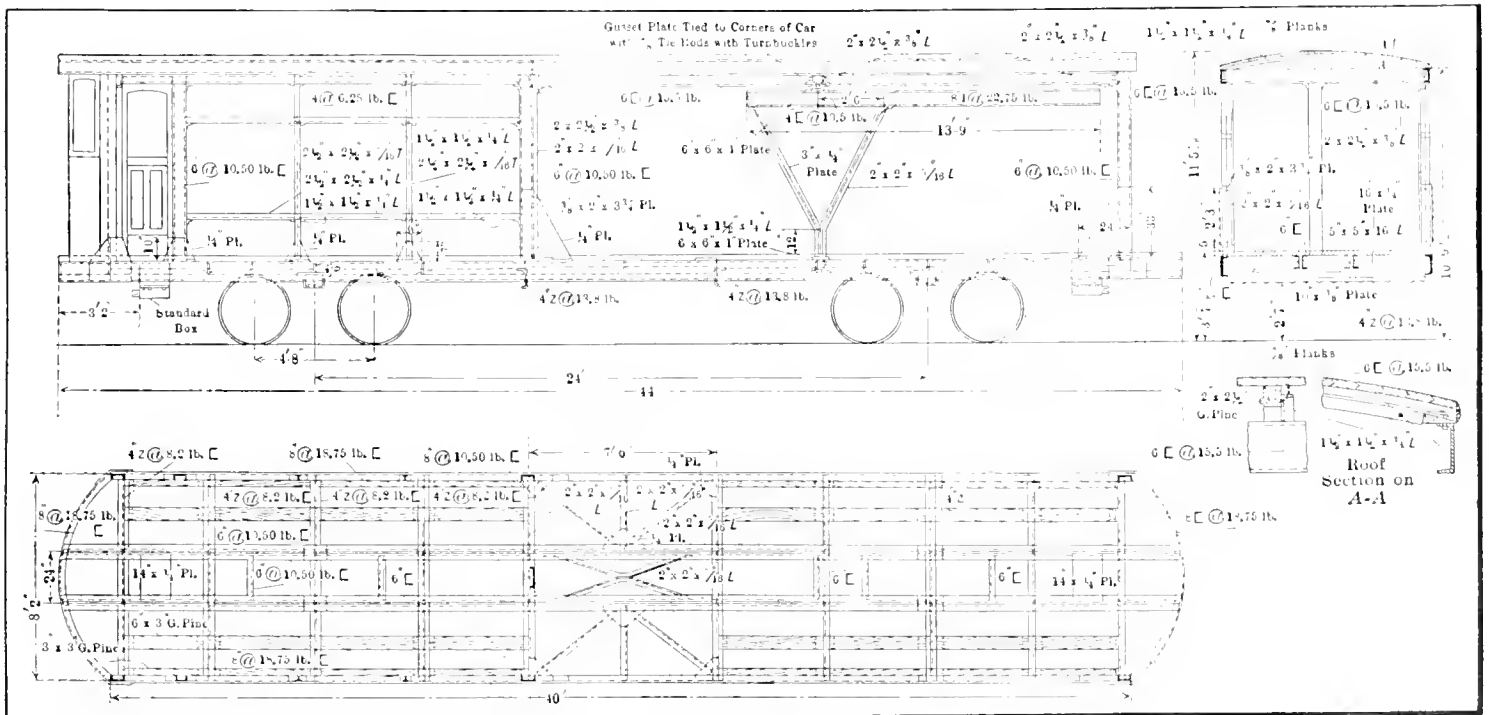

Steel Stores Car, Montreal Tramways Company.

done, that the one car is able to handle the stores for the whole system, carrying them from the main stores at Youville to the several car sheds throughout Montreal, replacing the three stores cars that were formerly used for this purpose. The car makes a complete circuit of the system once a day. The five car sheds are supplied, the daily

tered from both the front and rear ends through doors, in which the smaller stores are carried. The lower floor is divided into three lateral compartments, opening to the sides through downwardly swinging doors, and is used for transporting armatures, which are run in from the side as shown in the photograph, making a convenient ar-

ported in the V of the uprights on a small platform.

The whole car is built of commercial structural shapes and is most solid throughout. The end construction comprises an 8 in. bumper channel, with 6 in. channel corner posts, braced by corner gussets. The trucks are located at 24 ft. centres, and carry

Details of Steel Stores Car, Montreal Tramways Company.

run being 35 miles. The car cost complete about \$1,800.

The over all length of the car is 44 ft., with side sills of 8 in. channels, and intermediate sills of 6 in. channels. The roof is supported on side members of 6 in. channels,

arrangement for handling these members, and keeping them out of danger of damage in transit.

The rear part of the car is open on the sides, and is used for the heavier stores, for the handling of which there is a centrally

located jib crane, pivoted top and bottom, serving the whole interior. The verticals consist of 2 in. angles, and the jib member, of an 8 in. I beam, on which there is a traveller, air operated, and with a capacity for 3,000 lbs., the operating motor being sup-

Hydro Electric Power Commission of Ontario and Projected Electric Railways.

The Ontario Legislature has adopted the following resolution dealing with the many proposals now being made for the building of electric railways in rural districts in connection with the Ontario Hydro Electric Power Commission:—"That in the opinion of this house cheap and convenient electric railway transportation facilities is one of the most urgent needs in many rural sections and the towns of the province, and this house is gratified to see the general movement among the municipalities to secure improved electric railway transportation facilities through the Hydro Electric Power Commission. That this house views with satisfaction the prompt manner in which this question has been taken up by the Chairman of the Commission, and would respectfully urge upon the Dominion Government the importance of the question and the wisdom of encouraging the construction of municipal hydro electric radial railways, and that this house further respectfully urges upon the Dominion Government the great importance of co-operating with the province in the development of the water powers created by existing and projected canals and canals now under construction and capable of such development, by the utilization of the waters necessarily supplied thereto and not required for navigation purposes." In addition to the projected line to Port Perry, Whitby, etc., which was the first one suggested to be built under the Commission, meetings in municipalities have been and are being held to advocate the building of lines centering on Guelph, Stratford, St. Marys, London and St. Thomas, which, if built, would serve practically every part of Western Ontario. Engineers are going over many of the routes suggested, with a view of forming conclusions as to such lines as might be built with some prospect of expenses being met.

The most important question to be settled is that of how construction is to be financed and any deficit in operation met. At a meeting of representatives of municipalities at Guelph, Mar. 29, a deputation was appointed to wait on the Ontario Government in order to secure a standard form of agreement to be entered into between the Hydro Electric Power Commission and the municipalities with respect to the building of electric railways. The matter is under consideration by the Government and the Commission. (April, pg. 182.)

Answers to Questions on Electric Railway Topics.

Following are answers to questions in the American Electric Railway Association's question box, sent in by officials of Canadian electric railways:—

Interurban Fare Collection.—What is the best method of collecting and accounting for fares on interurban lines, the method making it possible for conductors to prevent passengers riding beyond the point to which they have paid, also permitting of an accurate check?

A. Gaboury, Superintendent, Montreal Tramways Co.—On suburban cars of this company, no zone collection is made. The conductor collects fares from passengers for full distance he intends to travel, cash or tickets, at the same time issuing a receipt for amount collected. These receipts are of different colors, each color representing a different denomination of fare. The conductor checks his load by means of these

receipts. Special ticket checkers, in uniform, also check up the load unexpectedly, thereby keeping conductors up to the mark. Receipts are all numbered in serial numbers, in pads of 50, and conductors have a waybill to make out, entering on it the first and last numbers of each denomination of receipt, and the total number of each denomination issued, and the total amount as shown on trip sheet must correspond with amount in conductor's farebox.

Employment of Platform Men.—What are the advantages, or disadvantages of advertising in cars or elsewhere for men wanted on train service?

A. Gaboury, Superintendent, Montreal Tramways Co.—Am very glad to say we have not, so far, found it necessary to advertise in any way for platform men. The number of men seeking employment on the cars, is such as to allow us to pick and choose those who seem most suitable.

Has any large railway system a bureau covering employment for all departments? If so, does this bureau hire men for each department, or what are its functions?

A. Gaboury, Superintendent, Montreal Tramways Co.—The employment bureau of this company engages only men for platform work for the operating department.

The Ontario West Shore Railway Muddle.

The enquiry, by the Ontario Railway and Municipal Board, into the affairs of the Ontario West Shore Ry., was resumed at Toronto, Apr. 6. At previous sittings, considerable time was wasted owing to the nonproduction of books and papers of the company, which it was alleged had disappeared, and also owing to the absence of J. W. Moyes, the promoter, on whose behalf medical evidence was tendered that he was mentally and physically unfit to present himself for examination. On the resumption of the sittings, it was stated that Mr. Moyes was still too ill to appear. Certain books and papers have been recovered, by the intervention of the police, and have been placed in the hands of accountants for elucidation, and from these the accountants state that only \$214,177.46 can be placed as having been properly applied to the company's work. Of this, \$74,000 was spent for rails, \$8,500 for ties, and about \$14,000 for right of way, etc.

On Apr. 7, P. A. Malcolmson, acting for the town of Kincardine, Ont., requested that Mr. Moyes be committed for contempt of court, for not producing all documents and bonds in his possession, although having been subpoenaed to do so, and stated that unless the bonds were produced in court, the municipalities would lose the fruits of the litigation. On behalf of Mr. Moyes, it was claimed that he had not been served with notice to produce the particular papers in question and that he had sworn he did not know where they were. He might be guilty of perjury, but not of contempt. The Chairman agreed that there had been disobedience under the subpoena, and suggested that the facts be submitted in a more formal shape, as he considered the Board had been played with, until by an accident the books being examined came into the Board's possession.

Amongst the papers recovered are the progress certificates, on which payments were made out of the trust funds raised by the sale of bonds guaranteed by the municipalities, and attached to each of the 57 certificates, was a calculation slip showing the method by which the amount stated on the certificate was arrived at. These showed an ingenious method of increasing the

amount to be certified. Under the agreements for construction, it appears that two-thirds of the amount of the progress certificates was to be paid out of the trust funds, and the balance by the contractors, and the progress certificates were to represent not more than 90% of the work actually done. The calculations showed that the actual amount expended was treated as the two-thirds portion, sufficient being added to cover the contractors' share, and this inflated amount was certified as 90% of the work actually done.

At a meeting of representatives of the municipalities concerned, at Kintail, Apr. 20, an offer of settlement was made on behalf of J. W. Moyes, but was unanimously rejected, those present deciding that the matter should be pressed to a proper conclusion. The offer was to return to the municipalities \$178,000 of unguaranteed bonds, \$2,000 in cash, and the railway as it stands at present, comprising right of way, steel and ties laid, all work done, and such equipment as is on the road. It was understood that if the offer had been accepted, the enquiry would have been stopped.

On the resumption of the enquiry at Toronto, Apr. 21, evidence was given by V. M. Roberts, the engineer who signed progress certificates, etc., who stated that he realized that he had done wrong in signing the certificates, but, at the time, he thought he was justified. D. M. McIntyre, Chairman of the Board, stated that the remedy for the nonproduction of the bonds, was with the courts, and continued to the effect that if the board is satisfied that Mr. Moyes' health is all right and he does not appear at the next sitting on May 1, he will be committed. When he appeared before, he took refuge behind the matter of missing papers. It may not be fair to make a report without hearing his explanation, but if he is not in attendance at the next sitting, the enquiry will close.

Statistics of Deaths Due to Street Traffic.

The National Highways Protective Association has compiled a record of deaths due to street traffic in a number of U.S. cities, and which shows how much more deadly automobiles are than street cars. The number of persons killed per million of population are as follows:—

	Automobiles.	Street Cars.	Wagons.
Utica, N.Y.	70	29	0
New York, N.Y.	64	23	36
Buffalo, N.Y.	54	47	21
Albany, N.Y.	40	40	10
Atlantic City, N.J.	87	0	0
Trenton, N.J.	52	21	31
Paterson, N.J.	48	8	16
Newark, N.J.	47	18	21
State of New York ..	50	20	22
State of New Jersey ..	44	11	10

Woodstock, Thames Valley and Ingersoll Electric Ry.—An order was made by Mr. Justice Middleton, in Toronto, April 22, for the transfer of possession and control of the W. T. V. & I. E. Ry. from E. B. Stockdale, Receiver of the Grand Valley Ry., the parent concern, to J. G. Wallace, of Woodstock, trustee for the bondholders of the road, the transfer to be made April 23. The receiver must pass his accounts before the local master at Woodstock, and that official is directed to allow all accounts paid at the request of the first mortgagee. Mr. Stockdale was ordered to pay the costs of the action, but may reimburse himself out of any funds that may come into his hands belonging to the second mortgagee or mortgagor.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—Work was reported to have been started, April 1, on the building of a second track on the line from Dominion Road to Head St., and from Lampson St. to Admirals Road, Victoria, B.C. It was expected to have the work completed by April 30. Material is being assembled, it is reported, for the extension of the line from Burnside Road to Harriet Road, and a start is expected to be made on the work early in May. Information that these works would be undertaken was given by A. T. Goward, Local Manager, at the recent meeting of the City Council.

An arrangement has been completed between the Victoria City Council, the Provincial Government and the B. C. E. Ry., for the building of what is known as the proposed Johnson St. bridge. The estimated cost of the work has not been ascertained, but the Government has promised to contribute \$150,000 and the B. C. E. Ry., \$50,000. The work will be carried out by the City Council, under plans to be prepared by the Provincial engineering staff.

The B.C. Minister of Railways has authorized the opening for freight traffic only of the recently completed line from Port Moody through Coquitlam municipality, to mileage 7. (Feb., pg. 87.)

Cape Breton Electric Co.—We are officially advised that no decision has been reached with reference to the extension of the line to New Waterford, N.S., the construction of which has been under consideration for the past two years. (April, pg. 184.)

Dominion Power and Transmission Co.—We are officially advised that the contract with the Canadian Westinghouse Co., for equipment for the new steam power plant at Hamilton, covers the following:—Two 10,000 k.w., 6,600 volt, three phase, 66 2-3 cycle steam turbine generators operating at 200 lbs. steam pressure, 200 degrees superheat, with surface condensers, condensation pumps and boiler feed pumps. All pumps will be centrifugal type, turbine driven. The exciters will be one turbine driven and two motor driven. The step-up transformers will rise from 6,600 volts to 40,000 volts. There will be the usual switchboards, lightning arresters and other accessories. (April, pg. 184.)

Dunnville, Wellandport and Beamsville Electric Ry.—The Ontario Legislature has granted an extension of time for the building of the several lines authorized. (Feb., pg. 87.)

Edmonton Interurban Ry.—A press report states that the company is considering plans for the building of a branch line to Fort Saskatchewan, Alta. (Mar., pg. 135.) Felix Santallier, Edmonton, is General Manager.

Forest Hill Electric Ry.—The Ontario Legislature has extended the time for construction of this projected line north of Toronto, and increased its bonding powers from \$30,000 to \$50,000 a mile. Pending financial arrangements for construction, we are informed that nothing has been arranged as to when the building of the line will be started or when the organization of the company will be completed. (Mar., pg. 135.)

Fort William Electric Ry.—G. H. Adair, Fort William, Ont., is authority for the statement that property owners on Arthur St., between Franklin St. and the western city limits, are working on a scheme for an extension of the street railway between the last two mentioned points. It is proposed to build the line by private subscription and turn it over to the city free of encumbrance,

for operation. It is stated that the extension will be completed and ready for operation by Nov. 15.

Grand Falls to Limestone, N.B.—The New Brunswick Legislature has incorporated a company with this title, to build an electric railway from Grand Falls, on the St. John River, to Limestone, on the boundary between New Brunswick and Maine. Power was asked to build wharves and docks on the St. John River, but the Legislature refused this.

Grand Valley Ry.—The Ontario Legislature has passed an act to enable the Brantford City Council to acquire the franchise of the G. V. Ry. in Brantford and in the counties of Brant and Waterloo; to pass bylaws for the issue of debentures for securing money necessary for the purchase, improvement and operation of the line; to dispose of any portion of the lines to be acquired as may be advisable; and to appoint a commission of not less than three nor more than five to manage the line.

It is not expected that the line will become vested in the City Council until July 1. Until the city gets possession, the council proposes to give every consideration to the best means of improving the lines and in preparing for their effective operation. (Feb., 1913, pg. 90.)

Guelph Radial Ry.—An extension of time has been granted by the Ontario Legislature for the building of extensions authorized in 1908. Power is also given, subject to the approval of the Ontario Railway and Municipal Board, to build half-mile branches of existing lines.

Press reports state that bids are being asked for alterations at the power house. A. H. Foster, Guelph, Ont., is Manager. (April, pg. 134.)

Hamilton St. Ry.—The street railway committee of the Hamilton City Council has been asking the company to lay new rails on a considerable portion of the lines in the city, to build a second track on a section of Sanford Ave., and to build a stub line from the Wentworth St. incline to the International Harvester Co.'s plant. At a meeting of the committee, Mar. 31, General Manager Coleman intimated that owing to present financial conditions and the amount of work still uncompleted on the Kenilworth Ave. extension, there was little likelihood of the company undertaking any other improvements or extension this year. (Jan., pg. 38.)

Hull Electric Ry.—We are officially advised that at present the company is not arranging for any extensions. A press report stated that the company was going to build some second track, and a branch to Notre Dame Cemetery, Hull, Que. (April, pg. 184.)

Kingston, Portsmouth and Cataraqui Electric Ry.—H. W. Richardson, President, asked the Kingston, Ont., City Council, April 6, when it would be ready to go on with the paving of Princess and King Streets, as the company is ready to lay down a second track from the Y.M.C.A. building to beyond Alfred St. (April, pg. 184.)

Lacombe and Blindman Valley Ry.—We are officially advised that six miles of grading from Lacombe to near Gull Lake, Alta., was completed last autumn, and that a contract has been let for the construction of the entire line to Rimby, about 20 miles from Gull Lake. Press reports state that the contract has been let to S. S. Hogan. It is expected that part of the line will be put in operation by July 31, and

the remainder completed by Dec. 31. An order has been placed for one passenger car, which will generate its own power, and for one locomotive to handle the freight traffic.

The officers and directors are:—President, J. C. Gibson; Vice President, A. B. Taylor; Treasurer, E. K. Strathy, Winnipeg; other directors:—S. J. Hungerford, Winnipeg; Hon. S. Barker, M.P.; A. J. Taylor, Hamilton; G. S. May, F. C. T. O'Hara, Ottawa; F. Vickerson, J. Dawson, A. Hume, Lacombe, Alta.; J. R. L. Starr, Engineers, Lacombe, and Inkster, Edmonton, Alta. Except where otherwise stated the officers and directors reside in Toronto. (Mar., pg. 135.)

Lethbridge Municipal Ry.—The revised capital expenditures approved by the Lethbridge, Alta., City Council, provide for \$21,610, of which \$3,210 is for improvements at the car barn, and for the provision of a Y and siding at the pavilion in Henderson Park. (April, pg. 184.)
